−$102,100,000 for the antarctic program which is offset by the inclusion of such funds under a new account structure; and plus not less than $5,000,000 for grants to 2- and 4-year colleges for equipment and instrumentation.

Amendment No. 39: Deletes language proposed by the House and stricken by the Senate concerning the ocean drilling program and various earmarkings of funds under the research and related activities account and deletes language proposed by the Senate earmarking funds for new grants.

The conferees have deleted the specific earmarking of 3 percent of funds appropriated under research and related activities for faculty at non-Ph. D.-granting institutions. However, the committee of conference points out that the percentage of funds made by the Foundation for such institutions has declined from approximately 2 percent of the total NSF funding in 1968 to a current level of about 1 percent. The conferees strongly urge that the Foundation make an effort to reverse this trend over the coming months and expect a progress report on that issue submitted to the Committees on Appropriations by March 31, 1984.

Amendment No. 40: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate providing $102,100,000 and establishing a new separate account for the United States antarctic research program.

Amendment No. 41: Appropirates $75,000,000 for science education activities as proposed by the Senate, instead of $70,000,000 as proposed by the House.

Amendment No. 42: Deletes language proposed by the Senate earmarking funds for graduate and minority fellowships. The conferees agree that a minimum of 100 additional new graduate fellowships including woman and minorities be provided in 1984.

Amendment No. 43: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate earmarking funds for merit based instructional materials development and permitting the transfer of up to $5,000,000 of funds provided under this account to the research and related activities account to conduct research on teaching and learning.

The committee on conference urges the Foundation to encourage the involvement of State and local education officials in the development of merit based instructional materials.

NEIGHBORHOOD REINVESTMENT CORPORATION

Amendment No. 44: Deletes language proposed by the House and inserts "the capital" as proposed by the Senate.

Amendment No. 45: Deletes language proposed by the Senate which would permit the Neighborhood Reinvestment Corporation to provide funding to the Baltimore, Maryland mutual housing program to cover capital costs. The conferees are agreed that the Corporation may continue its efforts in the three communities currently under planning.

SELECTIVE SERVICE SYSTEM

Amendment No. 46: Appropriates $24,500,000 for salaries and expenses, instead of $24,049,000 as proposed by the House and $24,649,000 as proposed by the Senate.

The committee of conference is in agreement with the following changes from the budget request:

−$800,000 from public information programs;

−$50,000 from travel; and

−$149,000 general reduction to be applied at the agency's discretion.

DEPARTMENT OF THE TREASURY

Amendment No. 47: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate appropriating $4,566,700,000 for payments to the State and local government fiscal assistance trust fund. The House deferred consideration of the budget request.

Amendment No. 48: Appropriates $7,278,000 for the Office of Revenue Sharing, salaries and expenses as proposed by

the Senate, instead of $7,378,000 as proposed by the House. The committee of conference is in agreement to limit additional permanent positions to one in fiscal year 1984.

VETERANS ADMINISTRATION

Amendment No. 49: Appropriates $1,371,000,000 for readjustment benefits as proposed by the House, instead of $1,521,000,000 as proposed by the Senate.

Amendment No. 50: Deletes language proposed by the Senate earmarking $150,000,000 for veterans' emergency job-training program, contingent upon enactment of authorizing legislation before December 31, 1983.

The conferees agree to delete funding for the veterans' emergency job-training program because it is a new program that is not presently authorized. The conferees have taken this action without prejudice and will wait until enactment of authorizing legislation before funding is considered. The funds in the readjustment benefits appropriations are for entitlement programs. If funded, the veterans' emergency job-training program would be provided for in a separate account.

Amendment No. 51: Appropriates $8,070,726,000 for medical care, instead of $8,078,526,000 as proposed by the House and $8,065,187,000 as proposed by the Senate.

The conference agreement adds $12,200,000 above the budget request. Of that amount, $10,300,000 is for maintenance and repair projects and $1,900,000 is for an additional 100 community nursing home care patients.

The conference agreements restores the $5,539,000 reduction taken by the Senate in medical equipment (object class 31). The conferees agree, however, with the language contained in the Senate report directing the VA to restore the former balance between additional equipment and replacement equipment. In this respect, the conferees direct the VA to apply no less than $120,000,000 of the amount provided for the purchase of replacement equipment.

The conferees are also in agreement with the concerns expressed in the Senate report about the need to establish an operating plan for the medical care account. The conferees direct the VA to submit an operating plan that will serve as the basis for future reprogramming requests no later than November 1, 1983.

This amount of funding is specifically intended to support 190,554 full-time equivalent employees (FTEEs) with the understanding that, in accordance with established Congressional practice, any additional pay costs necessary to support that FTEE level will be borne by the VA, using funds made available by this measure, funds made available through the enactment of supplemental appropriations, or through absorption of the costs, or some combination thereof. This FTEE level does not include common services FTEEs.

Also, 4,385 full-time equivalent employees are included for medical and prosthetic research and 856 full-time equivalent employees are included for medical administration and miscellaneous operating expenses.

Amendment No. 52: Appropriates $345,692,000 for construction, major projects, instead of $350,992,000 as proposed by the House and $341,692,000 as proposed by the Senate.

The conference agreement deletes the $5,300,000 requested for the 60-bed nursing home care project at Providence, Rhode Island. In taking this action, the conferees have deferred the funding for this project until a later time. The conferees note that this facility is the lowest priority of the seven nursing home care projects contained in the budget request. The conferees also note that the VA's revalidation team did not identify an immediate need for the Providence facility and recommended deferring the project.

The conferees have included the requested $14,700,000 for the 120-bed nursing home care project at San Francisco. However, the conferees direct that the VA not proceed with the multistory parking garage part of the project until a report on the subject is prepared and submitted to the Committees on Appropriations. The report should outline alternative parking arrangements, including the use of land currently under the jurisdiction of the Department of the Interior. The VA should not proceed to implement any of the parking alternatives without the prior approval of the Committees on Appropriations.

Amendment No. 53: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate with an amendment as follows: *Provided,* That, except for advance planning of projects funded through the advance planning fund, none of these funds shall be used for any project which has not been considered and approved by the Congress in the budgetary process: *Provided further,* That $15,000,000 of the advance planning funds provided in this Act for medical projects shall only be available for the advance planning of those projects proposed in fiscal year 1983 and prior years: *Provided further,* That funds provided in the appropriation "Construction, Major Projects" for fiscal year 1984, for each approved project shall be obligated (1) by the awarding of a working drawings contract by September 30, 1984 and (2) by the awarding of the construction contract by September 30, 1985: *Provided further,* That the Administrator shall promptly report in writing to the Comptroller General and to the Committees on Appropriations any approved major construction project in which obligations are not incurred within the time limitations established above; and the Comptroller General shall review the report in accordance with the procedures established by section 1015 of the Impoundment Control Act of 1974 (Title X of Public Law 93-344): *Provided further,* That no funds from any other account may be obligated for constructing, altering, extending, or improving a project which was approved in the budget process and funded in this account until one year after final acceptance of the project by the Veterans Administration.

The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

The conference agreement modifies the House provision limiting the use of advance planning funds only to those projects carried in the report. The modified provision earmarks $15,000,000 of advance planning funds for projects proposed in fiscal year 1983 and prior years. This will permit all of those projects currently proposed to proceed.

The conference agreement should not be interpreted as abandoning the effort to develop a stable priority list of construction projects. The conferees are concerned with shifting construction priorities. However, it may be that tracking procedures can be developed to accomplish the same objectives. The conferees direct the VA to notify the Committees on Appropriations of any changes in new projects under the advance planning fund and the reason for the change.

Amendment No. 54: Appropriates $185,378,000 for construction, minor projects, instead of $193,378,000 as proposed by the House and $177,185,000 as proposed by the Senate. The conferees agree that the reduction from the budget request includes $8,000,000 of the $39,157,000 increase requested for minor construction projects and $500,000 of the $12,973,000 increase requested for the expenses of the Office of Construction.

Amendment No. 55: Establishes the limitation on expenses of the Office of Construction at not more than $45,338,000 as proposed by the House, instead of $45,838,000 as proposed by the Senate.

Amendment No. 56: Codifies program citation.

Amendment No. 57: Deletes language proposed by the House and stricken by the Senate authorizing not to exceed $150,000,000 from the direct loan revolving fund for mortgage assistance to veterans. The conferees agree to delete funding for the mortgage assistance to veterans program because it is a new program that is not presently authorized. The conferees have taken this action without prejudice and will wait until enactment of authorizing legislation before funding is considered.

TITLE III—CORPORATIONS

FEDERAL HOME LOAN BANK BOARD

Amendment No. 58: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate permitting the transfer of funds between the fiscal year 1983 limitations on administrative and nonadministrative expenses with the approval of the Committees on Appropriations.

TITLE IV—GENERAL PROVISIONS

Amendment No. 59: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate with an amendment as follows: *to site-related travel performed in connection with the Comprehensive Environmental Response, Compensation, and Liability Act of 1980*

The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

CONFERENCE TOTAL—WITH COMPARISONS

The total new budget (obligational) authority for the fiscal year 1984 recommended by the Committee of Conference, with comparisons to the fiscal year 1983 amount, the 1984 budget estimates, and the House and Senate bills for 1984 follow:

New budget (obligational) authority, fiscal year 1983	$54,212,179,889
Budget estimates of new (obligational) authority, fiscal year 1984	[1]49,561,458,896
House bill, fiscal year 1984	[2]58,992,788,000
Senate bill, fiscal year 1984	54,254,397,810
Conference agreement, fiscal year 1984	55,789,340,000
Conference agreement compared with:	
New budget (obligational) authority, fiscal year 1983	+1,577,160,111

Budget estimates of new (obligational) authority, fiscal year 1984.....	+6,227,881,104
House bill, fiscal year 1984	−3,203,448,000
Senate bill, fiscal year 1984	+1,534,942,190

[1] Includes $4,832,200,000 of budget estimates not considered by the House.

[2] Includes for comparability $4,566,700,000 deferred by the House.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. ALEXANDER (at the request of Mr. WRIGHT), until 5 p.m. today, on account of family reasons.

Mr. LEWIS of Florida (at the request of Mr. MICHEL), from 8 p.m. today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. MCKERNAN) to revise and extend their remarks and include extraneous material:)

Mr. DANNEMEYER, for 30 minutes, today.

Mr. DANNEMEYER, for 30 minutes, on June 28.

Mr. DANNEMEYER, for 30 minutes, on June 29.

Mr. DANNEMEYER, for 30 minutes, on June 30.

Mr. GEKAS, for 15 minutes, today.

Mr. GRADISON, for 10 minutes, today.

Mr. SENSENBRENNER, for 5 minutes, today.

Mr. SMITH of New Jersey, for 10 minutes, today.

Mr. HARTNETT, for 60 minutes, on June 28.

Mr. MCEWEN, for 60 minutes, on June 28.

(The following Members (at the request of Mr. GONZALEZ) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 30 minutes, today.

Mr. MINISH, for 60 minutes, today.

Mr. LANTOS, for 5 minutes, today.

Mr. AUCOIN, for 5 minutes, today.

Mr. FEIGHAN, for 5 minutes, today.

Mr. LAFALCE, for 5 minutes, today.

Mr. BROWN of California, for 30 minutes, today.

Mr. ROE, for 5 minutes, today.

Mr. KASTENMEIER, for 10 minutes, today.

Mrs. BOGGS, for 5 minutes, today.

Mr. ZABLOCKI, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. EDGAR, and to include extraneous material, notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $2,535.75.

Mr. ALBOSTA, immediately following Mr. DANNEMEYER.

(The following Members (at the request of Mr. MCKERNAN) and to include extraneous matter:)

Mr. LONG of Maryland.

ADJOURNMENT

Mr. GONZALEZ. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 9 o'clock and 20 minutes p.m.), under its previous order, the House adjourned until Monday, June 27, 1983, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1422. A letter from the Deputy Administrator, Veterans' Administration, transmitting a draft of proposed legislation to amend title 38, United States Code, to modify and improve the educational assistance programs administered by the Veterans' Administration, and for other purposes; to the Committee on Veterans' Affairs.

1423. A letter from the Attorney General of the United States, transmitting notice that the Justice Department will not appeal a decision of a district court which held unconstitutional a portion of the Social Security Act, title 42, United States Code, 402(d)(5), pursuant to section 21 of Public Law 96-132; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. JONES of North Carolina: Committee on Merchant Marine and Fisheries. H.R. 1556. A bill to authorize the conveyance of the Liberty ship John W. Brown to the John W. Brown preservation project; with amendments (Rept. No. 98-261). Referred to the Committee of the Whole House.

Mr. MITCHELL of Maryland: Committee of Conference. Conference report on S. 273 (Rept. No. 98-262). Ordered to be printed.

Mr. MITCHELL of Maryland: Committee of Conference. Conference report on S. 272 (Rept. No. 98-263). Ordered to be printed.

Mr. BOLAND: Committee of Conference. Conference report H.R. 3133 (Rept. No. 98-264). Ordered to be printed.

Mr. DIXON: Committee on Appropriations. H.R. 3415. A bill making appropriations for the government of the District of Columbia and other activities chargeable in

whole or in part against the revenues of said District for the fiscal year ending September 30, 1984, and for other purposes (Rept. No. 98-265). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. GIBBONS (by request):

H.R. 3398. A bill to change the tariff treatment with respect to certain articles, and for other purposes; to the Committee on Ways and Means.

By Mr. BIAGGI (for himself, Mr. JONES of North Carolina, Mr. FORSYTHE, Mr. ANDERSON, Mr. BENNETT, Mr. ADDABBO, Mr. BREAUX, Ms. MIKULSKI, Mr. BONKER, Mr. PRITCHARD, Mr. HUTTO, Mr. HUGHES, Mr. D'AMOURS, Mrs. BOGGS, Mr. DONNELLY, Mr. LIPINSKY, and Mr. AKAKA):

H.R. 3399. A bill to establish a Maritime Redevelopment Bank of the United States through the restructuring of certain credit programs to promote innovation, increased productivity, competitiveness and capital investment in maritime enterprise, and for other purposes; to the Committee on Merchant Marines and Fisheries.

By Mr. SIKORSKI (for himself, Mr. WAXMAN and Mr. GREGG):

H.R. 3400. A bill to amend the Clean Air Act to control certain sources of sulfur dioxides and nitrogen oxides to reduce acid deposition, and for other purposes; to the Committee on Energy and Commerce.

By Mr. DOWDY of Mississippi:

H.R. 3401. A bill to designate that hereafter the U.S. Post Office and Courthouse at 245 East Capital Street in Jackson, Miss., will be known as the James O. Eastland Federal Court Building; to the Committee on Public Works and Transportation.

H.R. 3402. A bill to designate that hereafter the Federal building at 100 West Capital Street in Jackson, Miss., will be known as the Dr. A. H. McCoy Federal Building; to the Committee on Public Works and Transportation.

By Mr. KASTENMEIER (for himself, Mr. RODINO, Mr. MAZZOLI, Mr. FISH, Mr. MOORHEAD, Mr. KINDNESS, Mr. FRANK, Mr. CROCKETT, Mr. HUGHES, Mr. GLICKMAN, Mr. HYDE, Mrs. SCHROEDER, Mr. SAWYER, Mr. SYNAR, Mr. SAM B. HALL, JR., Mr. AKAKA, Mr. LOWRY of Washington, Mr. WON PAT, Mr. SOLARZ, Mr. EDGAR, Mr. LEHMAN of Florida, Mr. STOKES, Mr. SUNIA, Mr. LELAND, Mr. AUCOIN, Mr. OBERSTAR, Mr. PRITCHARD, Mr. FEIGHAN, Mr. BONKER, Mr. MITCHELL, Mr. HERTEL of Michigan, Mr. SIMON, Mr. BEVILL, Mr. GONZALEZ, Mr. SMITH of Florida, Mr. FRANKLIN, Mr. MORRISON of Washington, Mr. REID, Mr. HAMMERSCHMIDT, Mr. WEISS, and Mrs. VUCANOVICH):

H.R. 3403. A bill to aid State and local governments in strengthening and improving their judicial systems through the creation of a State justice institute; to the Committee on the Judiciary.

By Mr. KOSTMAYER:

H.R. 3404. A bill to amend the Wild and Scenic Rivers Act to designate a segment of the Delaware River in Pennsylvania and New Jersey for potential addition to the National Wild and Scenic Rivers System, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MINETA (for himself and Mr. PANETTA):

H.R. 3405. A bill to amend title XVIII of the Social Security Act to restrict the time period within which a penalty for late enrollment can be imposed under part A or part B of the medicare program; jointly, to the Committees on Ways and Means and Energy and Commerce.

By Mr. OXLEY:

H.R. 3406. A bill to recognize the organization known as the Daughters of Union Veterans of the Civil War 1861-65; to the Committee on the Judiciary.

By Mr. PORTER:

H.R. 3407. A bill to amend title 18 of the United States Code to provide a mandatory 30-day waiting period for the purchase of handguns; to the Committee on the Judiciary.

By Mr. RINALDO:

H.R. 3408. A bill to repeal the denial of the use of the accelerated cost recovery system with respect to tax-exempt obligations and the expiration of the authority to issue such obligations; to the Committee on Ways and Means.

By Mr. SHANNON (for himself, Mr. BOLAND, Mr. EARLY, Mr. CONTE, Mr. MOAKLEY, Mr. MAVROULES, Mr. MARKEY, Mr. DONNELLY, Mr. STUDDS, and Mr. FRANK):

H.R. 3409. A bill to amend the Federal Supplemental Compensation Act of 1982 with respect to the number of weeks of benefits paid in any State; to the Committee on Ways and Means.

By Mr. SIMON:

H.R. 3410. A bill to authorize the Secretary of Agriculture to make loans to establish and operate agricultural communities that provide shelter and employment for individuals in lieu of certain Federal assistance; to the Committee on Agriculture.

By Mr. OBERSTAR:

H.R. 3411. A bill to amend title II of the Social Security Act to provide full benefits for disabled wives, husbands, widows, and widowers without regard to age (subject to limited adjustments to reflect any previous reductions in their benefits), to liberalize the strict definition of disability which is presently applicable to widows and widowers, and to provide benefits for essential spouses of disability beneficiaries without regard to age or children in care; to the Committee on Ways and Means.

H.R. 3412. A bill to amend title II of the Social Security Act to liberalize eligibility for disability benefits by providing for the determination of an individual's eligibility for such benefits without regard to the recency of such individual's coverage; to the Committee on Ways and Means.

By Mr. SCHUMER:

H.R. 3413. A bill to limit temporarily the acquisition of depository institutions and the commencement of certain new activities by State chartered depository institutions, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. SEIBERLING:

H.R. 3414. A bill to amend the Internal Revenue Code of 1954 to allow the targeted jobs credit for hiring any member of an economically disadvantaged family who is between the ages of 16 and 18 and who has been charged with a delinquent act; to the Committee on Ways and Means.

By Mr. DIXON:

H.R. 3415. A bill making appropriations for the Government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending September 30, 1984, and for other purposes.

By Mr. DOWDY of Mississippi:

H.J. Res. 306. Joint resolution to provide for the designation of April 9, 1984 as "National POW/MIA Recognition Day"; to the Committee on Post Office and Civil Service.

By Mr. HOYER (for himself, Mr. CONTE, Mrs. HALL of Indiana, Ms. MIKULSKI, and Mr. TAYLOR):

H.J. Res. 307. Joint resolution designating the month of November 1983 as "National Diabetes Month"; to the Committee on Post Office and Civil Service.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 11: Mr. CROCKETT.

H.R. 24: Mr. CARNEY, Mr. MCGRATH, Mr. MOLINARI, Mr. SCHEUER, Mr. BEVILL, Mr. JEFFORDS, Mr. SMITH of Florida, Mr. QUILLEN, Mr. CORRADA, Mr. WAXMAN, Mr. LEVIN of Michigan, Mr. STOKES, Mr. SUNIA, Mr. HUGHES, Mr. LOWRY of Washington, and Mr. VENTO.

H.R. 25: Ms. OAKAR.

H.R. 137: Mr. SILJANDER.

H.R. 352: Mr. EVANS of Illinois.

H.R. 433: Mr. DOWDY of Mississippi, Mr. FRENZEL, and Mr. WYLIE.

H.R. 555: Mr. SHUSTER and Mr. EVANS of Illinois.

H.R. 659: Ms. MIKULSKI.

H.R. 881: Mr. THOMAS of Georgia, Mr. HARKIN, Mrs. LLOYD, Mr. CROCKETT, Mrs. KENNELLY, Mr. SKELTON, Mr. PRICE, Mr. RATCHFORD, Mr. PEPPER, Mr. COYNE, Mr. TORRES, Mr. WILSON, Mr. CLAY, Mr. SHARP, Mr. CLARKE, and Mr. HUBBARD.

H.R. 1092: Mrs. SCHNEIDER and Mr. LOWERY of California.

H.R. 1347: Mr. MCCOLLUM.

H.R. 1373: Mr. ROE.

H.R. 1392: Mr. CARR.

H.R. 1415: Mr. TAUKE.

H.R. 1584: Mr. SILJANDER.

H.R. 1617: Mr. COLEMAN of Missouri and Mr. MINETA.

H.R. 1657: Mr. MARKEY and Mr. RANGEL.

H.R. 1693: Mr. WHEAT.

H.R. 1743: Mr. WYDEN, Mr. BIAGGI, Mr. JEFFORDS, and Mr. TORRES.

H.R. 1815: Mr. SEIBERLING.

H.R. 1903: Mr. CARR, Mr. LEVINE of California, and Mr. RODINO.

H.R. 1914: Mr. DASCHLE, Mrs. BOXER, Mr. EVANS of Illinois, Mr. FISH, Mr. KILDEE, Mr. FEIGHAN, Mr. STOKES, Mr. SEIBERLING, Mr. LANTOS, Mr. MRAZEK, Mr. SMITH of Florida, Mrs. SCHROEDER, Mr. COOPER, Mr. MARTINEZ, and Mr. LAFALCE.

H.R. 1955: Mr. LOEFFLER, Mr. MCKERNAN, Mr. MAVROULES, and Mr. LUKEN.

H.R. 2012: Ms. OAKAR and Mr. FOGLIETTA.

H.R. 2036: Mr. MCNULTY, Ms. MIKULSKI, and Mr. SMITH of Florida.

H.R. 2053: Mr. TORRICELLI.

H.R. 2073: Mr. BADHAM.

H.R. 2243: Mr. OBEY and Mr. FRANK.

EXTENSIONS OF REMARKS

YELLOW RAIN

HON. TOM LANTOS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. LANTOS. Mr. Speaker, in an article of extraordinary persuasiveness, our distinguished colleague from New York, Representative STEVE SOLARZ, condemns the use of chemical weapons by the Soviet Union in Southeast Asia.

I commend my friend from New York, chairman of our Subcommittee on Asian and Pacific Affairs, for his most important work in this area and I recommend his excellent article to all my colleagues.

The article follows:

[From the Wall Street Journal, June 22, 1983]

YELLOW RAIN: BEYOND A REASONABLE DOUBT

(By Stephen J. Solarz)

There may be reasons for doubting that the Soviet Union is involved with illegal chemical warfare in Asia, but the facts of the case aren't among them. No matter how hard those who prefer to see and hear and speak no evil may try, the evidence simply cannot be explained away.

It is not just the United States but also Canada, Britain, Australia, China and Thailand, among others, which have found that illegal chemical warfare is being used in Asia. Even the Socialist foreign minister of France, who is no enemy of Vietnam, recently announced that France on its own had "firm and convincing evidence" of the use of the weapons in Southeast Asia and Afghanistan.

Yet it is easy to understand why so many good people resist this conclusion. When former Secretary of State Alexander Haig first aired the charge that the Soviet Union was violating treaties prohibiting chemical and biological warfare, his publicly presented evidence—a twig—seemed so thin that Mr. Haig's claim appeared to be more an exercise in Cold War propaganda than a presentation of carefully compiled scientific data. Many people here and abroad also worried that Mr. Haig's accusation was part of a Reagan administration attempt to justify its hostility to arms control agreements with the Soviet Union.

PLENTY OF EVIDENCE

The initial skepticism which greeted Mr. Haig's accusation notwithstanding, the use of chemical warfare by the U.S.S.R. and Vietnam has now been established beyond doubt. Not only is there persuasive, if highly classified, technical data indicating Soviet involvement in the manufacture, supply and use of chemical weapons, but peer reviews of the U.S. evidence by a panel of Americans scientists and a leading Japanese authority on the subject have independently confirmed that the chemical agents discovered were indeed man-made, prohibited substances. In addition, there is publicly available medical testimony, hundreds of first-hand reports from the victims of "yellow rain," and laboratory analysis of samples taken from areas in which these prohibited toxins have been found.

Doctors from France, India, the U.S., the Philippines and Canada who work with refugees along the borders to which the victims of chemical warfare have fled almost uniformly report finding symptoms in victims of attacks which aren't consistent with any known disease, but which do conform to symptoms associated with illegal chemical weapons.

The stories of the victims are compelling in themselves. Contrary to what some doubters imply, these reports do not come from a handful of able-bodied, politically committed Meo leaders, but from a wide variety of Khmer, Hmong and Afghan refugees, ranging from little children to the elderly.

Their accounts of "yellow rain" attacks are particularly convincing in that they are usually not volunteered, but are revealed only when a doctor asks the refugees directly about their symptoms.

Refugee reports are dismissed by many people as inherently unreliable. This is exactly what happened when the first stories began to come out of Nazi-occupied Europe about the Holocaust. In fact refugees have a record of being excellent sources of information on inaccessible societies and situations.

The Chinese who fled to Hong Kong in 1962 carried reports of mass famine. Even experts dismissed their testimony. Yet it is now known that at least 10 million people perished.

Cambodian refugees fleeing Pol Pot's minions after the fall of the Lon Nol regime in 1975 related harrowing accounts of autogenocide. Many people dismissed the bloody truth as a Cold War lie invented to discredit Vietnam, which was seen as supporting Cambodia. Yet we now know that about a third of the Khmer people lost their lives during Pol Pot's brief period in power.

The reports of Afghan refugees fleeing Soviet tyranny and of Guatemalan refugees fleeing their own army, which has gone on a rampage in the countryside, are now widely accepted. It strains credulity to believe that the refugees escaping "yellow rain" in Asia, alone among all the victims of repression, are uniquely engaged in a monumental hoax.

For those not fully convinced by the testimony of independent doctors or the reports of victimized refugees, even more definitive proof is available in the form of laboratory analysis. Samples obtained from areas in which "yellow rain" has been reported reveal combinations of trichothecene toxins not found in nature. Since Hanoi doesn't have the scientific or technical capacity to manufacture these illegal substances, it is clear that Vietnam must be receiving them from the Soviet Union.

The only explanation of these manmade poisons that would exculpate the Soviet Union is that the CIA or some other foreign agency planted the evidence. But not even the U.S.S.R. has suggested such a conspiracy theory as a way of explaining the undeniable existence of these toxins.

In its formal response to the U.S. charges, the Soviet Union has acknowledged the existence in Laos and Cambodia of these prohibited chemicals. But it has claimed that they are due to U.S. use of Agent Orange in Vietnam, which, according to the Soviet argument, destroyed the natural vegetation and led to the growth of elephant grasses that produced the toxins in question. These deadly poisons, the Soviets go on to claim, are being carried into hostile Hmong and Khmer regions by monsoon winds that, somehow or other, deposit them nowhere else. So far not a single serious independent scientist, or even Rube Goldberg, has lent any credence to this Soviet invention of inherently implausible interrelations, and a U.N. team of experts found no validity in the Soviet hypothesis.

WE CAN'T IGNORE THE VICTIMS

The latest effort to explain away the damning evidence asserts that the trichothecenes found in Southeast Asia grew on bee defecations. Since bees have presumably long been indigenous to the region, it is odd that these deadly manifestations show up only now. The incredible bee hypothesis, unlike the one advanced by the Soviet Union, does not even pretend to explain why these poisonous substances did not appear in earlier years or in other places.

Some people resist the compelling evidence of Soviet violation of chemical and biological arms accords out of a fear that such a conclusion would jeopardize prospects for reaching future arms-control agreements. But the conclusion which the evidence compels is not that the U.S. should refrain from entering into such agreements with the Soviets, but that any such treaties must have adequate provisions for verification, in contrast to the chemical-war conventions which lack them.

Arms-limitation agreements with the Soviets are essential if we are going to bring the arms race under control. But it is absolutely imperative that, in the midst of such efforts, we don't turn our backs on another helpless group of victims. Otherwise the crime will spread. Reports are now coming in of similar chemical attacks in Eritrea. This outrage must end.●

POPE PAUL'S VISIT TO HOMELAND

HON. HENRY J. NOWAK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. NOWAK. Mr. Speaker, the media this week have been filled with observations and commentary on Pope John Paul II's visit to his homeland.

Poland is a country struggling with social injustices incurred by a repressive Communist government and a system of martial law. Besides being

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

deprived of basic human rights, the Poles live in a grim economic environment where basic necessities of life, such as food, clothing, and medical supplies, are often lacking. Yet the fervent national pride and hope of the Polish people persists, even under the present political system.

Although the Vatican has described the papal visit to Poland as a "religious pilgrimage," it clearly has immense political significance for the Polish nation. The Jaruzelski regime allowed the papal tour hoping it would have a moderating effect on the Polish people. Instead, the Pope's message has been a call for peace, justice, and most importantly, freedom. He has openly supported the renewal of Solidarity, and a return to the social reforms introduced during Solidarity's short era.

The people of Poland certainly must be heartened by this strong voice from Rome which denies legitimacy to and strongly challenges the repressive Polish Government. The Pope's political candor and refusal to overlook blatant social injustice has instilled new hope for freedom and unity among all Poles. His visit to Poland is a symbol of many of the values and ideals our own Founding Fathers vigorously defended more than 200 years ago.

I know we all hope and pray that the long-term results of the Pope's visit will be a lessening of tensions and a broadening of freedoms in his native land.●

BZ DEMILITARIZATION FACILITY AT THE PINE BLUFF ARSENAL

HON. BERYL ANTHONY, JR.

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. ANTHONY. Mr. Speaker, H.R. 2972, the military construction authorization for fiscal year 1984, and H.R. 3263, the military construction appropriations for fiscal year 1984, contain $10.2 million for a BZ demilitarization facility at the Pine Bluff Arsenal.

This facility will be used to destroy a 20-year-old stockpile of BZ, a nonlethal type of agent that temporarily incapacitates personnel. Two questions have arisen about this project and the future plans the Army may have to convert this facility for use to demilitarize other types of chemical agents now stored at the Pine Bluff Arsenal. One question that causes some concern is whether the Army plans to bring chemical agents stored at other locations around the country to the Pine Bluff Arsenal for demilitarization. BZ is stored at only one other site than the Pine Bluff Arsenal. That is the Chemical Systems Laboratory at the Aberdeen Proving Ground, Md. I have a letter I would like to submit for the record in which the Army states it has no plans to move the BZ agent at the Chemical Systems Laboratory to Pine Bluff Arsenal for demilitarization.

The other question is whether there would be congressional review before the BZ facility at the Pine Bluff Arsenal were converted to a facility capable of destroying other chemcial agents. In the letter I have submitted for the RECORD, the Army states that congressional authorization would be sought before the Army would convert the BZ demilitarization facility at the Pine Bluff Arsenal to a facility for demilitarizing other types of chemical agents.

The letter follows:

DEPARTMENT OF THE ARMY,
Washington, D.C., June 21, 1983.

Hon. BERYL ANTHONY, Jr.,
House of Representatives,
Washington, D.C.

DEAR MR. ANTHONY: This is to advise you that the U.S. Army does not have any intentions or plans for moving the 330 pounds of bulk BZ agent and submunitions stored at the Chemical Systems Laboratory, Aberdeen Proving Ground, Maryland to Pine Bluff Arsenal, Arkansas for demilitarization purposes.

The fiscal year 1984 budget request contains $10.2M in MCA funds for the construction of the BZ facility, disposal and support buildings, at Pine Bluff Arsenal. Should a decision be reached to dispose of other obsolete chemical munitions and bulk agent at Pine Bluff Arsenal, additional MCA funds would be requested from Congress to accomplish this requirement.

Sincerely,

H. S. LONG, Jr.,
Major General, GS Assistant Deputy Chief of Staff for Operations and Plans.●

LARRY NULL

HON. TONY COELHO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. COELHO. Mr. Speaker, next month the Fresno and Madera Counties' Committee on Political Education will honor a distinguished labor leader, Larry Null, as Labor Leader of the Year.

The honoree is most deserving for his numerous contributions to the working men and women of the Fresno and Madera County region, as well as for his work throughout the State of California.

Larry Null has served as an executive secretary-treasurer for the Sequoia District Council of Carpenters since 1968. He has been a member of the Carpenters Union for 35 years and has held many offices in his union. He is presently vice chairman of the 46 Counties Conference of Carpenters as well as vice president of the State council of carpenters. Mr. Null was appointed by former Governor Brown to the advisory committee pension funds investments, of which he is now chairman.

Under his leadership, Mr. Null's pension funds committee was among the first to rush assistance to the victims of the May 2 Coalinga earthquake. While banks and government agencies were still in the planning stages for many relief programs, Mr. Null's carpenters pension fund moved quickly to make $5 million available for financing of new structures in the demolished town. Much of Coalinga's new appearance will bear the stamp of Mr. Null and the dedication of his labor group.

Fresno County has also benefited from the work Larry did for 4 years on the county planning commission. In addition to his work in political affairs, he served the previous administration in Sacramento by identifying some of the problems in California's construction industry.

Larry is also a member of the Boy Scouts of America Advisory Board.

In every sense of the word, Larry Null is dedicated to the labor movement in our great State, to the public good, and to his family. Our colleagues, Mr. Speaker, will certainly join me in saluting this great American.●

WOMEN'S AMERICAN ORT CONVENTION

HON. HOWARD L. BERMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BERMAN. Mr. Speaker, I rise today to call to the Members' attention the upcoming national convention of the Women's American ORT—Organization for Rehabilitation Through Training—to take place October 16–19 in Los Angeles. Some 1,500 leaders from this organization, all of them leaders within their local communities, will gather together to represent the over 145,000 members of Women's American ORT.

Women's American ORT is primarily concerned with the quality of public education. The group's philosophy, Mr. Speaker, which I endorse completely, is that every person has an equal right to develop to their fullest potential. Worldwide, ORT has trained over 2 million people in its 103 years of operation, through vocational and technical education programs. They represent the largest nongovernmental program of this kind, today operating 800 facilities in two dozen countries, training over 100,000 people annually.

Their programs teach young people that they have a right to know what they can do, and what their strengths

and weaknesses are. ORT shows young people how they can apply their skills and aptitudes, and how to secure employment on their own. They are involved in efforts to raise the public's awareness as to the need for quality educational programs.

In this country, Women's American ORT is actively engaged in gathering support for educational legislation, providing career education, promoting the use of the entire community as a "laboratory for learning" for students, and in the dissemination of public information on education.

Their cause is of vital importance to this Nation and the world, for it is the youth of today which must become the leaders of tomorrow. I am pleased to be able to extend my personal congratulations to the delegates to the Women's American ORT convention, and to all the members from coast to coast, for their excellent and important work. I know that their efforts are creating a significant impact in improving the quality of public education.●

RURAL VOTER PROJECT

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. JONES of Tennessee. Mr. Speaker, I want to bring to the attention of my colleagues the outstanding effort the Rural America organization is making in registering voters in our rural communities. This project recognizes that rural citizens lost enough of their political power during the decades of urban migration. With the loss of voting power went a loss of fair and equitable treatment at the hands of the Federal Government.

Much influence can be recaptured, however, by turning rural nonvoters into rural voters. I applaud this project and am inserting for your information an article by David Raphael from the newspaper Rural America.

The article follows:

IN SEARCH OF THE RURAL VOTER

(By David Raphael)

At its December meeting, Rural America's Board of Directors adopted an organization plan and budget for 1983, paving the way for an expansion of the organization's activities in several new and exciting areas.

The plan describes our present organizational structure and activities and reflects our program priorities and goals for the coming year. It grows out of extensive discussions between the staff and board. Its adoption establishes a set of important new directions for the organization—directions that emerge after more than a decade of national leadership in rural issues and that respond to some of the more critical issues facing people in small towns and rural areas today.

In developing the plan, the board and staff recommitted themselves to the continuing struggle for rural equity and justice. One of our most important new initiatives in that struggle is the Rural Voter Project, which establishes a significant response to the historic neglect of human needs in rural areas and the immediate political and economic crisis confronting rural citizens. Its implementation at this time is likely to have a profound impact on the structure and focus of Rural America in the years ahead.

Simply put, the purpose of the project is to identify, support and ultimately increase the number of rural voters participating in progressive politics, at every level and in all regions.

The rural vote remains a potent force in American politics. Roughly one-third of the voting-age population now lives in nonmetro areas—the nation's fastest growing sector—with the remaining two-thirds split between suburban and central-city areas. Between 1980 and 1984, it is estimated that nearly four million new rural voters will be added to the rolls as a result of major population shift and the continued growth of rural communities.

Throughout our country's history, rural people have played central roles in populist, civil rights and other popular movements. Once again, it is clear that these forces must be mobilized around a new national agenda if we are to resolve the pressing social, political and economic problems facing us today as a nation. In short, the rural electorate must be organized.

Through the Rural Voter Project, we intend to build an alliance between diverse rural constituencies whose effective political expression has been systematically stifled by conservative forces and special interests or restricted by lack of organization.

The initial work of the project will focus on analyzing rural participation in the political process and networking among community and citizen groups. This phase will culminate with a national gathering later this year that will bring together rural political activists, elected officials, researchers and others interested in increasing the effectiveness of the rural vote.

We are delighted that former editor and board member Richard Margolis has agreed to return to the Rural America staff to coordinate this important effort. In the coming months, he will be consulting with individual members, community leaders and others whose support and participation are vital to the project's success. Working with the Washington and field-based staff of Rural America, he also will identify a national network of resource people and local activists to help guide the project.

People interested in participating in the Rural Voter Project should write Margolis at the national office.●

THE "GETAWAY SPECIAL" PROGRAM

HON. ANTONIO BORJA WON PAT

OF GUAM

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. WON PAT. Mr. Speaker, the phenomenal resurgence of interest and enthusiasm for this country's space program is largely attributed to the success of our space shuttle flights. The unique experiment prepared by high school students from Camden, N.J., is a credit to the students, the schools, NASA, and the public image of RCA. With respect to education, the "getaway specials" are an inspiration. They have taken these teenagers' enthusiasm and converted it into a personal learning experience, as well as a team effort. You do not tell a child that science and math are important, you show him why.

The efforts of NASA and RCA are certainly due our applause, but beyond their goodwill it is necessary to acknowledge the pragmatic value of their participation. If only other corporations would look forward far enough, beyond the bottom line, to encourage this type of interest in their industries. Today's children are tomorrow's scientists and engineers. They are at a pivotal point in their development, and if our Nation is to retain its advantage we need more and more of them to enter into technological fields. As a former teacher, I am excited by these ideas. I only hope that our businesses and industries are listening.●

A DESIRE NAMED STREETCAR

HON. GENE TAYLOR

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. TAYLOR. Mr. Speaker, the June 1983 edition of the Lions Club magazine the Lion carried a story relating how interested citizens, who have a dream, can make life a little better for their friends and neighbors.

The article deals with the work of Fred Rogers and Cecil Veatch, two friends and constituents, a trolly they restored and King Jack Park in Webb City, Mo., where their good work brings fun and joy to hundreds of people in southwest Missouri.

The article follows:

A DESIRE NAMED STREETCAR

(By Marti Attoun)

Fred Rogers' dream hasn't come easy. It's cost him six years of backbreaking volunteer work, three broken toes, and traveling more than 10,000 miles at his own expense.

But it's all been worth it.

Last August, hundreds of residents of Webb City, Missouri, and the surrounding area, shared in Rogers' dream. They climbed aboard the only operable streetcar in Missouri—a shiny, green restored trolley from the Southwest Missouri Railway, and chugged along a mile track around King Jack Park. Shouting "All Aboard" was a delighted Rogers, who engineered the streetcar rebuilding as a Lions Club project back in 1976.

"My whole desire is to see kids get to ride on a streetcar," Rogers said shortly after the arduous rebuilding began. Now his two-year old grandson knows the joys of streetcar riding along with 80 and 90 year-old residents of a local nursing home who were treated to a ride.

Nearly 40 years after Streetcar No. 60 was abandoned to serve out its days as a shed on

a Joplin farm, a local bank, the car's owner, donated it to the Webb City Lions Club.

The battered, rusty hull with weeds sprouting through the floorboard was towed to a lot behind the city's police station and work began in earnest. Another skeletal streetcar was unearthed from near the neighboring community of Carterville and was parked beside it to be used for parts.

Rogers and Cecil Veatch, a fellow Lion, began scraping the gray paint and sandblasting. A $10,000 donation from the Webb City Lions got the project rolling, and Rogers logged between 30 and 40 hours a week to get the trolley back on its tracks.

The front and rear vestibules were rebuilt, every piece of salvageable wood was taken out, bleached and stained.

All of the labor was donated, and many of the parts were, also. Rogers, often accompanied by Veatch, began scouring the United States and even went to New Zealand in search of rare parts. As word of the project spread, cash donations came in along with some hard-to-find parts. An employee of the National Park Service donated a headlight and a bell. A Webb City cabinet company donated necessary lumber and a salvage company handed over curtains culled from an Amtrak train. A surprising donation of five dollars came from a Chicago minister who declared that he would ride the car upon completion. Several individuals donated $100 or more and their names have been placed on a bronze plaque at the park.

Nothing discouraged Rogers and his fellow-Lion, Cecil Veatch. When cold weather blasted in, Rogers moved into a small room beneath the police station or worked in the car warmed by a coal oil stove.

Crutches did slow him up a bit, though, after a heavy metal part fell and fractured three of his toes. Veatch later broke his foot during an accident unloading rails. And both men were rushed to the hospital after they encountered a wasps nest in the front vestibule.

Rogers' labor of love on Streetcar No. 60 has not gone unnoticed. In 1980 he was named Webb City's Outstanding Citizen of the Year.

He laughs when he recalls the days when he was a youngster, riding the old Country Club streetcar line and trying to trick the conductors to save a token so he could sell it for needed cash. "I've been kicked off more than once," he smiles at his youthful pranks.

There's little chance, though, that Rogers will be kicked off Streetcar No. 60. He's earned a free ride several times over.●

G. PRESCOTT LOW, PIONEERING PUBLISHER

HON. BRIAN J. DONNELLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. DONNELLY. Mr. Speaker, the American Newspaper Publishers Association last week paid tribute to a man who has been in the forefront of publishing technology for a generation.

G. Prescott Low, the chairman of the board of the Patriot Ledger of Quincy, Mass., has been a newspaperman for half a century.

The ANPA honored him primarily for his efforts to adapt new technologies to newspaper production. But Mr. Low's commitment is not solely to the technology itself. He has been committed to advancing the mechanics of printing a newspaper so that greater effort can be devoted to the quality of the editorial content. That devotion to editorial superiority is familiar to anyone who knows the excellent and widespread reputation of the Patriot Ledger.

I join the American Newspaper Publishers Association in recognizing the contributions made to daily journalism by G. Prescott Low in the course of the last 50 years.

[From the Patriot Ledger, June 14, 1983]

G. PRESCOTT LOW CITED FOR PIONEERING CHANGES

LAS VEGAS (UPI).—G. Prescott Low, chairman of the board of The Patriot Ledger in Quincy, Mass., has been honored by the American Newspaper Publishers Association as a pioneer in the technology that brought newspapers into the computer age.

ANPA President William C. Marcil presented Low with an award plaque at a luncheon in his honor yesterday. He described Low as a man who pioneered "two of the most vital bridges from hot-metal production to today's world of computerized front-end systems, high-speed typesetting and pagination."

The bridges to computer-age technology perfected at The Patriot Ledger were the Photon Machine and the Dow Rapid-Etch engraving process.

"Both are virtually extinct in our business today," Marcil said, "but their role in the evolution of photocomposition should not be forgotten."

"Pres Low's burning interest in new methods of printing really began in the 1940s with a conviction that newspapers and textbook printers could not survive economically with the old methods," said Marcil.

Low told UPI yesterday he looked forward to the day when the money saved in daily production would be channeled into a better news and editorial feature production.

"There will be ample room and ample money brought about through technical savings to have better newspapers in the future," said Low, 70, who is now in his 50th year in the newspaper industry.

"I see a good future for newspapers," Low said. "I am not worried in any way about the competition from the instant perishable media as so many people are. You can pick up a newspaper today or tomorrow and the news is not perishable as with television, radio and cable."●

COMMENDING MOODY HIGH SCHOOL BASEBALL TEAM

HON. SOLOMON P. ORTIZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. ORTIZ. Mr. Speaker, I would like to commend the Moody High School baseball team for its accomplishment as the 1983 runner up in class 5A. It gives me enormous pride to point out that the Moody team is the only one from Corpus Christi, Tex., to reach the final game in the State championship playoff in its class since 1967. The coaches, players, and others making this feat possible are the following: Dr. Vance Littleton, Dr. Ed Grant, Steve Castillo, Joe Sendejar, Chipper Zamora, Arthur Delgado, Julian Mondragon, Leo Zarate, Rick Gomez, Jimmy Reyes, John Perales, Richard Perales, Robert Ibarra, Chato Ibarra, Rene Garcia, Henry Gonzales, Abel Flores, Robert Trevino, Arnold Acuna, Jesse Villanueva, Danny Aleman, Rene Castillo, Sonny Colunga, Rudy Beltran, Pokie Villalon, Chris Hubbard, Bill Martinez, and Edmond Mechell.●

CONNECTICUT'S CITIZENS SPEAK OUT AGAINST TANDEM TRUCKS

HON. STEWART B. McKINNEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. McKINNEY. Mr. Speaker, the State of Connecticut is currently embroiled in a controversy which threatens the health and safety of its driving public. Congress enactment last year of the Surface Transportation Assistance Act has resulted in a Federal mandate allowing the operation of dangerous tandem-trailer trucks on interstate highways in all States. In the case of Connecticut, those highways are clearly unsuited to the giant trucks now permitted by the Federal Highway Administration. Accident rates are shown to be higher for the double rigs, and the fact that 15 States formerly prohibited their operation altogether indicates that serious opposition exists to the Federal mandate. Congress should return to the States their right to determine whether or not their roads are safe for tandem trucks.

In that regard, I have introduced H.R. 2438, a bill repealing the provision that removes the States' right to control the operation of these giant vehicles. I encourage your support of this effort to keep our highways safe for the traveling public. In addition, a constituent of mine, Ms. Michele C. Lacobelle, has sent me a letter and petition containing nearly 200 signatures from across the State, in opposition to the operation of tandem trucks. Because her letter expresses the concerns of Connecticut residents in a vigorous and personal manner, I am taking the liberty of inserting it in today's CONGRESSIONAL RECORD.

FAIRFIELD, CONN.,
June 20, 1983.

DEAR CONGRESSMAN MCKINNEY: Enclosed is a petition against allowing Tandem trucks in the state of Connecticut. It has been signed by Connecticut residents living between Greenwich and Hartford, plus a few out-of-state residents who travel on Connecticut highways frequently.

The people who have signed this petition are: independent truckers who fear being squeezed out of business, truck drivers who are afraid of being layed off from their jobs, Connecticut motorists who see the highways as a means of escaping the traffic on the main city streets, and others who see the foreseeability of increased traffic accidents due to the direct relationship that increased size has with danger.

These are people who know Connecticut highways; the constant deviations in traffic; the maneuverability required for such deviations; the type of incidents that take place on the highways. They are people who, consequently, agree that the incidents of traffic accidents are high enough without warranting further danger from bigger vehicles. (I, myself, have been threatened nearly fatally two times in the past three weeks which is why I have initiated this petition. Do you realize that large trucks sometimes try to get into the fast lane on the highways, and when they do many times cannot see you or hear your horn. One truck came close to enveloping my whole car under his truck! They really should have some kind of bar that prevents that kind of gruesome accident from happening.)

I am asking you to send copies of this letter and petition to other Congressmen and members of the legislature on behalf of myself and these other people who stand to lose if this case is not successfully appealed.

Thank you for your consideration,

Sincerely,

MICHELE C. LACOBELLE.

PETITION

Think of yourself!

Think of the children you drive in your car!

Think of all the times you've been threatened by big trucks on the highways!

Think of the gruesome accidents you've seen involving big trucks!

Then . . . think of how dangerous Tandem trucks would be!

Although a federal law has been passed to allow Tandem (double-trailer) trucks to travel on interstate highways, it doesn't mean that Connecticut has to allow them on their highways. Connecticut has the sovereign right of "police power" which allows them to restrict any such traffic on their intrastate highways which they deem to be unsafe. Connecticut's stance, presently, is to disallow, these double-trailer trucks on their highways. However, if this action is appealed by commercial trucking companies, it will be brought to the Supreme Court who will then make the final decision based on the evidence of the benefits vs. burdens that they find. I am asking you to sign this petition, if you feel, from your own experience in driving on Connecticut's highways, that these trucks would create an unreasonable health and safety burden to Connecticut citizens if they were allowed in this state. It is not much that we can do to protect ourselves—but at least it's something—and we deserve to be heard!

MICHELE LACOBELLE.●

COMMENDING ROBSTOWN HIGH SCHOOL BASEBALL TEAM

HON. SOLOMON P. ORTIZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. ORTIZ. Mr. Speaker, I would like to commend the Robstown High School baseball team for its accomplishment as the 1983 regional champions in class 4A. It gives me a great deal of pleasure to point out that I grew up in Robstown, Tex., and feel particularly close to this team. The coaches, players, and others making this feat possible are the following: Sammy Martinez, Gilbert Tobias, Hector Benavidez, Rudy Youngblood, Raul Garza, Ricky Ysassi, Joe Esquivel, Myron Bockholt, Orlando Salas, Manuel Garcia, Rex Ramon, Gilbert Ramirez, Rolando Salas, Lupe Perez, Emilio Zamora, Robert Luna, Marcos Villarreal, Savino Rojas, Brian Zimmerman, Moy Cortez, Juan Escareno, Ernest Abrego, Victor Gonzalez, Rene Roliz, Trey Lopez, Steve Castro, Martin Perez, Bobby Gonzalez, Dr. Jose Gene Gallegos, and Mr. Luis B. Gonzalez.●

THE OPPRESSION OF MINORITIES IN THE U.S.S.R.

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BIAGGI. Mr. Speaker, I wish to bring to your attention the deplorable subjagation of the religious and ethnic minorities in the Soviet Union. Because of its long and sad history of denying even the most basic of human rights to its peoples, the outright persecution of Soviet minorities by that government's authorities is an issue which we must ardently address when dealing with the U.S.S.R. on any level.

Although they have never been very tolerant of those who hold religious beliefs, the Soviet authorities have been increasingly hostile toward their citizens who practice faiths which are considered "unusual." This degenerative Soviet war against the right of conscience in their own nation has produced nothing more than human misery and fear. Innumerable amounts of evangelicals and pentacostals have been systematically imprisoned or have been forced to seek asylum in foreign embassies, including our own in Moscow. Catholic worshippers and clergy have been continuously harassed, Muslim Mullahs have been incarcerated and even Russian Orthodox religious and laity have been sent to the slave camps of the Gulag or to the numerous mental institutions throughout the U.S.S.R.

Along with the flagrant persecution of religious freedom in their nation, the Kremlin's autocracy is furthering its unyielding and unmerciful efforts to oppress and eventually destroy all ethnic groups within the Soviet Union and the Warsaw Pact by their intensive imperialistic campaigns of forced "russification." Within the U.S.S.R. itself, Ukranian school children must learn the Russian language and culture without any regard to their own. In the Baltic States, natives are forced out of their illegally annexed countries and are replaced by staunch Communist Russians, a treacherous and evil campaign which Moscow is also waging against the Soviet Central-Asia Muslim so-called republics, the enslaved nations of the Warsaw Pact and all of Soviet Jewry.

The plight of present-day Soviet Jewry is horribly reminiscent of the situation to which Jews were subjagated at the beginning of the Nazi nightmare. Emigration of Jews from the Soviet Union has been virtually halted by that nation's authorities, KGB agents continuously harass and imprison Jewish dissidents and even Hebrew teachers are forced into slave labor on the oil pipeline to Western Europe. As demonstrated by the recent reunion of American Holocaust Survivors, the final approval for a National Holocaust Memorial and the Solidarity Sunday with Soviet Jewry rally on May 22, it is imperative for us to display to the Kremlin our firm dedication and resolve to do all which is in our power to keep the torch of freedom and hope lit for all Soviet Jews.

If we are to leave our posterity a nation based on moral integrity, love for peace and respect for the right of individual freedom, we must make human rights an integral part of our foreign policy. Realizing that we must negotiate with the Soviet Union in order to insure our mutual survival, this is an excellent opportunity to urge the Soviet authorities to end their cruel campaigns of terror against their citizens. If Moscow does not begin to respect the most sacred of its peoples' rights and permit the individual, religious and national freedom of its ethnic minorities, we must make it clear to the Politburo that any pending or future agreement between us depends heavily on whether or not they improve their human rights policies.●

CONSUMER PRODUCT SAFETY ACT AMENDMENTS OF 1983

HON. RICHARD C. SHELBY

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. SHELBY. Mr. Speaker, set forth below is a letter I received today

from the Executive Office of the President, signed by OMB Director Stockman, which indicates strongly the administration's support for my amendment in the nature of a substitute that I intend to offer to H.R. 2668, Mr. Waxman's bill to reauthorize the Consumer Product Safety Commission. I am gratified that the administration has taken this position in support of my amendment and would commend to my colleagues a reading of this letter.

EXECUTIVE OFFICE OF THE PRESIDENT, OFFICE OF MANAGEMENT AND BUDGET,
Washington, D.C., June 22, 1983.

Hon. RICHARD C. SHELBY,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN SHELBY: This letter states the position of the Administration on H.R. 2668, the "Consumer Product Safety Amendments of 1983," which is scheduled to be voted on soon by the House of Representatives.

The Administration strongly opposes House passage of H.R. 2668 and instead supports passage of Representative Shelby's substitute to H.R. 2668, which was introduced as H.R. 3015.

H.R. 2668 contains numerous unacceptable provisions. Section 3 of this bill would (1) take the unprecedented step of requiring the Consumer Product Safety Commission (CPSC) to employ at least 650 full-time equivalent staff on a permanent basis; (2) usurp the authority of the Executive branch by excluding future CPSC personnel increases from Executive Office of the President review and approval; and (3) require CPSC to establish and maintain 10 field offices.

The need for balanced consideration of resource allocation among Federal agencies and programs is an essential part of the President's responsibility to develop and submit to Congress an integrated budget for the Executive branch as a whole. Section 3 of H.R. 2668 would undermine the President's flexibility in meeting that responsibility and would represent a highly undesirable restriction on his authority.

The resource levels requested for CPSC in the President's 1984 Budget reflect the results of lengthy consultation within the Executive branch. These levels also reflect the overall budget stringency to which all Executive agencies have necessarily been subjected as part of the President's efforts to reduce the growth in federal spending. Budget and personnel levels for CPSC should be weighed against equally meritorious competing demands of other Executive agencies. This cannot be done if Congress arbitrarily singles out an agency or group of agencies for special treatment.

H.R. 2668 would also provide for an increase of 38 percent in 1984 authorization levels over CPSC's 1983 level. Moreover, including the increases this bill proposes in the outyears (1985–1988), CPSC authorization levels under H.R. 2668 would be increased by 58 percent. Given the budgetary deficits confronting the Federal Government, such increases are totally unacceptable.

Finally, H.R. 2668 makes a multitude of unnecessary and ill-founded substantive changes to the statutes which CPSC administers. These changes have been made with no apparent programmatic rationale or cost-benefit analysis. For example, under Section 5 of H.R. 2668, CPSC would be permitted to use informal notice and comment rulemakings rather than more formal adjudicatory-type proceedings when taking regulatory action under the Federal Hazardous Substances Act. Current law safeguards, such as (1) the right to cross-examine witnesses, (2) application of formal rules of evidence, and (3) the right to an automatic stay of regulation pending judicial review, would all be eliminated. Similarly, Section 5 of H.R. 2668 would also remove the requirement that material amendments to existing consumer product safety rules and rules specifying warning labels be made in accordance with procedural requirements (including regulatory impact analysis) applicable to original rulemakings.

As an alternative to H.R. 2668, the Administration supports House passage of the substitute offered by Rep. Shelby. This substitute provides for a simple three-year extension of the CPSC, with a 15 percent increase in authorizations over the next 3 years. The Administration believes that annual increases of 5 percent would be more prudent and fiscally sound than the excessive increases in H.R. 2668. At the same time, the Shelby substitute would permit the CPSC to function effectively and efficiently.

I strongly urge each member of the House to join the Administration in opposing House passage of H.R. 2668 and instead supporting passage of the Shelby substitute. Enactment of H.R. 2668 in its present form would not be in accord with the program of the President.

Sincerely,

DAVID A. STOCKMAN,
Director.●

IN THE NAME OF DEFENSE

HON. BRIAN J. DONNELLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. DONNELLY. Mr. Speaker, this week we will again consider the first budget resolution for fiscal year 1984.

The conference report that will come before us provides for a 5-percent increase in defense spending after inflation. This increase comes at a time all other segments of the budget are under severe constraints. Still, an administration spokesman has claimed this will not be adequate for the safety of our Nation.

The most dangerous weakness our Nation faces, though, is not in our weapons systems or in our Armed Forces. It is in our ability to prepare the younger generation to face the challenges of the next century.

One college student visiting my office not long ago asked, "Where is the President going to get the engineers to build the missiles he wants if he keeps cutting the budget for education?"

This irony was recently addressed very eloquently in an editorial broadcast on radio station WEEI in Boston by Jack Baker, vice president CBS Radio Division and general manager of WEEI.

IN THE NAME OF DEFENSE

In the name of defense, anything is possible.

We landed on the moon—in the name of defense.

We trained scientists and mathematicians—in the name of defense.

For whatever reason, Congress has always found it easier to fund programs in the name of defense.

So don't be surprised if this year, Congress supports a massive federal program to spur science and math education, in the name of defense.

It worked once. In 1958, in the wake of the Soviet Union's launch of Sputnik, the National Defense Education Act was passed, providing $1 billion to train scientists to keep up with the Russians.

But somewhere along the line, we lost the resolve. Maybe the program was too successful and we thought we were on top to stay. Today, we are faced with a situation not unlike 1958. However, the challenge now is not just from the Russians, but from the Japanese and the Germans and other countries where science education is a much higher priority, than it is here.

Already this year the House passed the Emergency Mathematics and Science Education Act and a Senate Committee approved the Education for Economic Security Act.

Make no mistake about it. It is a matter of national security. We are falling dangerously behind. Our educational systems have not kept pace with the competition. And no amount of MX missiles or Pershing missiles can protect us from this danger.

It will take the resolve of the nation, now. Our school need teachers who are trained and equipment that is up-to-date. And all that takes money.

If Congress needs to act in the name of defense, so be it.●

SALE OF ART AUCTION HOUSE TO AMERICAN FIRM BLOCKED BY BRITISH SNOBBERY

HON. TOM LANTOS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. LANTOS. Mr. Speaker, I would like to call to the attention of my colleagues an unusual and arbitrary action by the British Government which has blocked the normal process of smooth business interaction between private companies in our two nations. The following letter was sent today to the U.S Trade Representative, Ambassador Brock.

HOUSE OF REPRESENTATIVES,
Washington, D.C., June 22, 1983.

Hon. WILLIAM E. BROCK,
U.S. Trade Representative,
Washington, D.C.

DEAR AMBASSADOR BROCK: The British government has unjustifiably delayed the attempt of an American company to purchase the British art auction house, Sotheby Parke Bernet.

In April, Knoll International Holdings issued a cash offer for all of Sotheby's shares. Sotheby's shareholders were willing to sell, and, by early May, sufficient stock had been tendered for Knoll to control

Sotheby's. Now the purchase has been postponed by Lord Cockfield, the British Trade Secretary, who referred the entire matter to the Monopolies and Mergers Commission for lengthy review.

It is apparent that this referral is simply a delay tactic. Knoll is primarily a furniture manufacturer and currently owns no interest in auction houses, hence there will be no reduction in competition by its acquisition of Sotheby's. More than 40% of Sotheby's stock is currently in the hands of Americans. The Office of Fair Trading concluded that there were no anti-competitive elements to the transaction. Therefore, there is no threat that the purchase would lead to a monopolization of auction houses.

Why the British need a protracted review to come to this obvious conclusion is not clear. However, innuendos in the press imply elitism and prejudice which go far beyond decisions based on national economic and monopolistic concerns.

We are certainly open to foreign investment in the United States. In fact, the American auction house, Parke Bernet, was acquired by Sotheby's twenty years ago with no objection by the United States government. Last year several substantial American firms were acquired by British companies without objection or delay on the part of our government.

I urge you to protest the unusual action by the British government to block this sale, and I encourage you to take strong action to hasten the review of the case by Britain's Monopolies and Mergers Commission.

Sincerely,

TOM LANTOS,
Member of Congress.●

NAVSPACECOM

HON. KEN KRAMER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. KRAMER. Mr. Speaker, last week Secretary of the Navy John Lehman announced the establishment of the Naval Space Command (Navspacecom). The command is slated to become operational on October 1, 1983, and will consolidate Navy activities and organizations that operate and maintain space systems for the fleet and other Defense Department agencies, much as the activation of the Air Force Space Command in Colorado Springs last fall consolidated Air Force space and space-related operations. I commend the Navy for taking this important step toward unification of our Nation's space and space-related defense activities under a single, all-service Space Command. This objective is embodied in H.R. 3073, the People Protection Act of 1983, which I recently introduced. A unified space command is also in the process of being recommended to the Joint Chiefs by the Air Force. Such a unified command would provide the operational institutional framework required to give life to President Reagan's call for a new strategic posture based on truly defensive technologies, a call that will ultimately make nuclear weapons obsolete. A unified command would also bring into being a strong, effective voice for space within the Defense Department. I applaud the Navy's initiative in creating Navspacecom, and I wish the new command "a fair wind and a following sea."●

THE NATIONAL ENDOWMENT FOR THE ARTS RECOGNIZES MEXICAN AMERICAN CONTRIBUTION

HON. SOLOMON P. ORTIZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. ORTIZ. Mr. Speaker, I am delighted that the National Endowment for the Arts has given 1 of its 16 National Heritage Fellowships to Narciso Martinez of San Benito, Tex. These awards honor the best of this country's folk artists. By honoring Narciso, the National Endowment for the Arts is clearly recognizing part of the Mexican American contribution to our country's rich and diverse musical tradition.

The music being honored emerged out of the blend of rich Mexican musical heritage of the Rio Grande Valley with the instruments and popular forms of the more recently arrived German, Czech, and Polish immigrants to south Texas and northern Mexico. This music is known as musica nortena (northern music) of Mexico and conjunto and "Tex-Mex" in Texas. This musical development has centered around one single instrument—the accordian.

Narciso Martinez, pivotal in the evolution of this folk music, learned to play the accordian in 1927. He learned with his brother and a few other close friends and family members. The following year he began performing at local dances. In 1935, he made his first commercial recording with two of his own compositions, "La Chicharronera" and "El Tronconal." It was an immediate success, and from this point in time on into the 1960's his musical output and popularity among texano audiences remained unsurpassed.

"El Huracan del Valle," (the hurricane of the valley) as Narciso is called, was a household name among texano workers during the 1940's and 1950's. Musicologist and former Texas farmworker, Manuel Pena, writes:

I remember distinctly that wherever the cottonpickers settled, Saturday night dances were an indispensable past-time after the gruelling work week, and invariably the most popular and sought-after musician was Narciso Martinez. Don Chicho was "numero uno," probably because more than any other musician of that time, he knew how to inspire his people. This is not too surprising, of course, since don Narciso was only too intimate with the hardships that attended the farmworker's lives, having himself spent the better part of his own life in much the same circumstances. His person and his music thus captured the enthusiasm of his people. They appropriated his music—his huapangos, redowas, polkas—made it part of the norteno tradition that, thanks to Narciso, remains so vital to this day.●

ANTI-SEMITISM AGAIN SCARS NEW YORK CITY

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BIAGGI. Mr. Speaker, yesterday afternoon, an act of malicious violence was directed against three young Jewish students in New York City. Two Yeshiva University students and a Yeshiva High School student were wounded when as the New York Daily News reported this morning "gunmen jumped from a car and pumped 19 or 20 shots into a kosher luncheonette where many students from the Washington Heights schools gather."

The tragedy is compounded by the fact that this is another in a series of incidents with high anti-Semitic overtones which have struck this area of New York City. New York State for the past several years has led the Nation in anti-Semitic acts with a disturbing number directed at religious institutions and individuals.

It is imperative that all levels of government take strong steps to deter the spread of the scourge of anti-Semitism. Laws must be adopted by all units of government to deter as well as insure sure and swift punishment against all who would perpetrate such crimes.

I have sponsored such a bill to impose strong new Federal penalties for all forms of antireligious violence and vandalism. I remain hopeful that favorable action will be taken on the bill during this first session.

In the meantime I am confident that the New York City Police Department will take all necessary steps to apprehend those responsible for yesterday's brutal act of violence.

At this point in the RECORD I wish to insert the article from the New York Daily News detailing the tragedy.

[From the Daily News, June 23, 1983]

STUDENTS WOUNDED IN EATERY

(By Keith Moore and Stephen McFarland with Daniel O'Grady)

Two Yeshiva University students and a Yeshiva High School student were wounded yesterday when gunmen jumped from a car and pumped "19 or 20" shots into a kosher luncheonette where many students from the Washington Heights schools gather, police said.

Investigators believe the incident is related to two recent attacks on Jewish institutions in Washington Heights.

Police said that because of final exams, which are being given at the high school division of Yeshiva this week, only about 20 patrons were in the kosher dairy luncheonette instead of the normal 100 to 150. "We could very well have had 20 dead," Deputy Inspector John Hill of the Manhattan North homicide squad said.

Three men drove up to the luncheonette at 2549 Amsterdam Ave. at about 11:25 a.m. in a green or brown 1974 or 1975 Dodge. Police said the car had no license plate in the rear and a blue New Jersey plate in the front.

The men got out of the car and sprayed the luncheonette with gunfire from what police believe was an M-16 automatic rifle.

Three patrons were wounded. Josef Zimmerman, 43, and Abraham Weintraub, 26, both senior rabbinical students at Yeshiva, were each hit in the right arm. Lee Needleman, 14, a Yeshiva HS student, was grazed in the stomach by a bullet that ripped across his jacket and shirt, Hill said.

The gunmen fled in their car. All of the wounded were taken to Columbia Presbyterian Hospital. Weintraub and Needleman were treated and released. Zimmerman was held for observation.

In a June 7 shooting, men in a car sprayed bullets at the front door of Yeshiva University's Saul and Hilda Furst Hall at 500 W. 185th St., around the corner from yesterday's shooting site.

On June 9, there was a shooting incident at Jewish Memorial Hospital at Broadway and W. 196th St. No one was injured in either shooting, but Hill said that the same kind of weapon was believed to have been used in all three attacks. No arrests were made in the incidents.

The police bias unit, which specializes in crimes motivated by racial, religious or ethnic hatred, is working on the three shootings, along with a task force of homicide detectives under Hill's command, police said.

Yeshiva University, which has 7,000 students in 13 divisions, has had its principal campus in Washington Heights since 1929.●

TAX CUT CAP

HON. MICHAEL BILIRAKIS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BILIRAKIS. Mr. Speaker, when Ronald Reagan was elected President in 1980, he was given a message: "Cut taxes and spending and get the government off the backs of the people."

The historic tax cut of 1981 was a beginning. We are seeing more and more signs of a substantial recovery everyday. Today, on this House floor, we are debating whether to abort this recovery and return to failed policies of the past, or to stay the course and let the Reagan recovery continue.

The insensitive scheme to raise taxes through this so called tax cut cap is simply a return to those failed policies that caused the worst recession in the last 50 years. This bill would raise taxes for middle income Americans by an average of $654. We all know that with tax increases, spending increases are soon to follow.

I say simply this: The American taxpayer cannot afford any more taxes. It is time to stand up for the rights of these taxpayers. This is why I am stating my total opposition to the bill before us.●

THE IMPORTANCE OF FREEDOM AND REASON

HON. RON PAUL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. PAUL. Mr. Speaker, the Reason Foundation, a private, nonprofit organization dedicated to—as their motto puts it—"free minds and free markets," held a banquet on May 19 to celebrate its 15th anniversary.

For the past 15 years, under the expert, dedicated leadership of Robert Poole, the Reason Foundation has become probably the most respected free market foundation in America. The magazine it publishes monthly, Reason, is equally renowned. Instead of merely offering hypothetical, abstract evaluations of important policy problems, Reason addresses the problems—and outlines the free market solutions—on a practical basis as well. It is this principled yet concrete approach to policy analysis that distinguishes the Reason Foundation.

Syndicated columnist Walter Williams, who is a professor of economics at George Mason University in Virginia, has written an eloquent statement of this thoughts and feelings about the first 15 years of Reason. I encourage all my colleagues to take a few moments to read Dr. Williams' column about this fine organization that has done so much to further the cause of freedom.

BRINGING REASON TO THE PEOPLE

(By Dr. Walter E. Williams)

Every now and then this writer experiences a twinge of optimism about the future both of our country and the world. Last week's banquet in Los Angeles, marking the fifteenth anniversary of the Reason Foundation's struggling magazine—put out by a group of young people in Santa Barbara, California—roused that euphoric feeling. The energetic leader-editor of Reason magazine is Bob Poole, who has been on the cutting edge of the drive for deregulation of American industry. But deregulation isn't the only major issue presented in Reason. Its pages have covered a broad spectrum of issues with articles featuring such intellectual giants as Nobel laureates Milton Friedman and Fredrich Hayek. Other knowledgeable writers, including Thomas Szasz and Thomas Sowell, have also graced its pages; the former challenging myths and nonsense about insanity, the latter doing the same on race and ethnicity.

If you attended the banquet blindfolded, you well might have thought the evening's assortment of speakers were Thomas Paine, Patrick Henry, Thomas Jefferson, or George Mason. When Congressman Ron Paul (R-Tex.) spoke on our tryannical Congress, you would have sworn you were listening to Jefferson. Manuel Klausner, an early supporter of privatizing courts, a la television's "People's Court," gave a moving address against state control. Other speakers included Robert Ringer, Arthur Laffer, John Hospers, and William Niskanen. All shared in common the unquenchable thirst and love for individual freedom.

For this columnist, however, there was just the slightest bit of disappointment; you could count on one hand the number of blacks present. The movers and shakers of the Reason Foundation and the Libertarians are freedom-loving people; it would appear these folks would be natural allies of blacks, as opposed to elite, statist interventionists with whom most blacks have thrown their lot.

What's so interesting about this to those who fight, argue, and cajole against tyranny is the irony of it all. Today, the American who argues against government control is viewed as reactionary—an insensitive, uncaring Neanderthal. On the other hand, the person who argues for restrictions on freedom, government control of private property, and all sorts of bureaucratic rules and intervention is viewed as being progressive, sensitive, and caring. We've stood the values of our Founding Fathers on their heads. After all, most of Man's history was—and still is—a litany of daily violations of individual freedom, arbitrary control by the elite (agents of the church, king, and aristrocracy), and confiscation of private property. The Declaration of Independence and the U.S. Constitution essentially says America was to be an exception to all that. But lo and behold, in the interim, modern Americans have managed to resurrect much of what our Founding Fathers fought so valiantly to avoid.

But back to the good news. There are an increasing number of organizations like the Reason Foundation around the United States and in other countries. In South Africa there's the Free Market Foundation, which is directed by Mr. Leon Louw. Mr. Louw provides leadership for the intellectual challenge to the many South African laws that not only restrict the freedom of blacks but of whites as well. This is one thing that goes unappreciated about South Africa; there's no way you can thorougly restrict the freedoms of blacks without limiting the freedom of whites.

There are similar freedom-oriented organizations in Australia, New Zealand, Belgium, Brazil, and other nations. Some people have seen the folly of the ever-growing state and are peaceably trying to get their fellow countrymen to do something about it. Let's hope they succeed. But in the meanwhile three cheers for the Reason Foundation and REASON magazine in the fight to renew our freedom.●

LECH WALESA

HON. WILLIAM O. LIPINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. LIPINSKI. Mr. Speaker, It is my privilege here today to acknowlege a courageous man whom I believe deserves the recognition of our Nation. Lech Walesa, leader of the Polish Solidarity movement, has shown heroics

and patriotisim not only for his own people, but for the people of the whole world, who watch and hope for him every day. It is for this reason that I have introduced a resolution proclaiming Lech Walesa an honorary citizen of the United States of America.

Although this honor has been bestowed only twice in our Nation's history, Lech Walesa carries all the necessary credentials. Throughout his life, Lech Walesa has led his people against an oppressive and subversive government. Being seized and imprisoned twice by the Soviet-controlled government in Poland, Walesa never once broke his commitment or abandoned his campaign for freedom. In 1945, with his fellow countrymen under attack, Walesa lost his freedom and almost lost his life. Yet, despite the threats, imprisonment, harassment, and violence, Walesa has shined through like a star on a dark, cold night.

The people of Poland possess a genuine interest in democratic ideals and a longing for freedom that cannot be extinguished. Lech Walesa has sparked the hearts of a people who have suffered their share of repressive and aggressive acts at the hands of the Communists. The Polish people are no longer content with totalitarian rule. They no longer ignore the gap between justice and law. Lech Walesa is the leader of the Polish Solidarity movement, but more importantly he is a spiritual leader of his people; a people who have been given a taste of freedom and are demanding more.

In a world that has seen its share of Communist leaders, Lech Walesa truly deserves to be recognized. Castro, Ho Chi Minh, and other Communist leaders are commonly known and recognized throughout the world. It is important that we, as Americans, bring the attention of the world to Lech Walesa: a leader who believes, as we do, in the ideals of freedom, democracy, and justice. I urge my colleagues to join me in this recognition of a great man.●

SIGNS OF SOVIET DESPERATION

HON. DAVID DREIER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. DREIER of California. Mr. Speaker, there was an interesting editorial in yesterday's Los Angeles Times regarding the so-called World Assembly for Peace and Life Against Nuclear War which recently opened in that bastion of freedom—Prague, Czechoslovakia. This editorial is interesting both for what it says, and for what it implies. The fact that Moscow is underwriting this ridiculous facade of concern for world peace shows the desperation they are experiencing in their efforts to enlighten world opinion on their views of peace, freedom and disarmament.

Despite their extensive and unprecedented efforts, the Soviets have experienced several severe setbacks in recent weeks. The electorial victories of Thatcher in Britain and Kohl in Germany have renewed European support for a common and unified defense policy vis-a-vis the Soviet Union. The Williamsburg summit saw a surprising show of determination from a diverse group of nations, including France and Japan with regard to our nuclear policy.

In the United States we see growing signs of economic recovery coupled with a renewed awareness of reality in dealing with the Soviets. Congressional support of the MX missile and planned deployment of the Pershing II in Europe have demonstrated to the world that we are serious about the defense of ourselves and our allies. With his new proposals in Geneva, President Reagan is showing that he can be flexible and still guard vital American interests. All of these events have placed the United States in a much stronger position than we have enjoyed in a long while. I encourage my colleagues to read the editorial below as we realize that the Soviet desperation is a true sign of optimism and progress.

PEACE MOVEMENT, SOVIET STYLE

Something called the World Assembly for Peace and Life and Against Nuclear War opened in Prague on Tuesday with assertions by its communist hosts that the purpose was to provide a forum for a "true dialogue" on the subject. Would that this were so.

Czechoslovak dissidents and members of the unofficial East German peace movement were barred from the assembly, which is sponsored by the Soviet-controlled World Peace Council. Members of a small, unauthorized Soviet anti-nuclear organization never had a prayer of making it to the gathering.

Most, though not all, of the 2,500 delegates from 140 countries are willing cheerleaders for the Soviet view that U.S. policies and armaments endanger world peace—that, since the Soviet Union is the champion of world peace, its vast armory of nuclear weapons is no cause for concern.

Some Western delegates told newsmen that they intended to speak out against all nuclear arms—not just U.S. missiles. Even if they are allowed to do so, it is a foregone conclusion that their words will not be reported in the state-controlled media of the Soviet Union and its East European allies.

The real purpose of the gathering is to denounce the plans of the Western allies to begin deploying medium-range nuclear missiles in Western Europe late this year if the Soviets do not agree to a satisfactory reduction in their force of SS-20 missiles that already are aimed at European targets.

Czechoslovak President Gustav Husak, who was installed in office by Soviet occupation forces in 1968, set the tone of the meeting on Tuesday with a blistering attack on the United States and praise for Western peace groups "as a powerful social force" whose voices cannot be ignored "even by governments."

He meant Western governments, of course.

The Soviet Union and its Warsaw Pact allies all have "peace movements" that are run lock, stock and barrel by the governments. The result is what you would expect if the Reagan Administration were in charge of the anti-nuclear movement in the United States: As arms of the state, the communist peace movements find everything wrong with American policy and nothing wrong with the contributions of their own governments to the arms race.

Efforts have been made, especially in the Soviet Union and East Germany, to form unofficial peace movements that oppose nuclear armaments on both sides.

For their pains, at least 20 members of the East German pacifist group, who aroused the ire of authorities by singing peace songs and wearing badges bearing the slogan "Swords Into Plowshares," have been expelled to the West.

Members of an unofficial Soviet peace group have been harassed and jailed or incarcerated in mental institutions. Just this month Soviet peace activist Alexander Shatravka was jailed for three years. His crime was to collect signatures for a statement calling on both the Soviet Union and the United States to scrap their atomic arsenals and work toward better relations.

A few weeks ago an anti-nuclear delegation of British women enraged the Kremlin by bringing a member of the unauthorized Soviet peace group to a meeting with Soviet officials in Moscow. The women, although part of a group that has been demonstrating against the deployment of U.S.-made missiles in Britain, were nonetheless subjected to harassment at the Moscow airport as they left for home.

Against this background it will be a miracle if anything resembling the "true dialogue" promised by officials at the Prague assembly in fact occurs.●

NARCISO MARTINEZ

HON. E de la GARZA

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. DE LA GARZA. Mr. Speaker, in my district down in south Texas, next to the Gulf of Mexico, the hurricane season has just started. It started this month, in fact.

But for some of us, it has always been the "hurricane season" because the music of Narciso Martinez—known as El Huracan del Valle—the hurricane of the valley, has always been with us.

Sometimes I think the power of his accordion and the force of his music is as strong as that of the hurricanes that sometimes blast us in the Rio Grande Valley blowing out of the gulf.

I am particularly proud to join and honor a man whose music is being honored by the National Endowment for the Arts as one of the recipients of the Folk Arts Program's National Heritage Fellowships.

His music is a blend of the music of Texas and Mexico. It has the strains of a European waltz, the march of a Polish polka, and the warmth of a Spanish lovesong.

Out of all of this, combining with the music of northern Mexico, emerged the norteño music Narciso Martinez plays.

He took up the accordion in 1927 at the age of 16. For more than half a century, he has influenced the music of the whole Southwest—from Texas to California. He made his first commercial recording in 1935.

His popularity among tejano audiences remains unsurpassed. It is a tradition in Texas and is vital to our souls, for he moves us and makes our spirits bounce and, yes, dance.

Accompanying Mr. Martinez on his trip to Washington are Pedro Juarez playing a 12-string bass guitar, and Sabino Salinas playing a bass fiddle. We are extremely proud to welcome to the Nation's Capital this group and particularly "El Huracan del Valle," Narciso Martinez, a legend in our part of the world.●

LEGISLATION MODIFYING MEDICARE PART A OR B PENALTY

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. MINETA. Mr. Speaker, I am introducing legislation today to reform an excessively burdensome provision of the medicare program.

As my colleagues know, the basic medicare hospital insurance program, known as part A, is automatically available to most individuals when they reach the age of 65. Those people who during their working career—such as teachers and other public employees—did not participate in social security are not automatically eligible for part A, but do have the opportunity to purchase such coverage at a rate of $113 a month.

In addition, all medicare part A participants have the opportunity to purchase the supplementary medical insurance, known as part B. This coverage now costs $12.20 a month and covers physicians' and other services.

In each case, the existing law requires those eligible to purchase part A or B coverage to do so within 90 days of their 65th birthday. Anyone purchasing part A or B coverage after that initial enrollment period is charged a penalty equal to 10 percent for each year elapsed since the initial enrollment period. Thus, individuals 1 year late in enrolling pay a 10-percent penalty; those 2 years late pay a 20-percent penalty, et cetera. This penalty is paid each and every month of coverage for the rest of the beneficiary's life.

At the current rates, part A coverage costs $113 a month. A 10-percent penalty on top of this is $11.30, making the total monthly payment $124.30. Medicare participants charged a penalty are required under current law to pay that penalty each and every month of coverage for the rest of their lives.

These penalty fees can be a terrible burden for seniors. To be sure, the Government has a legitimate need to encourage prompt enrollment. Without such a penalty system, it would only be natural for some individuals to delay enrollment until the onset of a major illness. Such delays in enrollment would, of course, deny the system significant revenues needed to keep the system solvent.

On the other hand, in practice this penalty—especially the part A component—has excessively penalized a small group of individuals. About 18,000 people nationwide—mostly retired public employees—purchase the part A insurance, and only about 5,000 of them are paying some form of penalty.

One group that I am aware of, in particular, are retired schoolteachers in California, who believed in good faith that they had health insurance from Blue Cross. That Blue Cross policy was canceled, however, and by the time the retired teachers learned what had happened and understood that they needed to sign up for medicare, many of them were assessed penalties of from 1 to 3 years. Under current law, these teachers will pay these penalties for the rest of their lives.

My bill would keep the existing penalty structure in place, with one significant change. Under my bill, the penalty would be paid for twice the number of years the enrollment was delayed past the appropriate time, after which the premium would revert to the regular monthly charge in affect at that time.

Thus, someone 1 year late in enrolling would pay a 10-percent penalty for 2 years; someone 2 years late would pay a 20-percent penalty for 4 years, and so on.

This legislation would apply to medicare beneficiaries currently paying part A or part B penalties. Such individuals would receive credit toward the total 6 years required for the time they have already paid penalties. No refunds, however, would be available.

Mr. Speaker, this is an important measure. For those who are forced to pay it, the penalty is a burdensome and difficult requirement.

This is a moderate measure, which attempts to maintain the basic premises and operation of the penalty system while at the same time eliminating its most oppressive aspects.

I am pleased to have the support of my colleague from California, Mr. PANETTA, for this legislation, and urge its careful and thoughtful consideration by the Congress.

Thank you.●

CHRYSLER CORP. EXECUTIVE SPEAKS TO CONGRESSIONAL AUTOMOTIVE CAUCUS

HON. ELWOOD HILLIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. HILLIS. Mr. Speaker, I am placing in the record a transcript of the comments Jerry Greenwald, vice chairman of the Chrysler Corp. made to the Congressional Automotive Caucus earlier this month. I strongly recomment that my colleagues in the House read Mr. Greenwald's statement. He offers an excellent insight into some of the most important issues facing the U.S. auto industry today.

JERRY GREENWALD SPEAKS ON AUTO INDUSTRY SITUATION

Thank you all for coming this morning. I think I understand very well now the advice of a politician friend a few years ago when he said, "You have to remember that if you're going to come to speak in Washington, you have to learn how to speak and eat at the same time." I haven't learned that trait as yet, and I think I'll just concentrate on one of the two. I am both pleased and privileged to be the first guest speaker of the Automotive Caucus. I would like to do everything I can both to offer our support and to encourage you to make this caucus of yours really become an important and formidable force in Washington. Others of its type have worked very effectively and we want to do everything we can to provide the support that you would want of us.

A united front in Congress, when it comes to the auto industry, can mean a great deal. I can only emphasize to you what I suppose you already know—that our industry, both directly and indirectly, does represent employment for one out of six Americans in our country. I'm not going to try to say to you that what is good for the auto industry is good for the Nation, but certainly some of the remedies that will work for the auto industry will have the same impact for some of the basic industry in the United States in general. As we were discussing just a few minutes ago, I am happy to report that, for now certainly, we see all the right signs that Detroit is coming out of the doldrums. That finally, having held our breath for 4 years, the signs are up, car sales are up, employment is beginning to move. Some of our plants are even working overtime.

I think probably the most impressive measure of the auto industry's success is that Chrysler is making money. We, in the first quarter of this year, in fact, we made more money than any one quarter in more than 54-55 years of Chrysler's History. That's still in an industry that is just beginning to come out of recession. I think maybe the best sign for you folks—I think I heard a sigh of relief coming all the way from Washington into Detroit when we announced that we are on the way to paying off a full third of the loan guarantee program. We're going to bring a great big check on the 15th. We sort of tease some of the

folks at the loan guarantee board and say, "Now you better build your 'in' window because we really do mean it. We're coming back to pay off."

I don't think we need to dwell too long on our near-term success. I think that all of us who have been in car business understand that we are, in fact, in a cyclical business, and that we are going to see 2 or 3 years of strong results. Count on it. It really is going to happen. I think we'll see stronger results in the next couple of years than anybody who isn't close to the industry can even imagine. Then we are going to come back over another hill; because, I repeat, we are in a cyclical business and we ought to be smart enough to know what those problems are going to be, so that we do not have to go through the agony that our industry, our employees, and certainly what Chrysler had to go through, surely just to survive. Let me touch on some of those. I think the good news is that we've got a little time to plan. We ought to have the good sense to do it.

Let me just describe, as we sit here right now—remember that imported cars are still getting a quarter of the U.S. auto market. The economic recovery in the auto business has been modest so far, but is improving, but yet at the moment is still fragile. For us, our measure of success isn't just what our profits look like. We still left a quarter of a million people out there in the street, 36,000 of whom are on the indefinite layoff rolls of the Chrysler Corp. Even if those huge numbers are out there, I don't think they yet express, when we talk about a quarter of a million, they yet express the real pain that these 4 years have created. Remember that the base employment level that the auto industry provides is off over 1 million people since 1978. More than 1.1 million jobs have been lost if you count the workers in the auto industry itself and related jobs, along with those who have had to switch from full-time to part-time work.

As we stand here today, and as we look out over the next few months, some of the real signs that I was talking about that will create the boom—that I look to—are the consumer sentiment survey. The University of Michigan is saying that about two out of three people surveyed are saying that this is a good time to buy a car. Maybe the most heartening, in recent polls, those of Louis Harris, J. D. Powers, and most recently, Newsweek, are all saying that Americans are now substantially more willing to buy American products, including American cars, than they are Japanese products. I think that is very encouraging because it is a measure for us that all our talk about quality, all our work to get our cars in the industry improved substantially in terms of quality is finally beginning to surface in terms of consumer intention. To keep this recovery going, we are going to have to address some very basic priority problems. Now I'd like to talk briefly about them.

For me, the ones that count are three. The Federal budget deficit, energy policy, and national trade policy. Let me talk about the deficit. I'm not the expert; Washington's full of budget deficit talk. I can only reemphasize to you that the primary reason that both cars and houses got in trouble as industries was because of high interest rates. You can't live with 20 percent interest rates and make sense out of cars and houses. We are credit-intensive industries and we're going to be that way for the foreseeable future. Whether it is real or perceived, I don't even want to debate. The fact is, those that determine interest rates are still nervous about the future. They are scared that the Federal deficit will continue to grow rather than decline and the interest rates will rise rather than fall.

Until we say clearly, and my reason is—these are not just the top 10 commercial bankers in New York anymore—it is all the folks that come to visit places like Williamsburg. Until we get our deficit down, and I have to say I have a hard time with those who say you don't have to worry about 1984 and 1985—worry about 1987 and 1988 that show signs of progress. I think it is deeper than that. I think it can't wait that long. I think that if we don't show some serious results toward cutting the deficit, we are going to have trouble with interest rates.

I don't know any easy answer for any of you folks who are fighting it day by day on the subject. I can only say to you that in the end, when we had to deal with five or six different constituent groups—I mean our labor union, our bankers, our suppliers, our dealers, and our management—the only way we knew how to do it was a little phrase we coined, I think. It's called "equality of sacrifice." Maybe it is time, on behalf of the American people, that the Democrats did a little bit on their part that may hurt a little bit politically, and the Republicans do the same, and the President signs up for a little bit of compromise.

I can end up by saying, as a businessman, for any of us to sit here—let me use the defense budget as an example, but it is only an example—for us to sit here and say it is the most efficient way to buy and employ products for our defense which is dearly needed, and to employ people to say that we have the most efficient way to do that in the world, isn't facing reality. I imagine most of you read a comment, or I should say an article by Deputy Secretary of Defense Paul Thayer, who criticized defense contractors, and told them that they could cut their cost 10 to 30 percent just by building the weapons and equipment right the first time. Doesn't that sound familiar? What was the criticism of the American auto industry just 4 years ago? The Japanese knew how to build cars, they built them right the first time, they cut their inventories. We ran both a car company and a tank business until 15 months ago. Let me just end up by telling you I think that we ought to listen to Deputy Secretary of Defense Paul Thayer.

You probably all have read some comments of a business group of 160 business leaders who were commissioned by the President about 18 months ago to go look at spending in all the areas of Federal Government. I know that some of their comments are controversial, and some of them are a little bit too superficial, but the punch line is $118 billion could come out of spending in the Federal Government without affecting a program that is important for the American people. What is more important than anything is cutting the deficit and lowering interest rates and that will get cars and houses moving in the right direction.

Let me talk about energy policy for a moment. All of us have been through two shocks in the last 10 years. In the auto industry, we've been through two rounds of enormous and chaotic change—1973 and 1979. As I sit here today, unless we do something about it, believe me, we're going through another one. And we all sitting here are going to be the ones who are going to look very stupid to make the same mistake a third time. The reason to change—the reasons were different in 1973 and 1979, but the result will be the same all over again unless we figure out some commonsense steps to take. As a businessman, I'm trying to get myself fostered for the next one right now. The way I'm going to do it is: I've got front-wheel drive, lightweight cars powered by four-cylinder engines, and when people don't want to worry about fuel economy, I'm going to turbo-charge them. They will run with the wind, and when fuel economy gets to be important again, I'm going to take off the turbo charger. I'm not going to redesign parts again and spend billions of dollars all over again.

Our competitors are not situated that way. Chrysler is the only car—I'm not trying to give you a speech on Chrysler; I'm trying to make a point about energy—Chrysler is the only car company today that is meeting the 1985 standards. At 27½ miles per gallon, our competitors are struggling to meet 1983; I don't know what they are going to do for 1984. They are—you know this as well as I do—they are lobbying to remove the fuel economy standards. I would advocate that the right answer, an answer that will retain the auto industry's integrity and Congress' is not to remove those standards, but to start thinking about why Ford and GM are having trouble meeting fuel economy regulations. It's not because they built gas guzzlers; it is because the average of all the cars they built, big ones and little ones, is shifting to the big ones, because the consumer is buying less fuel-efficient cars today.

And we have got to do something about it; and my answer is keep adding taxes to, I don't care, you pick it, if it were oil or gas at the pump, I know it isn't politically pleasant, but it sure beats a bunch of us, 2 years from now, having to explain ourselves to those same voters or our consumers who are going to start asking some pretty tough questions. All I can emphasize to you is a penny a gallon is $1 billion in Federal revenue. It will get people starting to—a penny won't but 25 cents would—start getting people to get more interested in fuel economy, and would put about a $25 billion dent in that same Federal deficit. If tax at the pump isn't politically acceptable, is tax at the producer level, is tax on import, is something that will get the consumer aimed at fuel economy? Is that acceptable?

Let me talk about trade policy. Let me start by trying to cover what most people worry about: Those sneaky devils in Detroit are trying to get back to the good ole days when only three big car companies fought with each other for a big market, and all they were fighting about were how big the profits were going to be, and they passed on all their problems to the car buyer. I'm not in that world anymore. We learned our lesson. There ought to be some Japanese imports. There ought to be some European imports in our country. They'll keep us honest. However, they don't deserve to be able to sell in our market using unfair trade practices. I want the right to fight fairly for my market, and if I lose I lose. I cannot fight fairly in a world in which my competitor has a 20 percent profit advantage on a $10,000 commodity called a car. I'm good but I'm not that good.

With the tax advantages the Japanese have, you know this as well as I, they eliminate their major tax on a car when it is exported out of Japan. Their ability, no one quite knows how, I've got my ideas and you probably have yours, but everybody agrees the end is undervalue in today's economy. Put those two factors together alone, and there is a $2,000 advantage. I know my sta-

tistics better than the GM or Ford ones, but my guess is that ours is representative of theirs. We are, in quality terms, outdoing the Japanese with power trains, rust, and our sheet metal that doesn't rust. We are within 6 months of matching them car for car on finish. We are moving in enormous strides, to take all the things that we taught them and now they are teaching us, in productivity and going one more step beyond.

Let me use one I know. We just opened up, or we announced the opening of a St. Louis plant. We went from 130 hourly classifications to 17. The UAW put that package together and looked at our management and said, "OK, fellas, it's your turn. If you can't make that plant work as efficiently as any plant in Japan, it's management's fault." You know what my guys told me? The UAW's right. We went right to work and we cut half the management out of that plant. We're going into business September 12, and it's going to be a very efficient car plant.

Well, my point is, when we get finished with quality and productivity as an industry, if the Japanese are free to do it, and they adjust the yen at 275, that'll pick up another $500 or $600 advantage for them. And I can't do a thing about it. My only answer to the problem is, until we figure out how to deal with the yen or how we deal with the tax advantage, the only answer I know is quotas. 15 percent of the market or 1½ million cars, whichever is greater, the Japanese can have to keep us honest, even with their advantage. Maybe when we mean it, and when we say it clearly as a Government, as a Nation, the Japanese will fix their own problem and get fair. I've spent enough time working as partners with the Japanese to know that they are tough competitors, and they have been watching for 15 years all the talk coming out of Detroit and, for that matter, Washington. I firmly believe one simple statement: they understand action; they don't understand talk.

Well, those are my three priorities. We'd love to do everything we can to provide more information, to help explain our views, to do everything we can to make the caucus that has been formed become an effective political force in Washington. I think you've taken on a tough assignment. I encourage you to make it work. We'll do everything we can to help.●

THE SPACE SHUTTLE "CHALLENGER"

HON. MEL LEVINE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. LEVINE of California. Mr. Speaker, this week all of America and the world has been watching and listening as our space shuttle *Challenger* rockets through space.

No American could witness this performance without sharing some pride and satisfaction in the accomplishment it reflects.

My wife Jan and I had the pleasure of attending the launch. To call it spectacular would be an understatement. As a strong supporter of the space program, I have watched many launches and landings on television. They could not possibly have prepared me for the thrill of witnessing the *Challenger* takeoff in person.

The technical accomplishments of the space program are remarkable. But it is really people who have captured the imagination of two generations of Americans since John Kennedy first committed this country to landing a man on the Moon.

The seventh launch adds a new chapter to that history. This shuttle crew, along with four brave men, includes Sally Ride, our First woman astronaut. She showed dignity, courage, and humor even before the launch. I am proud to count Sally's parents, Dale and Joyce Ride, as special friends.

The courage and accomplishments of Alan Shepard, John Glenn, Neil Armstrong, and now, Sally Ride have helped identify them as unique and gifted Americans whose example helps remind us that new frontiers remain to be crossed and that man's exploratory and educational limits are not bound even by our own planet.

After watching the *Challenger* lift off, I think I better understand the feelings of wonder and excitement which have accompanied the space program since its inception. The shuttle will land tomorrow or Saturday, Mr. Speaker. That will be an appropriate occasion for all of us to renew our efforts to insure that the Congress and the administration maintain and expand America's national commitment to a space program second to none.●

EXPORT CONFERENCE

HON. THOMAS E. PETRI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. PETRI. Mr. Speaker, our colleague, TOBY ROTH, has worked diligently to strike some balance between the administration, business, and industry through his contributions to the Export Administration Act. And although this act limits some types of exports, mainly those that are military and strategic sensitive, Mr. ROTH has also been a leader in export promotion.

He sponsors an export conference each year. This year's conference will bring the top names in export trade to Green Bay July 22. Special Trade Representative Bill Brock, Commerce Under Secretary Lionel Olmer, and Agriculture Deputy Under Secretary Alan Tracy will be on hand at Mr. ROTH's conference to share their expertise with the participants.

Our distinguished colleague's efforts to boost small business into the export arena are exemplified by his remarks to the National Association of Manufacturers in Milwaukee which were reprinted in NAM's magazine Enterprise. I feel Mr. ROTH's points are well taken and am compelled to share them with the rest of my colleagues in this body, and I enter them in the RECORD:

REMOVING SOME OF THE EXPORT COBWEBS

INCENTIVES FOR SMALL FIRM PARTICIPATION

(By Toby Roth)

When I joined the Small Business Committee and its Subcommittee on Export Opportunities and Small Business Problems, I began to see evidence of the difficulties that prevent many thousands of small companies like yours from becoming part of international commerce.

I assumed the federal government did not need convincing that small business could make a significant contribution to our export effort. I assumed government was organized to encourage and to assist small businesses wanting to export. I was wrong.

What we tend to forget sometimes is that many companies that don't appear to export actually have their products sold abroad. Boeing, General Electric and United Technologies don't make everything they sell. A 707 or 727 isn't built by Boeing—it's assembled by Boeing. Thousands of manufacturers across the country contribute to every U.S. commercial airframe and engine flying under a foreign flag. The harsh realities of the marketplace are such that the bulk of official U.S. export credit-financing is now directed, and will continue to be directed, toward large exporters. But that doesn't mean that the system—in this case, export credit-financing—should ignore small business.

Recently, I directed my staff to call the Eximbank to obtain some information about its small business development program. Apparently, the man heading up this operation doesn't even have a secretary or someone to answer the telephone. It was difficult to obtain a straight answer, my staff told me, about how many people in this office are charged to assist small business.

To correct such obvious inequities, confirmed by the miniscule number of export credit-guarantee agreements with small manufacturers, the Subcommittee on Export Opportunities will soon consider a new legislative proposal. It requires that 20 percent of the Eximbank's loans, guarantees and insurance be directed toward small business. As things now stand, only 2.5 percent of Exim's total program effort goes to small business. Government can do better. The Commerce Department has surveyed export potential at the national level. In one study, it estimated that some 11,000 small manufacturers with fewer than 250 employees have the capability to export. In dollars and cents, the figures are startling: In one year, new exports could reach $4.2 billion.

On the local level, the figures are less dramatic but make the point. Probably no area symbolizes small business better than my own state of Wisconsin. In 1979 and 1980, the University of Wisconsin surveyed the state's 8,200 manufacturers of which 7,800 are small businesses. After considerable evaluation, the university's Small Business Development Center found that 1,800 firms qualified as potential exporters. To date, few, if any, firms are actually selling overseas.

It's clear that potential hasn't been translated into acutal performance. Five years ago, the House Committee on Government Operations studied the effectiveness of export-promotion programs. What it found

turned out to be an indictment: government programs that had lost touch with the realities of the marketplace and with the needs of small business.

The committee reported that only a small fraction of the participants in trade fairs and foreign exhibits were newcomers to foreign trade. Programs designed to assist small companies had become marketing tools for major American corporations and multinationals. And it should come as no surprise that private-sector promotion programs were significantly more cost-effecitve than government sponsored programs. The agencies involved had sloppy accounting procedures. Finally, and this may seem shocking, a significant portion of the goods displayed at U.S. government trade centers abroad was produced or assembled in foreign countries. Our tax dollars, in effect, were being used to subsidize foreign sales of foreign-made goods. At least, that was the impression.

Much of this, however, has changed since 1980. Congress' watchdog agency, the General Accounting Office, last January released a series of findings about export-promotion programs for small business. The agency reported that only 12 percent of this country's 252,000 manufacturers sell abroad but that, with the right assistance, many more small manufacturers could begin to export. It cited trade fairs and missions as constructive ways of overcoming the apprehensions and unfamiliarity of small companies with exporting.

But even workable programs can't be successful if there are few callers. For even a large company, exporting is complicated. The potential exporter must contend with a host of U.S. government regulations and then the regulations of foreign governments at the other end of the export cycle.

You can measure the complexity of the process by the number of forms and paperwork. Depending on the particular export, a businessman might be required to submit forms to the Departments of Commerce, Treasury and State, the Customs Bureau, the Census Bureau and the Export-Import Bank. In addition, documentation is required for shippers, insurers and foreign customs officials.

Still, there are ways to avoid the paperwork burden. You can pay an export management company (EMC) to act as your agent or take control of your goods. Such companies have been in existence for decades; they may work for their clients but are not the sole solution. The rewards of exporting all too often appear distant, if not impossible, to reach. Common misapprehensions about the difficulties of exporting often take precedence over the reality of what is actually possible. What do impressions have to do with small business and exporting? A great deal. When you weigh the factors, many small businessmen conclude that exporting is probably worthwhile but would not meet the test of a short-run cost-benefit analysis.

To prove this point, one government agency surveyed more than 100 reports dealing with "Export Behavior and Motivation." It seems that after all the publicity, special-award programs and fine work done by the NAM and other business organizations, many small firms still aren't exporting simply because they are unaware of the potentials of the export market. Add to that the necessity of preserving position in the domestic market—and the risks and complexities of foreign markets—and you have a mind set against pursuing international trade.

Government, it seems, is partly responsible for this situation. Some trade proposals currently before Congress illustrates this point. Many are not new ideas. They do not chart creative and innovative paths. Instead, they are bills to simplify, clarify and reform existing legislation.

But times are changing. After much delay, Congress last year enacted the Export Trading Company Act, a piece of legislation with great expectations. Chase Econometrics, a private economic forecasting group, estimates that export trading companies (ETCs) could draw a great number of small companies into foreign commerce. And, as a side benefit, the group predicted, this involvement would lead to 320,000-640,000 new U.S. jobs by 1985.

An ETC is not a producer of goods, but a service organization for its membership. If the nitty-gritty elements of exporting—foreign market research, tracking sales leads, marketing, product research, legal assistance, transportation, warehousing and managing foreign-exchange transactions—are technical disincentives to exporting, then the ETC concept should open the door to international markets for many companies. The revolution in the ETC concept is the ability for bank participation. For decades, the rule was to separate banking from commerce. Banks were forbidden to take an equity position in nonbanking business. The purpose was to avoid potential conflicts between lenders and borrowers whose commercial interests were intertwined.

The debate over the ETC bill shattered the taboo regarding banking's involvement with commerce. Protection for both parties was provided in both the bill and the agency regulation. Congress recognized that small business, on its own, would not break through actual and perceived disincentives to exporting. Small- and medium-sized businesses are likely to benefit from the financial as well as the institutional resources of banks—such as international-marketing networks and foreign-market intelligence.

Let me turn to the antitrust area. We Americans probably have the toughest antitrust laws in the world. I support them. I believe in competition. But these laws have also discouraged many companies from participating in joint ventures to develop technologies and products and to engage in joint marketing ventures. The perception of the Sherman and Clayton antitrust laws by business and the fear of prosecution by the Justice Department were, according to many studies, a disincentive to small companies to combine their respective strengths in competing overseas.

But now the situation is modified. Business will receive two new benefits: (1) "certificates of review" exempting companies from antitrust liabilities for activities described in the certificate, and (2) an exemption that the antitrust laws will not apply to international transactions that do not have a "direct, substantial and reasonably foreseeable effect" on domestic commerce.

The positive results of this legislation can be seen by the creation of many new ventures. In Pennsylvania, for example, the Wharton School of Economics has helped organize the Philadelphia Exports Network.

To its credit, Congress also approved the Small Business Export Expansion Act, which originated in my subcommittee. Congress established a revolving line of credit at the Small Business Administration to guarantee 90 percent of bank loans up to $500,000. These guarantees can be used to cover receivables or to develop and break into foreign markets.

The point I'm making is that government is beginning to recognize its deficiencies concerning small business.

In the debate over the future of our industrial base, we tend to forget that we are one country with a national government in Washington—a government with the responsibility to look after the entire country. We aren't just talking about the evolution of the American economy. We are talking about people—about towns and cities—about churches and communities—about the quality of lives of millions of Americans.

In recent memory, the international sector of the economy was not all that important to our economic security. Now it is indispensible. Statistics tell us that every $1-billion increase in exports creates an additional 32,000 jobs. That is why I'm so concerned about small business and exports. It means bread on the table for many hard-working people.

The Grand Dimension

The big issues in international economic policy and trade affect small exporters no less than they affect large exporters. The general course of U.S. trade policy is uncertain. In the midst of a global recession, fierce competition and often bitter reaction to foreign imports, the last Congress approved only one trade bill regarding imports—and that was a miscellaneous tariff bill. In addition to a very long list of bills designed to promote specific industries, or restrict specific types of imports, Congress questions the basics of U.S. trade.

First, it appears to many members of Congress that the general agreement on tariffs and trade (GATT), is an outdated multilateral organization—a relic from the post-war years. They see this international Geneva-based organization as incapable of addressing the host of nontariff barriers that stop our exports at foreign borders. We have undertaken a series of negotiations under the GATT to reduce these nontariff barriers. But many observers have found that the actual results have fallen far short of the promised results. We have complained about foreign subsidies and tax policies that harm our industries or undercut our exports. The result is often more negotiation and shuttling back and forth between Washington, European capitals and Tokyo.

Second, individual laws that regulate trade relations with developing countries (the generalized system of preferences) and trade with communist countries (the Export Administration Act) must be renewed by Congress. The debate over these statutes will be long and difficult. Congress appears uncertain how to proceed with these issues. And I want to emphasize they are not just trade issues—how we regulate trade with other countries is foreign policy as well as trade policy.

Third, U.S. trade laws, including the Tariff Act of 1930, the Anti-Dumping Act and the sections of the Trade Act of 1974 give the President authority to restrict imports. As we increasingly feel that other countries don't conduct their trade relations by a "fair set of rules," then there will certainly be attempts to broaden these statutes to "protect" U.S. industry and labor. It's for this reason that so many "reciprocity" bills were introduced during the last Congress. They will surely be the subject of debate again.

Fourth, our industrial base is in the process of a major restructuring. There are more definitions of the problem than proposed so-

lutions. Some see the issue as regional rivalry between Northeast and Midwest, on the one hand, and the Sun Belt on the other. Others say it's high tech versus smokestack industries. Still others argue that service industries hold the key to a golden economic future.●

THE ENDURING SPIRIT OF RURAL AMERICA

HON. WILLIAM F. CLINGER, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. CLINGER. Mr. Speaker, I welcome this opportunity to call your attention to a small rural community in my congressional district which is celebrating the 125th anniversary of its founding this year; namely, Wilcox, Pa. Col. A. I. Wilcox first settled there in 1858 because of the great beauty in the valley, a valley located on the upper branch of the Clarion River. It is still beautiful, the surrounding countryside still relatively untouched by industry as is characteristic of much of the 23d District of Pennsylvania.

Located near the edge of the Allegheny National Forest, Wilcox attributed much of its early prosperity to a tannery which has long since been gone. But the village has survived and maintained its identity largely because of the independence of those residing there—persons who love their community, their State, and adhere to the principles on which our Nation was founded. They epitomize the values of rural America with a strong work ethic and appreciation for what they have—great natural beauty, the friendship and support of their neighbors, their places of worship, and the ability to take care of themselves and their own—values that too often have been diluted by the pressures and demands of our changing society.

This proud community of less than 1,000 residents will celebrate their 125th anniversary by giving thanks in the churches for their village and also by honoring their sons who have given their lives in the service of our country. It is my privilege to represent Wilcox, Pa., and I extend to them my best wishes for the next 125 years.●

COMMENCEMENT ADDRESS AT THE CATHOLIC UNIVERSITY OF AMERICA, WASHINGTON, D.C.

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. YATES. Mr. Speaker, last month the director of the Woodrow Wilson International Center for Scholars, James H. Billington, was invited to give the 1983 commencement address before the students and faculty of Catholic University. Dr. Billington's words on truth and scholarship are inspirational and perceptive, and I am pleased to insert them into the RECORD.

COMMENCEMENT ADDRESS BY JAMES H. BILLINGTON, DIRECTOR, WOODROW WILSON INTERNATIONAL CENTER FOR SCHOLARS

Your Eminence, Your Excellency, Reverend President, distinguished trustees, faculty, families, friends, and graduates of Catholic University: The higher education which so many of you are finishing today sometimes seems in late 20th-century America to be just a paper chase within a rat race. Television teaches us subliminally to run even when we are at rest over weekends that begin on Saturday morning with cartoons of cats chasing mice and run on until Monday night with steroids in the starlight and Higgins chasing Riggins.

We now hear that collectively we must make the educational track a little faster to keep ahead of the Russians lest we fade like Romans. Individually, one must run harder to avoid being a "loser" even if one cannot be a winner.

The trouble is, of course, that those of us who win a rat race are still rats; and that most of us who can never be Number One are left with no higher goal than simply to look out for Number One. A study based on a poll of last year's graduating class at one of our leading universities quoted these seemingly successful students as collectively concluding: "If you can't be sure of anything, then get a good job and try to put some distance between yourself and the coming hard times." In other words, keep on running, but run away from the others, because the ship may be going down and it's every rat for himself.

But neither learning nor life was meant to be just a sordid scramble for shelter from supposed storms. That restless something within us as Americans does say "move on," but not "run around," let alone "run away." What lies ahead, in any case, is not just another lap on another racecourse, but an unknown stretch of time across surprisingly open terrain whose features are obscure, whose obstacles and opportunities are uncertain.

For such a terrain there is no precise map. You alone can determine how to proceed and along what kind of path. I would offer only two bits of advice. First, look on this commencement today not as just another starting line for yet another race, but as the departure from a base camp for a higher adventure. And second, as you leave the base camp, make sure you take the basics with you. For the higher, liberal learning these basics are an awakened taste for the good, the true, and the beautiful—just as the basics for earlier, elementary education were a confident command of reading, writing and arithmetic.

To help lighten your luggage, shuffle through your course notes and make sure you preserve from the chaotic college curricula of our times anything that you can file under any one of these three entries: goodness, beauty, truth. For these are more than just higher longings from the past that endure to the present; they may also be essential ingredients in humanity's survival kit for the third millenium.

Sophisticated people today generally either avoid using such lofty words (the way Victorians avoided talking about sex), or else invoke them as monumental platitudes to lend an air of gravity to trivial talk about trendy topics. As Karl Barth said about theology in the 19th century: most talk about God in those days was only talk about man in a loud voice.

So let us talk—hopefully, in a quiet voice—for your last few minutes in this base camp about these three, somewhat embarrassing, sublimely simple things. We can never hope to understand them, but we need to go on discovering things about them. And let us make sure at the outset that we do not load our packs with a seductively fashionable confusion that burdens down far too many college graduates today: the tendency to look in the wrong places for both goodness and beauty.

True goodness is found among people and is fulfilled in human association; true beauty is found in things and fulfilled in material nature. But our high culture has long ago twisted it the other way around, teaching too many of us passively to worship the false idols of beautiful people and good things.

Admiring beauty more than goodness in people is characteristic of the unrecognized neopaganism of our educated class today. Many of our celebrated national afflictions—narcissism, pornography, sheer loneliness—are related to, if not derived from, our excessive worship of beauty as the object, the body as the subject, and the mirror as our icon.

The beautiful person must, of course, appear eternally young as he or she grows inevitably old; be perpetually in pursuit of the ephemeral, the erotic, the exotic; and make the self the all-consuming subject, a consumer object in a consumptive society.

This society increasingly judges human affairs by aesthetic rather than moral criteria. Though the serious discussion of ideas has increased dramatically in this city in recent years, it is reported—if at all—only in a section of the local paper called "style," as if ideas were part of the fashion industry. Political reporting often focuses on the aesthetics of power rather than the substance of policy. Even daily life itself sometimes seems subtly drained of substance—let alone moral standards—by the unchallenged, spreading use of that dreadful word "lifestyle."

If life is just a matter of style, one style is just as good as another; another style is probably better; and one style after another is best of all.

But no one can live that way; and no society will long endure or even cohere without some basic moral standards. Sooner or later, if they are not found within, they will be imposed from without.

The effort to find a moral vocabulary for our times is inhibited not just by the mistaken search for the beautiful in human affairs, but also by the misplaced effort to find the good in material things: the so-called "good things of life." Materialism leads beyond our self-indulgence as individuals to the deepening degradation of our civic culture as everyone increasingly clings to his own private "good thing" and enters the public arena largely to protect his own special, often single, always selfish, interest. Public discussion among politicians increasingly focuses on the size and number of things—weapons, social programs, and budget allocations—rather than real people and common purposes. The dominant culture which finds good in accumulating things produces an equally simplistic protest culture which seeks to find good in

freezing, destroying, or just avoiding things. The pulpit no less than the podium is drawn into this disintegrating dialogue of the neopagan media culture, where one person's totem pole becomes the next person's voodoo pincushion.

So how does one set out to seek good in people and beauty in things in a world filled with so much evil and ugliness? By reminding yourself, first of all, that you are setting forth not on a race against everybody else, but on an adventure in which you need other people. If you seek to climb higher, you need to tie yourself to others. But, in this city so fascinated by summits, let us also affirm the value—even the sacredness—of working with small groups on the plains and in the valleys.

It was to very small groups that the Risen Lord and then the Holy Spirit first came to establish the tradition honored here, extending the promise of presence to whenever twos or threes were gathered together.

In the intimate relationship designations of the family we still find the terminology that takes us closest to the mystery of transcendence: new spirit proceeding from father and son. In the most intimate of relationships within that family unit, we experience our own closest link to the mystery of creation: new life proceeding from husband and wife. The quiet nurture of goodness can be a more rewarding adventure than the noisy pursuit of greatness.

With England at the height of empire, Thomas Hardy, famous for long novels, wrote a short, simple poem, "In Time of the Breaking of Nations," reminding us that small things somehow endure:

Only a man harrowing clods
In a slow silent walk
With an old horse that stumbles and nods
Half asleep as they stalk.

Only thin smoke without flame
From the heaps of couch-grass;
Yet this will go onward the same
Though Dynasties pass.

Yonder a maid and her wight
Come whispering by;
War's annals will cloud into night
Ere their story die.

The perfection of traditional tasks by disciplined craftsmen was seen as the artist's essential calling until the 19th century created the cult of the alienated, iconoclastic innovator: the myth of artitic "genius" in some ways replacing sainthood as a new ideal for the "beautiful people." Yet what we may need most now is simple craftsmanship that blends joy and discipline into all manner of everyday things, if we are to bring beauty back into our environment—or, for that matter, productivity back into our economy.

For most of you, however, the way ahead will involve more than simply a parish and a craft. As you move beyond the familial and the familiar, there will be trouble and may even be terror along the way. So resolve at the outset not to suppress those reflexes that incline you to reach for (and to stretch out) a hand—rather than to clench a fist.

An open hand may be more exposed and vulnerable—and may look more awkward groping for goodness than grasping for goods. The hammered, humiliated hands of a carpenter must have looked that way many years ago—hands that still touch people in our time like Dorothy Day, who in turn reminded us that when we die, the only things we will still hold in our own outstretched hands are whatever we have given away.

For all of you as graduates of one of America's pioneering research universities who have studied in a city that contains perhaps the greatest repository of scholarly materials anywhere in the world, the adventure ahead will almost certainly involve a continuation of the search for truth: a high adventure across dangerous terrain for which you have prepared yourself in this base camp.

"The Catholic University of America is a community of scholars, both faculty and students, set apart to discover, preserve, and impart the truth." So begins the first sentence of your catalogue under the heading "Aims of the University." This ambitious, even arrogant assertion that man can affect life by a deepening discovery of nature and destiny reflects the founding fathers of this institution, who believed that the search for truth was not only compatible with, but necessary to, both church and country. About the historic conflict between faith and learning, one of the pioneers wrote "The apparent antagonism lies in our apprehensions and not in things themselves." [And the sense that higher learning was a priority even within the church was so strong among those giants on whose shoulders we stand here today that it led to blunt language, which I quote with trepidation today in such august episcopal company. But it was an Archbishop, John Ireland of St. Paul, who advised the first president of Catholic University: "You must educate your professors and then hold on to them, making bishops only of those who are not worth keeping as professors."]

Truth is the proper object of the higher learning that has begun here. The pursuit of truth is the highest form of the pursuit of happiness—and the surest way to keep us from the pursuit of one another. Truth is noncompetitive; the discovery of one can benefit all. Truth is bigger than all of us, and can be pursued by each of us wherever we are with whatever we have at hand.

The open, unlimited search for truth is a major source of hope for a free society—not because it offers easy answers, but because it offers a shared enthusiasm that threatenes no one and can involve everyone. Only in the life of the mind and spirit can the horizons of freedom still be infinite in an era of growing physical limitations.

As other nations rise in strength, America must increasingly rely on its wits more than its power. Leadership in the search for truth is an international asset for America as we enter a global information era with vast new segments of the world's population tasting the fruits of knowledge for the first time: in the Third World, in the lower classes of the advanced nations, and among women and previously neglected ethnic minorities. The need—and the thirst—for both individual and institutional models of the higher learning is growing globally—and is perhaps less than adequately met nationally by the general absence of philosophical discussion about higher education in our great research universities. There seems to be a continued reluctance, for instance, even to admit let alone discuss or correct what may be the most important change in American education in the last 20 years: the quiet renunciation of its historic function of helping to transmit moral and spiritual values along with intellectual standards from one generation to another.

In search of a more positive image of scholarship to leave with you instead of that of the rat race, I turned to the great poets of our language—only to discover a surprisingly unanimous negative view of the higher learning. Listen to Alexander Pope:

. . . despise the man to books confined
Who from his study rails at humankind

or Samuel Johnson:

Deign on the passing world to turn thine eyes
And pause awhile from letters, to be wise.

or, worst of all, and in our own century, William Butler Yeats:

All shuffle there; all cough in ink.
All wear the carpet with their shoes
All think what other people think;
All know the man their neighbor knows.

Perhaps it is all because, as Yeats wrote in another poem,

[When man] struggled with the mind;
His proud heart he left behind.

Now his wars on God begin;
At stroke of midnight God shall win.

To find a positive image, it seems, one must go back to medieval times when the first universities were founded, to that simple "clerk of Oxenforde" in Chaucer's "Canterbury Tales" who gladly taught and gladly learned. Of course, he was not running round and round against everyone else on the fast track just before midnight, but rather moving slowly in a straight direction on a pilgrimage in springtime. The pilgrimage was raucous, you may recall, and sometimes downright bawdy; but it had a destination that was open to everyone.

Whatever might be its corporate imperfections and your private complaints, the Catholic University of America will have served you well by its continued commitment to include teaching about the morally good as well as the scientifically true and the artistically beautiful. Your catalogue says that "the only constraint upon truth is truth itself." And the Jewish philosopher Franz Rosenzweig said that truth is a noun only for God, for us it is always a verb.

For free men and women in a democratic society, truth should be an active verb—not, as in Soviet Russia, a passive noun: the name of the party newspaper. As Americans of conscience in continued pursuit of truth, you should be concerned about the state of relations between our country and theirs and about the awesome weapons we share between us. And you might ask if the only alternatives are either to hurtle ahead in armed anger, perhaps to burn in space—or to halt in disarmed anguish, perhaps to freeze in place? If so, the only real question left for our kind of society is whether it will end with a bang or a whimper.

The Aristotelian tradition taught medieval Christians to look for a golden mean; and practical experience has inclined modern Americans to seek out the center between extremes. But a middle way is not just an apathetic compromise. In the years ahead—halfway between 1984 and the year 2000, with their respective suggestions of secular nightmare and millenial apocalypse—lies 1992: the half-millenium of a great adventure by Christopher Columbus.

As in so many real-life adventures, this Italian sailing for Spain in search of Asia has a hard time getting going and did not find exactly what he was looking for. But he built adventure into the opening of the new world. And our America, which slowly emerged to the north, was, like ancient Israel, founded on a covenant to fulfill justice in time rather than on a compulsion to extend power in space. It was the pilgrims' alternative to older, larger, more absolute

empires. By limiting rather than increasing central power, by proclaiming rights before rules, and by harnessing political power to the complexity of a constitution rather than the simplification of an ideology, the founders of this country produced an innovation so stunning that we have yet fully to understand it.

So go on discovering America. Being an American is not a patent of privilege, but an invitation to adventure. It involves spiritual aspiration as well as material achievement. It is the search for Faulkner's bear, Melville's whale, and Citizen Kane's rosebud; and it is the hope that buds of all colors will blossom more in that future America which will value its technicolor as much as its technology, and it is the dream that a deepened pluralism at home may help secure a peaceful pluralism for all the earth.

Few of you will go over deep water like Columbus or into outer space like the *Columbia*. For most of us, the adventure ahead will unfold on earth, in finite creation, through the simple recreation of goodness and beauty. May you be renewed by memories of this base camp and by its continuing reminder that truth is not just a collective noun for what is useful in a race, but a verb of motion for a shared pilgramage.●

OVER THE MOUNTAIN CLUB MARKS MILESTONE

HON. GILLIS W. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. LONG of Louisiana. Mr. Speaker, I would like to call the attention of the House of Representatives to the activities of the Over the Mountain Athletic Club of New Orleans, which celebrates its 10th anniversary July 8, 1983.

As my colleagues are aware, mountains do not adorn the topography of my home State of Louisiana. No, the club's name refers to the maturity of its members and to its fundamental mission: to promote physical fitness and the enjoyment of athletic competition among mature adults.

The Over the Mountain Athletic Club is dedicated to the sound proposition that athletic exertion and competition is not for the young alone. The club stages sports events in the belief that competition can also promote the physical and mental health of middle-aged men.

During the last decade, the club has supported the improvement and maintenance of playgrounds in the New Orleans area, and has served as a source of additional manpower in times of emergency.

Founded 10 years ago by New Orleans attorney Frank J. Uddo, the club has grown and has bred spinoffs throughout Louisiana and Mississippi. Mr. Speaker, I commend the club's fine work and hope it continues to flourish.●

PARENTS OF THE YEAR

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. FAUNTROY. Mr. Speaker, on June 9, 1983, John and Jennie Bailey, residents of the District of Columbia, were honored by "Closer Look" as Parents of the Year, for their extraordinary and selfless service to the community.

John and Jennie Bailey are rare people, whose selflessness in serving as foster parents to more than 50 children, including many handicapped young people, sets an example for all of us. The story of their rare dedication to helping children and young people is told in the following story from the Washington Post and the accompanying editorial.

[From the Washington Post, June 9, 1983]

FOSTER PARENTS CITED FOR 26-YEAR MISSION

(By Edward D. Sargent)

About 26 years ago, when Jennie Bailey was a teletype clerk at the old Health, Education and Welfare Department, she saw something that troubled her and sparked what she now calls her special mission.

"A lot of troubled parents came to the office looking for the welfare department, which was [then] a few blocks away," said Bailey, who at the time worked for the Voice of America, which was located at the old Health, Education and Welfare building at Fourth and Independence SW. "They brought with them groups of children whom they couldn't care for. They needed support, I just felt there was a need."

To help fulfill that need, Bailey became a foster parent for the Prince Georges County Department of Social Services. Since 1957, Jennie and her husband John, now District residents, have cared for about 50 children—some of whom were awaiting adoption—from Prince Georges County. The couple also has raised several handicapped foster children to adulthood.

Today, the Baileys will receive the "Parents of the Year" award from a national nonprofit organization that provides information and training for parents of handicapped children.

The group, Closer Look, will also present a "Legislator of the Year" award to Sen. Lowell P. Weicker (R-Conn.), chairman of the Senate subcommittee on the handicapped, for his work supporting the needs of the handicapped.

"I had a lot of love to give," Jennie Bailey said of her work with foster children. "I had had two children of my own and didn't want any more. But I didn't want to sit around brooding. Being a foster parent kept me busy. It was fulfilling. I get the most pleasure by helping others."

Her husband, John, supported and joined her in caring for the foster children. Although they moved to the District 18 years ago they still take in foster children referred by the Prince Georges County social services department, said Miriam Fuchsberg, a social worker at the department.

"They have taken difficult children with serious problems. They're outstanding people—nurturing, warm, devoted and committed," Fuchsberg said.

Children with severe learning disabilities, epilepsy, cerebral palsy and psychological problems have found a sweet home at the Baileys', she said.

Over the years, the Baileys have cared for children from many backgrounds in their three-story, five-bedroom home on Brentwood Road in Northeast Washington. Not all of the children have been wards of the state. Parents that the Baileys did not know have asked the couple to keep their children when they had nowhere else to turn.

Currently three handicapped adults and two teen-agers, one of whom is also handicapped, live with them.

John Bailey, a maintenance engineer at the Washington Urban League, said life as a foster parent often has been a struggle. The problem often is the way other people treat the children. When we moved to D.C., the neighbors didn't particularly like the idea of having a foster home on the block. They looked upon foster children as criminals. They're not the criminals. . . . most are just children who have been rejected by their parents [and] who could become criminals without help."

"Rejected children usually are the ones who become criminals," his wife added. "So, if we are to fight crime we have to start at home. The only way to fight it is with love. Discipline, direction, food, clothing, advice—all that's love."

One of the Baileys' foster children called her, "The best momma a child could have."

[From the Washington Post, June 11, 1983]

EXTRAORDINARY PEOPLE

Most people act on (or at least entertain) a charitable impulse from time to time. But not many people are willing to take on day-to-day, year-to-year responsibility for helping others. Curiously, it is often people whose own share in the material goods of this world is relatively modest who choose to make such long-term commitments.

Two such extraordinary people in this city are Jennie and John Bailey. Twenty-six years ago, Mrs. Bailey, having raised two children of her own, decided that she ought to do something to help other children who didn't have the kind of warm and loving home that the Baileys could provide. Since then the Baileys have opened their home and their affections to a long procession of children and adults who had no one else to care for them.

Some of the 50 or so children whom the Baileys have sheltered were referred to them by a local welfare agency. Others were brought by desperate parents who had heard that the Baileys would provide good care for children when their own parents could not.

Raising a large number of children from troubled backgrounds is a tough job. But the Baileys didn't stop with the "easy" cases. Several of the Baileys' charges—including three adults and one teen-ager who currently live with them—have serious physical handicaps or psychological problems. The Baileys have raised some of these handicapped children to adulthood.

Mr. Bailey is a maintenance engineer at the Washington Urban League. Without the modest financial help that the welfare department's foster-child program provides, the Baileys could not afford to do their good work. But the Baileys provide something that money alone can't buy. That is the security, discipline and love that children need.

The Baileys' exceptional contribution was recognized this week by a national organization for handicapped children, which selected them as its "Parents of the Year." That's well-earned recognition. But the real reward for the Baileys' good deeds comes from somewhere else. In Mrs. Bailey's words, "I get the most pleasure by helping others."●

A TRIBUTE TO JOHN J. BELLIZZI—EXECUTIVE DIRECTOR OF THE NEW YORK STATE BUREAU OF NARCOTIC ENFORCEMENT

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. RANGEL. Mr. Speaker, John J. Bellizzi, executive director of the New York State Bureau of Narcotic Enforcement announced that he will retire after 40 years of service in the field of narcotic enforcement. Mr. Bellizzi has been an effective and dedicated public servant. His contributions to combat the problems associated with drug abuse have been invaluable and stemmed from his genuine, deep concern over the increasing deleterious affects of this problem on the economic and social health of this Nation.

I have known and worked with John Bellizzi for over 20 years, most notably in his capacity as the founder, past president and longtime executive director of the International Narcotic Enforcement Officer's Association and the executive director of the New York State Drug Advisory Committee. His current and past professional experience, coupled with his educational credentials, have afforded him the opportunity to develop a sensitivity to and understanding of the aspects of this vitally important problem. Mr. Bellizzi is the author of many articles on pharmacy narcotics and he has served on several faculties including St. John's University for 14 years as a professor of pharmaceutical law. In addition, he has over 35 years of law enforcement experience with the New York City Police Department and the State narcotics bureau, and served as a consultant to the White House on narcotics and drug abuse, and as a member of New York City Mayor Wagner's and Mayor Lindsay's Narcotic Commissions.

Mr. Speaker, I want to take this time to pay tribute to a distinguished public servant and friend and to commend him on his outstanding record of service and achievement. I also want to thank him for the assistance he has personally given me over the years and for the expertise and wisdom he has shared with the drug enforcement community at large. Although Mr. Bellizzi is leaving State service, his professional leadership and subsequent contributions will not be lost, as he will continue in the position of executive director of the International Narcotic Enforcement Officer's Association. I am pleased to honor John J. Bellizzi and I wish him all the best in the years ahead.●

ORBIT '81

HON. DANIEL K. AKAKA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. AKAKA. Mr. Speaker, as you know, even while we talk, space shuttle *Challenger* is orbiting the Earth. On board the shuttle is a special experiment called Orbit '81. This experiment, designed by high school students from Camden, N.J., places the first colony of living creatures in the zero gravity environment of space. Students from two high schools in Camden have been working since 1978 to design and build the experiment which will study the effects of prolonged weightlessness on the social structure of a colony of carpenter ants.

Orbit '81 is a joint effort by NASA, the RCA Corp., and high school students and is part of a NASA program entitled the "Getaway Special" program. Under the terms of the "Getaway Special" program, NASA leases leftover space in the shuttle's cargo bay for small payloads. The RCA Corp. offered to pay the cost of leasing the space on the shuttle—which amounted to $10,000—if the students could conceive and design an experiment to meet NASA's safety and scientific requirements.

The students were successful and the experiment is now flying on the shuttle.

The students will get their data from movie and video cameras inside a specially designed cannister. They have programed a microcomputer to operate the cameras and lights at regular intervals during the weeklong flight. When the flight is over, the experiment should yield a time-elapsed chronicle of a colony of social creatures living in space.

Mr. Speaker, this program is a good one. It is good for the students, it is good for our educational system, and it is good for our space program. Since the Orbit '81 program began, student enrollment in science classes at the two inner-city high schools participating in the program, has increased 35 to 50 percent. More than 60 percent of the students who have participated in the program are continuing their academic careers in college and are pursuing degrees in engineering, computer sciences, and related disciplines.

I want to take this opportunity to congratulate those responsible for their outstanding accomplishments—the principals, teachers, and staff of Camden and Woodrow Wilson High Schools in Camden, N.J., the RCA Corp., NASA, and, of course, the students themselves, without whom none of this would have been possible.

I urge my colleagues to participate in the special order this afternoon, honoring the Orbit '81 project. I am inserting extraneous material "Orbit '81—A General Description" in the RECORD immediately following my remarks.

FACT SHEET: ORBIT '81

GENERAL DESCRIPTION

Orbit '81 was conceived in November 1977, at a meeting between NASA officials and community leaders in the Philadelphia region.

Mrs. Riletta Cream, principal of Camden High School, said there was a need for a program to interest minority students in science. Irving K. Kessler, an RCA executive vice president, offered to pay NASA's $10,000 fee to get a student-built experiment into one of the space shuttle's "getaway special" canisters.

In January of 1978, the Camden School board approved the concept. Mr. Kessler appointed David Shore, RCA Division Vice President of Business Development, as coordinator of a program to provide technical material and financial assistance to Camden and Woodrow Wilson high schools.

Mr. Shore dubbed the program Orbit '81, anticipating three years of science training that would culminate in a completed experiment.

In May of 1979 a group of students from both schools selected an ant colony as the subject for their experiment because ants have an observable highly sophisticated social structure and for other reasons: (1) ants have hard external skeltons capable of withstanding the force of launch, (2) ciliated feet which cling to smooth surfaces, and (3) have a life cycle which allows for observation of births and deaths in weightlessness.

To record their data, students decided to train video and movie cameras on the ant colony during the planned one-week mission of the space shuttle.

The experiment is computer controlled and is the first shuttle payload capable of operating without crew assistance. However, redundant circuits do exist for crew override in case of emergency.

GETAWAY SPECIAL PROGRAM

The small "getaway special" payloads which NASA accepts for voyages on the space shuttle, are handled on a space-available basis, generally in a first-come, first-served sequence.

The five-cubic-foot canister (about the size of a 30-gallon trashcan) must not draw upon the shuttle's services beyond three on-off controls operated by an astronaut.

The GAS program, as it is called, was created to encourage use of space by researchers from industry and the general public, foster enthusiasm about space among the young, and generally increase knowledge of space.

Users must pay a fee and meet NASA's safety and scientific requirements.

Approximately 380 companies, schools, governments and individuals have reserved GAS payloads for future shuttle missions.

Many of the experiments will test the possibility of using the low gravity of space to

improve industrial processes and materials. Others, such as the Orbit '81 experiment, seek results on the effect of weightlessness on organisms.

CONDITIONS

Before implementing a program, RCA and school district officials agreed on several conditions:

1. The experiment had to be significant. It could not be a cause for ridicule because it was too elementary.

2. A minimum of three years of enriched science courses would be necessary.

3. The experiment had to be a team effort, rather than the work of a single student or small elite group since the team approach is closer to the problem solving methodology used in industry.

4. As much as possible, the student body of both schools had to be involved. Thus, journalism students published an Orbit '81 newsletter. Industrial arts students assisted graphical design, manufacturing, fabrication and assembly and art students promoted the project with posters. When Dr. Robert Frosch, NASA administrator, visited the schools, home economics students prepared a special "space meal," and the music department played a "space concert." Also, the dramatics department put on a "space skit." The choir sang an Orbit '81 song.

5. Student interest was enhanced by lectures, field trips, assemblies and other means.

CURRICULA

Both Camden and Woodrow Wilson high schools have a core group of about 15 Orbit '81 students. In addition, students from journalism, industrial arts, and art curricula have been active participants in the program.

All Orbit '81 students have taken "space science" courses (one each year) developed by the faculty and administrators from both schools.

Space science covers such topics as the space environment, the space shuttle, and the shuttle's "getaway special" program.

At Camden High School, teachers and administrators selected Orbit '81 students in their freshman year, based on previous abilities in science and mathematics. Students who accepted were expected to participate in Orbit '81 for four years. They took space science each year and worked on one of the experiment's three teams—computer, ants or engineering design.

The computer team developed flow charts and the computer program for a microprocessor to control the experiment's cameras, lights, air conditioning and other equipment. Another group studied the ants to observe their behavior and discover the conditions needed to keep them alive during the experiment. A third team developed a design to place all the equipment within the NASA canister, which is about the size of a 30-gallon trashcan.

At Woodrow Wilson High School, participation in Orbit '81 was left open to volunteers, regardless of previous academic achievement. Interested students could participate for any number of years, according to Mr. Nick Timpanelli, the program's adviser. Some students, he said, chose to participate for only one year. Others have remained in the program for four years.

RCA'S ROLE

RCA paid NASA's $10,000 fee for the Orbit '81 space aboard the space shuttle.

Engineers from RCA plants and the staff of RCA's Government and Commercial Systems Divisions have lectured students on computers, computer software, amateur radio satellite terminals, and electronic test equipment.

Students have taken several field trips to RCA plants and Laboratory in southern New Jersey (Princeton, Camden and Moorestown).

RCA engineers have served on technical advisory committee for the students' design of the experiment. In addition, the RCA divisions have donated more than $450,000 worth of surplus electronic test equipment to both high schools.

In addition, the microprocessor that will control the experiment's equipment was donated by RCA as was the consumer grade video camera and recorder that will document the ants' space voyage.

RCA Solid State Division, Consumer Products Division and RCA Service Company have donated new equipment, advice and services on a continuing basis throughout the training and development cycle of the Orbit '81 project.

CHRONOLOGY

November 1977. Project conceived at a meeting of NASA officials and community leaders. RCA offers to pay $10,000 NASA fee for small experimental payloads aboard the shuttle.

January 1978: Camden Board of Education endorses and approves a program that will put a student experiment in space.

Summer of 1978: School administrators and teachers start to develop science curricula, aided by a grant from RCA and the Camden School Board.

May 1979: Students select ant colony as the subject for experiment.

July 1979. NASA deems experiment significant and approves.

February 1980: Dr. Robert Frosch, NASA administrator, visits schools and deems Orbit '81 a role model for other high school programs designing experiments for the space shuttle.

October 1981: Students' design for experiment approved by panel of RCA engineers and biology professor John Tarka of Temple University, Philadelphia.

May 1982: Students complete construction of experiment. Tests scheduled at RCA facility in Princeton, N.J.

September 1982: Students began improvements to the experiment based on advances in the state of the art.

April 1983: Students complete preparation of the experiment at Kennedy Space Center for loading aboard STS-7.●

PAPAL VISIT TO POLAND

HON. BILL RICHARDSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. RICHARDSON. Mr. Speaker, after watching his native country struggle under 18 months of martial law, Pope John Paul II has returned to Poland in an effort to relieve some of the suffering and replace some of the shadows with sunshine.

With the imposition of martial law and the outlawing of free trade unions, the Polish people have been stripped of all but a little remaining pride. Pope John Paul's arrival in Poland on June 17 restored Polish pride and hope to the levels they had been at in 1981, prior to the dissolution of Lech Walesa's Solidarity Trade Unions.

The Pope instilled renewed confidence in the people of Poland by speaking out on the importance of freedom and respect for human rights.

Among the places the Pope chose to celebrate Mass was Niepokalanow Monastery, where a priest sacrificed himself to protect the life of a man scheduled to be executed by the Nazis. He also visited the Warsaw Ghetto, where over 20,000 Polish Jews were confined and subsequently murdered in cold blood. At each Mass he spoke of freedom, the need for renewed faith, and reminded his people that deliverance from oppression was in the hands of the youth, workers, and people of Poland.

Pope John Paul's meeting with his compatriots has been unique and emotional. It is as if the Polish people represented sons and daughters seeking comfort and guidance from a father who knows how to encourage perseverance and renewed strength.

The purpose of Pope John Paul's trip to Poland is not simply to protect his people and their beliefs. His concern for those who suffer, either physically or spiritually is universal; and his message has been carried around the world.

He has advocated the unalienable rights of all people. He has spoken for those who have no voice. He has stood for those who have no lobby. He has been strong for those who are weak, demanded fairness for those to whom life has been unfair and has admonished us not to be ashamed of caring. But, above all, he has forcefully stated that we must take the road that leads to peace.●

AVERELL AND PAMELA HARRIMAN

HON. THOMAS S. FOLEY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. FOLEY. Mr. Speaker, earlier this month one of America's greatest 20th century statesmen Averell Harriman, appeared along with his wife Pamela, on ABC news' "This Week With David Brinkley," to discuss their recent trip to the Soviet Union and meeting with the new Soviet leader Yuri Andropov.

As a former Ambassador to the Soviet Union and chief negotiator for the Limited Test Ban Treaty, Averell Harriman, is the leading Kremlinologist of our time. No other American has, over the years, been so intimately and continuously involved in so many major decisions and milestones in American foreign policy. No other has

participated in so many of the first history-making foreign conferences.

Presidents have relied upon Averell Harriman's wisdom on international issues for decades and his tremendous experience as a diplomat has been an invaluable resource for the Nation. At a time of growing tension in United States-Soviet relations, as well as uncertainty about the future of arms control, I feel his recent observations about the Soviet Union merit our most careful review.

Mr. Speaker, I attach a copy of excerpts from Ambassador Harriman's interview for the RECORD:

Mr. BRINKLEY. Ambassador Harriman, Mrs. Harriman, we are delighted to have you with us today. Thank you for coming. You have seen leaders of the Soviet Union going all the way back to Joe Stalin. Now you have been to Moscow, the two of you, together, talking to Mr. Andropov. Give us your judgment. What do you think of him?

Ambassador HARRIMAN. Well, I think he's an extremely able man. He's intensely interested in the issues that he faces and ready to talk about them. He seemed in good health. He was rather a larger man than I expected. He must be about 6'3" or so. He's taller than I am. I'm about 6'1". I found him interesting and quite ready to talk about any subject. He seemed to be frank. He gave us his views, as he saw them.

Mr. BRINKLEY. I want to hear Mrs. Harriman's view on this too. Did you find it encouraging? Do you think the prospects for good relations with the Soviet Union are—how would you characterize them?

Ambassador HARRIMAN. It's a two-way street, and he made that clear. Neither one side nor the other can make relations alone. It's got to be a common objective, a mutual objective. I don't know what the attitude of this Administration is going to be, but I think there's an opportunity, if they would seize it, to really improve our relations. I think it's very much in our interest to do so.

Mr. BRINKLEY. Here with us is John Scali, who is ABC's senior diplomatic correspondent. John, you——

Mr. SCALI. Yes. Governor, the State Department has already spoken up to welcome what was said after your meeting with Mr. Andropov, and they said that the United States would be a ready and willing partner in any concrete proposals that the Soviets might have in mind. Do you have any thought as to what might be specific and concrete proposals which could help reduce tensions between our two governments?

Ambassador HARRIMAN. Well, I think it depends upon how far our government is ready to go. I couldn't dictate it. The important thing is to start discussions and not, as has been the case in the past, to stop carrying on discussions. I think the opportunities will come from discussions, and we ought to follow up the areas in which we can make progress.

Now, obviously, we have many differences which we cannot settle, so I would go for those that seem to offer the greatest progress possible.

Mr. BRINKLEY. Mrs. Harriman, what were your thoughts after the meeting with Andropov?

Mrs. HARRIMAN. My feeling was that he was a very serious man, very concerned with the present relations with the United States. He, in fact, referred to our facing the common foe of war and said that it was important to get back to the traditions which we did have, traditions of the past, in World War II, when we successfully managed to beat the foe. He indicated that we are again facing that kind of situation.

Mr. SCALI. Did you discuss at all with him the prospect or the possibility of a summit meeting between President Reagan and him?

Mrs. HARRIMAN. No, we did not discuss a summit meeting, but we did discuss the possibility of having more meetings with members of Congress. And he very much welcomed this idea, the idea that it is better to talk, face to face, than by written communications.

Mr. SCALI. What kind of meetings with Congress did you have in mind? Visits or specific——

Mrs. HARRIMAN. Visits. Tom Foley, who is Majority Whip as you know, is going over there in the near future, and I felt it was important that he be given every possibility to talk with the most important equivalent figures in the USSR.

Mr. BRINKLEY. Well, as the Ambassador said, and as we all know, it is a two-way street. We can't have good relations unless both sides are really interested. My question is, Mr. Ambassador, he knows you as a highly respected senior statesman. Was he being—was he being more polite, more forthcoming than he might have otherwise——

Ambassador HARRIMAN. I don't think so.

Mr. BRINKLEY. Because you were there?

Ambassador HARRIMAN. I don't think so. I think he's too concerned with what the issues are to make any particular exception for me. He saw me, which, of course, he wouldn't do many other people, and we had an hour and twenty minutes, which is rather more than he indicated he was ready to spend. The fact that he saw me was because he believes that there should be contact, but I think when he talked to me, he talked to me as he would to anybody else.

Mr. SCALI. Governor, would you favor an early summit meeting between Mr. Reagan and Mr. Andropov?

Ambassador HARRIMAN. That didn't come up.

Mr. SCALI. I know, but would you favor one?

Ambassador HARRIMAN. If the President wants to discuss it, that's his affair, and I'm not going to comment on it.

Mr. BRINKLEY. Ambassador and Mrs. Harriman, have you passed along to the U.S. Government what—I'm not asking what it was because I don't think you'll tell, but if you will, I'll be happy to hear it, have you passed along what you learned there to the U.S. Government, the State Department?

Mrs. HARRIMAN. Not yet. We only got home last night.

Mr. BRINKLEY. You do plan to do that?

Mrs. HARRIMAN. Yes, we do.

Ambassador HARRIMAN. I saw the Secretary of State before I left. And I told him I would report to him when I got back. We're going off for about 24 hours of rest, and when we get back, I expect to call on him at his convenience, and tell him of this talk. I found him very much interested in our going there, and he gave me some questions he'd like to have answered. We've got some of his answers, but not all of them.

Mr. BRINKLEY. Could you—I gather you don't want to tell us before you report to him in detail, but tell us as much as you can about what was said.

Ambassador HARRIMAN. Well, I think Pam has given you some pretty good——

Mrs. HARRIMAN. He was very tough.

Ambassador HARRIMAN. Leads on the subject. He was tough. He was very direct. And as far as the details are concerned, it is agreed that the talks would be confidential. And, so, it's rather hard for me to pick out anything more than the subject that Pam has discussed.

Mr. SCALI. Was there any single problem, Governor, that stood out as you look back, as being of major concern to Mr. Andropov?

Ambassador HARRIMAN. Yes, the normalization of relations. He wants to get back on a relationship which he described, as Pam said, as our intimacy during the war. And he said, "You were part of it. And together we beat Hitler. And we want to get back to that same sort of relationship." And it seemed to me that was the most important thing that he said to us and the most important subject on his mind. Get back to normal relations. He used the word normal on several different occasions and different aspects.

Mr. SCALI. You spoke after your meeting, sir, about how the Soviets were ready and interested in what you called joint initiatives.

Ambassador HARRIMAN. Yes.

Mr. SCALI. As a long time expert in the area of Soviet-American relations, do you have any thoughts about what might be joint initiatives that each side could profitably pursue right now?

Ambassador HARRIMAN. Yes, I think that we can have discussions and decide on what we want to take up. There are so many issues between us that you've got to select from them. And I think we ought to avoid those that are unsolvable. Our system is so different from theirs that it's utterly impossible for us to come to agreement on all subjects. We want to pick out those subjects which we are ready to move forward on. And certainly the establishment of normal relations is I think the first one. I'm not going to propose details because I think that's up to our government to do.

And I think there'll be a response from Andropov to any of the areas which are on the possible side, but we're not going to change their system. You know, there are some Americans who think that you can sit down and talk to a Communist and get him to change his ideology. That's utterly impossible. And it's very unfortunate that so many Americans think that we can do that.

We can only recognize that we can still live together, in spite of our systems' being different. We can still have trade relations as one of the things that I would specifically put forward, increasing trade. It's very important for us to have the Soviet Union as a market for our grain, which we've had for so many years.

Mr. BRINKLEY. Mrs. Harriman, you said with some emphasis that Mr. Andropov is tough. How? What do you mean by that?

Mrs. HARRIMAN. Well, his statement was—his statements were tough and I must say I saw my husband be very tough back, but I also felt that Mr. Andropov has a feeling of frustration. That it's one thing to be tough, but how do you get to the next step. And I thought him very very anxious to make a next step without possibly knowing exactly what way to achieve this. He was asking.

Mr. BRINKLEY. Well, in the differences between the two countries—I guess we all should admit that we have at times been something less than angelic—but nevertheless, the Russians continue to be aggressive around the world and how can we have normal relations when they are, according to Mr. Reagan's view, pushing themselves

into Central America, while continuing in Africa and now in Syria, and one place after another? What would normal relations be?

Ambassador HARRIMAN. Well, normal relations would be that we talk to each other, that we exchange views. That when we have an objection to what they do in Afghanistan, we take it up with them and talk it out. We may not come to an agreement, but at least we can exchange views in connection with that. I've made it very plain that we cannot solve the problems of Communism as against our system of individual initiative, which I heartily believe in, and I despise communism, but we don't have to look for those subjects which are unsolvable.

There are many things. Trade—you asked me for one. That's one of the things which we've said we can find ways and means of increasing and ways and means of stimulating. Helping American business in connection with their affairs—is a subject which we could undertake to do.

Mr. SCALI. Governor, was there any mention or discussion of Moscow's public threat to move nuclear weapons into Eastern Europe if the West goes ahead and deploys American cruise and Pershing missiles?

Ambassador HARRIMAN. Well, he made it very plain that the nuclear threat made war far more dangerous than it ever had been before. He specifically said so, that the dangers of war are far more devastating. And he made it very clear that he understood that there was no such thing as a limited war. If you started war, there was mutual destruction. And he's under no illusions about that. It was certainly very satisfactory that he has that understanding, because it's my firm conviction that that's true.

We can come to agreement on arms control, we can come to an agreement on the reduction of nuclear weapons, mutual reduction, but, it's got to be equitable to both sides. The proposal they made was not a fair one.

Mr. BRINKLEY. Mr. Ambassador and Mrs. Harriman, thank you. Thank you very much for coming in.

Mrs. HARRIMAN. Thank you, David.

Mr. BRINKLEY. We've enjoyed hearing your views and thanks for coming.●

MARTIN LUTHER KING BIRTHDAY HOLIDAY

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. CONYERS. Mr. Speaker, of all the letters that I have received in connection with the Martin Luther King holiday bill, I find the following statement from the Nobel Prize-winning scientist, Prof. George Wald, to be the most moving:

STATEMENT OF GEORGE WALD, PROFESSOR EMERITUS OF BIOLOGY, HARVARD UNIVERSITY, NOBEL LAUREATE IN PHYSIOLOGY OR MEDICINE, 1967

I am told that there are in fact no national holidays, each state setting its own; and that the President and Congress can declare only "federal legal holidays" applicable only for the District of Columbia and federal employes. Yet most states do observe the federal legal holidays, only two of which as yet commemorate persons, Christopher Columbus and George Washington.

I do not understand how our country came to regard Columbus as a national figure or his discoveries as a national event. He was an Italian navigator, setting out under a commission from the Spanish throne to find a new trade route to "the Indies", i.e., Asia. Unexpectedly he ran into the Bahamas, and eventually landed on the South American continent, on the coast of what is now Venezuela. Still thinking he had found the Indies, he called the peoples he found, soon to be decimated and their cultures destroyed, "Indians". What he "discovered"—only in the sense that Europeans had not known of it was the Western Hemisphere. The North American continent was discovered by another Italian navigator, Giovanni Caboto (John Cabot), working for England, who landed probably in Newfoundland, in 1497. America (North and South) is named quite undeservedly, for a third Italian, Amerigo Vespucci, who never commanded a voyage of discovery.

I say all this, not at all to denigrate Columbus's achievement, but to forestall the thought that with personally designated national holidays so rare, one to honor Martin Luther King, Jr., might be inappropriate.

To say it plainly, claiming Columbus as a national figure is pure supererogation (Chutzpah; cf American Heritage Dictionary).

George Washington was of course a monumental figure, decisive in procuring our independence and founding our nation. All honor to him. He is our father-figure.

Let Martin Luther King then be our son-figure, the child of the American Evolution. What he calls forth is not only admiration, but emulation. We can't ask our fellow citizens or our children to emulate Christopher Columbus or George Washington, but one can ask then to grasp the meaning, to try to fulfill the purposes, to be American in the spirit of Martin Luther King. He offers us a lesson to be learned, perhaps never before needed so greatly as now.

He was our American Gandhi. It is the fate of saints, first to be killed, then canonized. The time has come to recognize Martin Luther King as an exemplary figure in the American tradition. His meaning for us is unique. It comes not trickling down from the heights, but rising up from the base: from the great yearning of vast numbers of our people to fulfill the American promise, recorded in the second paragraph of our Declaration of Independence, spoken in Lincoln's Gettysburg address inscribed on the Statue of Liberty. Its main themes are freedom from discrimination, social justice, human dignity—a widening area of recognition in which one person is as good as another. Those are the things that Martin Luther King stood for; and left them, not hanging in the air, but like Gandhi, made of them a program for action, forced them as issues always non-violently, yet insistently, never compromising, never giving up, whatever violence he himself and his companions encountered.

That American promise, never fulfilled, needs constantly to be re-discovered and restated, and never more so than now.

That is what a Martin Luther King Day can do for us.●

MRS. TIMOTHY VANN—A GREAT AMERICAN FAMILY

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. VENTO. Mr. Speaker, this week nine American families were honored by Nancy Reagan. One of those families is from my district, and I feel it is most appropriate that Mrs. Timothy Vann be awarded such an honor.

I had the pleasure and honor of working with Mrs. Vann on the building of the Model Cities Health Clinic in St. Paul. I was greatly affected by her commitment, drive, and her ceaseless interest in improving the lot of those less fortunate than she.

Mrs. Vann used her strength and love to guide her 10 children, virtually singlehandedly, through the hardships of adverse environment. They are testimony to the success of her efforts. As an upstanding resident of St. Paul she directed her energies toward civic activities such as organizing a softball team, teaching dancing, art and culture, and even starting a rock band. And for the last 10 years she has been the director of the Model Cities Health Clinic in St. Paul, where she helps provide valuable health care for minorities and the elderly in the area.

I am honored to have worked with such an outstanding individual, and I feel strongly that her unyielding love and productive energy can be an inspiration for all of us.

At this time I would like to bring my colleagues' attention to a story about Mrs. Vann that appeared in the St. Paul Dispatch on June 15, 1983, detailing some information about Mrs. Vann and her family.

The article follows:

[From the St. Paul (Minn.) Dispatch, June 15, 1983]

MAMMA VANN "COACHED" FAMILY TO LOVE

(By Don Terry)

A drunk stumbled and then fell into a gutter. Theodora Vann, then a little girl, laughed and pointed at the man as she walked along the sidewalk with her mother, Timothy.

When Timothy Vann got her daughter home, "she made me go into the backyard and cut my own switches and then she gave me a whipping," said Theodora, now 31.

"We're all children of God," Vann told her daughter as the switch dropped on her bottom. "That man may have been a judge and had some bad luck. You will respect that man as a child of God."

Mama Vann smiled as her daughter—one of 10 children—told the whipping story.

"All my children were trained in the old-fashioned way," said Mrs. Vann, 66. "I didn't use psychology much. There was no formula. I sort of muddled through."

The old-fashioned way paid off. Recently the Vanns were named one of nine "Great American Families" of the year.

On June 22, Vann, of 705 Dayton Ave., will take her softball-team-sized family to Washington, D.C., to a White House award ceremony to be hosted by Nancy Reagan.

Sitting around Vann's living room Monday, the Vann children, now all adults, talked about life with mama.

"It was exciting and wonderful," said Ailene, 32, Arlene's twin. "There was a lot of discipline and belief in God. And most of all, love."

"We're not a special family," said Ora Mae Mitchell, 39, the oldest daughter. "But we have a very special mother. I think there should be a mother of the year award not a family award, because we don't rate 2 cents."

Last year, the Vanns were the St. Paul Urban League's family of the year. The league nominated the Vanns for the first annual national family award.

"We nominated the Vanns because they show and exemplify the strength of the black family," said Ronald A. Smith of the Urban League. "They have overcome a lot of hardships."

Mrs. Vann has raised her children by herself for the last 20 years since her husband, William, died.

"But I was a widow almost all of my life," she said. "My husband was away from home so much anyway that I got used to raising the kids alone."

William Vann was a musician and waiter on the railroad. Raising the children was never easy. Money was scarce, especially for a black family living in the segregated Kansas City, Mo., of the 1940s and '50s.

"But we were never on welfare," Mrs. Vann said. "My husband was a very proud man. He struggled all his life."

Mrs. Vann decided that she wanted her children to grow up without racism dogging their every step, so she and her husband loaded up their brood and moved to St. Paul.

"But I was surprised to find a lot of segregation and racism up here, too," she said.

She used to coach girls' softball teams from the Summit-University area. The teams traveled around St. Paul and ran into taunts of "nigger, nigger."

Mrs. Vann said she was determined not to let her children become bitter or hateful.

"I didn't want my children to be affected by hatred or paranoia," she said. "I made sure they knew that there was nothing wrong with being black.

"My parents made me feel that I was wonderful and I didn't know any better," she said. "And that's how I taught my kids."

Whenever a new Vann came into the world, the baby was put in the middle of the other children, who clapped and smiled and laughed and sang a song:

"Look at that pretty baby, pretty baby."

"My mother gave us a sense of self-worth," Ora Mae said. "She taught us not to let other people put limitations on us, or to put limitations on ourselves."

"Mother's parents were very strong individuals," said Tony Vann, 41, the oldest. "They gave her a sense of responsibility, which she gave to us. We took it for granted that was the way it was supposed to be."

Mrs. Vann, the director of the Model Cities Health Clinic, 270 Kent St., did a little bit of everything to feed her family. She drove a cab in Kansas City and worked for the St. Paul Housing and Redevelopment Authority.

When she was 52, she went back to school and earned a master's degree in public administration.

"My parents taught me the value of hard work," she said.

During an interview in Mrs. Vann's office, the phone rang several times with people calling for advice from the short woman with the quick smile.

"Don't be confused," she told one caller, "We'll work it out. I usually come up with an answer."

Single parent families aren't usually honored, Mrs. Vann said. Instead they often are blamed for an array of social problems.

"But I never bought that," she said. "I used to say if (President) Kennedy's children weren't misfits because their father died, then mine sure weren't.

"And I also realized that there were plenty of families with both parents home where family life was just pure hell. I didn't let the kids get upset about that kind of stuff."

Mrs. Vann said she steered the children into dancing, music and sports.

"We're still a great softball team," Coach Vann said, looking over her starting lineup:

Tony, 41; Ora Mae, 39; June, 37; twins Arlene and Ailene, 32, Michael, 32; Theodora, 31; Timothy, 27; Starr, 24, and Travelle, 21.

And warming up in the bullpen are 16 grandchildren.

"The bottom line about my mother and our family is love," Ailene said.

"Plenty of love."●

IMPARTIAL ANALYSES OF CHILDREN'S MATERIALS

HON. BARNEY FRANK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. FRANK. Mr. Speaker, Diana Green, editor of the magazine Parents' Choice recently addressed some comments to the Federal Communications Commission on the important subject of children and television. Ms. Green is particularly concerned that there may be some misunderstanding of the position of the Parents' Choice foundation on this important subject because of a tape recently shown to the Federal Communications Commission in which her views on one small segment of this overall subject were quoted. I agree with Ms. Green that it is important that the views of Parents' Choice on the overall subject be clear and I submit her comments to the Federal Communications Commission to be printed here:

CLARIFICATION OF THE PARENTS' CHOICE POSITION ON TELEVISION PROGRAMING AND CHILDREN

(By Diana Green)

Parents' Choice is the only publication in the country which specifically focuses on giving parents and professionals the information they need to sort through the barrage of media-books, television, movies, music, story records, cassettes, toys and games. It offers critical evaluations and diverse views to help parents make comfortable and intelligent choices to augment their children's learning, in school and out. Parents' Choice is published by Parents' Choice Foundation, a non-profit service organization devoted to parent education.

The Parents' Choice voice is an impartial one. We strive to keep totally independent as well as optimistic and have assembled a distinguished advisory board to help. As Charles Champlin wrote in The Los Angeles Times ". . . those of us with any involvement in questions of judgment know how often organized guidance reflects ideological positions of left, right, super-timid center or zeal of one kind or another. Guidance that is well focused . . . and also humanistic and positive, rather than alarmist and negative, is rare."

Parents' Choice takes a realistic view about children and television. We acknowledge that children watch all TV and that the time of a program's airing has little to do with its value for the young. The mere absence of violence or sex is not reason for special laudation. High standards of performance, respect for the audience, and the courage to challenge with love, knowledge and wit are.

Parents' Choice believes programs meeting these standards are available. However there is a dearth of them.

The education of America's children is in jeopardy. Parents need help. Children need help. Perhaps Alfred North Whitehead has pointed up the root reason:

"Our sociological theories, our political philosophy, our practical maxims of business, our political economy, and our doctrines of education are derived from an unbroken tradition of great thinkers and of practical examples from the age of Plato . . . to the end of the last century. The whole of this tradition is warped by the vicious assumption that each generation will substantially live amid the conditions governing the lives of its fathers and will transmit those conditions to mould with equal force the lives of its children. We are living in the first period of human history for which this assumption is false."

It is a difficult period. It demands attention and almost equally—optimism. Nothing will be accomplished without it.

Parents' Choice assumes that almost any experience can be, when shared by caring adult and child, a learning experience. All television is available as a teaching tool to the thoughtful creative parent or teacher. Parents' Choice magazine often suggests ways. (Example: "Re-runs As Social History" by Pulitzer Prize winner William A. Henry III). But we are aware that not all our children are under the tutelage of caring, thoughtful, creative parents and teachers. While Parents' Choice continues to present and explore the available and how to use it toward the academic, emotional and intellectual growth of the young, we seek help. We believe a great part of that help is fine television programming. But there is a dearth of it.●

AMBASSADOR HENRY L. KIMELMAN AWARDED HAITI'S HIGHEST HONOR

HON. RON de LUGO

OF THE VIRGIN ISLANDS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. DE LUGO. Mr. Speaker, we are all proud when a friend makes good. We are even more proud when that

person is a friend of long standing, when they come from our home area, and when they achieve deserved national recognition. We are prouder still when a friend rises from performing exceptional local service to larger contributions to humanity and is internationally acclaimed for it.

I am, therefore, very, very proud to call the attention of the House to the accomplishments of Virgin Islander Henry L. Kimelman. A dynamic businessman and a dedicated citizen of the islands that I represent, Henry's activities in the public arena have also been outstanding.

Known to many in Congress as an extraordinarily astute and campaign adviser and manager, Henry's public service goes far beyond politics. He has been a brilliant executive in government as well.

As Virgin Islands Commissioner of Commerce, Henry vitalized our territory's tourism industry. As former Secretary of the Interior Stewart Udall's chief of staff, Henry helped direct some of the Nation's wisest management of its natural resources.

As ably as Henry performed in his many public and private capacities, however, those who know him well know that there is no field of endeavor Henry is better suited to than diplomacy.

Henry L. Kimelman has all the qualities that make a superb representative of our Government and people abroad. He is energetic, resourceful, personable, caring, tactful, and intelligent.

President Carter appreciated these qualities and others as well as Henry's expertise in business and in the Caribbean and appointed him as our Nation's Ambassador to Haiti. Henry's services in that country earned him praise at the time from those familiar with his work in the other body and in the White House. In fact, I think it is accurate to say that even those in the State Department who are generally cautious about entrusting sensitive diplomatic assignments to nonprofessionals came to realize that the United States could have no better representation in Haiti than that provided by Ambassador Kimelman.

Perhaps the most telling fact is that Henry's service earned him the continuing admiration of the nation and people to which he represented our Nation and people. This was demonstrated by President Duvalier's recent conferring on Ambassador Kimelman Haiti's highest civilian award, the "Grand Croix" of the National Order of Honor and Merit.

I was privileged to be among those present as Haiti's fine new Ambassador, Fritiz N. Cineas, presented the honor to Henry earlier this month. At that time, Ambassador Cineas well explained why his nation was taking the unusual step of awarding such rare recognition to a former foreign diplomat. He said better than I just what Henry had accomplished in Haiti and fully outlined Henry's distinguished public and private career.

Mr. Speaker, Ambassador Henry L. Kimelman's work in Haiti was such a service to that nation and ours that I would now like to quote Ambassador Cineas' statement in full.

AMBASSADOR CINEAS' STATEMENT

It is with great pleasure that I welcome you today to this small part of Haiti in the United States of America. Today is a joyous occasion for Haiti and for me personally. We are here among good friends who are not only distinguished in the fields of politics, diplomacy, business and the arts, but who have also demonstrated by their own actions and personal beliefs genuine care, consideration and understanding for our dear country, Haiti.

Few can fit this description better than Henry L. Kimelman who served as Ambassador of the United States of America to Haiti from 1980 to 1981 and whose outstanding and very much valued contribution to our country, my President His Excellency Jean-Claude Duvalier, wishes to recognize today by bestowing upon him the "Grand Croix" of the National Order of Honor and Merit, our Highest Civilian Award.

Those of us who came in contact with Ambassador Henry L. Kimelman during his stay in Haiti appreciated his hospitality, his always positive atitude and determination to support projects and policies which could help in the development of our country. We respected his judgment and took pride in calling ourselves his friends. We were impressed when he and his lovely wife, Charlotte, at their own initiative, visited our homes, not just our offices, and really got to know us. He was a representative not only of the President of the United States but truly of the American people.

But all these human qualities do not surprise us, for those are mere traits of Mr. Kimelman's personality. We, in Haiti, have always prided ourselves on being a friendly, open and sincere people which is a national characteristic and I might add a Caribbean characteristic. Having lived in our region for many years, Henry has proved himself a sincere friend of our people, and therefore we consider him as a true native of the Caribbean.

Although born in New York, Mr. Kimelman now comes from one of the Virgin Islands where for many years he has led a most active and distinguished career in local affairs and business. He served as Administrator of the Area Redevelopment Program and Chairman of the Virgin Islands Economic Development Board as well as Commissioner of Commerce for the Virgin Islands from 1961 to 1964, when the Legislature commended him, by resolution, for his outstanding contribution. Unfortunately for them, the Virgin Islands lost him to Washington in 1967 when he was appointed Assistant to the Secretary of the Interior. He has played a leading part in the Democratic Party, serving as Chairman and Deputy Chairman respectively, for candidates in the Presidential election campaigns of 1972 and 1976.

His business activities are wide and range from New York investment banking to successful involvement in many sectors in the Caribbean—finance, transportation, the hotel industry, real estate—most intelligently linked, if I may be permitted to say, by a deep commitment to the Wine and Spirit Industry. He was a member of the Young President's Organization and is currently a member of the Chief Executives Forum. He is actively involved with the World Business Council, a group of whose members he brought to Haiti earlier this year.

A few months ago, I referred to Henry L. Kimelman's human touches in Haiti and, perhaps, the genuineness of his interest in our people is best understood by his significant and longstanding commitment to charitable work and education, as trustee of the Antilles School, as Chairman of the Child Development Associate Consortium in Washington, as Chairman of the Virgin Islands Fund Drive for the Boy Scouts of America, as Director of the Psychiatric Institute Foundation, and as Chairman of the United Jewish Appeal in the Virgin Islands.

From this brief biography, I think you will understand, Ladies and Gentlemen, Haiti's privilege at being able to count Henry L. Kimelman as friend, as an interested and involved friend in the welfare of our people and the development of our country. I know that he will continue his efforts to focus attention on areas that can benefit Haiti and would like to believe that he will always continue to be open to us for advice and appropriate assistance. It is, therefore, with the utmost pleasure that I carry out the instructions of my President, His Excellency Jean-Claude Duvalier, to bestow upon The Honorable Henry L. Kimelman, the Highest Civilian Award of the Republic of Haiti, the "Grand Croix" of our National Order "Honneur et Mérite".●

COMPUTERIZED JOB BANK SYSTEMS

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. HAWKINS. Mr. Speaker, within the next few weeks, the House will consider H.R. 1036, the Community Renewal Employment Act, which would provide employment opportunities for long-term unemployed individuals in communities experiencing high rates of joblessness. I would like to bring to my colleagues' attention title IV of the bill which would authorize a 4-year program for establishing computerized job bank systems in each State.

The State employment service agencies throughout the country are in varying stages of readiness with respect to computerizing their job matching and labor market information systems. In fact, only 21 of the 50 States are operating automated job matching systems. In this day of advanced technology and computers, it is hard to believe that some States still rely on manual systems for jobs applications and orders.

With the record high levels of unemployment and major dislocation of many segments of the work force, the committee is particularly interested in the automation of the public employment service throughout the Nation to

bring a far greater number of job seekers and potential employers together in an efficient and timely manner.

H.R. 1036 authorizes appropriations, for the development and implementation of job bank systems in each State for such purposes as: First, identifying job openings and referring jobseekers to such openings with a continual updating of this information, second, providing information on occupational supply and demand, and third, utilizing such systems for career counseling programs in school. With this automation enhancement, the employment service can provide better labor market information to help employers in making decisions on plant locations or expansions thereby creating jobs. This same capability can then be used to match unemployed workers with job openings or referrals to training programs for skill development. As resources diminish and workloads increase, technological advancement has to be the answer, particularly if it meets the needs of both the job seeker and the employer. I believe that H.R. 1036 is a step in this direction.●

THE FUTURE OF WATER

HON. BOB EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. EDGAR. Mr. Speaker, I would like to commend to my colleagues an article in the current issue of the Atlantic by Peter Rogers entitled "The Future of Water." Many of us who have worked on the water issue in Congress believe that water quality and quantity issues constitute the most important resource question which we will face in the coming years. While Mr. Rogers outlines the vastness of potential water problems we are facing, he indicates wisely that these problems are solvable through sound water management policies. Many of these policies will have to originate here in Congress, though all levels of government and the private sector must be farsighted and cooperative in dealing with the issue.

I commend the Peter Rogers' article to my colleagues.

The article follows:

[From the Atlantic Monthly, July 1983]

THE FUTURE OF WATER

(By Peter Rogers)

Is there a "water crisis" in the United States? The impression has certainly been created in recent years that there soon won't be enough water to go around, and that much of what is left is likely to be poisoned. The 1982 report on the state of the environment by The Conservation Foundation, a nonprofit group devoted to the study of environmental policy, describes how excessive consumption of surface water has led to a reliance on groundwater, which has itself been depleted, and also stressed by contamination. In 1981, Robert Harris, a member of the Council on Environmental Quality during the Carter Administration, told a New York Times reporter that drinking water is "a significant public health hazard." An ongoing study conducted by the Environmental Protection Agency lends some support to Harris's charge. By last fall, the EPA had found that the groundwater supplies of 29 percent of the 954 cities in its sample were contaminated, chiefly by toxic wastes that had leached out of landfills.

A review of the popular press is a good way to gauge the conventional view of most questions. The cover of the June issue of Science 81 showed a rancher, a suburban householder, a miner, and an Indian gathered glumly around a water pump, with the caption: "Rationing the Colorado: Who Gets the Last Drop?" A quick look through back copies of The New York Times yields the following: the headline "Efforts to Gain 'Fishable-Swimmable' Waters Appear to Falter" (October 12, 1982); Representative Robert Edgar, of Pennsylvania, arguing on the op-ed page, "Is America running out of water? Yes. . . ." (September 23, 1982); the headline "Depletion of Underground Water Formation Imperils Vast Farming Region" (August 11, 1981); and the headline "Toxic Chemicals Loom as Big Threat to the Nation's Supply of Safe Water" (August 13, 1981).

Perhaps the most complete compendium of these concerns to date is Fred Powledge's recent book "Water: The Nature, Uses, and Future of Our Most Precious and Abused Resource," which is devoted to a description of what Powledge calls "the water crisis." Powledge writes that "the United States has entered a period of grave emergency in its supply of water," and that as far as contamination is concerned, "there is little indication that anybody knows what to do about it." He says, "We are learning that there is no escaping the poisons . . . at least with our current technology."

Most of what one reads about the pollution of water in every region, and the short supply in some parts of the country, is true. It is not true, however, that nothing can be done. Water's depletion and contamination are not irreversible. We have the technology and management skills to rise to the challenge; only the will to do so has been lacking.

Unfortunately, for many people, the response to news of contamination and shortage—or to the way in which the news is presented—is fear rather than determination. The anxiety arises in part from the fact that since the turn of the century we have been able to take unlimited amounts of clean water for granted. But as recently as the end of the nineteenth century, the mortality and morbidity rates from water-borne diseases were very high. (Because they remain high for the majority of the world's population, the United Nations has designated the 1980s the "International Drinking Water Supply and Sanitation Decade.") The engineering achievements of the nineteenth century and the early years of the twentieth were, in effect, too successful: as water in short supply and of poor quality became a distant memory, purity and plentifulness began to be assumed rather than systematically safeguarded.

Although the results of our poor stewardship are not beyond repair, they should not be minimized. Of these, contamination is by far the most notorious. In 1974, the Safe Drinking Water Act, which Congress passed largely in response to the efforts of environmentalist groups, forced many communities, often for the first time, to search for chemical contaminants in their water supplies, as well as for the traditionally monitored biological sources of pollution. People have been quite surprised by the exotic toxic chemicals that were found, and are still being found. Disclosures of the reckless disposal of toxic wastes, which, by leaching into the earth, can contaminate groundwater as well as soil, have not inspired confidence in either government or industry, and the addition of Times Beach, Missouri, to a long roster of contaminated sites has led many people to question the safety of their own surroundings.

Some contaminants are showing up in water not because they have been recently introduced but because scientists have only recently become able to measure them in small concentrations. Moreover, the science of assessing the amount of contaminants in water is a good deal more precise than the science of assessing the effects of contaminants on human health. Here we find that definitive judgments are extremely difficult to make. Although much work remains to be done to improve these assessments, scientists may never know more about the toxic effects of many chemicals than they do now. Too many variables (what statisticians call "noise")—occupation, personal habits, diet, the presence of environmental insults other than chemical in question, and so forth—exist in any given geographic area to allow clear linkages of diseases to specific contaminants. This frustration is not likely to diminish significantly with time; it represents an inexorable deficit in scientific understanding.

The public has little tolerance for the ambiguities that complicate statements about contaminated water's effects on health. Confronted with the lack of sure knowledge, many people assume that they are being manipulated for devious reasons. Often, in fact, the suspicion is well founded. Although the uncertainties about toxicity ought to be a warrant for extreme caution in any effort to purify water, they have served also as a refuge for manufacturers and the overseers of landfills, who can cite the uncertainties as a way of understanding their liability once contamination is discovered. Under these circumstances, rational debate on how best to protect water is hard to sustain.

Safeguarding water's quantity and quality are two parts of a single enterprise—management—and most of the threats to water in this country stem directly from the fact that it is a common resource that has been managed chiefly in the service of private profit. Believing that water is limitless, we have made it available to industry and agriculture essentially at zero cost, and with few stipulations. Therefore, we should not be surprised or offended by the profligacy with which these users have exploited it. Few corporate officers who look to the bottom line of a financial balance sheet would insist on investing large sums to conserve or clean up a resource for which their companies did not have to pay much in the first place.

To worsen the consequences of this fundamental error, the country's shortsighted and rudimentary control of the environment makes it inevitable that the regulators will trail behind those regulated. Even as we restrict the permissible levels of some contaminants we discover others, and must set regulations on those as well, in a never-ending game of catch-up. Similarly, as we undertake large and costly engineering

projects to transfer water to farms and factories in regions where it is dwindling, we ensure that the practices that have led to a supply's depletion will persist. Both these obstacles are chiefly matters of policy, however, and policy—unlike the laws of nature—can be changed.

Poor planning is particularly obvious in the country's efforts to deal with chemical wastes, which are a chief source of water's contamination. Although a variety of treatment methods have been developed to make hazardous wastes safe, most wastes have been either stored untreated or indiscriminately dumped. Unfortunately, storage is at best a temporary solution, and an unreliable policy for the future.

The annual tonnage of hazardous wastes produced in the U.S., and other data equally fundamental to any reckoning of the threat to the water supply, are by no means firm. The EPA and other government agencies have not been collecting data for long, and the release of interim numbers to the scientific community and the press has given rise to inconsistent but often-cited figures. For example, a lengthy report on hazardous wastes, which Congress's Office of Technology Assessment (OTA) published in March, cited an estimate by the EPA that between 28 million and 54 million tons of federally regulated hazardous wastes are released in the U.S. each year. The OTA estimates that the total is instead somewhere between 255 million and 275 million tons. The enormous difference between these estimates, which is explained by the OTA's more liberal definition of hazardous wastes, can only complicate the government's efforts to control them. Moreover, within both the OTA's estimate and the EPA's, the margins for error are so wide—at least 20 million tons—that either one alone is a poor basis for policy.

Since no one can say precisely how many tons of hazardous wastes are produced in the U.S. each year, the fact that no sure figures are available on the extent to which chemicals have infiltrated the nation's water should come as no surprise. The United States Geological Survey (USGS) oversees more than 500 stations around the country, which supply regular information on the quality of surface water. These stations do not keep track of all pollutants, however. They do not measure most of the potentially toxic chemicals, and those they do test for elude detection at the low concentrations that would be expected in large volumes of water—concentrations at which the pollutants may nevertheless have significant adverse effects. Thus, although the data the USGS does provide indicate that the country has been able to hold its own with respect to conventional pollutants, such as municipal sewage, the extent of contamination of surface water by unconventional pollutants is barely known.

As for groundwater, no systematic monitoring has been undertaken. Instead, we have only incidental evidence, brought to light, by and large, by concerned individuals. In the San Gabriel Valley of California, for example, thirty-nine wells that supplied water to thirteen cities had to be closed in 1980 when they were found to be polluted by high concentrations of trichloroethylene (TCE), an industrial solvent and degreaser. Seven municipal wells and thirty-five private wells near Atlantic City, New Jersey, had been closed by March of 1982, after wastes from a chemical dumpsite were found to have seeped through the sandy soil into groundwater. In Bedford, Massachusetts, four wells providing 80 percent of the town's drinking water were closed in 1978 when they proved to have been contaminated by high concentrations of dioxane and TCE, among other toxic chemicals. By 1979, drinking water in a third of the communities in Massachusetts had been found to be contaminated. In the spring of 1980, the federal Council on Environmental Quality compiled all the reports of groundwater contamination that had been filed at the EPA's regional offices. The results showed that contamination had occurred in at least thirty-four states: in nearly every state east of the Mississippi River, and in the less industrial western states as well.

Although the EPA is conducting tests of drinking-water wells scattered nationwide, it has concentrated chiefly on locating potential sources of contamination. By the end of 1982, the agency had found 80,263 pits, ponds, and lagoons in which industrial, municipal, agricultural, and mining wastes are impounded. Fewer than 10 percent of these sites have been investigated, and of these, only half are being checked on a regular basis to ensure that clean-up is proceeding. In addition to these impoundments, approximately 16.6 million septic tanks routinely disperse their effluent—about 800 billion gallons a year—into the ground. Septic tanks can be a source of chemical as well as biological water pollution, because of the popularity of cleaning fluids sold to flush out sludge. The fluids contain TCE and benzene, which are both known carcinogens. Finally, the 14,000 active municipal landfills, many of which receive industrial wastes as well as the solids from sewage-treatment plants, and the 75,000 active industrial landfills generally are unlined and leach their contents into ground and surface waters.

Given the volume of contaminants released into groundwater, the fact that they have taken so long to show up may seem puzzling. But most of the chemicals are tasteless and colorless, and therefore hard to detect, especially at low—but nevertheless potentially toxic—concentrations. Moreover, water travels through the ground quite slowly; a contaminant may emerge in a well years after it was released from a source even a short distance away.

The insidiousness of the poisons, their wide geographic distribution, and the frequency with which they appear when tests are conducted understandably provoke reactions of panic or despair. Remedies do exist, however. We can insist that manufacturers reduce the amount of waste they produce; we can treat the wastes before disposing of them; we can treat water after it has been polluted; finally, we can restore an entire area after wastes have been discharged. Of course, some combination of these strategies is also possible. It is generally recognized, however, that the cost of cleaning a site after untreated wastes have been dumped is somewhere between ten and a hundred times the cost of treating wastes before disposing of them. The first two options are therefore clearly the best policy.

Any landfill, no matter how well engineered, is likely to leak eventually. Thus, to start with, landfills might be designed in such a way that the leaks would be directed into collectors; even then, they will have to be checked over a much longer period than the thirty years now required by the EPA, because of the extreme corrosiveness and long lives of many of the chemicals contained. Beyond this, technologies for treating wastes are already in place at many manufacturing plants, and the advantages and disadvantages of potential improvements on these should be explored. Segregating the harshest wastes before they are released to a treatment facility (rather than shipping them in mixed form), and altering manufacturing processes to make their byproducts more benign and to allow for recycling, appear to be relatively cheap but effective ways to control potential contaminants at their source. Wastes can also be burned. Incineration is not appropriate for all chemicals, however. The most toxic ones must be subjected to extremely high temperatures—an expensive and not yet perfected technology—to keep the gases given off from polluting the air. Dumping hazardous wastes in canisters in the ocean and injecting them in the earth at a depth of 5,000 feet or more—that is, far below easily accessible water tables—are two other possibilities. (Even now, in many coastal cities, the effluent of sewage-treatment plants is freely discharged into the ocean.) Both plans are risky, however, because they bring untreated wastes into direct contact with the environment. Eventually, canisters will leak or break up in the ocean, but, according to proponents of this strategy, the wastes released would be so diluted that their toxicity would be nil. Shifts in ocean currents could defy this theory, though, and wash the wastes in close enough to shore to pose a threat after all. The chemicals could also be ingested by fish and find their way into human diets. As for deep injection wells, wastes could migrate upward along unsuspected fault lines; earthquakes and other unforseen geophical phenomena could disturb them too. Chemically breaking down batches of wastes into less toxic forms or decomposing them with bacteria are perhaps the best tactics tried so far, because they ensure that all hazards have been eliminated before a substance is released from a plant.

There is no doubt that, at a price, the country can safely handle its wastes. Prices quoted by nine large firms that treat chemical wastes to bring them up to acceptable safety standards range between $55 and $240 per metric ton. Generously assuming a price of $250 a ton to treat 54 million tons of hazardous wastes a year (the maximum volume estimated by the EPA), the annual cost would be about $13.5 billion. This cost could rise, of course, as more chemicals are analyzed and found dangerous.

Is $13.5 billion, or more, a year a high or low price to pay for the safe disposal of chemical wastes? There is no easy answer to this question. Consider, however, that this sum represents 2 percent of the annual contribution of manufacturing to the GNP, and 0.4 percent of the GNP as a whole. It should also be kept in mind that this $13.5 billion would not be lost, as payments for imported oil are. Rather, it would create and stimulate a substantial industry—and jobs—in its own right.

A task more arduous than controlling wastes before they assault the environment is cleaning them up after the fact. How a site is cleaned up varies with its proximity to houses and drinking-water supplies, the type of soil, the disposition of groundwater, the specific chemicls dumped, and how they were dumped (in liquid or solid form; in containers or not). Generally, though, problem dumpsites can be handled in one of three basic ways: isolating the site by surrounding it with trenches lined with clay or some other nonporous material, and lining and capping the site itself; diverting the flow of any water through the site, underground or on the surface; removing the wastes and the soil and water they have polluted, decon-

taminating them by one of the methods cited earlier, and storing them at a controlled landfill.

These options are not uniform in cost. Clearing a contaminated site and treating everything removed from it entails a good deal of money and labor, but once the task is accomplished, little else is required. In contrast, steering water away from a contaminated site is less expensive initially, but purification plants nearly always must be built to ensure that the water is truly safe, and so maintenance costs can be high. Moreover, regular tests for toxicity are essential, no matter how a contaminated site is handled. The EPA's crisis-management strategy has been simply to transfer the contents of a dumpsite, without treating them, to other landfills, which are themselves prone to leaks. Although the EPA's response has the advantage of being fast and relatively cheap in the short term, its ultimate wisdom and cost-effectiveness are dubious.

The obstacles to cleaning up hazardous wastes, like the obstacles to treating them, are economic, and therefore political, rather than technical. The OTA reports that some 15,000 uncontrolled dumpsites are in need of attention. The total cost is estimated at between $10 billion and $40 billion—many times the $1.6 billion that the federal government expects to collect from chemical manufacturers for its environmental "Superfund," established in 1980. If the country chooses to accept the expense, the goal is within reach.

Aside from the steps the country can take to protect water from contamination, there are ways to protect the public from the toxic effects of contaminants already in water. No contaminants appear to have an irreversible effect. What we put in water, we can usually extract—at some cost. Indeed, only the cost and long-term efficacy of the available technologies remain to be established.

The most reliable method that has been developed so far is the granular-activated-carbon (GAC) filter—essentially ground-up charcoal. (Other filter mediums, such as synthetic resins, are also being studied.) The filter works by a physical process called "adsorption." Molecular attraction causes the chemicals flushed through a carbon filter to adsorb, or stick, to the carbon's surface. Once the grains of carbon are covered completely, they are either restored by being subjected to a high temperature, which drives off the chemicals adsorbed (if the filter is a large one, at a municipal plant), or discarded (if it is small, attached to a household tap). There is little risk involved in the disposal of household filters, because they are small and because, in any case, the molecular bond is extremely strong.

A special advantage of carbon filters for municipal drinking water is their proven ability to trap not only chemical wastes that have infiltrated the system from outside but also unwanted chemical by-products of chlorination. The great reduction in waterborne diseases in the U.S. has been sustained by chlorine, which rids water of harmful bacteria. It turns out, however, that chlorine reacts with natural as well as man-made chemicals in water to create a family of chemicals known as trihalomethanes, one of whose members is chloroform, which has been shown to cause cancer in animals. Flushing water that has been disinfected with chlorine through a carbon filter at the end of the treatment cycle can efficiently remove trihalomethanes and any other hazardous organic chemicals present, according to a report released in 1980 by the National Academy of Sciences. The report cautions that further study is needed to make sure that potentially toxic chemical reactions do not occur on the carbon and that no micro-organisms build up in the filters, but it concludes that there is already "ample evidence for the effectiveness of GAC," and advocates the filter for municipal supplies threatened by contamination.

In 1978, the EPA proposed carbon filters as the option of choice for the control of hazardous chemicals in water. Soon after, a group of ninety investor-owned water utilities, the Coalition for Safe Drinking Water, was formed to resist any EPA requirement on that score. Although the coalition expressed doubts about how well the filters would work, their underlying complaint was cost. Studies sponsored by the EPA in response to the coalition's objections have shown that for cities with a million or more residents, the cost of water would rise between 17 and 21 percent. In relative terms, one could argue that the increased cost would be large. But in absolute terms, and considering how cheap water is everywhere in the U.S. at present, the increase would be modest; based on the EPA's figures, for a family of four it would range between $11.81 and $60.25 a year.

Many water utilities have been using carbon filters to control taste and odor and to treat waste water; some have installed them specifically to control toxic chemicals. In Europe, many cities have been using carbon filters for this purpose alone for several years. So far, however, the EPA has not ordered any utilities to install carbon filters. The EPA does require large community systems—representing about 54 percent of the American population—to test for trihalomethanes and other contaminants. People who are concerned that their water might not be safe could ask their utilities for the results. Local health departments may also be able to provide this information, and some may even be willing to accept a sample and test it themselves. Independent tests of domestic water supplies are expensive, but they are the only recourse for the 33 million Americans whose water comes from their own wells.

Fortunately, some of the household-sized carbon filters on the market do a very good job of ridding water of chloroform, trihalomethanes, and other toxic chemicals. *Consumer Reports* reviewed fourteen of them in its February, 1983, issue, and rated five "very good" or "excellent." The three best were Culligan Super Gard SG-2, at $175 ($23 for replacement cartridges); Sears 3464, at $23 ($7.50 for replacement cartridges); and AMF-Cuno AP50T, at $67 ($12 for replacement cartridges). The magazine gave the Sears filter its "best buy" rating, because of its effectiveness and low cost. In Rockaway Township, New Jersey, a dozen houses relying on contaminated well water have been fitted with such small carbon filters, and tests show that the water is up to acceptable safety standards.

An investment in the treatment of contaminated water need not be an endorsement of the uncontrolled release of hazardous substances into the environment. But treating contaminated water can protect the public health for relatively low additional costs while the country goes about cleaning up the mess it has already made.

A good engineering approach is to be very conservative, and to set the highest standards affordable. It is legitimate to ask whether or not the cost of improving the quality of water is too high, but it is also legitimate to ask, compared with what? If the cost is compared with what industry, agriculture, and households now pay for water, it does seem large. But if we compare the cost with the value of water that won't make us sick, it is small. By any standard of comparison, the eventual expense that is likely to result from current policies, which protect water only haphazardly at best, will be enormous.

Although by now it is a commonplace to say that we live in an era of limits, water is still managed in accord with presumptions, laws, and institutions that do not reflect a recognition of these limits. Abel Wolman, professor emeritus of environmental engineering at Johns Hopkins University, and one of the world's foremost experts on water supply, was quoted in The New York Times on August 9, 1981, as saying:

"Water is cheaper than dirt. That means there is no orderly design as to when and where to use it. In a vast country such as ours we have never been able to organize a thoughtful, logical national plan, and I am very doubtful we ever will."

One does not have to be an economist to see the problem of underpricing. Common sense tells us that people waste commodities that they do not value highly, or commodities that, though valued highly, are supplied cheap.

Both in the Southwest, where water shortages are permanent and likely to worsen if present consumption rates continue, and in the Northeast, where shortages are periodic and rarely dire, water prices are extremely low. Indeed, they are lower by half here than they are in Europe. People in Frankfurt, Germany, pay $2.82 per thousand gallons, whereas in Los Angeles, which is significantly more arid than Frankfurt, people pay only $0.60 per thousand gallons. This disparity in prices is reflected in the sharp contrast in rates of consumption between the U.S. and Europe. The average amount of publicly supplied water for all nonagricultural purposes in the U.S. is about 180 gallons per capita per day ("gped"), of which 120 gallons go to households and for municipal uses, such as street washing and fire fighting; the rest goes to manufacturing and businesses. Yet in countries with comparable levels of social and economic development, consumption is a fraction of the U.S. rate. The rate in Germany, for example, is 37 gped; in Sweden, 54 gped; in France, 30 gped; and in the United Kingdom, 53 gped.

Price differentials alone do not explain the large differences in water consumption in these societies. Consider that in New York City, where water prices are on a par with those elsewhere in the East, the rate of consumption is reported to be 180 gpcd, and supplies to most residential users are unmetered. (As it turns out, the rate of consumption in cities where water is metered is roughly half the rate in cities without meters.) In Boston, water prices are also in the range of prices elsewhere in the East, yet the rate of consumption is 233 gpcd—well above the national average. As much as 40 percent of that amount is lost to leaks in the system. Best guesses as to the effect of doubling Boston's 1978 price of $1.18 (now down, to $1.00) per thousand gallons suggest that consumption would be reduced at most to 160 gpcd—still four times Frankfurt's rate of 40 gpcd.

Something else in addition to price seems to influence water consumption in the U.S.

Americans may be able to recognize, in a theoretical way, the pressures that serve to diminish supply, but they seem unable to keep conservation in mind when devising distribution schemes that borrow from reserves necessary for the future, when confronted with the need to renovate old and wasteful utilities, and when watering lawns and taking showers. Thus, even where water is least plentiful in the U.S., prices rarely reflect supply. Indeed, prices are lowest where water supplies are lowest: $0.53 in El Paso and $0.59 in Albuquerque, compared with $1.78 in Philadelphia or $1.00 in Boston. Moreover, a rise in price does not seem to provoke a commensurate decline in demand. Perhaps American prices are so low that even when they are raised they fail to make an impression on consumers. Can the average homeowner even remember the amount of his last water bill? And how does that expense compare with the cost of an evening's entertainment, or a tank of gas?

However low the price of municipal water in the U.S. appears in comparison with prices in other countries, it is high in comparison with what American farmers pay. The price of agricultural irrigation water in the U.S. ranges between about $0.009 and $0.09 per thousand gallons, and federal subsidies make up the difference between price and cost. The amount of subsidy in the more arid parts of the country is staggering, in fact. In eighteen western federal irrigation projects that the U.S. Department of the Interior studied in 1980, the government was providing between 57 and 97 percent of the costs over the lifetimes of the projects. This works out to an amortized value of between $58 and $1,787 a year for every acre subsidized. Kenneth Frederick, an economist at Resources for the Future, Inc., a nonprofit organization for the study of environmental questions, based in Washington, D.C., wrote in his book *"Water for Western Agriculture,"* published in 1982, that for all Bureau of Reclamation projects, water subsidies total, on average, at least $500 per acre over the life of a project. Thus, for a 160-acre farm, the subsidy might total $80,000, and in some water-short regions it could be as high as $286,000. Until recently, a 160-acre farm was the largest eligible for federally subsidized water under the 1902 Reclamation Act. An amendment to the act was passed last summer, however, which raised the ceiling to 960 acres for individuals and to 640 acres for corporations. The amendment merely acknowledged the fact that the Bureau of Reclamation had been providing subsidies to farms larger than 160 acres for some time. Simple arithmetic shows that for the largest farms now eligible, the subsidy can rise to between $480,000 and $1,715,510 per farm. Senator DANIEL PATRICK MOYNIHAN, of New York, who has been persistent in calling for more rational water policies, argued on the Senate floor that the bill represented "all that is wrong with federal involvement in water resources: chaos, arbitrariness, inequity, and waste."

Water is not limitless, but, contrary to the views of alarmists, there is no absolute danger that it will run out. The U.S. as a whole can count on at least fifty years without serious shortages, even at the present wasteful rates of consumption. Extremely difficult choices will have to be made soon in some regions, however, and almost everywhere methods of allocating present supplies and developing new ones need to be more conservative. For water's quantity as for its quality, it is not nature that could prove intractable but policy. The nation has the power to abandon various water-intensive activities in favor of others less demanding on supplies, and the opportunities are numerous enough to make the transition relatively painless.

Annual precipitation in the continental U.S. is about 4,200 billion gallons per day (bgd), on average. Of this amount, 1,400 bgd should be available for all our uses; the rest evaporates. But yearly fluctuations in precipitation further diminish the supply, in ninety-five out of a hundred years, to 675 bgd. The variability of precipitation should be obvious to everyone this year. Rainfall has been well above normal rates in all parts of the country. Notwithstanding the costs that will result from flooding and soil erosion, these rains could bring important benefits: increased supplies in surface reservoirs, an increased volume of groundwater, and increased soil moisture to ease the demand for irrigation. Unfortunately, though, the amount of water that can be carried over from wet years, such as this one, to drier years is quite small, because the capacity of American reservoirs to store it is limited.

According to the U.S. Water Resources Council, the nation's total average daily consumption in 1975—the most recent year for which the council made an estimate—was 106 bdg. Of this amount, fully 83 percent was used in agriculture. Improved irrigation efficiencies could reduce this share substantially. A tremendous asymmetry exists between agriculture, which consumes 83 percent of the nation's water but contributes only 3 percent to the GNP, and manufacturing, which consumes less than 6 percent of the water but contributes 27 percent to the GNP.

Nearly a quarter of the total amount of water consumed in the U.S. is drawn from the ground. Between 1950 and 1975, the demand for groundwater increased 140 percent. Groundwater accounts for half of the irrigation water used in the West, and some appealing features make it a prime target for development. First, a tremendous quantity is stored in American aquifers—underground streams and basins. The Water Resources Council estimated in 1978 that more than a thousand times the amount of water consumed in 1975 lay within 2,500 feet of the surface. Second, groundwater can be used to even out the natural fluctuations in precipitation from year to year. And third, in many areas, groundwater is the only source that remains to be appropriated.

Unfortunately, in addition to those advantages, there are some drawbacks. Extracting water from the ground demands a good deal of energy. Also, the rate of replenishment, or "recharge," is slow—typically less than 10 percent a year, and only slightly faster in years like this, when precipitation is above average. These drawbacks are now becoming critically evident in the West, where, since 1950, development has depended largely on groundwater sources. As a result, annual withdrawals of water in excess of the amount recharged to an aquifer—"overdrafts"—range between 4 and 95 percent in those regions in which farm acreage is increasing most rapidly. In Texas and the Oklahoma High Plains (the site of the vast Ogallala aquifer), the annual overdraft is equivalent to the unregulated flow of the Colorado River—approximately 14 million acre-feet a year. (An acre-foot is the amount of water needed to cover one acre to a depth of one foot.) In all of the western states, the overdrafts exceed 20 billion gallons a day, or 22.4 million acre-feet a year. In the remaining states, overdrafts have been less substantial, rising to one billion gallons. These data show that enough water to irrigate 10.7 million acres is being withdrawn in excess of replenishment from American aquifers. Although overdrafts for short periods do no harm, for the long term they deplete aquifers, and pumping costs rise as a result.

Consumption has meaning only in terms of supply, and supply is not always easy to predict, because it is subject to technology, politics, and the economy, as well as to natural constraints. For example, a serious effort has been made during the past fifteen years to modify weather in ways likely to increase precipitation. These techniques—seeding clouds with silver-iodide crystals, for example—are still experimental, but they may prove workable eventually. A problem that engineers have yet to solve is that efforts to increase rainfall in one area might decrease it in another. Then there is desalinization—a technology that has attracted a good deal of publicity and that has been employed successfully in harshly arid parts of the world, such as the Middle East and some islands in the Caribbean. However, desalinization is well enough established now to support the prediction that in the U.S. it will always be too expensive for farming purposes—the only source of demand that could seriously deplete supply here.

Just as human intervention can enhance the water supply, human intervention can diminish it. For example, if the federal government were to impose a ban on overdrafts of groundwater, the supply available to consumers could drop by 25 percent in the country as a whole, and by an even greater percentage in the West. The burning of fossil fuels may have provoked a buildup of carbon dioxide in the atmosphere, and evidence is accumulating that if such a buildup has indeed occurred, the small changes in temperature that will result will lead gradually to large changes in rainfall in the country's mid-latitudes. According to Roger Revelle, a member of a panel on the buildup of carbon dioxide in the atmosphere which was convened by the National Academy of Sciences, if the average air temperature increased by several degress centrigrade at a latitude of about 40° north, a 15 percent decline in precipitation would follow, reducing the flow of the Colorado River system, for example, by half. This could create major agricultural dislocations in Colorado, Utah, and Arizona. Revelle says that a decline in precipitation at this latitude across the U.S. might begin to be felt within the next fifty years. So far, though, the change in the earth's atmosphere and its potential effect on weather are only hypotheses.

The effect of politics and the economy on the country's water supply is easy to demonstrate. A huge federal pork barrel is based in part on the construction of dams and the transfer of water from one basin to another, both of which serve to increase a water supply when it runs short. Between 1965 and 1980, $52 billion was spent on all water-resource projects—inland waterways, ports and harbors, multi-purpose dams, and so forth—by four federal agencies: the U.S. Army Corps of Engineers, the Bureau of Reclamation, the Tennessee Valley Authority, and the Soil Conservation Service.

The Bureau of Reclamation's Central Arizona Project is a good example of how the money is used. This project has been under construction since 1973, and is 38 percent complete. Ultimately, it will divert 1.2 million acre-feet of water a year from the Colorado River basin to the cities of Phoenix

and Tucson, and to the agricultural land in between. The water has to be lifted 1,200 feet over a granite reef to a 300-mile-long aqueduct. Most of the water is intended to compensate for the depletion of aquifers by farmers for irrigation; the project will not provide enough water to allow for any expansion in irrigated farmland, or for any further development of cities and industries.

The bureau estimates the project's final cost at between $1.4 billion and $2 billion; estimates made by others are substantially higher. When federal agencies undertake projects like this one, they pay most of the cost; the share borne by the beneficiaries is very small. Moreover, only 6 percent of the $52 billion budget for water projects between 1965 and 1980 was allocated to the Northeast, where 24 percent of American taxpayers reside, and where water systems are generally old—in need of renovation and expansion. The West received 35 percent of the expenditures, though its share of the population is only 17 percent. As a result of this inequity, many congressional representatives of states and districts outside the West have opposed western water-reclamation projects in recent years; indeed, no major package of water-resource projects has been authorized since 1976. A good deal of money remains to be spent, however. According to the General Accounting Office, the cost of the 289 authorized projects still under construction by the Bureau of Reclamation and the Army Corps of Engineers totals $57.4 billion; of this sum, $22 billion has been spent by the end of fiscal year 1981. Another 645 projects have been authorized, with funds yet to be appropriated.

One can object to expensive water projects on the narrow grounds that if they are truly needed, then the beneficiaries should pay for them. But the question of their financing aside, many water projects entail no riders to ensure that the increased supplies will not merely perpetuate a wasteful status quo, in which users who have consumed water indiscriminately can persist in doing so. Federal water projects attract development in regions that have already been developed to a point that strains existing supplies, and they encourage farmers to cling to thirsty crops and inefficient irrigation practices that ought to be abandoned. For example, water supplied by the Bureau of Reclamation to the Grand Valley of Colorado is so highly subsidized that the farmers rely on flood irrigation—they simply cover entire fields with water. Flood irrigation uses up to six times more water than "big wheel" and fixed-sprinkler systems, which are themselves by no means the most advanced and efficient techniques available.

If water and water rights were freely bought and sold, the demand for water would be easier to control; the market would help to establish the most efficient use of the resource. But most water supplies and rights are protected under legal and institutional arrangements that have been worked out over time in accord with objectives other than equity and economic efficiency. The two major legal doctrines—riparian rights and prior appropriation—were designed to secure the land titles of settlers. Riparian rights, which are observed chiefly in water-abundant eastern states, allow the owner of land adjacent to a body of water to make use of the water so long as no inconvenince is caused to his neighbors. Prior appropriation, which is observed in water-short western states, ranks the claims of settlers according to how early their homesteads were established. When a property owner fails to exercise his rights, they lapse. The doctrine is analogous to the pressure on a manager within a corporation to spend all the money budgeted or suffer a cut in funds the following year. Thus, prior appropriation, far from being an incentive for farmers to use less water, is an incentive for them to use as much as they can. In many cases, water rights are attached to parcels of land or specify particular uses. As a result, late arrivals—industries, municipalities, or other farmers—often have trouble acquiring water at any price.

If Indian water rights in the western states are ever enforced, they will reduce substantially the amount of water available to everyone else in those states. The Winters Doctrine, based on the 1908 Supreme Court ruling in *Winters* v. *United States*, holds that when the federal government claims land for any purpose (specifically, to create an Indian reservation), it at the same time implicitly claims sufficient water to accomplish the purpose for which the land was set aside. At present, Indian water rights remain unquantified, but the Navajos, for example, could legitimately claim as much as a third of the flow of the Colorado. In New Mexico, pending claims by several tribes add up to many times the present allocations of water to all the irrigated farmland in the state.

Water is largely in the hands of the states, and it was only in the nineteenth century—with passage of the Rivers and Harbors Act of 1826, which established federal control over interstate navigation; the Refuse Act of 1899, which controlled dumping in navigable waters; and the Reclamation Act of 1902, which established a federal role in enhancing water supplies in the West—that the federal government involved itself at all. The state laws are complex, having evolved, much like federal tax laws, over a long period, and there is little chance that a single national code will ever be devised, much less approved, to replace them. In fact, such a code would not even be desirable in this country, where there is so much variation in supply and demand from one region to another. But it is clearly in the interest of the states, perhaps with the guidance of the federal government, to plan equitably in ways that exploit the legal structure rather than conflict with it.

Water rights may be unbreakable, but they can be bent. For example, a state might offer grants to farmers to offset the cost of adapting farms so that they consume water more efficiently. In exchange, the state would be entitled to the surpluses achieved—water that could then be diverted for municipal and industrial uses, and to increase reserves. Alternatively, since the economic return on water for agriculture is significantly lower than the return on water for manufacturing, industries in arid parts of the country might be enabled, through state intervention, to meet their needs by a mechanism as simple as competitive bidding.

Arizona's Groundwater Management Act—the first comprehensive state law to limit the pumping of groundwater—is a worthy precedent for the thoughtful redistribution of water. It was the severity of groundwater shortages in that state that prompted construction of the Central Arizona Project, but the project will supply only two thirds of the water needed by the year 2000, at current rates of consumption. Thus, the act calls for wells to be registered, and levies fees on the water withdrawn. It calls on farmers to improve irrigation efficiencies, and if these efficiencies are not adequate by the year 2005, it allows the state to buy and retire as much farmland as necessary to restore the natural balance. The act also requires housing developers to secure state certification that a 100-year supply of water is available before construction can proceed.

Harvests need not suffer if farmers use less water than their water rights entitle them to; the agricultural and social optimums rarely coincide, and, given the subsidies, there is no reason why they should. On average, irrigated crops consume only 53 percent of all the water that a farmer withdraws. At farms dependent on surface water, irrigation efficiencies are typically less than 45 percent. At farms dependent on groundwater, the efficiencies are better than 60 percent. The difference is a matter of economics. Irrigation water from surface supplies, which reaches farms through federal or privately managed canal systems, costs a good deal less than groundwater, which farmers must pump themselves. With improved irrigation systems, these efficiencies could rise to between 65 and 75 percent, or higher.

Many farmers—not just those in Colorado's Grand Valley—irrigate by flooding. Alternatives to this practice are "permanent furrow systems", which collect rainwater and surplus irrigation water and channel it to storage ponds for future use; concrete or plastic pipes that carry water underground from the water source to the furrows, reducing the losses to evaporation and seepage incurred by open channels; and "drip irrigation," in which plastic tube feed small increments of water directly to the roots of each plant. Drip irrigation both inhibits evaporation and allows plants to be fed only as much water as they need; farms in Israel using this method have been reported to achieve efficiencies as high as 95 percent.

Besides reducing total water consumption, farmers might also tap supplies of brackish water, for which there is no competing demand. A rule of thumb in agriculture holds that "if you can drink the water, it's all right to use it for irrigation." Yet some crops—barley and cotton, for example—can flourish with brackish water. Crops less tolerant of salt, such as corn and beans, can also be grown in brackish water if it is supplied in such quantity that the salt is washed past the roots. Running tiled drains under the root zones of the plants also helps to keep salt concentrations low. Brackish water occurs inland as well as near the sea. Thus, adapting drainage systems to accommodate brackish water and growing crops that can thrive on it—leaving sweet water for other uses—are conservation options for farmers everywhere in the U.S., not just those in coastal regions. Brackish water could also be substituted for sweet in air-conditioners, washing machines, and industrial washing and rinsing processes.

The homily "mother nature knows best" is as true of water as of any other environmental resource. In many arid regions of the U.S., farmers have been able to cultivate crops that are more water-intensive than the resource ultimately can support, because water is cheap. But when a water supply is exploited to the limit of its capacity, nature asserts itself in ways that should force farmers to conserve. As a water table drops, pumping becomes more expensive. For a while, farmers may persist in their withdrawals, choosing to pay for more fuel to run the pumps, or to drill new wells. Eventually, however, the cost will rise

higher than farmers can afford, and at that point they will abandon their farms or turn to the crops that can thrive with little or no irrigation, such as sorghum, wheat, and soybeans.

Society can be content with this self-regulating system so long as the irrigated crops lost are not essential to health or economic survival. The system can be hard, however, on the farmers at its mercy, and some form of government subsidy ought to be made available to compensate them at least partially for the cost of converting to different crops. Such compensation is sure to cost much less than the federal projects conceived to increase water supplies artificially.

Does the nation depend on crops irrigated with water from the Ogallala aquifer? Do we need Arizona's cucumbers? The most recent comprehensive study of the question, conducted last year by Kenneth Frederick, shows that we do not. Frederick found that out of a national total of 547 million acres of cropland and pastureland, only about 61 million acres are irrigated. The Center for Agricultural and Rural Development, at Iowa State University, which is the leading research group on American agricultural needs, has predicted that only 32 million irrigated acres will be needed to meet the demand for food and fiber in the U.S. in the year 2000. The Center asserts that even this acreage can be irrigated at lower cost, in both water and dollars, using existing technologies. Clearly, if irrigated acreage can safely decline by half over the next twenty years, the country does not desperately need to water the desert, nor does it need to devote so much of the water it consumes to the task. With a decline in irrigated farmland, and the adoption of more efficient irrigation methods, an enormous amount of water can be saved for drinking and other uses.

Industry has already markedly reduced its demand for water, as a result (unintended) of the Water Pollution Control Act, which Congress passed in 1972. Predictably, economic constraints have proved a powerful motive for change. The act requires industries to treat their own effluents, or to pay others to do so; to cut that cost, firms have found it in their interest to produce less waste. The Water Resources Council estimated in 1978 that by the year 2000, industry will withdraw 62 percent less fresh water than it did in 1975, although its consumption of water will increase by as much as 150 percent. Industries will make up the difference by recycling the water they do withdraw from the nation's supply.

Industries can reduce their demand for fresh water substantially merely by keeping a cleaner house. A large textile plant in São Paulo, Brazil, was able to use 39 percent less water within two years after the city levied a nominal charge for the treatment of its effluent, and the reduction was virtually costless. The plant resorted to such simple practices as shutting off taps when no water was needed and using some wash waters more than once. Where plants are being replaced or renovated, changes in manufacturing processes can also bring about large savings. A new paper-pulping technology developed in Sweden has been demonstrated to use half as much water as conventional processes while nearly doubling productivity: the new process gets ninety-five tons of paper from a hundred tons of wood, as compared with the fifty tons yielded by other means. These savings are realized at a price, however, since the alternative technology requires more fuel and a tenth of the usual manpower.

The nation's demand for energy is another source of stress on the water supply. However, although this demand is sure to rise substantially in the future, the amount of water consumed to generate electricity from steam is not likely to rise commensurately. In fact, steam-power plants will consume about 11 percent less water in the year 2000 than they did in 1975, according to the Water Resources Council's last forecast, even though the amount of water they require could be seven times greater. The huge difference between these two figures will be accounted for by improved technologies for cooling water, so that more of it can be recovered. For example, a shift away from evaporative cooling towers to non-evaporative cooling towers, in which condensed water is collected rather than released, cuts the water lost in cooling virtually to zero.

The synthetic-fuels industry, which converts coal and oil shale into more efficient sources of energy, is based chiefly in the West. Although it has been stalled by the buyer's market in oil, its revival will place it in fierce competition for water that is already running short. A coal-gasification plant that can produce 250 million cubic feet of gas a day will require between 3,000 and 15,000 acre-feet of water a year. A coal-liquification plant that can produce 50,000 barrels of fuel a day will require between 5,000 and 10,000 acre-feet of water a year. An oil-shale plant that produces 50,000 barrels of oil a day will require between 2,000 and 9,000 acre-feet of water a year. These are small amounts of water, however, in comparison with agriculture's requirements. A coal-liquification or -gasification plant would use only enough water to irrigate between 1,000 and 5,000 acres, with harvests worth about $250,000. If the same amount of water were used to produce synthetic fuels, it would be worth many times that sum. In 1981, Noel Gollehon and other economists at New Mexico State University studied the likely economic and social consequences of a 40 percent cut (1,245,000 acre-feet) in the water available to agriculture in Montana, Wyoming, Utah, Colorado, Arizona, and New Mexico—states for which synthetic-fuel plants have been proposed. The impact was measured in terms of the loss of income and employment directly related to agriculture and peripheral to it. The $28 million a year and 900 jobs estimated to be lost are not trivial figures. But when these losses are weighed against the income and employment generated by industries producing the equivalent of a million barrels of oil a day, they become a good deal less disturbing.

Although reasonable pricing is not the only solution to the country's poor stewardship of water, it would have powerful ramifications. No state can be expected to refuse a dam or waterway as long as the federal government promises to foot the bill, even though such schemes may delay its coming to grips with the true sources of a shortage. No consumer in any category can be expected to use less water as long as water bills do not reflect the need. Industry cannot be expected to pay for adequate treatment as long as its failure to do so is met at most by nominal fines and more often by silence. Finally, water utilities cannot be counted on to be careful of chemical contamination, and to take steps to prevent it, as long as the EPA is too timid to insist.

The consumers of water must be made aware of its cost for any effort at conservation to succeed. Consider, for example, the aftermath of the federal Water Pollution Control Act, which provided substantial subsidies for the construction or renovation of municipal sewage systems. By 1982, grants to municipalities totaled about $36 billion. The EPA estimates that by the year 2000, an additional $118 billion will be needed to bring the country's sewerage systems into compliance with the act's standards. Because initially the government agreed to pay 75 percent of all construction costs, but nothing for land or maintenance, it ensured that communities would turn to conventional plants, which are expensive to build but cheap to maintain, and which require little land. By the same token, it ensured that communities would avoid innovative systems, which typically cost little to build and relatively more to maintain, and which require large tracts of land. (Innovative sewage treatments tend to rely on nature itself; they employ liquid sewage to irrigate and fertilize crops or they decompose sewage biologically in oxidation ponds or meadow/marsh systems.) The terms of the grants have since been changed in a way that partially corrects this defect, and compels communities to pay close attention to a project's true cost. In 1985, the government's share will drop to only 55 percent for conventional treatment plants, but it will remain at 75 percent for innovative systems. The grants will still cover only the cost of construction, however, and, as a result, a community's incentive to innovate is still not obvious. According to the EPA, the new grant policy is likely to leave a shortfall of $28 billion—or 24 percent—between the cost of the new or improved systems needed to achieve federal standards and the probable contributions of the federal government and communities to that cost.

The Reagan Administration has effectively eliminated the three federal bodies that were in a position to correct the nation's faulty planning: the Council on Environmental Quality, the Water Resources Council, and the Office of Water Resources Technology. Staffs and budgets were cut back to nearly zero. Even though the Council on environmental Quality was composed of too many lawyers and too few scientists and engineers, it played an important role in educating the public about the threats to water and the progress toward solutions. The Water Resources Council studied on a continuous basis the adequacy of water supplies in all parts of the country. The Office of Water Resources Technology, in the Department of the Interior, was the major funding agent for studies of water's proper management. The role of all these groups was essentially critical. By consistently pointing out the flaws in how water is being managed, they made an enemy of the EPA, whose administrators did not appreciate negative evaluations of their performance. They also alienated the four agencies holding the purse strings of the government's water projects, and their chief constituencies—farmers, real-estate developers, mining companies, and so on. Last year's amendment to the rules on access to federally subsidized water is only one example of the power of these constituencies to influence the government's control of the resource.

A bill proposed by Representative EDGAR, of Pennsylvania, to set up a national commission on groundwater, appears on its face to be a good first step in changing the traditional priorities of water management. Yet, although the bill's intention is worthy enough, such a commission is surely premature. Water policy is already thoroughly

fragmented: the Department of the Interior and the USGS have chief jurisdiction over problems of quantity, and the EPA over problems of quality, but no agency is trying to look at the nation's water in all its aspects. Even when it was functioning, the Water Resources Council, which might have studied the interrelationships between supply and purity, and the competing demands of the states, did not do so effectively. Before a commission on groundwater is appointed, there ought to be a commission on water. Such a commission should seek ways to resolve the battles between East and West, and to integrate the activities of the various agencies. And it must do so without engaging in the partisan politics in which these agencies are so often embroiled. The American people are owed a careful explanation of the choices they face, both as taxpayers and as consumers of water.

Perhaps, after all, this country can prove Abel Wolman wrong, and devise a "thoughtful, logical national plan" for water. First on the agenda is to compel users to appreciate water's economic value. Prior to the energy crisis, one would not have believed that Americans could curb their appetite for oil. Ten years of rising prices have provoked amazing changes in behavior. The adjustments have not been easy, but many of the ones most feared by politicians and citizens—the charge of $1 or more for a gallon of gas, for example—have come to pass with no real peril to the common good. Higher prices could influence water consumption just as radically, and with less trauma.

Higher prices by themselves will not untangle the snarl of competitive demands for water in regions where it is running short in absolute terms. But higher prices can reveal the true economic value of water, and make the political choices among these demands clearer. Similarly, the public health is not merely in the domain of cost-benefit analyses. Standards of water purity are ideally studied with no consciousness of the financial burdens they would impose. These burdens must then be confronted, however, and borne as part of our commitment to ourselves and to future generations. Compared with the nation's other expenses, these burdens will not be so very large. Insofar as a water crisis exists, it is a crisis of political will. If the country acts wisely, and is willing to pay the price, it can prevent politics from transforming the water crisis of the headlines into a true crisis in the natural world.●

AID TO GUATEMALA: VIOLATING HUMAN RIGHTS

HON. SAM GEJDENSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. GEJDENSON. Mr. Speaker, in our great concern over the unfolding events in Honduras and the seemingly endless war in El Salvador, we must not forget the tragedy of neighboring Guatemala. In the interest of understanding what is going on in that beleaguered country I highly recommend the May 1983 report from the Center for International Policy. The authors of this report, entitled "Aid to Guatemala: Violating Human Rights Laws," also explain in clear detail our human rights laws, the evolution of those laws and their relevance to the situation in Guatemala.

The article follows:

AID TO GUATEMALA: VIOLATING HUMAN RIGHTS LAWS

(By Bruce P. Cameron, and Christopher D. Ringwald)

The Carter administration determined in 1979 that the Guatemalan government was violating the human rights of its citizens so severely that, under U.S. law, U.S. support for multilateral aid to Guatemala had to be withdrawn.

The Reagan administration decided in 1982 that Guatemala's access to the multilateral development banks, governed by the same laws, would no longer be obstructed by the U.S.

Meanwhile, in Guatemala, citizens continued to be detained, tortured and killed.

The difference between the policy implemented by Carter and the policy put in force by Reagan is not a reflection of human rights improvements in Guatemala. Rather, it is an indication of the Reagan administration's willingness to use every ambiguity in human rights law to avoid applying sanctions to protect human rights.

The implication is that the practice of providing arms and supporting multilateral assistance to regimes with reprehensible human rights records will continue.

"CONSISTENT PATTERN OF GROSS VIOLATIONS"

The human rights legislation to which the Carter and Reagan administrations have been subject consists of legislative amendments to three acts: the International Financial Institutions Act of 1977 (section 701); the Agricultural Trade Development and Assistance Act of 1954 (section 112); and the Foreign Assistance Act of 1961 (sections 502B, 116, and 239).

The crux of each amendment is that the U.S. shall not provide or approve assistance to any government which engages in a "consistent pattern of gross violations of internationally recognized human rights," unless such assistance is channeled to "projects which address basic human needs (BHN) of the people of the recipient country", or in the case of security assistance, "extraordinary circumstances exist", or, if "it is in the national interest to provide such assistance."

The phrase "engages in a consistent pattern of gross violations of internationally recognized human rights" is inherently subjective, but has been interpreted, if not applied, with some consistency. It is generally recognized that isolated acts of governments do not warrant human rights sanctions. Yet, under three administrations (Ford, Carter, and Reagan), legal advisors in the State Department have also consistently found that human rights law prohibits loans to governments which fail to cause human rights to be respected, just as it prohibits loans to governments which directly carry out, encourage or incite human rights violations.

Although there is no strict formula, an Agency for International Development legal memorandum of July 18, 1977, is an example of this standard interpretation:

"From the clear import of the term, we conclude that isolated and inconsequential acts of foreign governments are not incorporated . . . as a violation of human rights. We also conclude that a foreign government should be found in violation if it has, by act or *omission* [emphasis added], conducted or endorsed a systematic pattern of glaring violations of internationally recognized human rights against its citizens.

"These interpretations indicate that the phrase 'consistent pattern of gross violations' is a stern test in examining the conduct of a foreign government towards its citizens. A determination that a foreign government has been found to engage in this activity would indicate that government has acted intentionally or at least with unconscionable disregard for the human rights of its citizens by express acts or omissions."

APPLICATION OF HUMAN RIGHTS LAW PRIOR TO AUGUST 1982

It is not easy to unravel the Carter administration's application of human rights law to the case of Guatemala, because Carter implemented a human rights policy over and above legal requirements. Futhermore, the Carter administration was often inconsistent and halting in its application of human rights law, and seems to have preferred to blur the distinction between policy and law .

From the record, however it can be discerned that the Carter administration twice determined that the government of Guatemala was engaged in a "consistent pattern of gross violations of internationally recognized human rights."

First, on the basis of its human rights policy, the Carter administration banned government-to-government military sales to Guatemala in the late 1970s. Commercial sales in small quantities of nonlethal items were not prohibited, but, beginning in 1979, the executive directors routinely opposed non-basic-human-needs (non-BHN) multilateral loans to Guatemala.

Second, after the Guatemalan police stormed the Spanish embassy January 30, 1980, a full arms embargo against the government was put into effect. This was a decision in line with Section 502B of the Foreign Assistance Act of 1961 which prohibits security assistance to gross and consistent violators except in "extraordinary circumstances," yet was explained as another policy decision. It was the Carter Administration's practice to apply the "extraordinary circumstances" clause to most countries, but not to countries in Latin America.

It was in September of 1979 that the Carter Administration invoked the legal prohibition of approving loans to Guatemala. Then, the Interagency Group on Human Rights and Foreign Assistance decided to abstain on a loan to Guatemala which would have been used for industry and tourism. The thinking behind this decision was spelled out in the Operating Manual of the Bureau of Human Rights, and Humanitarian Affairs, written at the end of the Carter administration. The Manual notes the proposed loan was one "which required extensive consideration of other U.S. strategic interests," but that, "in the final analysis the Deputy Secretary of State felt that it was not possible *within the law*[1] to approve non-BHN assistance to Guatemala at that time (emphasis added)."

Because the Interagency Group made its decision on the basis of law, rather than policy, it must be concluded that the Carter administration judged Guatemala to be a gross and consistent human rights violator. It is clear that the loan would not have served basic human needs, and there was no concern that Guatemala was harboring international hijackers—the only other con-

[1] Section 701 of the International Financial Institutions Act of 1977.

dition which would have resulted in a legal prohibition on loans.

Since the Carter administration judged Guatemala to be a gross and consistent violator in September, 1979, it is puzzling that a full prohibition on arms transfers to Guatemala was not put into effect until January, 1980, and then only as a matter of policy. In the summer of 1980, however, Section 502B directly blocked efforts to renew military assistance.

Guatemala "was a gross and consistent violator and we couldn't renew," a deputy assistant secretary of the Department of State said.

WHY THE REAGAN ADMINISTRATION OBEYED THE LAW

While a combination of law and policy guided the Carter administration's policy toward Guatemala, law has been the only restraint under the Reagan administration. Furthermore, the Reagan administration has only upheld the law when the factual situation was so compelling and Congressional pressure was strong.

The Reagan administration's decision in June 1982 to lift prohibitions on non-BHN loans to Argentina, Chile, Paraguay, and Uruguay showed its disregard for U.S. human rights law. Although their military establishments were no longer engaged in massive, brutal crackdowns, the people of Argentina, Chile and Uruguay were experiencing appalling levels of human rights violations. The dictatorship of Paraguay, which imposes periods of severe human rights violations and periods of milder repression, was far from respecting the human rights of its citizens. But, by taking the highest level of violence as the standard of reference, State Department official were able to argue that "consistent patterns" of gross violations of human rights had been discontinued in each of these countries.

This judgment rested on an apparent ambiguity in the human rights law. In the key phrase "consistent pattern of gross violations of internationally recognized human rights," the word pattern clearly refers to violations which occur repeatedly and in relationship to one another. The problem arises with the word "consistent," however, because it has been interpreted in two ways.

One view is that the word "consistent" is merely redundant, because a pattern is by definition "consistent." But in another view, "consistent" modifies "pattern" in a particular way. According to this interpretation, a government is not subject to human rights law sanctions—even if it is committing a pattern of human rights violations—if the kind and scope of the violations change and decrease.

This was the argument the administration made in the case of Argentina, Chile, Paraguay and Uruguay. This case could not be made for the Guatemalan government of Lucas Garcia, but the Reagan administration was prepared to try.

Even in 1981, when the government of Guatemalan President Lucas Garcia was clearly involved in a program of detention and execution that had resulted in the deaths of thousands of Guatemalan citizens, the Reagan administration considered removing Guatemala from the sanctions of human rights laws and lifting the prohibition on non-BHN loans. Arms sales to Guatemala, OPIC insurance for Texaco oil exploration in the Petain, and an Inter-American Development Bank loan for a non-BHN hydroelectric project were all favorably considered inside the Reagan administration.

Only a campagin of public and congressional pressure, spurred by an Amnesty International report, forced the administration to acknowledge the unequivocally dismal human rights record of the Garcia regime, and to obey U.S. human rights law.

In its February, 1981 report, Amnesty International revealed that nearly five thousand Guatemalans had been seized without warrant and killed since Lucas Garcia had become President. Furthermore, Amnesty International held the Garcia government directly responsible for the executions.

"Abuses attributed by the Government of Guatemala to 'independent death squads' are perpetrated by the regular forces of the civilian and military security forces," Amnesty charged. ". . . The evidence compiled and published by AI in recent years indicates that routine assassinations, secret detentions and summary execution are part of a clearly defined program of government in Guatemala." *(Guatemala: A Government Program of Political Murder.)*

In fact, Amnesty concluded most damagingly, the president of Guatemala was personally ordering the assassination of political oponents. "New information . . . shows that the task of coordinating civil and military security operations . . . is carried out by a specialized agency under the direct supervision of President Lucas Garcia," Amnesty said.

The State Department knew Amnesty's accusations to be valid and, most important, Congress knew the State Department knew them to be true. The sale of spare parts which had been scheduled for August was postponed pending further consideration. The U.S. abstained from the hydroelectric project loan on human rights grounds. In December, Texaco withdrew its request for OPIC insurance.●

THE DEATH OF A. J. CERVANTES

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. GEPHARDT. Mr. Speaker, A. J. Cervantes was an untiring advocate and booster of the city of St. Louis and its people. His efforts and accomplishments for his beloved city—as an elected official and a private citizen—will endure.

A. J. Cervantes served as mayor of St. Louis at a time when the future of all U.S. cities was bleak. The social unrest of the sixties and early seventies, combined with the flight to the suburbs placed a strain on cities like St. Louis that threatened to bankrupt their spirit as well as their coffers.

Al Cervantes lifted the spirit of St. Louis above the increasing rabble of the experts who said the city could not survive and moved the town forward with his energy and vision.

With the incredible enthusiasm of Al Cervantes, St. Louis began the slow recovery back to the vital and vibrant urban center it is today.

Mayor Cervantes was proud to be the servant of all St. Louisans—rich and poor, black and white. For many, his ebullience meant hope for a better day for his city and its people.

I join all St. Louisans in offering my condolences to Carmen Cervantes and the Cervantes family on the loss of A. J. Cervantes.●

FORCED RESETTLEMENT OF BLACKS CONTINUES IN SOUTH AFRICA

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. SOLARZ. Mr. Speaker, one of the most brutal practices of South Africa's racist apartheid regime is its policy of relocation and "dispossession" of its black majority which unfortunately continues today.

While the South African cabinet decided yesterday not to block its high court ruling allowing urban blacks with 10 years residency to remain permanently in white areas, it refused to allow their families to join them.

A new report prepared in South Africa documents this continuing tragedy. It outlines South Africa's forced resettlement of well over 3.5 million blacks in the last two decades, and reveals the Government's goal of relocating another 2 million people in the near future.

An article summarizing the findings of this important report appeared in yesterday's Christian Science Monitor. Mr. Speaker, I submit this article to be reprinted in today's CONGRESSIONAL RECORD for the benefit of my colleagues and others concerned about the oppression of blacks in South Africa.

[From the Christian Science Monitor, June 22, 1983]

SOUTH AFRICA CALLED "BRUTALLY SUCCESSFUL" IN FORCING BLACKS INTO "HOMELANDS"

(By Paul Van Slambrouck)

JOHANNESBURG.—One day there will be no black South Africans, exalted a white government minister back in 1978.

A new report on the subject says Pretoria has been "brutally successful" in that endeavor, delusory as it might sound considering that more than 70 percent of the South African population is black. Yet the government has:

Uprooted and relocated well over 3.5 million people, mostly blacks, over the past two decades.

Set its sights on relocating another 2 million blacks in the near future.

Accomplished this massive resettlement of people through force, which continues to be the main tactic despite government insistence that removals are now done on a voluntary basis.

These are the main conclusions of a report dubbed the Surplus People Project, written by a group of academicians, religious figures, community workers, and individuals involved in nonprofit organizations. Project members include blacks and whites;

all have volunteered their time and most have been consistent government critics. The report is one of the most comprehensive reviews ever made of South Africa's policy of forced population resettlement.

Pretoria's aim has been unwavering, says the report. It has sought through forced resettlement to keep South Africa's black majority separate and as distant as economically possible from the ruling white minority. All this to ensure that whites will be able to retain power.

The government's "process of dispossession," as described in the report, begins with as many blacks as possible being physically forced to live in tribal "homelands." It ends when those "homelands" are brought to "independence" by Pretoria and all the blacks assigned to that territory are stripped of their South African citizenship.

Carried to its conclusion, Pretoria's policy will result someday in the statutory exclusion of all this country's blacks from South African citizenship.

The statistics in the report are staggering. They suggest that the government will soon have relocated more blacks than the sum total of the entire white population of some 4.5 million.

While the forced relocation of blacks is not a uniform process, the report notes that the general direction has been the same: "out of the towns, cities and farming areas falling in the 87 percent of the country designated for white ownership." The black "homelands" comprise the remaining 13 percent of the South African land mass.

One measure of the government's success in thwarting the process of urbanization by blacks and the racial integration of communities is the rising percentage of blacks living in the "homelands." In 1960 some 39 percent of the black population lived in those tribal territories, compared with 54 percent today.

For those blacks resettled, the process has brought "enormous suffering," according to the report. Cohesive, self-sufficient black communities have been deprived of land and relocated in "hastily flung-together settlements" where rudimentary facilities like taps, toilets, and shelter are "very poor."

The report speaks of the social and psychological damage done to blacks by the resettlement process, which it finds more significant than the material deprivation. Says the report: "The dominant mood in relocation areas is often one of passivity and helplessness in the face of the enormous problems and the hidden bureaucracy that controls people's lives."

The most sinister result of the government's relocation policy is not so much the physical suffering it brings to many blacks, says the report. Rather, it is the cumulative effect of the policy, along with other laws, that have the net effect of dispossessing blacks of their land and citizenship and forcing them into areas where they are cut off from jobs, services, and the opportunity to improve their living conditions.

The resettlement policy is bolstered by stringent influx control laws that restrict blacks' ability to legally go to the cities in search of jobs. The government has indicated it intends to further tighten influx control.

The South African government has adopted an increasingly low profile on the issue of resettlement, apparently feeling the less said about the policy the better. This report points to statements by the government that removals are now being done on a voluntary basis.

However, the report documents a number of case studies and comes to the conclusion that while the coercion process has become more sophisticated, it remains for blacks an "involuntary" process nonetheless. "In a situation where blacks do not possess political rights or freedom of movement, there can be no talk of them exercising a free choice about being removed," it says.●

LONG'S QUESTIONNAIRE

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. LONG of Maryland. Mr. Speaker, over 14,000 residents of Maryland's Second Congressional District responded to my districtwide questionnaire.

Fully 40 percent say things have gotten worse in the past 2 years and about half do not expect to be better off during 1984. The tax cut passed with my support has helped people second only to the curtailed inflation. But, two constituents say:

A lower level of inflation has helped, but not at the supermarket.

Federal tax cuts have helped me the most, however, the medicare tax has taken any savings right back.

The middle-income people expressed growing frustration that the Government seems to be helping the poor and the rich, but not those in between.

[Because of] high unemployment in our area of the country—Middle River, Essex, Dundalk,—you can't sell your services to someone who has little or no income . . . Government doesn't help; you have to fend for yourself.

All we can do is borrow money and live within a tight budget because there's no safety net for the employed middle class.

Although most of my constituents seem to be pleased with the President overall, they also express marked dissatisfaction with several of his specific policies. Says one:

[Reagan] is sincere and he's likeable. But he's got communism on the brain.

Says another:

Economically, I think [Reagan] is doing good. But I am very angry at his utter disregard for the natural environment.

Three to one, they support my positions, opposing the President's, in favor of repealing the 10-percent withholding law and freezing nuclear weapons. Two to one, they agree with what I have been trying to do: cut back on the President's requests for defense spending and for military aid to El Salvador. And three to two, they join in my opposition to his plan for decontrolling natural gas prices.

My constituents appear evenly split on whether Congress is doing enough to address unemployment. One comments:

There's a limit to how much government spending can make up for a recessionary economy.

However, they overwhelmingly think we should do more to protect American jobs against unfair foreign trade, and would agree with my efforts to provide Trade Adjustment Assistance benefits to laidoff workers, extend the trade relief program for specialty steel, and discourage U.S. Steel's plan to import British raw steel. One constituent says:

I strongly urge re-training of unemployed, displaced workers.

My constituents seem to feel we have cut social programs all we can, at the same time feeling we should not do any more to strengthen them, except in the area of education. Says one:

Put education of our young as a top priority.

There was no need to ask whether we need to bring the deficit down, but three out of five oppose doing it by postponing the tax cut. However, holding back somewhat on defense increases has considerable support.

Finally, one constituent noted:

Too bad we cannot raise the consciousness level that people are the government.

Here are the specific results:

LONG'S 1983 CONGRESSIONAL QUESTIONNAIRE

THE ECONOMY

1. Compared to two years ago, are you better off, 22 percent; worse off, 40 percent; about the same, 38 percent.

2. What has hurt you the most in the past two years? Inflation, 33 percent; unemployment, 10 percent; interest rates, 16 percent; taxes, 35 percent; cuts in Government programs, 6 percent.

3. What has helped you the most? Tax cuts, 23 percent; reduced inflation rate, 38 percent; lower interest rates, 12 percent; increase in wages or salary, 12 percent; family more fully employed, 8 percent; Government deregulation, 7 percent.

4. Do you expect to be better off during 1984? Yes, 49 percent; No, 51 percent.

UNEMPLOYMENT

5. Should Congress pass a jobs bill that does even more to relieve unemployment than the recent $4.6 billion bill? Yes, 47 percent; No, 53 percent.

TAXES

6. Do you want to repeal the federal law to withhold 10 percent of interest and dividend income? Yes, 77 percent; No, 23 percent.

DEFENSE

7. Do you support a freeze on nuclear weapons, if it is mutual and verifiable? Yes, 74 percent; No, 26 percent.

THE PRESIDENT'S BUDGET

8. What should Congress do with the President's Budget Proposal? "Stay the Course," give it more time to work, yes, 72 percent; no, 28 percent; cut social programs even more than the President has proposed, yes, 35 percent; no, 65 percent; restore spending on social programs, yes, 42 percent; no 58 percent; postpone the income tax cut scheduled for July 1, yes, 41 percent; no, 59 percent; slow the planned increase in defense spending, yes, 67 percent; no, 33 percent. Other?

ENERGY

9. Do you support the President's proposal to decontrol natural gas prices by 1986? Yes, 61 percent; no, 39 percent.

TRADE

10. Do you support more protection of American industry and labor against "unfair" foreign trade? Yes, 73 percent; no, 27 percent.

EL SALVADOR

11. Do you support the President's request for increased military aid to El Salvador? Yes, 31 percent; no, 69 percent.

REAGAN

12. On the whole, is the President doing a good job? Yes, 58 percent; no, 42 percent.

THE "CHALLENGER" MISSION

HON. BOB LIVINGSTON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. LIVINGSTON. Mr. Speaker, on June 18, the space shuttle *Challenger* was launched at Cape Canaveral, making it the seventh successful launch in the NASA space shuttle program. In addition to the satellites and NASA experiments aboard the shuttle, the *Challenger* also carried with it a series of experiments called getaway specials. Orbit '81 is one of these getaway specials, and it is designed completely by high school students in Camden, N.J.

As a member of the Congressional Space Caucus, I would like to acknowledge the accomplishments of these high school students. They have creatively used a colony of carpenter ants to show the effects of weightlessness in space. This project has helped the students to take a new interest in science and engineering in their school. It is also yet another example of the positive effects our space program has back here on Earth.

I would just like to congratulate these high school students on their hard work and initiative on their project, Orbit '81.●

FLAWED FOREIGN POLICY

HON. JAMES J. FLORIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. FLORIO. Mr. Speaker, the administration's policy regarding Central America is causing concern among millions of Americans that we once again are stepping slowly but surely into the quagmire that was once Vietnam.

One American adviser is dead already, and fears abound that one day soon the administration will add U.S. troops to its wish list of military aid for the region.

For this reason I reintroduced in this session legislation that would require specific approval by Congress before any U.S. combat troops could be ordered to Central America.

The administration's relentless push for a military solution to the region's conflicts completely ignores the roles that economic and political solutions could play.

This single-minded military approach recently was the subject of an opinion page article in the Bergen Record, a newspaper published in Hackensack, N.J., written by Rev. Joseph T. Eldridge, a Methodist minister who is director of the Washington Office on Latin America. Supported by a variety of church groups, the organization disseminates information about the region.

I would recommend Reverend Eldridge's article to the attention of my colleagues and ask that it be reprinted in the RECORD at this time.

[From the Hackensack (N.J.) Bergen Record, June 14, 1983]

FLAWED FOREIGN POLICY

U.S. ACTIONS IN LATIN AMERICA ONLY ALIENATE OUR FRIENDS

(By Joseph T. Eldridge)

One of President Reagan's favorite themes these days is the Marxist threat posed by revolutionary movements in Central America. He apparently believes that it's a good political warm-up for the 1984 presidential sweepstakes. His accomplishments are significant. Since addressing a joint session of Congress, the president has scattered the Democratic opposition and salvaged most of his military-aid programs for the region.

But even as he tries to win the war in El Salvador, tries to save his secret war against Nicaragua from congressional efforts to curtail it, and effectively neutralizes the Democratic opposition, he's losing the rest of the hemisphere and jeopardizing U.S. security interests for years to come.

In his major Central America address in April, the president declared that Central America's crisis directly affects the security and well-being of our own people. The problem, as he views it, comes from the Marxist threat represented by revolutionary movements in the region.

While making appeals for dialogue and negotiations, Mr. Reagan is pursuing a rapid military strategy to contain and eventually destroy these supposedly unfriendly forces. He asks for more military aid to combat the guerrillas in El Salvador, more military aid for Honduras, and a resumption of military aid for Guatemala. Moreover he appeals to the Congress to let him continue his covert war against Nicaragua.

This is a policy guaranteed to produce disaster. Until the underlying social and economic causes of the insurgencies in Central America are seriously addressed, they will spread and deepen. A military response only raises the level of violence and prolongs the war. By escalating U.S. military involvement, President Reagan besmirches the reputation of the United States in this hemisphere and calls up memories of the gunboat-diplomacy era, when U.S. Marines enforced orders at gunpoint.

Paradoxically, by using apocalyptic language to describe the threat to our national security, he hastens the day when Central America could become another apocalypse. Nothing would more directly affect the security and well-being of our own people than a region-wide war in Central America, yet President Reagan's own policy steadily increases the danger of such a conflict.

President Reagan also admonished the American people not to "lose sight of our neighbors to the south." Ironically, no president in recent history has been so isolated from the rest of the hemisphere. The White House is out of sync with our Latin allies.

On the day before the Reagan address, President Figueiredo of Brazil, visiting Mexico at the invitation of President Miguel de la Madrid, warned the United States not to intervene in the hemisphere. He suggested that Brazil and the rest of the continent would quickly unite to defend any nation whose sovereignty was threatened by U.S intervention. Figueiredo strongly endorsed the diplomatic initiatives of the "Contadora group"—Mexico, Venezuela, Colombia, and Panama—allies of the United States who've tried to undo the damage wrought by U.S. policy and to find peaceful solutions to Central America's conflicts.

By using apocalyptic language to describe the threat, Reagan hastens the day when Central America could become another apocalypse. Nothing would more directly affect us than a region-wide war in Central America, yet his own policy steadily increases the danger.

Mexico agrees with the Reagan administration that the turmoil jeopardizes hemispheric security but comes to very different conclusions about how to deal with it. President de la Madrid has joined others in insisting that peace talks must be started to reduce tension.

Although the progress hasn't been encouraging, the Contadora countries, led by Mexico, continue promoting talks as the only viable solution. During the past year, international support for the Mexican position has grown substantially. Governments that initially supported Reagan have diverged from this Central American blueprint.

The Contadora countries' approach to the region currently enjoys the active support of the Dominican Republic, Brazil, Spain, France, Italy, the Scandinavian countries, the Netherlands, and Canada, as well as the passive support of Costa Rica and Ecuador.

No U.S. president can expect to act unilaterally in Latin America without damaging our relations with the whole region. The administration's stance is viewed with growing alarm by political leaders of all persuasions in Latin America. By refusing to halt support for covert funding for a war against Nicaragua and by saying that U.S. troops are not being sent because they "are not needed and have not been called for," President Reagan insults not only Nicaragua but every country in the hemisphere. Each nation must be privately asking itself whether it would be subjected to similar treatment should it diverge from the president's prescription for nationhood.

Mr. Reagan's belligerency is creating a wave of anti-Americanism in the region, even among traditional political conservatives. The nationalist Blanco Party of Uruguay, a bastion of conservative philosophy, lashed out at the administration's presumptuous behavior in Central America. Similar editorials and newspaper articles have appeared in news magazines from the Rio Grande to Patagonia.

Latin Americans are particularly sensitive to President Reagan's double standard, better known as the Kirkpatrick doctrine,

which uses arcane and scholastic distinctions between authoritarian and totalitarian governments to justify a policy of aggression toward Nicaragua and apologetic silence toward El Salvador's death squads. President Reagan pretends to champion freedom by harshly attacking the Sandinistas.

But if the United States is such an implacable foe of tyranny, why is it supporting the military governments of Uruguay and Chile? Where is our support for freedom fighters in those countries?

If President Reagan wants to preserve our national security, laying the groundwork for a lasting and just peace, Central America is a good place to start. Besides the obvious advantages for the region, it would also begin to restore a measure of good will among our principal allies.●

PROPOSED REGULATIONS FOR THE 1983 COMBINED FEDERAL CAMPAIGN

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mrs. SCHROEDER. Mr. Speaker, tomorrow the Office of Personnel Management will issue proposed regulations for the 1983 Combined Federal Campaign which would exclude many of the charitable advocacy organizations that have participated in recent campaigns. OPM's delay in issuing the regulations, and the additional time required to process comments and appeals, have already caused extensive harm to the fall campaign. My constituents in Denver are served by a large number of organizations which receive CFC funds, and the delay and confusion sparked by the new regulations may severely impair the services these organizations can offer to Denver's citizens.

Because activities for the CFC have already been greatly delayed, I support Representative BARNEY FRANK'S proposal that the administration conduct the 1983 CFC under existing regulations and eligibility determinations.

I strenuously oppose OPM's proposal to exclude charitable organizations which spend more than 15 percent of their budget on litigation or advocacy before legislative or administrative bodies. This limitation closely parallels the antiadvocacy language used in the now withdrawn proposed revisions to Office of Management and Budget Circular A-122. OPM's proposed limitation on the percentage of resources an organization can spend on administrative advocacy while remaining eligible for CFC participation is far more expansive than the restrictions of title 26 United States Code, section 501(c)(3).

OPM may have already crippled the 1983 campaign. By law, OPM must allow time for public comment, administrative review of those comments; final regulations must be promulgated, and eligibility and appeals determinations made. All this must be done before the campaign materials can be printed and distributed. In addition, excluded charitable organizations may seek injunctions to stop the CFC until their applications and appeals are resolved. Allowing the CFC to be conducted under these regulations would lead to a nightmare of confusion, delay, and litigation.

The CFC is a highly successful program. Federal employees have demonstrated their preference for a wide variety of potential recipients, including advocacy organizations. This choice should not now be restricted by arbitrary regulation.●

THE NEED FOR A PEACE ACADEMY

HON. DOUG WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. WALGREN. Mr. Speaker, during recent days the House has taken up the fiscal year 1984 DOD authorization bill which would authorize $187.8 billion for DOD procurement, research and development, operations and maintenance, and civil defense programs. This total dollar figure does not include bilions of dollars in military funding that is taking place in other Government agencies such as the Department of Energy where we are spending $6.8 billion on nuclear weapons. There is broad agreement that some degree of increased military spending is necessary for our own protection through deterrence. But peace through war is not a lasting solution.

In this debate the proposal establishing a U.S. Academy of Peace and Conflict Resolution has been largely overlooked and ignored in my review, this effort should be given much higher priority in our discussion.

I, along with 145 other cosponsors, believe establishing a Peace Academy as proposed by H.R. 1249 can make a crucial contribution to our defense. The development of a Peace Academy was first considered by the Commission on Proposals for the National Academy of Peace and Conflict Resolution, established in 1978. Their subsequent recommendations came after a year of research and interviews demonstrated the need for such a centralize institution to coordinate the varied attempts of policymakers to obtain peace.

Under this bill, the efforts of the Peace Academy would be focused on teaching peace in contrast to the focus of the long-ago-established military academies on war. The Peace Academy would be an interdisciplinary institution devoted to international peace studies and research to advance conflict resolution techniques.

There are basically three thrusts we could expect from a Peace Academy: Focused research, information distribution and training in conflict resolution resulting in more sensitive public discussion of Government policies.

The principal office of the Academy would be maintained in the District of Columbia. A Board of Directors, consisting of 15 presidentially appointed, Senate-approved members would oversee the Academy. The Academy would be an independent, nonprofit, national institution created to serve the people and the Government.

The Congress pours great amounts of time and effort into military defense budget debates, not to mention great sums of money. H.R. 1249 calls for only $5 million for 1984, and $8 million for the fiscal year 1985 in establishing the Academy. By comparison, the entire first year's funds necessary for the Academy would be covered, more than 100 times over if we were to build one less B-1 bomber. Despite this comparatively modest proposal, the Reagan administration still opposes the Peace Academy.

Mr. Speaker, I feel this bill has been neglected for too long. It is time that the United States establishes an institution to pursue peace, much as Alfred Nobel established the peace prize decades ago to recognize individual efforts to avert war. And, if Alfred Nobel had reason to give some effort toward peace because he was instrumental in the development of dynamite, the Congress has reason to support this kind of effort by factors and a hundredfold greater than called for by the proposal. By debating defense programs and defense budgets and ignoring the Peace Academy, we forfeit our standing to consider ourselves "peacemakers." The Academy represents one of the best hopes to produce tangible results.●

ANOTHER SIDE OF THE NICARAGUA STORY

HON. STEPHEN L. NEAL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. NEAL. Mr. Speaker, the tragic news today that two American newsmen have been killed along the Guatemala-Nicaragua border heightens again our sensitivity to and concern for events in Central America. Because they were killed, we will never know what they may have observed or discovered on their excursion in this dangerous territory.

I, for one, believe that every piece of information we can get from that area is important, because on a fair and objective evaluation of all the information rest decisions that are critical to the United States and the Western

Hemisphere. And while it may be difficult to sort through the bias that appears to color many reports, until we see and understand the whole picture, it may be impossible to devise a solution that works for the common good of all the people of our continent.

For that reason, I want to place in the RECORD a report by the North Carolina Interfaith Task Force on Central America, which recently spent 8 days in Nicaragua. The task force included 28 persons, representing 12 religious denominations affiliated with the North Carolina Council of Churches. Its purpose was to assess the Nicaraguan development process, the conditions, and attitudes of the Nicaraguan people, and the impact of current U.S. policy on Nicaragua and the Central American region.

I submit the report as another piece of information that may be useful to my colleagues. It is, as they will see, another side of the story. The report follows:

REPORT OF CAROLINA INTERFAITH STUDY TOUR TO NICARAGUA

From April 8-15, 1983, 28 persons representing 12 religious denominations and 13 cities visited Nicaragua to assess the Nicaraguan national development process, the conditions and attitudes of the Nicaraguan people and the impact of current U.S. policy on Nicaragua and the Central American region. The group included Dr. John McLeod, Executive Director of the Presbyterian Church, US of North Carolina, Sister Evelyn Mattern, North Carolina Council of Churches and Rev. Bernard Michel, editor of the North American Moravian. A number of the people in the group had served as missionaries, as AID and Peace Corps consultants, as analysts and historians of Nicaragua, Central America and the Caribbean region.

During our visit we met with many Nicaraguans. We traveled to the Honduran border, to the Atlantic coast, the Leon and Masaya. Discussions with leaders of C.O.S.E.P., the businessmen's association, La Prensa, the opposition newspaper, and with Moravian ministers critical of the Sandinistas, with church and government leaders on all levels who were supportive, and with a variety of people on city streets and in the countryside afforded us a multi-faceted view of Nicaragua. We did not find the Sandinista government to be perfect; we did find that it is not the repressive regime that is portrayed in the United States. Moreover, we were struck how under tremendous odds the Nicaraguan government is going forward with the national development process, and has the basic support of the majority of the population in this endeavor.

The present policy of our own country toward Nicaragua both saddens and angers us. The course being pursued by the United States to destabilize Nicaragua via Honduras violates both the letter and the spirit of national law as established in the Boland amendment of the U.S. Congress, as well as international principles embodied in the charters of the Organization of American States and the United Nations. It also serves to force Nicaragua to consolidate a relationship with the Eastern bloc that might otherwise be avoided.

We were aware of the eagerness of a number of military and foreign policymakers in Washington for the United States citizenry to shed itself of the "Vietnam syndrome." A concerted effort is being made to convince us that our security as a nation is gravely threatened by recent developments in Central America, and that a military solution to this threat is both viable and necessary. We strongly disagree and find ourselves identifying with Thomas Jefferson's sentiments in his assessment of slavery: "I tremble for my country when I think that God is just."

IMPACT OF CURRENT U.S. FOREIGN POLICY AND THE REGIONALIZATION OF THE WAR IN CENTRAL AMERICA

Three years ago at the ripe age of ten, Maria became a teacher. With other students, she left her home in Leon for three months to teach in the national literacy crusade. This year, a seasoned veteran, she went to the northern war zone to harvest coffee Maria's brother, Tomas, is also at the northern border, armed and in the uniform of the Sandinista National Militia. Their mother directs a tailoring cooperative for former prostitutes back in Leon; their father, a doctor, runs a public clinic.

This Nicaraguan family is fully involved in the drive to transform Nicaragua into a country of peace, justice and equity—even for the poor. But the family's current situation underscores the dominant national reality; Nicaragua finds itself at war, an undeclared war in which the principal enemy is perceived to be the United States. Not only is his young son called upon to fight but the doctor finds medicines for the ordinary people he works with to be in short supply, since wounded at the front get first priority. Maria, too, has felt the impact of the war. Two friends, Church workers from Esteli who volunteered their services with her, were abducted from the coffee groves only a few kilometers from the Honduran border. Two youths who had escaped from the "contra" camp in Honduras brought news that gave little hope. They reported that the man and woman had been naked and terribly bloody when they were displayed to prisoners as examples of what would happen to Nicaraguans who would not cooperate with their "liberation movement." Friends of the Church people have little hope that they are still alive.

Newsweek's November 1982 article on the U.S.'s "secret war" in Central America and a host of other recent newspaper and magazine stories in this country confirm Nicaraguan allegations that the "contras" have received money, arms, and training from the United States, often through the agency of the Honduran military establishment. We ourselves viewed captured U.S. uniforms as well as weapons from a variety of countries, including the United States, on the northern front. The United States's undeclared war against Nicaragua is in violation of the Boland Amendment passed by the U.S. Congress, as well as the charters of the Organization of American States and the United Nations. Sergio Ramirez, one of the three members of the Nicaraguan ruling junta, lucidly summed up the sentiment we found to prevail throughout the nation: "When a powerful and rich country thinks a frail neighbor is a threat to its security, the results can be disastrous. We are victims of an insane policy by the Reagan administration."

In this section of the report, we focus on the reality of war in Nicaragua, but also on the U.S.'s role in the regionalization of that war throughout Central America. Despite being civilians and from a country perceived as an enemy, we were taken to the northern war zone and allowed complete freedom to talk to victims of recent aggression. What follows is a portion of what we saw and heard.

West of the northern regional market center of Jalapa, a small dirt road off the main artery meanders north to El Limon. Located in rich coffee territory El Limon's hilly groves lie only four kilometers from the Honduran border. The villagers told us that there was steady work and, for the first time, ample credit was being made available by the national government. But, they asked, how could they or their children go to harvest coffee when they never knew if they would be attacked or kidnapped by the marauding "contras"? Attacks have come more than once, most recently at dawn just a week before our visit. Different townspeople estimated the number of invaders as anywhere from 50 to 150, but all were clear that they were unwelcome. The contras were turned back by twelve local militiamen and nine regular Sandinista soldiers. But the people continue to live in fear of their return. They feel lucky that so few were able to turn back so many but wonder what the result will be next time.

Interestingly, El Limon is a community that previously was not fully committed to the Sandinista government. Many members of Somoza's dreaded National Guard had come from this area and are now among the exiles attacking from bases in Honduras. When a brother or an uncle appears in the village with money on a recruiting trip, it can be a tough decision not to join him. But following repeated acts of terrorism, fewer and fewer in town want anything to do with the "contras."

Consider Palma, a Baptist preacher. He has four daughters whose age range from 12 to 22. He was warned that the "contras" had singled them out for abduction, to serve as "their women" and cooks in the Honduras camps. Palma took the threat seriously and left El Limon, because a young Baptist girl of eleven had already been kidnapped while picking coffee during the harvest. Several days later, the child had been found but with her breasts cut off and terribly violated. Others from the region confirmed this account and told similar stories to their National Baptist Convention. Such atrocities have cost the "contras" any credibility they might have had; increasingly border towns like El Limon look to Managua for protection.

El Porvenir is at the end of the road northeast of Jalapa. There we watched a bus travelling a couple hundred yards away on a Honduran road that winds along the border. Just one day before a hidden locale behind the road had been the source of devastating mortar fire. El Porvenir's rich tobacco fields and the barns drying the crop were razed. We walked through the still smouldering ashes and twisted roofing of the barn. Yet much more frightening than the loss of valuable property were the severe injuries inflicted to workers who had been sleeping in the housing of the state cooperative. A grandmother with an 8 month old infant as well as two other young grandchildren were all rushed to the Jalapa hospital in critical condition. The mother of the children still shaking like a leaf, showed us the blood-spattered walls of the house. "I was sure they were already dead; they were so badly hurt. I wanted to die too."

There workers know they are under constant surveillance from the Honduran hills at the end of their fields. Trenches on the

settlement's outskirts and family bunkers have been dug. But when the attack came, only two soldiers were in the area to help the small local militia confront 200 contras. It dawned on us "gringos" that our presence might be all that was keeping the area free from attack that very day. Indeed, we were later informed that, less than a half hour after we left the border, a new attack began only a few kilometers further east.

In both El Porvenir and El Limon, it was clear that part of the "contras" objective was to disrupt the economy. Attacks have focused upon workers in the field rather than on columns of regular soldiers. Despite the ever-present fear, daily chores continue in the war zone. Last year, with the aid of a national mobilization of thousands of volunteers, a record coffee harvest was brought in. Yet, this year there will be no way to recoup losses such as El Porvenir's burnt tobacco. Nicaraguans are even more concerned about an increase in attacks further west on the border near the Pacific, a zone of prime food production.

Several sources suggested that there have thus far been several stages in the "contra" campaign. First, there were simple hit and run actions combined with an attempt to recruit or kidnap new members. Then, efforts to disrupt the economy were intensified. Now government leaders feel a new phase has begun in which portions of national territory will be contested for use as a base from which to topple the Sandinista regime. Attacks on the Atlantic Coast have been more sporadic and are regarded as diversionary to make to the main thrust in the hills of the Jalapa region easier.

The former National Guard who are the main fighting force of the "contras" include many thousand who were imprisoned right after Somoza fell in July 1979. They were released by the Sandinista government only to flee to Honduras and be rearmed. Nicaraguan sources testify to capturing weapons from the rebels that apparently were left behind by American personnel following joint U.S. Honduran military exercises. Intended for the Honduran Army, they have found their way into the hands of the "contras."

For Nicaragua, the cost of the war is not measured only by the roughly 20 percent of the national budget that goes directly into war materiel. As in all wartime situations, the government must also contend with decapitalization in the private sector because of lack of confidence. Moreover, a broad range of human and financial resources must be allocated to the war effort; medicines, road building equipment, and personnel are all diverted to defense. Relations with neighboring countries are strained, and the energies of a whole people become stretched thin attempting to deal both with the war and the social goals of the Revolution.

But the effect of U.S. destabilization has been equally devastating for the people of Honduras. We met with several Hondurans forced to flee the mounting repression in their country, people who are still sought by Honduran intelligence in Managua. Each gave personal testimony of gross mistreatment by either military or government security officials: (1) a priest whose "crime" it was to minister to Salvadoran refugees in camps along the western border, (2) a peasant in his parish whose downfall was to preach the Word of God as a Catholic lay delegate, (3) university students who publicly opposed the brutal treatment of Salvadorans and their own people. All had been tortured, often with electric shock prods; two of the women repeatedly had been raped. These unfortunate people confirmed the existence of secret prisons, for the training in torture methods of Honduran military and intelligence officials by Argentine and Israeli "specialists." They also repeated a current campaign to murder selected leaders of peasant, labor and student organizations. The priest bitterly protested: "This is the gift of North American democracy—to strengthen the hand of the military so that they can suppress all popular organizations and expression of our people."

We must add that all this is occurring in a country which has no previous history of systematic violence characteristic of Guatemala and El Salvador.

CURRENT NATIONAL DEVELOPMENT PROCESS IN NICARAGUA AND THE ROLE OF THE CHURCH

As a church related group we found one of the most impressive accomplishments of the Nicaraguan revolution was the vital, even essential role of the church in the process of national development. To our surprise we discovered that the revolution has transformed a traditional evangelism of the word into a new and vibrant evangelism of action. This expression of faith had become a basic tool for bringing about a transformation of the people and was recognized as such by both the church and the state. Dr. Sergio Ramirez, a member of the ruling junta exemplified this attitude when he urged us to judge the government by its actions.

This combining of faith with action partly accounts for the strong ecumenical spirit among the churches where being involved directly in mission has taken precedence over doctrinal debates. We found the churches involved with the revolution to be alive and thriving; their worship services packed. We found that the speeches at the popular mass combined the purposes of the revolution with personal faith commitment resulting in a call for all believers to care for their neighbors. The churches which remained focused on doctrinal matters seemed to lack vitality.

We found in attending various religious services, during conversations with religious leaders and in visits to religious mission stations and offices a consistent pattern in which the churches supporting the revolution were making Christian action the center of faith and an outgrowth of the scriptures. We were especially impressed with the commitment of both the church and the state to the needs of the poor. This shared concern has brought the two institutions into a relationship of comfortable coexistence without structural union. Each institution remains autonomous and is able to engage the other in creative dialogue over points of mutual concern.

We found there to be a clear process of translating the concerns of the Medellin Conference where the Latin American Bishops of the Catholic Church unanimously took a public stand against institutional poverty as being against the will of God. The actions resulting from this stand within the context of the Nicaraguan revolution has had a profound impact on Catholic as well as Protestant church life. Most of the churches stress the dignity of all people regardless of social class. We found policies being implemented which made women equal to men, helped children with special needs, reform of the prison system, elimination of the death penalty, aid provided to the handicapped, help for refugees, comfort given the elderly and guarantee to all people basic education, health care, a good diet, a home and work. As one religious worker put it, "It is so easy to practice Christianity here."

We found the energy level of the Christian workers nearly inexhaustible although stretched to their limits. There was so much to do, often with very few resources due to their being in a state of war, that burn-out was beginning to become evident. Nonetheless, the people remained totally committed to the promises of the revolution.

People everywhere were different from what we expected to find. They were well informed, had faith in themselves, were completely committed to the process of serving one another, and freely expressed their frustrations with the revolution in those areas where it had failed. We found no one, however, who wanted to return to living under a Somoza type government.

We found their self assurance had expanded their concern for others. They had compassion for those within the religious community who opposed the revolution and they prayed for the day when they too would understand this new form of evangelism. We felt that this feeling of concern was a gift that could not be taken from the people. We heard numerous times that the only way this revolution would fail would be by killing all the people. They had sacrificed too much to gain what they had and were willing to continue to sacrifice if necessary to keep the resolution alive. We came away with the impression that this revolution was rooted in the Christian faith of the people and had made a permanent change in the Nicaraguan people. We felt that we were interacting with a truely "new" people.

HUMAN RIGHTS

We have found that basic human rights to life, liberty and the pursuit of happiness have been improved tremendously in Nicaragua by the Sandinista revolution. Significant gains have been made in health, education, status of women, housing, nutrition, personal security, and participation in decision-making.

We saw children receiving polio vaccinations and learned that in 1982 for the first time in history, no new cases of polio were found. We visited women's organizations and learned of laws giving women and children equal rights for the first time.

We found that expression of political opinion is vigorous and open. Critics and political opponents in Nicaragua do not suffer the disappearances, torture and murder which prevailed before the revolution and still occur in neighboring countries. Each week government leaders meet citizens in an open session, broadcast live, where complaints and criticisms may be aired. The press is partly free, and often critical, but subject to some censorship. Restrictions on freedom of expression are likely to increase and gains in human rights are likely to diminish, under pressures created by the growing undeclared war of the United States against Nicaragua.

Moravians in our group studied the Moskito Indian question and visited them on the Atlantic coast. All the Sandinista leaders now recognize that the first encounters between the new government and the Indians were poorly planned, and led to violence. This generated a lasting distrust which is being exploited as a part of the CIA's destabilization program. We fear that this will bring new and tragic suffering to the Moskito Indians.

We met with refugees from EL Salvador, Honduras and Guatemala. The Nicaraguan

program for receiving and resetting these refugees deserves world recognition for the humane quality of its care and assistance. We reflected on the contrast between this and the way Haitian refugees have been kept in prison-like camps in our country.

The success of Nicaragua in improving life for the vast majority of her people is a symbol of hope for the poor of Guatemala, Honduras, and El Salvador. In these countries, teachers, doctors, ministers, lay church leaders, labor leaders, and others who help the poor organize for self-improvement are being tortured and killed.

While world attention has been focussed on the struggle in El Salvador, large-scale massacres of Indians are being committed in Guatemala by General Rios Montt. The introduction of the United States military and CIA forces into Honduras and the rebuilding of Somoza's former national guard for an invasion have resulted in an increasing level of violence and repression now In Honduras.

It is clear that the rising violence in Central America is linked to the increasing U.S. military intervention in the region. U.S. taxpayers are financing undemocratic governments which maintain control through systematic terror, while seeking to destroy the one government in the region which has created a better life for the people.

EXPANDING THE TARGETED JOBS TAX CREDIT

HON. JOHN F. SEIBERLING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. SEIBERLING. Mr. Speaker, I am introducing legislation today to modify the targeted jobs tax credit. The purpose of this legislation is to help troubled teenagers become productive, law-abiding citizens.

Under current law, youths aged 18 to 25 who are from economically disadvantaged families can be certified for the credit. Under my bill, youths aged 16 to 18 from disadvantaged families could also be certified if they have been charged with a delinquent, unruly, or incorrigible act and have been referred to a court as a result. The certification would be sought by the court in order to help these youngsters find jobs and straighten themselves out.

Mr. Speaker, this House has demonstrated its commitment to efforts to help the youth of today find meaningful, productive jobs. Another bill for that purpose which I sponsored, the American Conservation Corps, was passed overwhelmingly by the House earlier this year. I urge similar speedy action on this important legislation.●

SOVIET JAMMING OF THE VOA

HON. WM. S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BROOMFIELD. Mr. Speaker, let me share with you an interesting article which recently appeared in the Washington Times newspaper concerning the Soviet Union. I believe that my colleagues in the House will find the following article quite informative concerning the Soviets' true attitudes regarding the free flow of information and news.

In spite of the Soviets' efforts to try to convince the world that they truly believe in freedom and open access to information, they show their true colors when they selectively jam transmissions beamed toward Poland and the Soviet Union which may be even slightly critical of the Soviet Union or its foreign policy objectives.

Last year, during the Polish crisis, the Soviets began intensive jamming of VOA Polish-language broadcasts directed at Poland. Just last week, as the article notes, the Soviets again began jamming the VOA's coverage of the Pope's appearances in his homeland. The VOA is providing live coverage of the Pope's activities in Poland and is also rebroadcasting the pontiff's speeches.

The Soviets are using large transmitters located in the U.S.S.R. to drown out the VOA signals with a heavy "buzz saw" jamming noise on the four frequencies being used by the VOA. It is hard to believe that in an age of advanced technology, greater understanding among the peoples of the world, and open information exchange that the Kremlin would resort to such offensive and primitive techniques.

Lest we forget, the Soviets are signatories to the Helsinki accords of 1975 which specifically state that all "participating states make it their aim to facilitate freer and wider dissemination of information of all kinds." In addition, the Soviets signed the 1973 International Communication Convention which specifically forbids jamming of radio broadcasts coming from other nations. Jamming also violates the terms of the Universal Declaration of Human Rights. I believe that this says a lot about the Soviets' real feelings concerning signed international agreements.

I am confident that all of my friends in the House will agree that resorting to jamming is a renewed demonstration of the glaring weaknesses of the Soviets' own system and of the regime they have imposed on Poland. Why do they fear the truth?

Let me suggest an answer. I believe that millions of oppressed people living in the many captive nations around the world desperately want to hear the truth about what is going on in the world and in their own countries. The truth will let them see that their own governments have been selectively controlling the news and blocking out information which they believe the masses should not hear. The truth will reveal to the masses in the captive nations of the world the real sham of many of these regimes which maintain power through coercion, intimidation, and thought control.

Let me then take this opportunity to share the sad truth about communism with all of you. In that spirit, I strongly recommend the Washington Times article to all of the Members of the House.

The article follows:

[From the Washington Times, June 23, 1983]

SOVIETS JAM VOA ON POPE

(By George Archibald)

Soviet jamming of Voice of America broadcasts of Pope John Paul II's visit to Poland is "odious, patronizing and in flagrant disregard of international agreements," VOA Director Kenneth Tomlinson charged yesterday.

The Soviets have beamed noise interference to block radio reception throughout Poland of three hours of additional daily VOA coverage of the pope's appearances since the pontiff arrived in his communist-dominated homeland last week, Tomlinson reported.

VOA is providing live coverage of the pope's activities in Poland and rebroadcasting the pontiff's speeches, Tomlinson said.

He called the Soviet action to prevent Polish listeners from receiving the broadcasts "odious because the pope stands for human dignity, patronizing because it places in the hands of a foreign power what is rightfully the decision of the Polish people and in flagrant disregard of international agreements because the Soviet Union by jamming is violating the Helsinki Accords which it signed in 1975."

Tomlinson said intelligence reports indicate that the Soviets are using four transmitters in their own country to broadcast a heavy "buzz saw" noise on each of four frequencies being used by VOA transmitters located at Woofferton, England; Kavala, Greece; Tangier, Morocco; and Munich, West Germany.

"The Soviets spend more to jam VOA broadcasts (into Poland and Bulgaria) than the Voice's entire budget (of $140 million)," Tomlinson noted. Heavy jamming of VOA's seven hours of regular weekly Polish broadcasts started with martial law rule in Poland in December 1981, he stated.

Tomlinson and State Department Counsellor Edward J. Derwinski yesterday awarded a special commendation to the 19 members of VOA's Polish Service staff for their week-long coverage of the pope's visit. The commendation "carries the weight of a battlefield presidential unit citation," Tomlinson told the staff at the presentation.

Derwinski, whose grandparents were from Poland, said, "This week, the whole world is watching Poland. It's a pity the government there is doing its best to limit access to the news."

Tomlinson cited three international agreements that he maintained were violated by the Soviet jamming of VOA broadcasts.

The Helsinki Accords state, "The participating states . . . make it their aim to facilitate freer and wider dissemination of information of all kinds."

The 1973 International Communication Convention, also signed by the Soviets, states, "All (broadcast transmitting) stations, whatever their purpose, must be established and operated in such a manner as not to cause harmful interference to the radio services or communications of other members."

The VOA director also pointed to the U.N. Universal Declaration of Human Rights, which guarantees the right to "seek, receive and impart information and ideas through any media and regardless of frontiers."●

TRIBUTE TO W. MELBOURNE KNOX, JR.

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. MINISH. Mr. Speaker, I am pleased to take a few minutes before the House to honor a fine person in my district, Mr. W. Melbourne Knox, Jr., who will soon retire from his position as township clerk and treasurer of Maplewood, N.J.

On June 30, Mr. Knox will end 30 years of outstanding and dedicated service to the township. Besides holding the positions of township clerk and treasurer, he has also been the chief financial officer, secretary to the boards of health, planning, economic development, A.B.C., and tax collector, among other prominent positions.

Throughout his prestigious career, Mr. Knox maintained a quality of excellence in his endeavors. Few people can boast the professional respect and admiration which Mr. Knox enjoys from his peers. His trademark is his high standards of professionalism in his work, and his amiable personality and character in his personal life. All of these traits have combined to make a lasting impression on the people of Maplewood.

Mr. Knox was also active in numerous charitable and civic organizations in Maplewood, often serving as an officer of the various associations. A veteran of World War II, Mr. Knox served with courage as an aerial engineer on 35 missions aboard B-17 bombers over Europe. He was awarded several different medals of commendation for his valor—including the Distinguished Flying Cross, Presidential Unit Citation, and four battle stars.

Mr. Speaker, W. Melbourne Knox, Jr., is one of those outstanding individuals whose life and work contribute so much to our society. I wish him continued success and happiness now as he can look forward to new challenges in his retirement.●

RELIGIOUS REPRESSION OF PROTESTANTS IN NICARAGUA

HON. VIN WEBER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. WEBER. Mr. Speaker, I believe my colleagues should carefully read the following article which appeared in the June issue of Catholicism in Crisis, a monthly journal of lay Catholic opinion published at Notre Dame.

The author, Humberto Belli, was an editor of LePresa in Nicaragua before he came to this country. He writes of religious repression of protestants in Nicaragua, as well as the use of accusation by the Sandinista's to discredit legitimate religious organizations.

I believe this article points to how the Sandinista government really treats religious, more specifically Christian, people. We should view this article in the context of what a truly democratic society would allow—free exercise of religion. The revolution in Nicaragua falls short of being a democratic society on this point.

PERSECUTION OF PROTESTANTS IN NICARAGUA—THE NEGLECTED STORY

Although many people have awakened to the fact that the Sandinista's revolutionary government have been mistreating religious leaders in Nicaragua, much of the attention has been focused on the conflict between the state and the Catholic Church, with only scant attention given to the grave events affecting the Protestant churches and other religious denominations.

Yet, the government attacks against a variety of non-Catholic groups have been harsher than those against the Catholics. The attacks have been more open, thorough, and started much earlier.

One reason for this neglect may be the fact that non-Catholic denominations are a minority—(10 percent of the population) fragmented in a variety of denominations that act independently of each other.

But there are two additional factors, that have played a decisive role in obscuring the facts. One is the confusion about the true nature of the Sandinistas. Although the Sandinistas showed their unequivocal Marxist-Leninist training from the start, they never declared themselves as such. Instead they sought to portray themselves as new revolutionaries who welcomed Christians among their ranks and were respectful of all religious beliefs.

The other factor is the great doctrinary confusion that today plagues most Christian churches in the world. Many Christians supported the Sandinistas in the beginning because they believed what the Sandinistas were saying. Others, however, sided with the Sandinistas, knowing that they were Marxist. The latter were Christians greatly affected by liberation theology, a trend of thought supportive of Marxism-Leninism which has made significant inroads in Catholic and Protestant churches. Among Protestants the most outstanding representative of this has been CEPAD, a well funded, evangelical organization that began editing books and pamphlets that preached Marxism and portrayed the Cuban revolution as the model to be followed. These groups have been campaigning in and out of Nicaragua on behalf of the Sandinistas, creating much confusion among Christians abroad.

It was not until 1982, as the clashes against Catholics stirred up unprecedented protests against the Sandinistas, both in and out of Nicaragua, that it became known that they were also attacking Protestants and other religious organizations. Yet, the persecution of Protestants had started long ago.

The first denominations to experience the weight of the Sandinista's repression were the Moravians working on the Nicaraguan East Coast. Early, in the middle of the last century, they had evangelized the inhabitants of this remote area, separated from the Western part of the country by swampy, almost impassable lands.

Former Nicaraguan governments, based on the Pacific neglected the Atlantic Coast region. The Moravian missionaries filled the gap by providing most of the schools, hospitals, and support organizations that maintained the area. When the Sandinistas came into power in 1979 they immediately announced that their top priority was to "rescue" the Atlantic Coast. They strove to reshape the lives and patterns of thought of all Nicaraguans along their lines of ideological thinking and started to replace the people's own leaders with their own authorities—many of whom were Cuban teachers and strangers. Frictions and resentments began to pile up until riots took place in the mid-1980's. The Sandinistas blamed the events on counterrevolutionary and CIA inspired forces, and began attacking the most influential Moravian pastors. Some of them were jailed and others expelled, stimulating new waves of protest and repression. Travel

between the East Coast and the West Coast was restricted and soon the Nicaraguan government banned from publication any news dealing with the Region.

Press censorship and the isolation of the Atlantic region allowed the government to act more freely. It stepped up its attacks and dismantled the network of charitable organizations that, after a century of work, the Moravians had established. In February 1981, when Sandinista troops wanted to arrest a Moravian leader inside a church in the coastal town of Prinzapolka, a clash with the population ensured, leaving four soldiers and four natives dead. The government had to acknowledge the incident.

According to a report released by the Board of World Mission of The Moravian Church (August 1982), reliable sources indicated that many Miskito Indians, including Moravian clergy and lay leaders, had been killed or arrested.[1] In January 1982, two important Moravian pastors, the Revs. Fernando Colomens and Norman Bent, were expelled from the Atlantic Coast. In July the Rev. Santos Cleban was arrested and held in confinement from July 11 through the 25th. The same report also refers to the May closing of CASIM (The Nicaraguan Moravian Social Action Committee) which sponsored health, education, and development programs from 1976 until last January, when its director, the Reverend Bent, was exiled to Managua. Some of the CASIM property was unlawfully confiscated and since early July all religious workers in the northeastern town have been required to check in twice a day with security officials.[2]

Edgard Macias, former Vice-Minister of Labor of the Sandinista government who resigned in May 1982, called the persecution of the Protestant denominations in the Atlantic "a tragedy for this Nicaraguan sector, for centuries abandoned by all the Nicaraguan governments and that had just reached a minimum standard of life thanks to the social programs of their churches, carried out by pastors from Nicaragua, North America, and other countries."[3] According to Macias' estimates, by the middle of 1982 the Sandinista troops had destroyed at least 55 churches in that part of Nicaragua.

The Sandinistas excused their actions against the Moravians on the grounds that they had stirred up revolt in the Atlantic Coast. They have disclaimed such charges—with no avail. The 1982 report of the Moravian Church talks of church leaders who "are trying to persuade government officials that their generalized suspicion of the Moravian Church is misplaced. So far, however, their efforts to meet directly with members of the governing junta have been unsuccessful."

In the Pacific area overt actions against Protestants took more time to evolve. Isolated events, however, gave some hints as to how the Sandinistas were going to act. In the second half of 1981 Morris Cerullo, an evangelical pastor who landed in Managua in order to stage a brief round of evangelistic meetings was immediately expelled by the Nicaraguan authorities. The only explanation the government gave was that Rev. Cerullo had links with the CIA and that his trip to Nicaragua was part of a wider plan to undermine the revolution. The Sandinistas did not provide documented evidence for their accusations. Nor did they allow the victims a hearing or the right to defend themselves from any charges.

In 1981, aside from the harassments of some village pastors, almost no news of persecution surfaced. The Protestant pastors as well as the leaders of other non-Catholic denominations were conscious of their vulnerability and tried to abstain from any kind of commentaries touching the political field. Some of them even preferred to reassure the government of their loyalty.

From time to time, though, leaflets published by "revolutionary Christians" would attack a denomination (for example, the 7th Day Adventists) portraying them as Uncle Sam's puppets, clever instruments of U.S. imperialism engaged in "ideological diversionism". The government mass media often propagated this kind of accusations.

In 1982 the attacks became direct. In March, just a few days before the government cancelled all individual rights and decreed a state of emergency, *Barricada*, the official newspaper of the Sandinistas, published two front-page, 8-column reports, on the Protestants, entitled: "The invasion of the Sects." In that Report most Protestant churches were portrayed as groups of fanatics and superstitious people who liked to manipulate people's emotions and were part of a world-wide strategy of cultural penetration orchestrated by U.S. imperialists.

Shortly after these publications the attacks grew more vocal and the first physical threats were issued. Commander Tomas Borge, the Minister of Interior, said in a television speech that many sects were spreading superstitious beliefs and trying to undermine the revolution. He said that there would be religious freedom for those who were with the revolution but for those who were deceiving people and preaching negative attitudes their days had been numbered.

Something similar was said by Commander Rene Nunez, the leading national directorate, in a widely publicized speech.

In August, following renewed attacks from Borge, Sandinista mobs went to the streets to forcefully take over several Protestant churches and facilities. A variety of religious groups including evangelicals, Mormons, Adventists, Jehovah's Witnesses, and Moravians, were affected.

In a single night 20 centers were occupied by the Sandinistas who said they would turn them into CDB's (Committees for the Defense of the Revolution), a partisan organization that the government is promoting in all neighborhoods in order to better control the whereabouts of the residents.

The unlawful occupation of these Centers was portrayed in the Sandinista's newspaper Barricada as an act of defense of the Revolution. Again, the standard accusation was made: that these sects had relationships with the CIA and were engaged in counter-revolutionary activities. As usual, the government did not provide any evidence for the charges and prohibited the newspaper La Prensa, from publishing the letters of self-defense that these groups wrote.

Confronted with these events, CEPAD did not speak against the Sandinista's actions, but said, quoting its director Sixto Ulloa, that "some of the sects were at odds with the revolution and therefore the masses had acted."●

TRIBUTE TO IRVING AZOFF

HON. HOWARD L. BERMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BERMAN. Mr. Speaker, I would like to take this opportunity to pay tribute to Irving Azoff on the occasion of his receipt of the Music Industry for the City of Hope "Spirit of Life" award.

Mr. Azoff has established himself as a respected and accomplished community leader in the Los Angeles area, as well as the Nation. A resident of southern California since 1974, he heads one of the largest personal management firms in the entertainment industry. In addition, Irving Azoff has worked with major film studios to produce such award winning films as "Urban Cowboy." He has also played a role in the production of the soundtracks for such films as "Heavy Metal" and "Fast Times at Ridgemont High." Earlier this year, he was appointed vice president of MCA, Inc., and president of MCA Records Group.

As one of the premier managers and promoters in the music industry today, Irving Azoff represents such artists as the Eagles, Stevie Nicks, Don Henley, Glenn Frey, Dan Fogelberg, Styx, the GoGo's, Chicago, Christopher Cross, Joe Walsh, Boz Scaggs, Michael McDonald, Jimmy Buffett, J. D. Souther, Timothy B. Schmit, Don Felder, and Warren Zevon. He has also worked with REO Speedwagon, Crosby, Stills, Nash and Young, Joni Mitchell, and Neil Young.

The award which he is to receive from the Music Industry for the City of Hope is a most prestigious honor. In addition, a research fellowship will be established in Irving Azoff's name at the City of Hope. I know how much pride Mr. Azoff will take in accepting these honors, because of the vital work performed at the City of Hope. The advances made through patient care and research undertaken there are applied internationally in hospitals and universities. Their ongoing research into the causes, treatments, and cures for catastrophic diseases benefits many people. Men like Irving Azoff enable the City of Hope to realize its goals.

Mr. Speaker, I am pleased to be able to congratulate Irving Azoff as he receives the "Spirit of Life" awards, and I would like to offer him my personal best wishes in all of his future endeavors.●

BALTIC FREEDOM DAY

HON. BEN ERDREICH

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. ERDREICH. Mr. Speaker, the resolution signed into law on June 14, 1983, by President Reagan designating that day as Baltic Freedom Day serves as a constant reminder of the struggles of the Baltic people to emerge from the dominance of Soviet repression.

Untold suffering was endured and hundreds of thousands of lives were lost between 1940 and 1945 by the Estonian, Lithuanian, and Latvian people during World War II, as the Soviet invasion of the Baltic countries and the spread of Nazism left their mark.

It is unthinkable that 43 years after the invasion and occupation of these three countries, their heroic struggle to free themselves from the hegemonic control of a totalitarian government continues.

It is important that we in the United States who enjoy the inalienable rights of life, liberty, and the pursuit of happiness, continue to speak out against the illegal occupation of the Baltic countries by the Soviet Union and for the restoration of the freedoms they have been denied for so long.●

UNEMPLOYMENT BENEFITS SHOULD BE PAID AS PROMISED

HON. JAMES M. SHANNON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. SHANNON. Mr. Speaker, today I am introducing legislation, supported by my colleagues from Massachusetts in the House of Representatives, to stop the Department of Labor from cutting off unemployment benefits for thousands of unemployed workers weeks earlier than expected and without any warning.

BACKGROUND

As part of the Social Security Act Amendments of 1983, the Congress extended the Federal supplemental compensation (FSC) program. The new program differs from the old program in that some changes were made in the formula used to determine, for each State, how many weeks of benefits an unemployed worker can receive.

In general, under the new formula, persons first becoming eligible for FSC benefits are eligible for a maximum of 14 weeks of payments in States with an insured unemployment rate (IUR) of 6 percent or above. As under prior law, benefits are less for States with a lower IUR, depending on how far below 6 percent the IUR is. In no case, however, can benefits be paid for less than 8 weeks for new entitlements.

FOUR-MONTH REDUCTION LIMIT

The new law also contains a provision guaranteeing that the number of weeks of benefits provided under the new program can be no more than 4 weeks less than the number of weeks of benefits provided under the old program.

For example, assume that a State's IUR was 6 percent in January, and was 4.5 percent beginning March 27—the first week of the new program's operation. That State would have been eligible for 16 weeks under the old program, but only 10 weeks under the new formula. The legislation as adopted provides that this State's benefits could only be reduced to 12 weeks—16 minus 4.

In implementing the new FSC program, the Department of Labor originally interpreted this 4-week reduction limit to mean that no State would ever receive more than a 4-week reduction from what it had been receiving under the old program.

DEPARTMENT OF LABOR CHANGES ITS INTERPRETATION

The Department of Labor is now telling unemployed workers in Massachusetts and in other States that it made some mistakes in determining how many weeks of benefits will be provided. This new interpretation was just recently announced, and thousands of unemployed workers are going to have their benefits cut off weeks earlier than expected, and without any warning.

Under its new interpretation, the Department of Labor is saying that the 4-week reduction limit covered States only during the week of March 27. If, during that week, a State's IUR had dropped low enough so that the State would receive benefits under the new formula that were more than 4 weeks less than under the old program, the reduction would be limited to 4 weeks.

However, States which experience a drop in unemployment after the week of March 27 are, under the Department of Labor's new interpretation, not protected by the 4-week reduction limit.

Massachusetts is one of these States. In March and April, the IUR rate in Massachusetts entitled unemployed workers on the new FSC program to 10 weeks of benefits. But the IUR rate dropped below 4 percent in May. Under the Department of Labor's original interpretation, even with this drop in the IUR, the 4-week reduction limit would still apply and the State, which received 14 weeks under the old program, would receive no less than 10 weeks under the new program. But now the Department of Labor is saying that Massachusetts is not covered by the 4-week reduction limit and that, with an IUR rate of 3.6 percent, it should only receive 8 weeks of benefits.

This new interpretation is being put into effect without any warning. People who have been unable to find work for months, who are currently finishing their eighth week of benefits under the new FSC program, and who were told by the Department of Labor that they would receive 10 weeks of benefits, are suddenly being kicked off the rolls after their eighth week.

PROPOSAL

The bill I am introducing today would prevent this insensitive and unfair treatment of unemployed workers by extending the 4-week reduction limit to the end of the authorization period of the new FSC program.

Under the proposed bill, benefits to any given State under the new FSC program could never be reduced by more than 4 weeks below the amounts provided under the old program.

In essence, this bill would require the Department of Labor to continue to implement the new FSC program as it originally said it would, and to pay to unemployed workers the benefits it said it was going to pay.

FAIRNESS FOR THOSE IN NEED

Unemployed workers who are depending on benefits from the FSC program have been looking toward the expiration of those benefits with dread as they wait and wait for the much heralded economic recovery to bring back their jobs. To kick these people off the rolls weeks earlier than expected, without any warning, is truly unfair. The bill I am introducing today is a reasonable way to address a problem created by the Department of Labor which, if not corrected, will inequitably and unfairly disrupt the lives of thousands of unemployed workers. I urge its adoption.

A copy of the bill follows:

H.R. 3409

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subparagraph (B) of section 602(e)(2) of the Federal Supplemental Compensation Act of 1982 is amended to read as follows:

"(B) The applicable limit for any State determined under clause (ii) of subparagraph (A) shall in no event be less than the number of weeks applicable to such State for the week beginning March 27, 1983, under this paragraph (as in effect for such week) reduced by 4."

(b) The amendment made by subsection (a) shall apply to weeks beginning after March 31, 1982.●

COURT'S DECISION REGARDING WAR POWERS RESOLUTION

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. ZABLOCKI. Mr. Speaker, today's Supreme Court decision regarding the so-called congressional veto has far-reaching and serious implications. It warrants the fullest possible consideration. However, respected legal experts differ as to its precise meaning. Therefore, until I have a more comprehensive analysis I believe it is premature to comment.

However, as to the decision's impact on the war powers resolution, I would make the following observations.

First, to the extent that the war powers resolution fundamentally involves a power—the power to declare war—which the Constitution explicitly reserves to the Congress, I would argue that the concurrent resolution provision in it has inherent integrity and should therefore be beyond the veil of the decision.

It is also significant that the war powers resolution was enacted into law in a totally legal and constitutional manner—by overriding of a Presidential veto. On that count it would also merit protection.

Second, the constitutionality of the war powers resolution is also reinforced by the separability clause contained in section 9 which stipulates that if any provision of the resolution is held invalid the remainder of the resolution shall not be affected.

Third, the war powers resolution is uniquely crafted in that it accommodates to the reality of our modern, nuclear world. It recognizes that in an age of intercontinental ballistic missiles and fast-moving events, the President may have to act quickly to protect the national security of the United States. However, the distinctive virtue of the resolution is that it reserves to the Congress its constitutionally mandated responsibility of ultimately deciding the full legality of a Presidential action.

In short, the war powers resolution is too fundamental in both its constitutional anchorage and its practical benefit to be dismantled by the extended interpretation of this decision.●

BILINGUAL EDUCATION AND THE TWENTIETH CENTURY FUND REPORT ON QUALITY OF EDUCATION

HON. WILLIAM F. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. GOODLING. Mr. Speaker, I have attached a copy of a Los Angeles Times article by Prof. Diane Ravitch which clarifies the position of the Twentieth Century Fund Report on the quality of education regarding the bilingual education issue. I would also like to stress that H.R. 2682—sponsored by JOHN ERLENBORN and me—has the same objective, that is, not to ban bilingual education but to provide flexibility to schools to determine the best methodology for teaching bilingual education which may include teaching in the native language. To quote Professor Ravitch:

In our view it is wrong for the federal government to require any particular method or pedagogy. Never in the history of federal-local relations has a particular teaching method been imposed by Congress and the courts on local school districts. Each district should decide for itself what method is best suited to helping children achieve fluency in English. And it should be acceptable within a district, or even a single school, to offer several different methods without losing federal funds.

This point is the heart of H.R. 2682. I commend Professor Ravitch's article and hope that each Member will read it.

Professor Ravitch's article follows:

[From the Los Angeles Times, June 6, 1983]

BILINGUAL INSTRUCTION IS AN ANSWER, BUT NOT THE ONLY ONE

(By Diane Ravitch)

In recent weeks several major reports have criticized the quality of American education. Only one of them, the Twentieth Century Fund report, directly raised the issue of bilingual education. As a member of the task force that wrote the report, I have been troubled by the way in which our recommendation on this subject has been misunderstood.

Friends of bilingual education have attacked our report as a threat to the survival of their program. Critics of bilingual education have cheered us for supporting their position. Both groups are wrong. We did not recommend an end to bilingual education, nor did we recommend any other method for teaching non-English-speaking children.

What we did recommend was that the federal government should not mandate bilingual education as the best method for teaching English to all non-English-speaking children. We urged the federal government to state clearly "that the most important objective of elementary and secondary education in the United States is the development of literacy in the English language"; that Federal funds that are "now going to bilingual programs be used to teach non-English-speaking children how to speak, read and write English," and that every public-school student have the opportunity to gain proficiency in a second language.

Since we were implicitly critical of the current emphasis on bilingual education to the exclusion of other methods, critics have claimed that we were in some way in league with the Reagan Administration. It is worth noting that our 11-member panel was independent of any government agency and included well-known Democrats like Wilson Riles, the former California superintendent of public instruction, and Patricia A. Graham, the director of the National Institute of Education in the Carter Administration (now dean of the School of Education at Harvard University).

Unlike the other national commissions studying the state of the schools, our specific charge was to assess the nature of the federal role in education. We were aware that the Administration has been eager to reduce the federal presence in the nation's schools. However, we concluded that the federal government has a continuing obligation to concern itself with both the quality and the equality of educational opportunity.

We proposed federal programs to identify and reward master teachers, to encourage scientific literacy, to improve the research functions of federal agencies and to increase financial aid to districts that receive unusual numbers of immigrant children. We opposed tuition tax credits and vouchers, recommending instead that public education remain a public responsibility.

As it happened, our section on bilingual education turned out to be the most attention-getting aspect of the report. We held that literacy in English is vital because "our political democracy rests on the conviction that each citizen should have the capacity to participate fully in our political life; to read newspapers, magazines and books; to bring a critical intelligence to television and radio, . . . and to vote thoughtfully."

Under the best of circumstances, all American children should gain fluency in a second language, but, whatever the circumstances, equal opportunity in America today requires fluency in the English language.

Our task force was aware that for most of the past 15 years the federal government has pursued a policy of promoting bilingual education as the best, and in some situations the only, method to teach non-English-speaking children. In bilingual programs, children study English while continuing to learn subject-matter courses in their native languages. Bilingual education is supposed to serve as the bridge from the native languages to English.

In our view it is wrong for the Federal government to require any particular method or pedagogy. Never in the history of federal-local relations has a particular teaching method been imposed by Congress and the courts on local school districts. Each district should decide for itself what method is best suited to helping children achieve fluency in English, and it should be acceptable within a district, or even a single school, to offer several different methods without losing federal funds.

As we saw it, if a district believed that the bilingual method was the best way to teach English, then it should receive federal funds to do so. But if a district preferred to use other methods, then federal funds should also be available. The important principle, we concluded, was that the goal should be the same for all: To see that every child in the United States becomes literate in the English language.●

DEPARTMENT OF JUSTICE RETREATS ON SECTION 504 PROTECTION FOR HANDICAPPED

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. VENTO. Mr. Speaker, several weeks ago, Vice President BUSH stated the Reagan administration's commitment to protecting the rights of handicapped and disabled persons. At that time, the Vice President indicated that he did not think it was necessary for the Department of Justice to revise its guidelines for enforcing section 504 of the Rehabilitation Act of 1973. Section 504 prohibits discrimination on the basis of handicap for programs which receive Federal financial assistance.

Unfortunately, only a few weeks later, William Bradford Reynolds, head of the Civil Rights Division of the Department of Justice, took action which contradicts the Vice President's statement. Mr. Reynolds sent all 91 Federal agencies prototype section 504 regulations to govern the programs that these agencies operate.

In 1978, section 504 was amended so that it covered not only recipients of Federal funds, but also programs operated directly by the Federal Government itself. The rationale behind the 1978 amendments was that Congress intended that the Federal Government should be governed by the same standards as recipients of Federal funds.

The problem with Mr. Reynold's prototye regulations is not that the Justice Department is encouraging Federal agencies themselves to develop section 504 regulations. The problem is the manner in which this is being done. Organizations representing disabled and handicapped persons were not given any opportunity to review them or to suggest possible changes. The end result is that each Federal agency will now use these prototype regulations as a model for developing their own regulations. Under formal rulemaking procedures governed by the Administrative Procedures Act (APA), organizations representing the interests of handicapped and disabled persons will have to study and comment upon 91 separate sets of proposed regulations implementing section 504.

These prototype regulations also ignore congressional intent in passing the 1978 amendments to section 504 by allowing a broad defense against compliance with the law if allowing handicapped people to participate in a program would cause "financial or administrative burdens" to the Federal agency. In short, Federal agencies would be held to a lower standard than programs which merely receive Federal assistance.

The rationale for this proposed change in the regulatory framework is that it is required because of the 1979 Supreme Court decision in Southeastern Community College against Davis. The Davis case involved a deaf woman who the Court found could not meet the essential qualifications for participation in a program without fundamental alterations of that program. However, since the time the Davis case was decided, the Department of Justice itself has concluded that the existing section 504 coordination guidelines were still valid. The Department of Justice has made it quite clear that they are now retreating from this position. The prototype regulations disseminated by the Department of Justice will likely make it easier for agencies in the Federal Government to find undue financial and administrative burdens, thereby allowing those agencies to avoid compliance with section 504 under the Davis decision. This is but one more example of action by an administration which has repeatedly demonstrated that it is more interested in finding ways around the law rather than enforcing the law.●

LEGISLATION TO LIMIT TEMPORARILY CERTAIN ACQUISITIONS OF FINANCIAL INSTITUTIONS AND THE EXPANSION OF ACTIVITIES OF STATE CHARTERED INSTITUTIONS

HON. CHARLES E. SCHUMER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. SCHUMER. Mr. Speaker, today I am introducing legislation that will give Congress an opportunity to address the recent revolutionary changes in the financial industry in an orderly and comprehensive manner.

Changes in the financial industry have been marked by dramatic encroachments by bankers and brokers into each others' line of business. Such encroachments run counter to 50 years of bank legislation and regulation. More frequently than not, they have resulted from the exploitation of unintended loopholes in the banking laws, and the independent actions of aggressive regulators.

The legislation I have introduced, H.R. 3413, would impose a temporary moratorium on certain types of acquisitions of financial institutions by other financial and nonfinancial institutions, and would restrict the expansion of State-chartered institutions into activities—such as the sale of insurance out of State and the underwriting to securities, which would have the effect of circumventing the intent of current banking laws.

This legislation has been suggested by the Federal Reserve Board, and has been introduced as drafted by the Board with only one change: in the Fed version the moratorium would expire on December 31, 1983—which has been introduced in the Senate by Senators GARN, HEINZ, PROXMIRE, and DODD—in the version I am introducing today, the moratorium would extend until December 31, 1984. I believe that it is unrealistic to expect Congress to act on comprehensive legislation in such a complicated area without a series of hearings and an opportunity to examine competing proposals for the future shape of our financial system.

The deregulation of the banking industry has, thus far, brought tremendous benefits to consumers, including greater convenience, a wide variety of services, and market rates of return on their money. But consumers have faith in newly available types of accounts and services only because bank regulation has emphasized the continuing safety and soundness of the system. A moratorium will allow Congress to keep the benefits of deregulation intact, while we devise a new framework that will preserve the safety and soundness of the system well into the future.

Mr. Speaker, I insert the text of the bill in the RECORD:

H.R. 3413

A bill to limit temporarily the acquisition of depository institutions and the commencement of certain new activities by state chartered depository institutions and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION. 1. The effective date of this Act is the date of its enactment and this Act is hereby repealed on December 31, 1984.

SEC. 2. On or after the effective date of this Act, no company that is engaged directly or indirectly, including through a subsidiary, in any activity not permitted for a bank holding company under section 4 of the Bank Holding Company Act shall acquire control of any insured bank, and no company shall acquire control of insured banks in more than one state without prior approval under the Bank Holding Company Act.

SEC. 3. On or after the effective date of this Act, no company that is engaged directly or indirectly, including through a subsidiary (other than an insured institution), in any activity other than an activity permitted for a multiple savings and loan holding company on the effective date of this Act under subsection (c)(2) of section 408 of the National Housing Act or for a bank holding company under section 4 of the Bank Holding Act shall acquire control of any insured institution, except as provided in subsection (m) of section 408 of the National Housing Act.

SEC. 4. No company that acquires or acquired control of an insured bank or insured institution on or after June 23, 1983 (the date of introduction of the bill), shall retain control of such bank or institution on or after the effective date of this Act and engage directly or indirectly, including through a subsidiary (other than an insured institution), in any activity other than an

activity permitted for a bank holding company under section 4 of the Bank Holding Company Act or for a multiple savings and loan holding company under subsection (c)(2) of section 408 of the National Housing Act, unless such insured institution was acquired pursuant to subsection (m) of section 408 of the National Housing Act. After the effective date of this Act, no company shall retain control of insured banks in more than one state that were acquired on or after June 23, 1983, unless such banks were acquired with prior approval under the Bank Holding Company Act.

SEC. 5. On or after the effective date of this Act, no state-chartered depository institution may commence, either directly or indirectly, including through a subsidiary, any activity not previously and lawfully engaged in by that institution unless (a) such activity was authorized for that type of institution explicitly and not by implication by a state statute adopted, or by interpretation promulgated thereunder, prior to January 1, 1983; (b) such activity is permitted under section 4(c)(8) of the Bank Holding Company Act for a bank holding company; or (c) such activity is explicitly authorized by a state statute, or interpretation promulgated thereunder, and is performed exclusively in the state authorizing such activity for customers present in that state; provided, however, that this section does not authorize the conduct of any activity currently prohibited to state chartered depository institutions under sections 20 or 21 of the Glass-Steagall Act. Nothing in this section shall prohibit a state chartered savings and loan association or savings bank from engaging in any activity expressly permitted for a federal savings and loan association or savings bank under the Garn-St Germain Depository Institutions Act of 1982.

SEC. 6. Any state-chartered depository institution that commenced, directly or indirectly, including through a subsidiary, on or after June 23, 1983, any activity that would have been prohibited by this Act if commenced after enactment of this Act shall, upon enactment of this Act, immediately terminate such activity.

SEC. 7. The provisions of this Act shall be enforced by the appropriate federal agency under the Financial Institutions Supervisory Act of 1966, as amended, and for this purpose any company that controls an insured bank shall be treated as a bank holding company.

SEC. 8. For purposes of this Act, the terms:

(a) "bank holding company," "company," "control," and "subsidiary" have the same meanings as provided in section 2 of the Bank Holding Company Act;

(b) "depository institution" has the same meaning as provided in 12 U.S.C. 461(b);

(c) "insured bank" has the same meaning as provided in 12 U.S.C. 1813(h) and shall also include any institution that is eligible to become an insured bank under 12 U.S.C. 1815, and any institution that accepts deposits that the depositor may withdraw by check or similar means for payment to third parties and engages in the business of making commercial loans. The term "bank" does not include any foreign bank having an insured branch or an institution expressly exempted under section 2(c) of the Bank Holding Company Act; and

(d) "insured institution" and "multiple savings and loan holding company" have the same meanings as provided in section 408 of the National Housing Act.●

AMBASSADOR SPEAKS TO THE IMPORTANCE OF TRADE

HON. DOUGLAS K. BEREUTER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BEREUTER. Mr. Speaker, earlier this month the Egypt-United States Business Council held its ninth annual meeting in Washington, D.C. More than 100 Egyptian and American business leaders spent 2 days discussing the investment climate and political, economic, strategic, and congressional relations between our two countries.

Egypt's Ambassador to the United States, Dr. Ashraf Ghorbal, spoke eloquently about the friendship between Egypt and the United States and about the great possibilities for continued political and economic cooperation.

I am pleased to share excerpts from Ambassador Ghorbal's remarks with my colleagues, with the hope that the comments will create a better understanding in the United States about Egyptian efforts to increase investment in Egypt and trade with the United States.

REMARKS BY HIS EXCELLENCY ASHRAF GHORBAL, AMBASSADOR OF EGYPT

The friendship that has been rebuilt since the early '70's has grown to be a solid rock on which these relations now stand. Both countries have worked to bring about the beginning of peace in our area. As joint partners, we are continuously working to bring others into the peace process. Whatever obstacles we both encounter, we are determined to overcome with more vigor and dedication to the cause of peace that unites us. No one can deny that we have had setbacks, but no one can deny that we do our best to overcome them and make people realize that only through negotiation, mutual understanding, and reason can we overcome the difficulties and help bring the people of the area nearer to prosperity. . . .

President Mubarak's visit to the United States last January was another milestone in the relations between the two countries. Your meeting with him in New York was definitely a high mark in his visit. Your report to him about achievements and difficulties was most useful. Surrounded by his assistants in the economic field, you could readily see that he takes American-Egyptian relations very seriously and American investment in Egypt close to heart. . . .

On our side, we have not hesitated to take the advice of our American friends in changing our investment laws, in streamlining our bureaucracy. The five-year plan—1982 to 1987—with an accelerated rate of growth around 11 percent above the present growth rate of domestic product of 8 percent is indicative of our intentions. Our export growth target of 10.5 percent per annum is indicative of our aspirations. The increase of commodity exports in comparison to the total current receipts in Egypt's balance of payments to the order of 49 percent in 1982 and 54 percent in 1987 is indicative of the hopes we pin on the coming five years. Can I then appeal to our American friends to help examine during this session among the issues they will discuss all possible ways and means to ensure easy access of Egyptian products to U.S. markets—both traditional and non-traditional export items? Your recommendations and participation in areas relating to the short-run strategies will, I am sure, be much appreciated and highly valued. Our exports pose no problem to any of your commodities. It will enhance our capabilities to buy more from the United States and replace, in time, the AID programs for which we have been and will remain grateful. Speaking of the AID program, I am happy to learn from Peter McPherson and his colleagues that every effort will be deployed to support programs of high and visible means to our masses. Needless to say, the support that the energy sector in Egypt received meant a great deal to our people, as some turned on the light for the first time in villages that had remained dark throughout centuries. Industry has also benefitted by putting the additional people to work that they need. I was pleased to learn that when one counts the energy produced from the combined projects that AID helped to finance, we come to a figure corresponding to the energy being produced from the Aswan high dam. Definitely, this has helped equally many an American company, as it sold to us the necessary equipment to produce such electricity.

We are determined to continue the building of additional power stations needed for our development program. We are relying on AID's participation in the financing of some of these. We are waiting, in particular, for AID's approval to finance Abu Sultan's fourth power station. This will help to make available the needed power for the construction of additional industry and other ventures in which American capital will be invested. American-Egyptian joint investment projects need that additional required energy. We must continue to build these sources of power.

The decision by the United States to earmark one and a quarter billion dollars for the coming five years to help our water and sewer systems will be another ediface in that program of cooperation between our two countries to benefit Egypt. It will also benefit many American companies and, thus, employees in the United States.

Over the years, the Egyptian budget has been taxed by a growing rate of subsidies to insulate our masses from the ever-growing rise worldwide in the prices of food stuffs, energy, and the daily needs for their livelihood. It has now become the considered decision by our government to cut down gradually on these subsidies, while securing for the masses the additional wages and resources that they need to have the necessary requirements for a decent living. While we have appreciated the advice we received from many quarters motivated by their friendship towards Egypt, we have taken and are determined to continue to take this new policy because of our conviction that this is for the benefit of our people and the economy that is destined to serve it.●

U.S. INVOLVEMENT IN CENTRAL AMERICA—THE ALTERNATIVES

HON. LARRY McDONALD
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. McDONALD. Mr. Speaker, many segments of the national news media seem determined to insist that U.S. involvement in Central America would lead to another Vietnam and that we ought, at the very least, to negotiate with the terrorist murderers directed by Marxist Nicaragua, Cuba, and the Soviet Union. Presumably they want to negotiate on the timetable for a complete Communist takeover of Central America, from Columbia to the Rio Grande.

Many Members of Congress also seem to want to ignore the lessons of history. Their actions in condemning U.S. allies in Central America for alleged human rights violations but failing to criticize terrorist acts by Soviet, Cuban, and Nicaraguan surrogates in that same area is hypocritical. Their unwillingness to face the reality of Soviet aggression in the Western Hemisphere and to meet that challenge head on merely hastens the day when terrorists will be knocking at our southern borders and when refugees by the millions will start flowing into the United States from Central America.

With those thoughts in mind, following is a fictionalized news story that—may—God forbid—be carried by our wire services in the near future if the current Communist aggression is not stopped. The problems it outlines are worthy of consideration by my colleagues, the national news media, and the American people.

TERRORIST ATTACKS ON U.S.

SAN ANTONIO, TX (WP).—Ten people were killed last night in a small community south of here after several hours of torture by a band of Marxist guerrillas based across the Rio Grande in Mexico, according to Texas authorities.

U.S. officials say they continue to have little success in sealing the 2,000-mile U.S.-Mexican border against terrorist attacks, which apparently are condoned and supported by the Revolutionary Peoples Communist Party that now controls Mexico.

In addition, refugees continue to stream across the border into Texas, New Mexico, Arizona, and Southern California. To date, U.S. officials feel that at least nine million refugees from Mexico, Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, and Panama have fled to the U.S. from the Communist governments in their own countries. American Immigration and Naturalization authorities say that refugees have jammed most of the Southwestern states and have even moved into Mississippi, Alabama, Georgia, Florida, and Tennessee, pushing emergency resources to the limit. But the worst apparently is not over, U.S. officials said, with at least another 12-million refugees expected from Central America in the next several months.

Virtually all the Southern and Southwestern states activated the National Guard months ago in an effort to stem the refugee flow and, most of all, to halt the terrorist raids across the border. In only 13 months, over 350 Americans have died and another 978 have been maimed or injured by terrorist actions in the four border states. However, government efforts have largely proven unsuccessful.

In response to what U.S. officials called "barbaric incidents of terror and border violations," most Americans within 250 miles of the Mexican border have been asked to move further inland. And because of raids on refugee camps, most of those fleeing the flames of Marxism in Central America have been moved to newer, makeshift camps in Arkansas, Tennessee, and the northern halves of Mississippi, Alabama, and Georgia. Additional camps are expected to be set up soon in North and South Carolina, Missouri, and Kentucky.

The President has protested the campaign of terrorism, both in notes to the Mexican government and in resolutions placed before the United Nations. However, the UN has instead condemned the U.S. for alleged oppression in the Southwestern states and praised the guerrillas on their self-described "war of national liberation."

A military junta comprised of leaders of all the Central American nations, and including Cuba's Fidel Castro, yesterday vowed to continue what they called "the fight by the people's forces in international socialism to bring down the last bastion of capitalist imperialism left in the world."

Meanwhile, in a speech on the floor of the U.S. House of Representatives, one Southern Congressman said that the nation's current military and immigration problems would not have arisen had the U.S. prevented a communist takeover of Cuba in 1957, or of Nicaragua in 1979, or even of El Salvador in the early 1980s.

"History has proven one cannot negotiate with a murderer," he said. "Neither will military gradualism work when the goal is not victory but rather appeasement or merely delay in the final outcome. Total elimination of the cancer of communism from the Western Hemisphere was the only solution in 1957, and 1979, in the early 1980s, and even now. But the hour is late, it is very, very late."

At the same time, one U.S. Senator from an Eastern state introduced a resolution urging the President to negotiate with the Marxist guerrillas and condemning the possible use of military force across the Mexican border against terrorist bases.●

THE NUCLEAR FREEZE: WHERE IT STANDS NOW

HON. HOWARD L. BERMAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BERMAN. Mr. Speaker, the time has come to bring the runaway arms race to a halt. If we do not stop it, we threaten the future of this planet. A mutual freeze on nuclear arms is the best way to begin ending the arms race, and this House affirmed that goal when it voted 278 to 149 for a resolution calling for a mutual, verifiable freeze on nuclear weapons.

Despite numerous attempts by opponents to change the spirit of the resolution and defeat its purpose, the clear message of the freeze emerged: the nuclear arms race must stop. The opposition claimed there should be arms reductions before a freeze. But that would simply allow the level of international tension to rise as new and more terrible weapons are created while other parts of the arsenal are reduced. Amendments to change the sequence of the freeze were defeated. Opponents wanted to allow modernization; this would really mean deploying new, destabilizing weapons under a freeze. A freeze would be meaningless if each side could simply create a new means of destruction and call it the latest fashion. This resolution calls for an end to both the quantitative and qualitative arms race.

Though there were many amendments, none really altered the essential position that there must be a comprehensive, immediate, bilateral freeze of nuclear weapons followed by reductions of arms. Congress has the responsibility to help develop an American negotiation strategy on arms control. This resolution started us on the way.

It took hours, but we made it understood: we are not trying to overstep the powers of the President. Congress is providing objectives for negotiations. We have not written a treaty text. Nothing will be frozen until a freeze is negotiated, signed by both parties, and approved by both Houses of Congress.

The freeze stands in stark contrast to the administration's policy of pursuing selected reductions on older ballistic missiles, while undertaking a massive buildup of new first strike and counterforce nuclear weapons followed, at some undetermined time, (perhaps) by a freeze.

The House has said more. We say, begin by negotiating an immediate, mutual, and verifiable freeze, then negotiate the reductions; decide how to achieve a freeze on testing, production, and deployment of nuclear weapons; give utmost attention to first strike weapons. The reductions which follow from a freeze should be achieved within a reasonable time, and that period will also be determined in negotiation.

We must always remember that nuclear weapons are only a part of our national defense. We are forced to have them because they exist, and because others have them. But we should not depend on them for our entire defense, nor should we increase our dependence on them. Yet that seems to be the very thing that this administration is doing. One way to

stop this acceleration is through the freeze.

The opponents of a freeze would frighten us with horror stories of Soviet dominance and Soviet deception. They try to convince us that anytime the Soviets get a new technological marvel, even if it is one we already have, that we are in grave danger. First it was the bomb itself that put us in peril, then it was bombers, then missiles, and now hard-target-kill capability. Suddenly, it is argued, we are vulnerable. We are told the only solution to this supposed technological imbalance is more technology and defense spending.

It is true that the Soviet Union deployed five new missile systems in the last 10 years, but the United States outproduced the U.S.S.R. in numbers of warheads, it introduced the Poseiden and Trident submarines, it upgraded the ICBM force, it added over 1,000 short-range attack missiles on the B-52. Let there be no mistake, the arms race continues, on both sides. As the pace accelerates, the weapons have greater accuracy, there are multiple warheads on each missile, the flight time is shorter, and the explosive force greater.

The United States and the Soviet Union now possess the equivalent of 3 million Hiroshima bombs—a total of 4 tons of TNT for every man, woman, and child on the Earth. Is that not enough?

Now a new round in the arms race begins as we build counterforce weapons which can match the Soviet hard-target kill capability; these weapons are supposed to protect us from our newest peril, the window of vulnerability.

The window of vulnerability is not there, and the President's Scowcroft Commission says it is not. We are vulnerable, it is claimed, because of the Soviet advantage in numbers of ICBM's. But the Soviets have concentrated three-fourths of its force in ICBM's, While America depends on a triad of forces, missiles, bombers, and submarines, making it much better able to survive a first strike. The Scowcroft Commission points out, "the existence of several strategic forces requires the Soviets to solve a number of different problems in their efforts to plan how they might try to overcome them."

As Stansfield Turner, the former CIA director, explains,

> We must count on making it so complicated for the Russians to knock out all our nuclear forces in a short period of time that they will never feel confident of their ability to do it.

The Commission, Turner, and other arms control experts speak in terms that simply demonstrate the horrific power that both nations must bring to bear simply to deter attack—they also make us wonder about the need to continue an arms buildup.

We no longer fear a bomber gap or a missile gap. We should not fear the window of vulnerability. Our present dilemma is not over how many weapons the Soviet Union has, it concerns the competing philosophies of deterrence. When both sides are capable of delivering an attack in retaliation to attack from the other side, both sides will feel deterred from launching a first strike. So goes the gruesome mathematics of the nuclear age. We must work to maintain the balance that exists today, not upset it with newer, more destructive weapons.

President Kennedy reminded us,

> We must not see a distorted and desperate view of the other side; we must not see conflict as inevitable, accommodation as impossible, and communication as nothing more than exchange of threats.

The Soviet and American people share the common desire to avoid a general nuclear war. A crucial aspect of the freeze is that it is negotiated. We would enter into a process with the Soviets aimed at its very core toward the stability that both sides desire. It is thus a most positive kind of negotiation, and one we should value.

We should not follow the administration and say, reduce after we build new weapons. Arming in order to disarm will not work. It has not worked in the past. There are no bargaining chips. The bargaining chips of yesterday are the weapons we have today.

The only way to reduce arms, the only way to bring some measure of stability and control to the precarious situation we are in today is to say once and for all, "stop." It has to begin sometime.

No one is freezing or disarming unilaterally—the freeze begins only after it is negotiated and it is mutual.

The freeze is possible, it is feasible, and it can be verified. Anything that cannot be verified will not be frozen. A nuclear freeze can give the United States and the U.S.S.R. breathing room before they rush into a nuclear future that may threaten the future itself.

The freeze will stop the arms race in its tracks, and it can assure there will be no future generations of nuclear weapons. If we do not act now, there may be no future generations.

We think of the rhetoric used to describe the situations of our two nations. The images may change, but the idea is the same: we are two international powers, with incredible destructive force at our disposal. One misstep, one unmediated strike in anger, and we may destroy more than an opponent. We may destroy ourselves.●

TESTIMONY OF CONGRESSMAN ROY DYSON ON H.R. 656, FEDERAL EMPLOYEE HEALTH BENEFITS REFORM ACT OF 1983, BEFORE THE SUBCOMMITTEE ON COMPENSATION AND EMPLOYEE BENEFITS

HON. ROY DYSON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. DYSON. Mr. Speaker, I was asked to testify before the Subcommittee on Compensation and Employees Benefits and include my testimony in the RECORD:

Madam Chairman, I appreciate the opportunity to testify before the Subcommittee on Compensation and Employee Benefits in support of H.R. 656, the "Federal Employees Health Benefits Reform Act of 1983." As you know, I am a co-sponsor of this legislation, and I strongly believe it will remedy many of the existing inefficiencies and inequities of the Federal Employees Health Benefits Program. I address you today, however, not merely as a co-sponsor, but as a Representative whose constituents are deeply concerned over the recent policies and practices of the Office of Personnel Management.

During the last two years, as we know, benefits have been reduced by 12 percent, while premiums have increased at a rate of 56 percent. In an effort to "contain rising health costs", the Administration has simply imposed additional burdens on the federal employees enrolled in FEHB plans. One estimate of these additional costs runs as high as $500 per "average" employee. Most of the lost value in health benefits incurred by federal employees has resulted as much from the Office of Personnel Management's abject disregard for the well-being of its employees as from the uncontrolled increase in health care costs as a general service.

As I reviewed the record of last year's hearings, and especially the fascinating defense of OPM's actions by its director, Dr. Donald Devine, I was struck by the many contradictory and contorted assumptions underlying the Administration's handling of the FEHB program.

For example, it is clear that Dr. Devine assumes that preserving the financial health of the FEHBP requires sacrificing the physical and mental health of federal employees. Dr. Devine, it seems, was astonished to have discovered that the system was facing a potential $500 million "shortfall" in funding for the 1982 fiscal year. Despite the fact that conventional sources of funding were readily available to cover any unexpected costs, Dr. Devine refused to avail himself of these sources because he considered continued discretionary funding to violate his sense of "good business practices". Instead, his alleged "good business practice" led him to precipitate a crisis which we are today having to set right. While Dr. Devine's business judgment is very much in doubt, it is clear, and I am confident, that H.R. 656 can restore the program's financial integrity and fulfill our obligation to federal employees.

H.R. 656 increases the government's contribution rate to 75 percent of the premium costs for plans sponsored by the "Big Six,"

the largest of the more than 100 plans approved for inclusion in the FEHB program. If individuals enroll in plans which are substantially less expensive, the Government contribution can provide up to 100 percent of the premium costs.

By offering an additional 5 percent premium contribution to carriers of plans providing health care to annuitants over the age 65, whose medical needs are not also covered by Medicare, H.R. 656 reverses the tendency in FEHB plans to neglect the needs of the most vulnerable retirees. It permits employees involuntarily separated from their federal jobs to enroll in FEHB plans during their first year of unemployment, thus aiding the effort to protect the health of those without steady income. And it sets broad guidelines for minimum coverage, such as dental and mental health care, which all plans must now provide. This is in addition to the minimum "catastrophic coverage" which all plans must offer.

There are, of course, other critically important provisions contained in H.R. 656, such as the requirement that a three-week open season precede any contract period when changes in premiums or benefits have been made, when new plans have been approved or when existing plans are terminated. And OPM will in the future, be prohibited from forcing carriers to reduce benefits by more than 5 percent, which should put a halt to the recent precipitous decline in the value of benefits.

In short, H.R. 656 stands on its own as a highly desirable and effective remedy to the crisis in FEHBP precipitated by Dr. Devine. But when compared with Dr. Devine's own proposed "reforms", the virtue of H.R. takes on an even more brilliant luster.

The horrific record of neglect which Dr. Devine has compiled during the past two years can only be eclipsed only by the probable consequences of his agenda for the years to come. He has finally unveiled a plan that has been floating around OPM for the last several months, and which, up to now, political expediency has prevented from being formally introduced. It seems that his answer to the mess he has created is to sweep the whole program away with the so-called voucher system.

This system, which he has designed to remove the government from the role of "middleman" in the arrangement between employees and medical program carriers, is being promoted as a blow against rising health care costs. But as his actions make clear, he is less concerned about containing health care costs per-se than about reducing OPM's contribution to the health care costs of its employees. The voucher system will do this in a number of ways, but most disastrously by limiting the yearly increases in the value of the public contribution to increases in the consumer price index or some other general measure of inflation. Since medical care costs rise, as we all know, many times faster than most other services, employees will be able to purchase less and less coverage each year. The value of their benefits will plummet, and conceivably, under Dr. Devine's management, workers would be unable to afford the price of aspirin, let alone adequate medical care.

For these and a host of other reasons, H.R. 656 is a necessary and desirable reform. In closing, I will only add that many argue for these reforms on the grounds that without them, the U.S. Government cannot expect to attract highly qualified employees. It will suffer from a drain of competent staff, lost mostly to private concerns offering better health benefits. However true this point, there are also broader issues that trouble me. The Federal Government has promoted, for the last hundred years, the dynamic partnership between labor and management that has made our industrial democracy a model for the world to emulate. At no time since the Depression of 1930 has this partnership been more troubled than at this moment. Abrupt plant closings, unrewarded employee give-backs and unilateral wage reductions must give way to a reaffirmed harmony of interests. Can we, as the nation's largest employer, expect to encourage the private sector to recommit itself to the guiding principles of an industrial democracy if we ourselves deny our responsibilities to our own employees? If our civil servants are to fulfill with skill and devotion their obligations to the nation, the nation must fulfill its obligations to the career service. Can we, in good faith, mediate labor-management disputes, assist in negotiating settlements, if we continue to neglect our own obligations to deserving workers?

I think not, and I believe you and this subcommittee share my onvictions.●

ADMINISTRATIVE SITES PROPOSED FOR DISPOSAL

HON. E de la GARZA

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. DE LA GARZA. Mr. Speaker, for the information of the Members of Congress, I am printing in the CONGRESSIONAL RECORD a list of tracts of land that are located outside the national forest borders and that the Department of Agriculture has reported as no longer needed for the Forest Service. Apparently the administration intends to take disposal action as to these tracts.

This information has been transmitted to me and to the congressional delegations of each State concerned pursuant to section 316 of the 1983 Interior and Related Agencies Appropriations Act. That act requires certain advance notifications to be made by the Department before action can be taken by the administration to dispose of these tracts.

UNITED STATES DEPARTMENT OF AGRICULTURE,

Washington, D.C., May 20, 1983.

Hon. E. (KIKA) DE LA GARZA,

Chairman, Committee on Agriculture, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Section 316 of the 1983 Interior and Related Agencies Appropriations Act (PL 97-394) requires funded Agencies to take the following action before disposing of any lands, except by exchange or under certain specified authorities.

1. Determine that the tract is no longer needed by the Federal Government and inventory the tract as to its public values.

2. Provide opportunity for public review and comment.

3. Provide 30 days advance notice to the congressional delegation of the State or States in which the tract proposed for sale is located and the plan for carrying out such disposal.

4. Notify the appropriate congressional committees for immediate publication in the Congressional Record.

In August 1982, the Secretary of Agriculture announced that the Forest Service had identified about 60,000 acres that could be sold under existing authority. In fiscal year 1983 but prior to passage and final clarification of the Appropriations Act requirements, the Forest Service reported several small administrative site tracts excess. (See enclosed list.) These administrative sites are located outside National Forest boundaries and are no longer needed by the Forest Service. These types of properties have in the past and will continue to be processed under provisions of the Federal Property and Administrative Services Act when no longer needed for administrative purposes. The General Services Administration (GSA) has suspended disposal action pending completion of actions called for by the Appropriations Act.

Many Regional and local newspapers carried news items about the administrative sites proposed for disposal. (See enclosed examples.) Because of the longstanding routine practice of excess administrative site disposal, the wide newspaper coverage of properties identified for disposal, including specific names and locations of many excess administrative sites, and the large volume of inquiries, without objections to their disposal, we plan no further public review of these specific administrative sites.

The congressional delegation of each State has been notified of these proposed disposals. No further action will be taken until 30 days following the notification of the proposed disposals.

Sincerely,

F. DALE ROBERTSON,
(For R. Max Peterson, Chief).

Enclosures.

WELFARE PROGRAMS

HON. MARCY KAPTUR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Ms. KAPTUR. Mr. Speaker, in discussions on reducing the Federal budget deficit, we often hear suggestions that the place to begin is with the welfare system which is fraught with "waste, fraud and abuse." I would like to commend an article to my colleagues which clarifies some of the misconceptions connected with the aid to families with dependent children (AFDC) program and food stamps. Nina Easton's article illustrates that the actual amount of waste in the welfare system is but a fraction of what occurs in other programs. We need to eradicate waste in all Federal programs, but to focus attention solely on the welfare programs when tremendous abuses occur in other areas is less than productive.

Furthermore, we must not lose sight of the fact that some of the most severe cuts over the last 2 years have been made in these programs which serve low-income Americans. AFDC benefits have been cut $1.5 billion a year. About 365,000 families have been terminated, and an additional 260,000 families have had their benefits reduced. In nearly half of the States those who were terminated lost their medicaid coverage for themselves and their children. An estimated 660,000 children have lost medicaid coverage when their families were dropped from AFDC. In addition, the food stamp program has been cut by over $2 billion a year. Nearly 1 million food stamp recipients have been terminated, and nearly all others are receiving lower benefits.

This article entitled "The Facts About Welfare Fraud" appeared in the May-June issue of Common Cause.

THE FACTS ABOUT WELFARE FRAUD

YOU'VE HEARD THE TALES OF ABUSE: HERE'S THE REST OF THE STORY

(By Nina Easton)

You can argue all day about whether our current welfare system is the best way to help the truly needy, but a look at some numbers on these programs reveals one certainty: There is nowhere near the amount of waste, fraud and abuse in poverty programs that many have been led to believe by President Reagan and others.

The Reagan administration has added a number of fraud fighting measures to the lengthy list of initiatives passed by Congress in recent years. But through his repeated tales of welfare abuse—some accurate, some hyperbole and still others dead wrong—Reagan has encouraged a perception that the needy people who benefit from public assistance tend to be dishonest, and that the total dollars of waste, fraud and abuse in these programs would contribute significantly toward balancing the budget.

Nothing makes the overburdened taxpayer angrier than stories of a mother pulling up to the welfare office in a Lincoln Continental; or of upper class college students getting free handouts; or someone using change from food stamps to buy vodka—all courtesy of the U.S. taxpayer.

But stories of individual abuse in the welfare system are only a small and often distorted part of the overall picture. Here is the untold story about fraud in the welfare system.

Fact 1: The nation's primary welfare program, AFDC, comprises only 1 percent of the federal budget. As economist Jack Meyer of the conservative American Enterprise Institute told a congressional panel last year, "If 20 percent of that were fraudulently spent, which I doubt, we would save two tenths of 1 percent of the federal budget and still be faced with massive deficits. We cannot avoid massive deficits with a lot of rhetoric about welfare cheating or 'fraud and abuse.'"

Fact 2: The extent of abuse in these programs pales in relation to that in defense: "Erroneous AFDC (Aid to Families with Dependent Children) payments"—which include both honest mistakes and fraud, some on the part of recipients, some on the part of agency workers—is estimated at 8.3 percent, or about $664 million in 1981, according to the Department of Health and Human Services. "Overissuances" of food stamps—again including fraud and mistakes on the part of both government workers and participants—is estimated at 10 percent, or a little over $1 billion a year, according to the Department of Agriculture (USDA).

Waste and fraud in these two programs, then, total about $1.6 billion a year. Analysts, including budget director David Stockman, have put the price of Pentagon waste and fraud at 20 to 25 times that.

Fact 3: Some of the waste in the AFDC and food stamp programs is due to the complexity of welfare regulations and application forms, which experts say invite error. The Reagan administration has added to that problem with a new series of complicated regulations which welfare workers, and in some cases even courts, are still trying to understand.

Fact 4: Contrary to a popular misconception, fraud in these programs is not perpetrated by the average needy family. In fact, after announcing that USDA food stamp investigations in 1982 had led to a record 1,170 indictments, Inspector General John Graziano had to explain: "Most of these were hardened criminals, not mothers on welfare."

In the Medicaid program where estimates of fraud and waste range anywhere between $2 billion and $6 billion a year, the main culprits are nursing home operators, doctors, pharmacists and hospitals—not patients. This abuse involves everything from crimes, such as kickback schemes, to unnecessary surgery, bloated physicians' fees and the like.

Fact 5: Reagan frequently complained about strikers and upper class college students on food stamps. But USDA figures from August 1981 showed that only one tenth of 1 percent of food stamp households included strikers; 1980 figures showed that students comprised only 1.8 percent of all food stamp households, and in order to qualify they had to be disabled, elderly, be attending both work and school, or have dependents.

Fact 6: To its credit the Reagan administration has increased the number of indictments for food stamp fraud by 46 percent since 1981. But for this we can thank law enforcement authorities, not the deep budget cuts that the president insisted were vital to eliminating waste and fraud.

Indeed, numbers compiled by the Congressional Budget Office showed that the government saved most of its money in the food stamp program by cutting benefits for hundreds of thousands of needy families. An estimated 10 to 15 percent of the savings in the President's first budget came from curbing error and fraud; only 3 percent of the President's 1984 food stamp cuts are aimed at reducing error.●

REPUBLIC STEEL MAKES PROGRESS

HON. EDWARD F. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. FEIGHAN. Mr. Speaker, everyone knows that the U.S. steel industry has fallen on hard times in recent years, and the outlook does not look too much better in the near future. The expected upturn in the steel industry is still more a hope than a reality.

In the face of these problems, the Republic Steel Corp. of Cleveland, Ohio, has taken quick and forceful actions to combat the institutional inertia that has been plaguing the industry for years. Under the aggressive and able chairmanship of E. Bradley Jones, Republic is making major progress to increase investment, increase productivity, and decrease its deficits.

I think all of my colleagues would be interested in reading the following article from Crain's Cleveland Business Review which details the steps Mr. Jones has taken to come to grips with the problems posed by foreign competition and an aging industrial base.

JONES BECOMES TRAVELING SALESMAN IN FIRST-YEAR PITCH TO RESCUE REPUBLIC

(By Forrest S. Gossett)

To say it's been rough going for E. Bradley Jones hardly speaks to the trials he has had to endure in his first year as chief executive of Republic Steel Corp.

Since moving into the chairman's office at Republic last July 1, succeeding retiring William DeLancey, Jones has had:

To watch, almost helplessly, as sales evaporated, sinking the company some 58 notches on the Fortune 500 ranking (to 145), while the bottom line reddened for the first time since 1938, inflicting a whopping $233 million loss;

To react to steadily falling plant utilization rates by handing out pink slips or layoff notices to thousands of loyal, longtime employees in a draconian, but necessary, campaign to lower the company's breakeven point;

To come to grips with an ultimatum posed by foreign competitors that the company quickly invest hundreds of millions of scarce dollars in new manufacturing technology, lest it be doomed to obsolescence and assured defeat in the international marketplace;

To respond with quick-footedness to rampant rumors among competitors, suppliers, customers, stock market analysts and employees that the company was about to go bankrupt.

As one might guess, it hasn't been a very enjoyable 12 months for Jones.

"It's very difficult for me to leave at 5 p.m., go home, turn on the music and say, 'Happy times are here again,' " said Jones in an interview with Crain's Cleveland Business.

The problems have been unrelenting. The upturn in the steel industry, predicted by analysts at the beginning of the year, has yet to materialize. Republic lost $35 million in the first quarter, and Jones expects to lose as much, if not more, after the books close in 10 days on the second quarter.

But through this, Jones has earned high marks for aggressively attacking Republic's problems.

"They are less apt to blame foreign competition for their problems now," said analyst Charles Bradford of Merrill Lynch, Pierce, Fenner & Smith in New York. "They have become good cost-cutters. Republic's breakeven point has been lowered from something like 80 percent of capacity to about 65 percent—which is good, but I would rather see that down to 60 percent."

Added Bradford, "What Republic, under new management, has done is masked by the general economy, which means you can't see the results on the bottom line yet."

Analysis and business associates say Jones brings an important element to the chairman's job—salesmanship. Unlike some previous Republic chairmen, Jones, 55, a graduate of Yale and Harvard, came up through the corporate ranks in sales and marketing segments. Previous chairmen were lawyers.

"These are challenging times that call for a man who is careful, prudent and confident at the top," said one Republic director. "He is a straighforward, honest man who isn't going to hustle you. I think he has great credibility."

Almost immediately upon taking the job, Jones was confronted with the twin ills of depressed market and bankruptcy rumors. And like a salesman, he hit the road, talking to employee groups, bankers and customers to sell them on the fact that Republic was not about to file for Chapter 11.

"A primary part of my job was to communicate our message to those groups," said Jones. "I spent a great deal of time with the bankers, answering their questions about what we were doing in order to respond to the economic downturn. We also had 10 dinners in various parts of the country with customers, introducing them to Republic's management and answering their questions."

The salesman's imperative to satisfy customers with price and quality also has been the driving force behind Jones' campaign to improve quality and make Republic pay much closer attention to the fundamentals of marketing.

"The marketplace is telling us today that the market is not going to pay a premium simply because we happen to produce our product in this country," said Jones. "We have to do certain things in order to be competitive in the world environment, and bringing that message home is the primary responsibility of all the corporate managers. The company that is going to succeed and become a viable producer is going to have to meet the quality requirements the consumer is demanding."

To meet quality goals, Republic has established closer coordination with customers to generate more feedback.

"The old attitude at Republic seemed to be that they knew what was best for the customer," said analyst Donald Eller of Roulston & Co. in Cleveland. "That has changed. They now seem to be asking the customer what he needs, and they've become much more marketing oriented."

The biggest challenge Jones has faced is Republic's weak balance sheet, which is holding the company back from capital spending plans and expansion.

Since January, Jones and Republic management have accomplished three major financial moves that Jones says will give the company some breathing room. The company successfully issued $75 million in preferred stock in February; it recently consolidated its loans into a single package of more than $400 million; and in late May, it generated $166.6 million through the sale of 12⅛ percent subordinated debentures.

But selling the financial community wasn't easy. Jones traveled over the country, meeting with analysts, brokers and institutional investors to push the Republic issues.

"Going that route was expensive," Jones said of the new issues. "But it gave us long-term debt, which we needed, instead of short-term debt. I did go on a road show for the issues and talked to investors about our future. The fact they sold so well indicates investors still believe Republic is a good investment."

Institutional investors were particularly sold by Jones. A year ago, only one institution owned more than a 5 percent block of the company's stock. As of April, five companies, holding at least 5 percent each, owned 30.6 percent of Republic's outstanding common shares.

Improving plant productivity has been another exceedingly difficult task. Despite a contract with the United Steel Workers of America earlier this year that gives the industry some wage relief, it still costs U.S. manufacturers much more per ton to produce steel than their foreign competitors.

While Jones is proud of Republic's accomplishments to date, he says more is needed to compete in a world market.

"We have got to find a way to meet the objectives of the labor groups and reduce the labor input into each ton of steel we produce," said Jones.

"We still have to work in terms of education of our work force, in terms of a program which will present to them what the economic environment is and find what we can do together to cause Republic to be a strong competitor," said Jones.

"A lot of that responsibility falls on our shoulders, because a great deal of that accomplishment is going to be created by our own retraining. There's a need to realize that going back to the same old way of business as usual will be the beginning of the end as far as the enterprise is concerned."●

INTRODUCTORY STATEMENT ON MARITIME REDEVELOPMENT BANK ACT OF 1983

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BIAGGI. Mr. Speaker, I introduce today the Maritime Redevelopment Bank Act of 1983. This legislation establishes the Maritime Redevelopment Bank of the United States to promote the revitalization of the maritime industry. It provides capital formation assistance: First, to vessel operators to purchase modern, efficient vessels, thereby increasing productivity and competitiveness in both domestic and foreign transportation markets; and second, to commercial shipbuilders in the form of procurement and investment incentives to undertake managerial, organizational, and technological changes to improve shipyard innovation, productivity, and competitiveness designed to achieve significant reduction in the delivered cost and time of delivery of vessels and other products constructed in domestic shipyards. These indirect incentives in the form of a self-financing program to promote investment in maritime enterprise would substitute for increasingly expensive and inefficient direct subsidy programs of the past.

One might well ask in these times of unprecedented budget deficits and fiscal austerity, do we still need a merchant marine, and, equally as important, can we afford one? At different periods in our history three Presidents have posed the identical questions to the Congress regarding the need for a merchant marine and the appropriate methods to foster and promote it. In proposing any new course for maritime revitalization, it is well to review and assess how our present policy evolved.

First to address these issues was President George Washington in his second state of the Union address in December 1790. Washington enunciated the principal theme regarding the commercial and economic justification for maintaining a U.S.-flag merchant marine when, in questioning substantial dependence on the maritime powers of Europe to carry our foreign trade in time of peace and war, he said:

> I command it to your serious reflection how far and in what mode it may be expedient to guard against embarrassment from these contingencies, by such encouragements to our own navigation as will render our commerce and agriculture less dependent on foreign bottoms, which may fail us in the very moments most interesting to both of these great objects.

For over 100 years, the principal thrust of shipping and trade policy in the United States assumed the form of

registry restriction to U.S.-built vessels and discriminatory tonnage duties favoring the use of United States—over foreign-flag vessels in foreign commerce. This system, incorporated in the Tariff Act of 1789, was later expanded to differentiate between United States and foreign vessels engaged in coastwise trade in the Fishing and Coasting Act of 1793. Discriminatory tonnage duties were last enacted in the Underwood Tariff Act of 1913, and promptly enjoined by the U.S. Supreme Court in the 5-percent discount cases in 1916 as inconsistent with our international treaty obligations. Aside from an attempted brief reprieve in the Merchant Marine Act, 1920, the utility of this—our original approach to maritime promotion policy—has been abandoned. The parallel restrictions imposed upon vessel registry in the foreign trades were likewise lifted by Congress in the Panama Canal Act of 1912.

Our current scheme of maritime promotional policy rests upon three legs. The first of these is Cabotage. The Cabotage Act of 1817 formally reserved the coastwise trade to U.S.-built, manned and operated vessels. The market dichotomy thus established between those vessels engaged in foreign commerce required to meet only prescribed conditions of vessel registry—and those engaged in the coastwise trade—is perpetuated today.

By and large, our generally protectionist policies toward trade and shipping proved an efficient combination in our first half century of independence. These policies prompted a rapid rise in the overall size and market-share of the U.S.-flag merchant marine in the transportation of U.S. foreign and domestic trade in a competitive domestic shipbuilding industry. These achievements were largely attributable to:

First, primary dependence on ocean shipping for intercity freight movement prior to the development of competing transportation modes;

Second, comparative advantage in labor and materials of domestic in comparison to foreign shipbuilding, and a technological edge demonstrated in the achievement of near perfection of design in sailing vessels; and

Third, a policy of trade reciprocity providing a flexible response to the rigid mercantilist policies of our major trading partners, reflected in the Reciprocity Act of 1828.

The first signs that these policies had outlived their usefulness would soon manifest, however, despite the early successes achieved. It was during that period that the United States pioneered the development of liner shipping with scheduled service between New York and Liverpool in 1817—only to relinquish the advantage to the British-owned Cunard Line, the beneficiary of the first ocean mail subsidy. We would later lose our technological advantage in the construction of sailing vessels through substitution of the steam-propelled, steel-hulled vessels that would ultimately dominate international seaborne trade by the middle of the 19th century. The maritime industry in the United States would never regain its position of supremacy from the combined effects of technological obsolesence and the ravages of civil war deflagging and decimation.

For the balance of the 19th century, America turned its attention inward to westward expansion and continental domination. During this period, the U.S. share of the international trade transported in U.S.-flag vessels averaged approximately 4 percent—despite sporadic attempts at indirect promotion of maritime enterprise through periodic mail subsidies, culminating in the Ocean Mail Act of 1891.

After a half century of the maritime equivalent of benign neglect, President Theodore Roosevelt (the former Assistant Secretary of the Navy and a disciple of Capt. Alfred Thayer Mahan) was the first American President to recognize the full dimensions of seapower—including the national defense requirements for a commercial merchant marine capable of serving as a naval auxiliary. Recalling the critical shortfall in sealift mobility which nearly altered the balance of power in America's first overseas encounter with a second-rate maritime power in the Spanish-American War, Roosevelt wrote the Congress in 1903:

> The condition of the American merchant marine is such as to call for immediate remedial action by the Congress. It is discreditable to us as a nation that our merchant marine should be utterly insignificant in comparison to that of other nations which we overtop in other forms of business. We should no longer submit to conditions under which only a trifling portion of our great commerce is carried in our ships. To remedy this state of things would not merely serve to build up our shipping interests, but it would also result in benefit to all who are interested in the permanent establishement of a wider market for American products, and would provide an auxiliary force for the Navy. * * * From every standpoint it is unwise for the United States to continue to rely upon the ships of competing nations for the distribution of our goods. It should be made advantageous to carry American goods in American built ships. * * * Our Government should take such action as will remedy these inequalities. The American merchant marine should be restored to the ocean.

From the perspective of America's recent emergence as a trading nation with global economic and political aspirations, President Roosevelt's message represented the first recognition of the twin dimensions of economic and national security compelling government intervention to develop and maintain a national flag fleet.

Congress responded by enacting the Military Transportation Act of 1904, the first Government-impelled cargo preference statute applicable to the transportation of ocean freight by the then-Departments of War and Navy. The second leg of maritime promotional policy was laid down.

Upon entering office in 1916, President Wilson was confronted with the imminent prospect of American intervention in World War I with a merchant marine transporting but 8.8 percent of its foreign trade (this percentage had substantially increased following a hasty reflagging program initiated several years previously). Yet, it was the prompt withdrawal of a large number of vessels belonging to our European allies from our trades, which ultimately provided a permanent lesson regarding primary dependence upon foreign bottoms in the carriage of our seaborne trade. In that not-soon-to-be-forgotten event, ocean freight rates increased 1,000 percent overnight. Congress responded by enacting the Shipping Act of 1916 for the primary purpose of building a Government-owned and operated fleet to transport troops and supplies to Europe, while maintaining our commercial waterborne commerce under both neutral and, eventually, wartime conditions.

After the war, Congress resolved to prepare for the next war by promoting the development and maintenance of a commercially operated fleet in enacting the Merchant Marine Act, 1920. Under that act, war-built vessels were hastily transferred to U.S. citizens amid severe global conditions of overtonnaging in virtually all trades. Indirect incentives in the form of low-interest loans (supplemented in 1928 by an expanded system of mail subsidies) were provided for the establishment of a permanent American presence upon the world's major trade routes. However, the act sowed the seeds of its own destruction through the lack of incorporation of adequate safeguards concerning the economic viability of what ultimately proved to be grossly undercapitalized subsidized operators. When foreign operators provided newer, more efficient vessels, U.S. operators could not replace their capital equipment and became noncompetitive.

Calls for reform of subsidy abuses under the 1928 act once more echoed in the Halls of Congress—similar to those following attempts at maritime promotion a half century earlier. President Franklin D. Roosevelt responded with a landmark message to Congress regarding the need for a restructuring of maritime promotional policy, posing the same questions, this time rhetorically:

> I present to the Congress the question of whether or not the United States should have an adequate Merchant Marine.
>
> To me there are three reasons for answering this question in the affirmative. The first is, that in time of peace, subsidies granted by other nations, shipping com-

bines, and other restrictive or rebating methods may well be used to the detriment of American shippers. The maintenance of fair competition alone calls for American-flag ships of sufficient tonnage to carry a reasonable portion of our own foreign commerce.

Second, in the event of a major war in which the United States is not involved, our commerce, in the absence of an adequate merchant marine, might find itself seriously crippled because of its inability to secure bottoms for neutral, peaceful foreign trade.

Third, in the event of a war in which the United States itself might be engaged, American-flag ships are obviously needed not only for Naval auxiliary, but also for the maintenance of reasonable and necessary commercial intercourse with other nations. We should remember lessons learned in the last war.* * *

Having thus made the definitive statement of the objectives of American maritime policy, he proceeded to lay out its third and final leg in the form of direct subsidy—a compass course we have steered without deviation to this day:

If the Congress decides that it will maintain a reasonably adequate American merchant marine I believe that it can well afford honesty to call a subsidy by its right name.

Approached in this way, a subsidy amounts to a comparatively simple thing. It must be based upon providing for American shipping, government aid to make up the differential between American and foreign shipping costs. It should cover first the difference in the cost of building ships; second, the difference in the cost of operating ships, and finally, it should take into consideration the liberal subsidies which many foreign governments provide for their shipping. Only by meeting this threefold differential can we expect to maintain a reasonable place in ocean commerce for ships flying the American flag, and at the same time maintain American standards.

In so doing, Roosevelt rejected 50 years of conventional wisdom questioning the advisability of direct subsidies to promote maritime enterprise, by embracing the concept of cost parity with foreign operators. Originally conceived as a tariff in reverse, the precedent for this principle was drawn from the Tariff Act of 1922. The concept could be more appropriately termed in today's international trade lexicon as a countervailing duty. Unfortunately, this key underlying justification for the provision of direct subsidies to the maritime industry would be lost in the legislation eventually enacted.

Congress once more responded by enacting the magna carta of American maritime policy—the Merchant Marine Act, 1936. The objectives of that act were to develop and maintain a merchant marine:

First, sufficient to carry its domestic waterborne commerce and a substantial portion of the waterborne export and import foreign commerce of the United States and to provide shipping service essential from maintaining the flow of such domestic and foreign waterborne commerce at all times;

Second, capable of serving as a naval and military auxiliary in time of war or national emergency;

Third, owned and operated under the U.S. flag by citizens of the United States insofar as may be practicable;

Fourth, composed of the best-equipped, safest, and most suitable types of vessels, constructed in the United States and manned with a trained and efficient citizen personnel; and

Fifth, supplemented by efficient facilities for shipbuilding and ship repair. It is hereby declared to be the policy of the United States to foster the development and encourage the maintenance of such a merchant marine.

The principal program elements of that act designed to achieve those objectives included:

First, construction differential subsidy encompassing the cost differential between foreign and domestic vessel construction;

Second, operating differential subsidies encompassing the difference in wages, insurance, maintenance, and repair between U.S.- and foreign-flag vessel operation in foreign commerce;

Third, mortgage insurance to provide financing assistance to promote vessel acquisition—in recognition of the fact that in 1936 one-third of all vessels operating under the U.S. flag were in technical default;

Fourth, capital reserve funds to promote vessel replacement through the deferral of income taxes on vessel earnings; and

Fifth, war risk insurance.

With enactment of this act, the U.S. merchant marine reached its ultimate evolution as an instrument of national policy.

Since 1936, under the direct subsidy programs, the Federal Government has spent approximately $10 billion—including over $6.5 billion in operating and $3.5 billion in construction subsidies. Half of these expenditures were made over the last decade.

Since that time, and in particular in my 13 years on the Committee on Merchant Marine and Fisheries, it has become increasingly obvious that a combination of factors has substantially diminished the effectiveness of these programs in the face of international competition, and the emergence of competing domestic transportation modes. Among these generally acknowledged factors are:

First, structural flaws in the form of operating restrictions incorporated in the 1936 act designed to preclude repetition of the abuses encountered under the direct subsidy programs administered under the 1920 act;

Second, increasing governmental intervention on a global scale, reflected in the exercise of national control over ocean shipping, market entry of national flag carriers—now aggregating 28 percent of the world's merchant fleet in number and 18 percent in volume—nationalization of domestic shipbuilding, provision of direct or indirect economic subsidy assistance to national flag fleets, dumping and concessionary financing of shipbuilding for export. This has distorted the operation of free-market competition in international ocean shipping and market equilibrium in international seagoing trade; and

Third, lack of adequate incentives to promote innovation, competitiveness, and efficiency in ocean shipping and shipbuilding in the face of international competition and in the context of a protected domestic market for ocean shipping.

The results could have been predictable. Following repetition of the events in World Wars I and II—twice necessitating the building up and later disposition of a wartime fleet and the eventual creation of a national defense reserve fleet—the Nation's seagoing operating fleet entered a period of uninterrupted decline beginning in 1950. Over this period our fleet declined from 1st to 11th in the world in absolute numbers—from over 1,300 to 566 oceangoing vessels at the present time. During the same period, the market share of our international trade transported by U.S.-flag vessels diminished from over 50 to less than 4 percent today. This parallels a decline in the U.S. share of global trade from 50 percent to 20 percent over the same period, now reflected in our substantially diminished leverage over international shipping and trade policy.

In response to this decline, in 1970 Congress renewed its efforts at maritime promotion assitance with the enactement of an amendment to the Merchant Marine Act mandating a 300-vessel construction program by extending the provision of direct subsidies to liquid and dry-bulk vessels operating in foreign commerce—with little regard given to either their commercial utility or defense relevance. This initiative was undertaken independently of the emergence in the postwar period of a sizable beneficially owned U.S. fleet operating under foreign flag, transporting a significant percentage of U.S. bulk trade at no cost to the Government—at least partially addressing the economic security argument in the transportation of strategic commodities. Unfortunately, like their subsidized counterparts, all but approximately 50 vessels of this fleet are recognized by the Defense Department to be unsuitable for repatriation to serve as naval auxiliaries in time of war or national emergency.

Perhaps more unfortunately from a commercial shipbuilding perspective—as many of us serving in the Congress

during that period are well aware, less than one-third the intended number of vessels were ever built. Moreover, despite the investment of over $2.6 billion in capital improvements by our major shipyards over this period—although only an estimated 15 percent of that amount was expended for advanced technology—the cost differential between domestic and foreign vessel construction actually increased rather than decreased over this period, except in the case of highly specialized vessels at the higher end of the technology spectrum. Construction subsidy programs continued to encourage the construction of vessels of customized rather than standardized design susceptible to exploitation of the inherent economics of scale in series production, with predictable consequences in terms of delivered cost. From the perspective of the industry's international competitiveness, the fact that the last seagoing vessel was exported in 1960 speaks for itself.

The inflexibility inherent in subsidy rather than market influenced promotional programs is no more aptly demonstrated than in the failure to respond to the technological shift from steam to diesel propulsion beginning in the 1970's. Despite the twin oil price shocks experienced during the decade (increasing the percentage contribution of bunker fuel to total vessel operating costs from 15 percent prior to 1973 to between 40 percent and 60 percent after 1979) the United States still continued to subsidize the construction of inefficient steam-propulsion systems in new vessels. Compounding this inefficiency, the operating differential subsidy program continued to absorb the cost differential in operating costs between efficient diesel-propelled foreign vessels and their steam-propelled U.S. counterparts. At the same time, only modest progress was made in reduction of mandatory crew sizes in comparison to pronounced reduction in crew size achieved by our foreign competitors. Notwithstanding, overall maritime employment continued its precipitate decline from 90,000 in 1950 to less than 16,000 seagoing billets today.

By the end of the decade, America was left with a legacy of a failed policy, a foundering merchant marine, and an ever-widening gap between U.S. and foreign productivity and competitiveness in maritime enterprise. Only in technological innovation in the development of advanced vessel design concepts such as containerization, roll-on and roll-off, and integrated barge vessels has the United States consistently led the world. Unfortunately, in many instances, it was our foreign competition rather than U.S. shipping firms that were better able to implement these innovations. This has been due in large part to the shipping industry's inability to attract substantial external capital because of its comparatively low rate of return on investment.

Mr. Speaker, the manifest need for a healthy maritime industry is now more acute that at any time in this century. From a national defense standpoint, the remaining elements of the 40-year-old, World War II, Government-built fleet (now resting at anchor in the national defense reserve fleet) are now ready for the scrapyard. In marked contrast to earlier foreign engagements requiring the deployment of commercial sealift assets, the United States has nowhere near sufficient tonnage to support its global economic and military commitments, while at the same time maintaining our commercial trade in time of hostility.

From the perspective of international competitiveness, approximately 160 of the 176-vessel U.S.-flag liner fleet (the backbone of our commercial operating fleet and Sealift augmentation assets) are now technologically obsolete and in need of accelerated replacement. The majority of the 210 vessels aggregating the 10.4-million-ton coastwise tanker fleet (the other critical element of the defense-relevant sector of our merchant marine) are over 20 years of age and beyond their economically useful life. Moreover, most of these vessels are not likely to be retrofitted to meet the increased safety requirements mandated under the Port and Tanker Safety Act of 1978 by the required compliance date of 1986. The once flourishing coastwise and intercoastal trades numbered over 300 vessels prior to World War II. This fleet has declined to a handful of vessels in liner and general cargo service. These are the types of vessels in critically short supply in terms of service mobility. This is despite the advantage in ton-mile cost of operation in intercity freight movement inherent in the marine mode and the growing need to develop a coastwise feeder service to complement larger capacity vessels entering the foreign liner trades expected to make fewer port calls in the future.

Our once proud U.S.-flag passenger fleet, now almost extinct, has made a limited comeback with the entry into service of two reconstructed vessels in the cruise trade last year. This contrasts with the explosive increase in demand in the cruise trades operating out of U.S. ports. This increase is expected to result in the construction of between 15 and 25 new vessels dedicated to U.S. service over the next decade. This is a ready market for a U.S. operator who can put together the investment package to carve out a market share.

In combination, these are precisely the type of commercial vessels that the Navy needs to supplement its global commitments. We simply cannot afford to be caught in a Falklands-type confrontation without the available commercial tonnage necessary to support and sustain such an effort. The ill-fated Teheran rescue effort of our hostages must not continue to symbolize the futility of a great Nation unable to project its power efficiently and effectively on a global scale.

Experience demonstrates there is no more appropriate time to begin to fashion a new course in maritime promotional policy than when the industry is clearly at ebb tide. Under the personal leadership of President Reagan (and now two successive Secretaries of Transportation), the administration has already begun a long overdue effort to reexamine maritime promotional policy and to offer constructive approaches to promote the industry's long-term economic recovery. It is now time for the Congress to respond before our oceangoing merchant marine disappears from the seas and the commercial shipbuilding and ship repair industry closes its doors forever.

Mr. Speaker, the legislation I introduce today is designed to restore the United States to a position of maritime leadership in the world. It is based upon the fundamental conclusion that the objectives expressed in the Merchant Marine Act, 1936, remain as valid today as when they were first enacted nearly 50 years ago. In my judgment, only the methods adopted to achieve those objectives require fundamental restructuring in light of the dramatically altered competitive environment of trade and domestic intermodal competition affecting the ocean shipping sector of our domestic transportation system and the declining productivity and competitiveness of our commercial shipbuilding industry.

In the context of revitalization, we must first recognize that, in the global economic environment of the 1980's the problems of the ocean shipping and commercial shipbuilding sectors of the maritime industry are substantially different in kind and degree, and perhaps, more importantly, in the time scale required for their resolution. In addition, the success of governmental efforts to stimulate revitalization of these principal sectors of the maritime industry will largely depend upon the willingness of the industry itself, as well as that of organized labor (both seagoing and shoreside) to become more innovative, productive, and competitive. For the same reasons that it is axiomatic that an industry has never been subsidized into becoming more competitive beyond a certain stage in its evolution, it is equally apparent that the provision of indirect incentives for stimulating innovation, productivity, and competitiveness must ultimately rely in large

part upon the willingness of the industry itself to recognize and to begin to take the necessary steps to initiate internal changes for its own self-preservation.

The ocean shipping industry today is an international service industry dependent upon the overall volume and distribution of seaborne trade which is, in turn, dependent upon the state of the global economy and the political actions of nation states increasingly influencing the market for ocean shipping services through either direct intervention through the imposition of restrictions upon market access or direct participation through the establishment of national flag carriers. Domestically, even though ocean shipping operates in a protected market, it still must compete with other transportation modes or combination of modes for the carriage of intercity freight movement measures on a tonmile basis. By definition then, ocean shipping must compete on an equal footing either according to international standards against foreign-flag carriers or domesticaly against other competing transportation modes. With ocean shipping becoming increasingly capital-intensive, indirect incentives for the accelerated replacement or expansion of capital plant and equipment offers the best strategy to encourage innovation and effect overall productivity improvement and competitiveness measured against either international or domestic standards. It also provides the most cost-effective application of Government assistance to offset structural differences represented principally by direct labor cost differential.

At the same time, commercial shipbuilding in the United States is a mature component of the industrial manufacturing base. It has traditionally operated: First, in the limited competitive environment of protected domestic markets; second, until recently, in subsidized markets for the construction of U.S.-flag vessels operating in foreign trades; and third, in the construction of vessels for Government account. In contrast to ocean shipping, the industry has not competed directly in global markets for almost a quarter century except in specialized vessel trades and in the production of offshore oil rigs and supply vessels. With the difference in the manhours required for the construction of a typical seagoing vessel approximating twice that of our foreign competition, the difference in time of delivery and delivered cost have predictably expanded rather than contracted over the last decade; this is despite substantial Government assistance paid directly to shipyards to offset foreign construction cost differential. It must be recognized, however, that foreign nations have substantially subsidized their domestic shipbuilding industries, either to increase exports (in the case of Japan and Korea) or more recently, principally to retain domestic employment levels (in the case of European Economic Community member nations).

Having recognized the functional distinctions between these very different sectors of the maritime industry, one can focus upon the industrywide barrier to future development shared by both sectors. That is the need for substantial capital investment in increasingly expensive modern vessels operating in dedicated trades and in the facilities to produce those vessels most efficiently. This is in response to the demonstrable shift on the industry as a whole from labor to capital intensity, in order to take advantage of economies of scale in vessel construction and operation. The most favorable opportunity for Government economic intervention to promote revitalization of both sectors of the industry is therefore in targeted assistance in the area of capital formation. The thrust of this legislation is the provision of capital formation assistance to both sectors of the maritime industry through the substitution of restructured indirect incentives such as credit guarantees and more effective use of tax expenditures for direct subsidy programs as a means of encouraging innovation and improving productivity and competitiveness.

The package of incentives provided in the bill is designed to result in the construction and operation of vessels in response to market demand for operation in foreign and domestic trades, with priority given to those projects providing indentifiable strategic benefits in terms of improving sealift mobility or provision of workload stability for purposes of maintaining an efficient domestic shipbuilding and ship repair mobilization base.

Capital formation assistance would be targeted to U.S. operators in foreign, coastwise, and intercoastal trades. Examples of priority markets justifying financial assistance would include accelerated replacement and expansion of the U.S.-flag liner fleet operating in bilateral and cross-trades, revitalization of the coastwise and intercoastal shipping trades (including the expansion of feeder service to complement rationalized liner service in foreign trades), and U.S.-flag penetration of the domestic and foreign cruise trade with vessels designed to operate in both trades while capable of serving as naval auxiliaries.

Maintenance and expansion of existing markets and penetration of developing markets will pose severe fiscal strain upon the chronically undercapitalized ocean shipping industry. Access to equity markets has not been traditionally utilized by the industry in view of its historically low rate of return on assets and equity. The best type of vessel financing, traditionally either debt, or more recently, offbalance sheet leasing, combines a fixed rate of interest and a long payment period approximating the economic use for life of the vessel. This is precisely what the existing title XI loan guarantee program offers, only at premium market rates. In the increasingly competitive environment of ocean shipping, however, the industry's emerging needs are for a variety of alternative financing methods combining wherever possible below market financing, additional equity, and expanded use of offbalance sheet financing in combination with full utilization of recently enacted liberalized capital allowances including the investment tax credit and accelerated depreciation.

The legislation I introduce today represents the first proposal for significant restructuring of the title XI credit financing program since 1972. On that occasion, the program was modified from an underutilized mortgage insurance program to a full faith and credit guarantee of nonrecourse debt issued by either a vessel owner or institutional investor acting as lessor in a leveraged lease transaction. However, the program was never further amended to take advantage of the creation of the Federal Financing Bank in 1973, providing the opportunity for below market financing.

In proposing the restructuring of existing credit programs and in comparing alternative ship financing programs to similar programs administered by other specialized Federal agencies, it became apparent that the level of sophistication and expertise involved in expanding the range of alternative ship financing techniques clearly exceeds the capability of those elements of the Maritime Administration in the Department of Transportation currently involved in ship financing. It became equally apparent that in order to insure that financing decisions would be made primarily in response to market factors as distinguished from the nonmarket orientation of other promotional programs administered by the Department, the entity administering a broad-based capital investment program should be autonomous to a large extent. Accordingly, I have chosen as an institutional vehicle a wholly owned Government corporation as a tool for administering the proposed restructured credit programs. I have called this adaptation of the generic development bank concept the "Maritime Redevelopment Bank of the United States." Unlike its institutional predecessors under previous promotional statutes, it is designed to operate as a development bank acting as a financial intermediary between maritime entrepreneurs and capital markets both here and abroad. It is

modeled after analogous Government corporations administering similar credit programs in the housing, education, energy, and agricultural sectors of the economy.

The bank's principal authority granted by its charter to promote capital investment in maritime enterprise falls into four categories: First, financing; second, refinancing; third, co-financing, and fourth, insurance-related activities.

First, its financing authority includes: One: Limited equity participation as utilized in the venture capital industry applicable to investment in higher risk activities. Two: Guaranteed loan authority similar to that exercised by the Student Loan Marketing Association (Sallie-Mae) in the Department of Education. Under this authority, the bank is authorized to borrow from the Treasury through the Federal Financing bank and, in turn, provide loans to private lending institutions subject to agency guarantee under appropriate guidelines for such purposes as vessel reconstruction with more efficient propulsion systems or modification to extend their useful economic life. The bank may then buy back the guaranteed loans and sell them to the Federal Financing Bank, thereby replenishing its loan authority.

Three: Guarantee authority. Under traditional debt financing, the bank is authorized to guarantee any obligation or combination of obligations subject to existing title XI guarantee authority. However, whereas under existing authority, the typical transaction involves guarantee of the repayment of principal and interest on commercial nonrecourse debt issued in conjunction with the procurement of individual vessels for the most part, here the intention is that the bank utilize its guarantee authority whenever possible to encourage multiple ship procurement under fleetwide financing arrangements.

Here, the bank is intended to operate much like the Government National Mortgage Association (Ginnie-Mae) in the Department of Housing and Urban Development. It would establish guidelines for the guarantee of mortgages for purchase by brokerage houses to be held for the benefit of shipping unit trusts. This form of passthrough investment would serve as a mechanism for expanded equity involvement in the industry, particularly in the purchase of existing tonnage at bargain rates with the objective of capital growth through eventual vessel resale when cyclical conditions of overtonnaging eventually improve. Shipping trusts could also invest in mortgage-backed securities issued by the bank (including options or futures contracts associated with the issuance of those securities) in addition to the purchase of ship and fleet mortgages themselves.

The bank is also authorized to guarantee charter payments or residual salvage value of vessels operating under hell or high water charter parties in the context of leveraged leased financing agreements between an institutional lender acting as an owner trustee and lessor, and a vessel operator as lessee. This alternative financing arrangement is intended to facilitate off balance sheet financing of vessel acquisitions, thereby improving an individual shipping company's rate of return on assets and equity, as well as promoting the full utilization of liberalized capital allowances passed on to vessel operators in the form of lower charter hire under charter parties.

Four: Issuance of mortgage-backed securities. The bank is authorized to issue mortgage-backed securities in the form of agency debt to increase the liquidity of capital investment in maritime enterprise by providing greater access to secondary capital markets by institutional investors (such as pension and profit-sharing trust funds) than occurs under current financing arrangement. This is analogous to the operation of the independent Federal National Mortgage Association (Fannie-Mae) in the Government-guaranteed housing markets.

In addition, the bank is expressly authorized to establish a foreign subsidiary in order to increase foreign passive investment in U.S. shipping assets through the sale of agency securities in Eurodollar markets to foreign institutional investors.

Five: Acceptance of alternative collateral. The bank is authorized to accept assignment of preferred ship mortgages as security for the issuance of nonrecourse debt in the context of either a single vessel or fleetwide financing through cross-collateralization provisions. In addition, the bank can make guaranteed loans or issue guarantees upon assignment of long-term charter party or contract of affreightment income, to facilitate the development of alternative shipping arrangements in either conventional or countertrades. The bank could also accept a pledge of stock (stock warrants) in exchange for financing assistance analogous to the Chrysler and Lockheed loan guarantee arrangements.

In order to facilitate leasing as an alternative to purchasing of new vessel tonnage, the bank could exercise a lien upon existing capital construction funds from which charter payments are made under the terms of leveraged leased transaction. Use of capital construction funds for this purpose would improve the liquidity reserves of vessel operators permitting future expansion of equity financing.

Second, under its refinancing authority, the bank is authorized to undertake either long- or short-term refinancing of previously guaranteed or nonguaranteed vessel financing (through cross-collateralization) wherever commercially and financially justifiable. This would permit the restructuring of existing debt to take advantage of lower interest rates, conversion from floating to fixed rate financing, conversion from foreign currency to dollar-based financing to reduce currency risk, or any other legitimate business purpose, without the necessity of foreclosing to protect the interest of existing debt-holders.

In this instance, a replacement guarantee would be issued superseding any existing guarantee. In addition, advance credits in the form of guarantees against future vessel construction would be issued in order to encourage scrap-and-build programs to replace obsolete existing tonnage with more modern and efficient vessels.

The bank would also be authorized to issue short-term liquidity loans encompassing payment of interest charges on outstanding debt, charter hire, layup expenses, or, within limits, operating losses.

Third, in terms of its cofinancing authority, the bank is authorized and encouraged to undertake fleetwide financing arrangements through cofinancing agreements or syndication arrangements with commercial banks and other lending institutions. The chief benefit of such arrangements would be the provision of superior financing terms and conditions in the form of fixed rate below market long-term financing as distinguished from comparable foreign financing arrangements involving medium-term (5–7 year) Eurodollar market floating rate financing. In addition, such financing arrangements would encourage domestic construction.

By permiting foreign investment of up to 50 percent equity participation in U.S.-flag shipping in foreign trades (representing parity in the case of a closely held corporation) to promote joint ventures or less than effective controlling interest in the case of a publically held corporation. These arrangements could be extended to include fleetwide financing of vessels under mixed domestic and foreign construction depending upon the adequacy of commercial shipyard workload stability and other factors.

Fourth, finally, under its insurance authority, the bank is authorized to underwrite either by itself or through co-insurance or re-insurance agreements, war-risk, political (including currency) risk, and mortgage insurance (where applicable) when not available under reasonable terms and conditions from insurance carriers.

The legislation also contains parallel procurement and investment incen-

tives to promote innovation, increased productivity and competitiveness in the commercial shipbuilding and ship repair sector of the maritime industry engaged in the construction of commercial vessels for operation in the foreign, coastwise, and intercoastal trades.

Shipyards would initially be indirect beneficiaries of the financing inventives designed to reduce the cost of vessel acquisition and replacement of those operators in the coastwise and intercoastal trades required to purchase their vessels from domestic shipyards, as well as those operators in the foreign trades attracted by the superior financing arrangements available in conjunction with domestic construction.

By including provisions constituting conditions of approval for the procurement of vessels by operators from foreign shipyards, the legislation expressly recognizes the time scale differences required for productivity improvement in ocean shipping in contrast to shipbuilding sector expectation of the maritime industry.

With direct application to commercial shipbuilding, the legislation is designed to stimulate market demand for domestic construction by improving the affordability of domestically produced vessels through the reduction in the delivered cost and time of delivery in relation to foreign construction. Market demand, equating to greater workload stability for the industry, would be increased by targeting procurement and investment incentives to promote capital investment in advanced ship construction technology. Unlike earlier attempts at promoting revitalization of the commercial shipbuilding industry, this legislation includes specific incentives for encouraging innovation and improving productivity and competitiveness of domestic ship construction.

This approach differs substantially with that taken in the amendments to the Merchant Marine Act adopted in 1970 in which additional construction differential subsidy funds were intended to be directed toward encouraging series production in shipbuilding. Unfortunately, the provision of construction differential subsidy (CDS) funds and credit financing assistance as administered under those amendments continued to promote single unit construction of vessels of customized design rather than series construction of vessels of standardized design under the expanded shipbuilding program. As a result, it is estimated that only 15 percent of the $2.6 billion invested in domestic shipbuilding technology over the 1970's was expended for advanced ship construction. It is not surprising, therefore, that during this period the cost differential between domestic and foreign construction continued to widen.

The principal institutional device designed to stimulate innovation in the commercial shipbuilding base would be the establishment of an industrywide research and development consortium in the form of a limited partnership with the corporation functioning as the general partner. Individual shipyards or lending institutions could participate as limited partners taking advantage of existing tax benefits under this institutional arrangement.

The consortium would undertake research and development into advanced ship construction technology and product diversification. It would license the technology developed to individual shippers to facilitate rapid implementation, and as a means of self-financing of its operations beyond its initial investment. It could operate a demonstration shipyard constructed or reconstructed from the ground up to implement advanced ship construction technology in the form of new continuous mode flow processing, incorporating computer-aided design and manufacturing techniques and robot-ics. It could continue to develop new software in support of individual shipyards investing in comparable hardware. Members of the R&D consortium would benefit from research and development tax credits and accelerated depreciation for R&D investment contained in the Economic Recovery Tax Act of 1981. In addition, the consortium would operate under permissible antitrust guidelines issued by the Department of Justice.

Capitalizing on identified opportunities for innovation in commercial shipbuilding and product diversification, the legislation contains procurement incentives for the purchase of vessels from domestic shipyards as an additional inducement for capital investment in advanced technology by domestic shipyards.

The first of these procurement techniques would be the utilization of commercial build-and-charter authority under title VII of the act to be implemented by the bank in two alternative forms. One alternative would combine the provision of interim construction financing with long-term investment guarantees to encourage serial construction of standard design vessels at a fixed price with fixed delivery dates under terms and conditions beyond the negotiating leverage of an individual shipowner purchasing a limited number of vessels from a single shipyard. The other alternative would rely principally on the long-term guarantee authority of the bank.

International competitiveness of domestic shipbuilding would be enhanced by encouraging foreign investment in the form of joint ventures in both ocean shipping and shipbuilding in particular, encouraging reverse investment in the U.S. maritime industry by those trading partners chiefly benefiting from penetration of our domestic markets and from participation in our ocean shipping trades. In the case of commercial shipbuilding, this would facilitate the transfer of foreign technology to upgrade the capability of domestic shipyards to enable them to compete once again on a global scale. In addition, the potential utilization of wrap-around financing incorporating fleetwide acquisition of vessels involving mixed foreign and domestic construction should result in substantially reduced average fleet-operating costs in comparison to the industry's present cost structures. Any residual cost differential could be further reduced through the provision of a capitalized cost differential paid to vessel owners based on average ton-mile operating cost computed on an annualized basis.

In addition, the development of new end products at the higher end of the technology spectrum built with the benefit of advanced technology should enable commercial shipyards to become more competitive on a global scale in a number of product lines. This is similar to the learning curve experienced in reduction of construction costs achieved in the liquefied natural gas (LNG) vessel and offshore drilling rig markets in the 1970's. This comprehensive approach to revitalizing the maritime industry providing indirect incentives for innovation, increased productivity, and competitiveness substituting for the direct subsidy programs of the past requires two additional elements to be completely effective. The first of these is more effective use of existing tax expenditures in the form of capital balances by the ocean shipping and shipbuilding industries. This includes the need for several specific changes to the tax structure of ocean shipping. These would restore tax parity to U.S. owners and operators in vessel acquisition, replacement, and operations. These would also establish true reciprocity in tax treatment between U.S. and foreign-flag shipping, equity as between U.S.-owned domestic and foreign-flag shipping, and neutrality as between leasing and purchasing of vessels by U.S. operators.

The second requires the adoption of a complementary trade strategy—with or without legislative guidance—which seeks to preserve and expand market access for U.S. vessels in bilateral and cross-trades, while at the same time responds to the legitimate aspirations of developing nations in international trade and shipping. This strategy must be based upon principles of fair trade. These objectives can be met through a coherent approach to resolving differences surrounding international trade policy—wherever possible on a multilateral basis—or, if necessary, on a bilateral basis. This would apply the analogous model of aviation bilateral agreements negotiated on a bilateral sectoral trade reciprocity basis.

This approach would also include the adoption of an analog to the multifiber agreement negotiated under the auspices of the General Agreement on Tariffs and Trade (GATT) in order to reduce chronic overcapacity in world shipbuilding. This agreement, as applied to textile manufacture, provides a multilateral basis for the imposition of specific import restrictions negotiated between GATT members on a bilateral basis. This could apply to the dumping and provision of extensive subsidies in shipbuilding or export as a means of reducing excess world shipbuilding capacity.

Mr. Speaker, it was the image of the Yankee trader first flying the American ensign in world trade which symbolized the last great era of U.S. maritime supremacy. Through the provision of a complementary framework of credit and tax policies, and trade strategy, beginning with the catalyst provided by those elements included in the legislation I introduce today, I believe the maritime industry can compete on fair and equal terms both at home and abroad in the intensely competitive transportation and trade environment of the 1980's. This legislation is intended to regenerate the entrepreneurial spirit of the Yankee trader to promote the lasting revitalization of those elements of the maritime industry which respond to the challenge.●

EUROPEAN COMMUNITY "REBUKE" IS NO REBUKE

HON. DOUGLAS K. BEREUTER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. BEREUTER. Mr. Speaker, in reading a news story by William Drozdiak in the June 20, 1983, edition of the Washington Post with a Stuttgart, West Germany, dateline this Member was dismayed to read the following:

In an indirect rebuke to the Reagan administration's policies in Central America, the European Community's 10 leaders said today that they are convinced that the area's problems cannot be solved by military means "but only by a political solution springing from the region itself."

However, a review of E.C. News No. 11/83, dated June 20, 1983, reveals the following full description of the European Council's position on Central America.

The heads of State and Government confirmed their close interest in developments in Central America. They are deeply concerned at the economic and social conditions in many parts of the region, at the tensions which these create and at the widespread misery and bloodshed.

They are convinced that the problems of Central America cannot be solved by military means, but only by a political solution springing from the region itself and respecting the principles of noninterference and inviolability of frontiers. They, therefore, fully support the current initiative of the Contadora Group. They underlined the need for the establishment of democratic conditions and for the strict observance of human rights throughout the region.

They are ready to continue contributing to the further development in the area, in order to promote progress towards stability.

There is nothing in that statement which is inconsistent with the administration's policy or actions; therefore the European Council's position cannot reasonably be considered a rebuke. This is in short, an example of a reporter drawing a conclusion that is not justified.●

THE 50TH BIRTHDAY OF TENNESSEE VALLEY AUTHORITY

HON. ED JENKINS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1983

● Mr. JENKINS. Mr. Speaker, the Tennessee Valley Authority is a Government-owned corporation created by an Act of Congress on May 18, 1933. The TVA conducts a program of resource development for the advancement of economic growth in the Tennessee Valley region.

The Authority's program of activities include flood control, navigation development, electric power production, fertilizer development, recreation improvement, and forestry and wildlife development.

I am pleased to submit an article from the Atlanta Constitution which details the achievements of the Tennessee Valley Authority on its 50th birthday.

ON 50TH BIRTHDAY, TVA LOOKING TO 21ST CENTURY

[From The New York Times]

Fifty years ago, in the first days of the agency that was to remold the Tennessee River Valley, all the cities and towns there were deep in the craw of the Great Depression.

In Decatur, Ala., for example, 1933 was the year the largest industry in town, which had employed 2,000 people, sank to its knees and closed. A much smaller operation went bankrupt, then another and another. Seven of the eight banks in the county folded. Cotton was selling for 5 cents a pound, and land was selling for the amount of tax owed. Children had empty stomachs, parents had vacant eyes.

The per capita income in the region was $168 that year, about 45 percent of the national average. The birth rate was about a third above the national average. About 30 percent of the residents in some areas of the valley had malaria. More than half the 3 million people lived on farms, and half of them were sharecroppers. About 97 percent of the farms had no electricity. Fires burned about 10 percent of the forests each year, and floods ripped along the rivers. About 7 million of the region's 12 million cleared acres were severely eroded.

It was in that year, on May 18, that President Roosevelt signed a bill establishing the Tennessee Valley Authority, a government corporation charged with taming the Tennessee River, improving navigation, reforesting and restoring land and providing for the agricultural and industrial development of the valley.

From its birth the TVA was swaddled in controversy as one of the foundation blocks in Roosevelt's New Deal. It has been criticized as an experiment in socialism and praised as one of the few government experiments that worked.

It became the largest utility in the country, though it is now second, and probably the most effective regional development agency. It has struggled with politicians and snail darters and opponents of nuclear power. It has improved the overall quality of life in the region, but it has also flooded generations-old farmland and the birthplace of the Cherokee Indian nation; it has attracted industry but has polluted the skies.

Since 1933, the number of manufacturing plants in the region has increased by 400 percent. Per capita income has climed to 77 percent of the national average. The river is tame and navigable for the entire 650 miles from Knoxville, Tenn., to Paducah, Ky. and in the fiscal year 1982, in a deeply recssionary economy, there were 273 announcements from industries planning to build new facilities or expand existing ones in the region.

Looking back over half a century, it is easy to see how the TVA changed the Tennessee Valley. Looking ahead toward the 21st century, its role in the region's future is sufficiently unclear to generate questions about the need for its continued existence.

"The need for this agency is very different now than it was 50 years ago," said Richard Freeman, one of the three managing directors who set policy for the TVA. "Then there was a need for a central agency to tame the river and develop the region. But a laboratory for the development of ideas and new technology is just as much needed today.

"TVA can be a leader in pushing for renewable energy sources, for conservation and more efficient use of energy. Our role would not be so much in the area of pure research, but taking the research technology and making things actually happen with it, getting it into the hands of the consumer, is a role TVA can play."

As is occurring throughout much of the nation, especially in the states that are looking enviously at California's Silicon Valley, North Carolina's Research Triangle and Boston's Route 128, Southern states are seeking high-technology industries as the employers of tomorrow.

For its part, Freeman said, the TVA is helping Tennessee develop a "technology corridor" between Knoxville, where the University of Tennessee is situated, and Oak Ridge, which is home to the National Atomic Energy Laboratory and 2,000 people with doctoral degrees. The TVA is addressing a similar situation near Huntsville, Ala., where early space technology was developed at the Redstone Arsenal and some such work is continuing at National Aeronautics and Space Administration centers.

S. David Freeman, who is another managing director but no relation to Richard Freeman, sees the development of high-technology industry in the Tennessee Valley as imperative.

"The old engines of economic growth in the valley—low-cost electricity and cheap labor—have run out of steam," he said. "The new engine is to be found in the emergence of high-technology industries and high-skill services."●

HOUSE OF REPRESENTATIVES—*Monday, June 27, 1983*

The House met at 12 o'clock noon and was called to order by the Speaker pro tempore (Mr. FOLEY).

DESIGNATION OF SPEAKER PRO TEMPORE

The SPEAKER pro tempore laid before the House the following communication from the Speaker:

WASHINGTON, D.C.,
June 23, 1983.

I hereby designate the Honorable THOMAS S. FOLEY to act as Speaker pro tempore on Monday, June 27, 1983.

THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives.

PRAYER

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

O Gracious God, we are conscious of the people who offer support and friendship to us. We recognize that our own strength is not always equal to our tasks and by ourselves we are not masters of our fate. We give thanks, Almighty God, for all men and women who give of their time and love in support of other people, and whose affection and caring is often so critical to healthy lives. In Your name, we pray. Amen.

THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Saunders, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate had passed a bill, a joint resolution and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S. 969. An act to amend section 1 of the Act of June 5, 1920, as amended, to authorize the Secretary of Commerce to settle claims for damages of less than $2,500 arising by reason of acts for which the National Oceanic and Atmospheric Administration is responsible;

S.J. Res. 34. Joint resolution designating "National Reye's Syndrome Week"; and

S. Con. Res. 22. Concurrent resolution expressing the sense of the Congress with respect to implementing the objectives of the U.N. Decade of Disabled Persons (1983-92).

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
June 24, 1983.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the permission granted in Clause 5, Rule III of the Rules of the U.S. House of Representatives, the Clerk received at 10:50 a.m. on Friday, June 24, 1983, the following messages from the Secretary of the Senate:

1. That the Senate agree to the conference report to H. Con. Res. 91; and

2. That the Senate agree to the House amendment to the Senate amendment to H. Con. Res. 91.

With kind regards, I am,

Sincerely,

BENJAMIN J. GUTHRIE,
Clerk, House of Representatives.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Pursuant to rule XXXIX, as a result of the adoption of the House and Senate of House Concurrent Resolution 91, as amended, the Chair announces that House Joint Resolution 308, increasing the statutory limit on the public debt, has been engrossed and is deemed to have been passed by the House.

SEPARATION OF POWERS, A BASIC CONSTITUTIONAL PRINCIPLE

(Mr. RATCHFORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RATCHFORD. Mr. Speaker, the Founding Fathers gave this Nation the strongest and most durable Constitution in the world, and nothing is more basic to our Constitution than the principle of separation of powers.

When it struck down the legislative veto last week, the Supreme Court, in the opinion of many people, may have shifted too much power in the direction of the executive branch. Left in doubt are such significant acts as the War Powers Act of 1973, the Budget and Impoundment Control Act of 1974, the Nuclear Non-Proliferation Act of 1978, and the role of Congress in reviewing administrative rules and regulations.

As we sort out the impact of this decision, it is clear that in the future Congress must draft laws more precisely. Just as clearly, administrative powers must be drawn more restrictively, for our whole system of checks and balances is now at stake.

BIOMEDICAL RESEARCH NEEDED FOR DIABETES

(Mr. REID asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. REID. Mr. Speaker, I would like to address my colleagues regarding a serious health issue which deserves greater attention and support. Millions of Americans will agree with me because they suffer from the disorder known as diabetes.

Basically, diabetes is a disorder in which the body is unable to convert nutrients properly into the energy necessary for daily activity. If not treated, diabetes can be fatal. Even with proper treatment, diabetes is the fifth leading cause of death by disease in the United States. The long-term complications are worth noting:

Diabetes causes almost 50 percent of amputations of the foot and leg among adults;

Diabetes causes 20 percent of all cases of kidney failure and 15 percent of all blindness;

Diabetes in pregnant women and gestational diabetes causes about 2,200 fetal and infant deaths annually; and

Twenty-five percent of diabetics have heart disease and diabetes is one of the four major risk factors for cardiovascular diseases.

These statistics are certainly cause for concern. Yet, I am particularly sensitive to these startling figures because of the death last week of Kevin Bilbray, the 21-year-old diabetic son of close friends of mine. When I was attending law school at George Washington, I served as a Capitol policeman with another law student from southern Nevada, James Bilbray. Two of his children, including Kevin, and two of mine were born during that time. Our children became close and lifelong friends. This tragic death is, for me and for my children, a deep personal

loss. Kevin's death resulted from a severe insulin reaction.

The actual causes of diabetes are not known. Consequently, there is no cure for the disease. Medical advances have been made to address the complications of the disease and to afford diabetics the opportunity to lead fairly normal lives. On the positive side, components of the National Institutes of Health have discovered new and promising leads on the possible causes of the disease. The ultimate prevention, control, and cure of diabetes depends upon the assistance which only biomedical research can offer.

In 1983, funding for the National Institute of Arthritis, Diabetes and Digestive and Kidney Diseases of NIH is approximately $83 million. When this body can obligate billions of dollars for weapons systems which have not yet proven their capabilities or effectiveness, I believe that more attention should be allocated toward finding a cure for this major public health problem.

Thank you.

AT LAST—SOME GOOD NEWS IN SOCIAL SECURITY

(Mr. PICKLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PICKLE. Mr. Speaker, last Friday, for the first time since the early 1970's, the trustees of the social security funds have given us a favorable report on the retirement and disability funds. That is something Congress should note because if the Congress had not acted earlier this year we would have had more than another warning from the trustees. If the Congress had not acted, we would have had a disaster report—a notice that checks due to go out this weekend would be delayed for lack of funds.

Instead the report shows the retirement and disability funds remaining above danger levels throughout the 1980's and beyond, even under pessimistic assumptions. Moreover, the 75-year projections now show no long-term deficit under the best guess assumptions, and even under pessimistic projections potential long-term problems were cut in half.

All this is due to the social security bill passed by this body in March addressing both the short- and long-term problems in the program.

It is true that we must now face medicare. It is true another severe recession could spell some more short-term trouble. But for now the Congress can feel we have done the right and responsible thing—and that, too, is worth noting.

LEGISLATIVE VETO

(Mr. SMITH of Iowa asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SMITH of Iowa. Mr. Speaker, I am surprised by the reaction that the news media and some Members of Congress have given to the Supreme Court's decision declaring the legislative veto unconstitutional. It should not have surprised anyone and the decision does not have the importance that has been attached to it.

I always thought it was rather elementary that it was unconstitutional because a provision in a bill permitting the Congress to veto executive department action either means: First, that legislative power was delegated; or second, exercising the veto would be an usurpation of executive power. Those who defended the constitutionality and logic of the legislative veto who were not caught on one argument, were caught on the other.

The legislative veto is a rather sterile tool anyway because time constraints are so great that it makes it impossible for Congress to exercise the veto power on thousands of executive actions effectively, and it has not been effective. It has been used only a very few times.

The decision did not shift power significantly as has been indicated because the legislative veto was of little importance compared to the power of the purse which still remains in Congress. By attaching limitations to appropriations bills limiting the use of Federal funds in appropriations bills that the President must sign to secure money he wants for programs, rules, regulations, and actions by departments can be rendered null by denying the use of any money for the next year to administer them. Appropriations which originate in the House of Representatives are for 1 year at a time. Therefore, even if a department puts a rule or regulation into effect, it could be used only until the next appropriations bill is passed and some of the limitations have applied to prevent regulations being put into effect during the period the rule is being considered and before it is effective. As an example of effectiveness of limitations on an appropriations bill and the power of the purse, I personally have sponsored amendments to three different appropriations bills which killed three embargoes. Those amendments prohibited the use of funds to administer the embargoes, so they were effectively dead. There are hundreds of other examples passed with the concurrence of the majority of the House and Senate each year. I am very surprised that the news media and some Members of Congress seemed to have completely missed this perspective and overlooked the fact that the power of the purse not only has been the principle tool to control excesses in the executive branch of the Government but also still remains that principle effective tool.

PROTECTION OF INDIVIDUAL RIGHTS

(Mr. LOWRY of Washington asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LOWRY of Washington. Mr. Speaker, when we break this July 4, in observance of one of the greatest events in the history of the world, it is important we remember the real principles that set this Nation apart from almost any other Government in the world, the Bill of Rights and U.S. Constitution, that protect individual rights against the abuse of Government power. The forefathers wrote into the Constitution and into the Bill of Rights the guarantee of due process of law, the guarantee that any person before he could be persecuted by government would have their day in court.

It is very important that we never forget that principle.

Last Friday, along with 26 Members of the House, I introduced legislation—the World War II Civil Liberties Violation Redress Act—to make redress for 120,000 loyal Americans of Japanese ancestry who in 1942 were taken from their homes and put into internment camps in this country, without one person ever being found guilty of violating any law of this land.

The World War II Civil Liberties Violations Redress Act is meant to assure the people of this Nation that their Government will never again violate their Constitution. I urge every Member of this House to join in passage of this important legislation. No person in this country is safe against the abuse of government power if we do not demand adherence to the U.S. Constitution.

□ 1215

One of the most important pieces of legislation this Congress could ever address is to pass that redress legislation to make sure this country never again forgets or violates the principles upon which this Nation was founded.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Pursuant to the provisions of clause 5 of rule I, the Chair announces that he will postpone further proceedings today on the question of passing a bill and on the motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule XV.

Such rollcall votes, if postponed, will be taken on Tuesday, June 28.

DISTRICT OF COLUMBIA BUSINESS

The SPEAKER pro tempore. This is District of Columbia day.

The Chair recognizes the gentleman from California (Mr. DELLUMS), chairman of the Committee on the District of Columbia.

INCREASED AUTHORIZATION FOR FEDERAL PAYMENT TO THE DISTRICT OF COLUMBIA

Mr. DELLUMS. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 2637) to amend the District of Columbia Self-Government and Governmental Reorganization Act to increase the amount authorized to be appropriated as the annual Federal payment to the District of Columbia, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 502 of the District of Columbia Self-Government and Governmental Reorganization Act (D.C. Code, sec. 47-3406) is amended by striking out "and for the fiscal year ending September 30, 1983, and for each fiscal year ending after September 30, 1983, the sum of $361,000,000" in the first sentence and inserting in lieu thereof "for the fiscal year ending September 30, 1983, the sum of $361,000,000; and for the fiscal year ending September 30, 1984, and for each fiscal year ending after September 30, 1984, the sum of $386,000,000".

Mr. DELLUMS. Mr. Speaker, I move to strike the last word.

I am pleased to bring up for the consideration of the House the bill H.R. 2637.

H.R. 2637 amends the District of Columbia Home Rule Act to increase the amount authorized to be appropriated as the annual Federal payment to the District of Columbia from the existing level of $361 million to $386 million. This increase was proposed by the President and is included in the fiscal year 1984 budget as passed by the Congress.

H.R. 2637 is required because the amount of the actual payment has not kept pace with the increase in the extraordinary net costs and denied revenues related to the Federal presence which is the basis of the Federal payment. Further, the Federal payment has decreased as a percentage of the District budget from almost 27 percent at the time of the Home Rule Act in 1973 to approximately 20 percent of the proposed fiscal year 1984 budget if this bill is approved. It should be emphasized to the Members of this body that the District raises 80 percent of its own revenues independent of this Federal payment.

The Subcommittee on Fiscal Affairs and Health of the Committee on the District of Columbia held a hearing on May 5, 1983. No testimony was received or submitted for the record in opposition to the bill and it was reported to the full committee. On May 10, 1983, the committee unanimously approved H.R. 2637, by a recorded vote of 11 ayes, 0 nays, a quorum being present, and ordered the bill reported to the House. For these reasons I urge passage of this piece of legislation (H.R. 2637).

Mr. MCKINNEY. Mr. Speaker, I move to strike the last word.

Mr. Speaker, while there are many pieces of legislation on which the administration, the majority party and the minority party all have differences of opinion, I am confident that the measure now under consideration is one that has near unanimous support.

H.R. 2637 would increase the authorized level of the annual Federal payment to the District of Columbia from $361 million to $386 million. That new level is what the President has proposed in his fiscal year 1984 budget submission, it is the level contained in the budget resolution just approved by Congress, and it is an effort which received the support of 11 of the 12 members of the Committee on the District of Columbia.

Since annual increases in the authorized Federal payment has been the norm for the past several years, one might assume that most of this body is familiar with the nature of the payment and how it came about. However, there are a good many of our colleagues whose experience with the District government and its relationship to Congress is limited to what they read in the newspaper. Over 70 percent of the current House membership was not serving when Congress debated and passed the Home Rule Act. For the benefit of those who are unclear on this issue, I will attempt to briefly explain.

One may view the Federal payment as some kind of handout, or gift to the city with no strings attached. That is certainly not the case. What the Federal payment attempts to do, and I would underline the word "attempts," is quantify the net impact of the presence of the Federal Government on an emerging local government. Certainly, there are benefits to the city based solely on the fact that Washington is the seat of government. Conversely, there are numerous drawbacks, such a property taxes lost, building height restrictions, and services provided to the Federal Government by the city which go unreimbursed. Trying to accurately quantify all of these individual elements is not merely monumental, it is in fact impossible. Thus, the city government, in consort with the Congress, attempts each year to arrive at what appears to be a reasonable level of compensation. And until we can arrive at some formula for determining this level, we will come to the floor each year with such legislation.

Mr. Speaker, when this authorization was increased in August of last year, I included information in my statement concerning the Federal payment prior to and since home rule. I think the conclusions that can be drawn from such information are just as important now as they were 1 year ago, and I have therefore updated the material.

In the 10 fiscal years prior to the passage of home rule, the Federal payment actually appropriated to the District of Columbia increased from $37.5 to $187.5 million, which amounts to an increase of 400 percent. In the final 10 years during which Congress exercised absolute control over the city, a steadily increasing annual payment was the rule.

Since home rule, however, the Federal payment has not enjoyed that magnitude of growth. The level has gone from $226.2 to $361 million, which works out to an increase of 59.6 percent over the 9 years during which the city has been given some form of local autonomy. In addition to this severely lower rate of growth, the level has not increased incrementally from year to year, but instead experienced sporadic fluctuations. I would be remiss if I did not note at this point that it is now back on course, and it has increased gradually since fiscal year 1979, and since fiscal year 1981 it has been the full amount authorized.

The conclusion that I draw from these statistics is that we expect more of the locally elected government than we did of ourselves. So that our colleagues can draw their own conclusions, I include in the RECORD at this point two tables detailing the information I have just provided in summary form.

FEDERAL PAYMENT TO THE DISTRICT OF COLUMBIA

	Authorization	Appropriation
Fiscal year:		
1975	$230,000,000	$226,200,000
1976	254,000,000	248,948,000
1977	280,000,000	276,650,000
1978	300,000,000	276,000,000
1979	300,000,000	250,000,000
1980	300,000,000	276,500,000
1981	300,000,000	300,000,000
1982	336,600,000	336,600,000
1983	361,000,000	361,000,000
1984	[1]386,000,000	([2])

[1] Proposed.
[2] Not yet enacted.

Federal payment to the District of Columbia

[In fiscal years]

	Appropriated amount
Pre-home rule (Public Law 93-198):	
1965	$37,500,000
1966	44,250,000
1967	58,000,000
1968	70,000,000
1969	89,635,000
1970	116,166,000
1971	131,000,000
1972	173,654,000
1973	181,000,000
1974	187,450,000
Post-home rule:	
1975	226,200,000
1976	248,948,000
1977	276,650,000
1978	276,000,000
1979	250,000,000
1980	276,500,000
1981	300,000,000
1982	336,600,000
1983	361,000,000

Mr. Speaker, the entire membership of this body has a stake in maintaining the Nation's Capital in a manner which will make every U.S. citizen proud of our seat of government. All too often, we forget that this city is also the home of more than 630,000 individuals, who I might note are not represented in the Congress by voting representatives. We are equally responsible to insure that the District of Columbia grows and prospers as a city, and passage of this bill will be one small step toward that end. I urge the support of all my colleagues.

Finally, Mr. Speaker, I would note that the gentleman from Virginia (Mr. BLILEY) is unavoidably absent at this time. He has asked that I indicate his full support for this legislation.

Mr. FAUNTROY. Mr. Speaker, I move to strike the last word.

Mr. Speaker, first of all, I want to associate myself with the remarks of my distinguished chairman, the gentleman from California (Mr. DELLUMS), and the distinguished ranking member, the gentleman from Connecticut (Mr. MCKINNEY), both of whom have clearly outlined the reasons for support of H.R. 2637.

The annual Federal payment for the District of Columbia is a part of the President's budget this year, as it has been every year for every administration. The authorization level included in H.R. 2637 is $386 million.

When President Reagan sent his budget to Congress last January the following statement appeared in the appendix volume, and I quote:

Legislation will be proposed to amend the District of Columbia Self-Government and Governmental Reorganization Act of 1973 to authorize $386 million as the 1984 payment by the United States toward defraying expenses of the Government of the District of Columbia.

H.R. 2637 on the floor today is the legislation to which the President's budget refers.

As suggested in the Home Rule Act, the payment is to compensate the District for costs to the city related to the Federal presence, a revenue denied due to federally imposed regulations.

Many years ago, around the turn of the century, the Federal payment was a much larger share of the city's budget. It was set at 50 percent of the District of Columbia's operating costs then, but since 1925 the Congress has set the amount separately.

This year's payment will only be 20 percent of the expenses of the city. This is in spite of the fact that nearly 55 percent of the taxable land is not available to us in the District of Columbia. The other 80 percent comes from local income taxes, property taxes, the sales tax and other fees and grants.

Of course, this is just an authorization bill. The final figure will be set by the Appropriations Committee when they approve other aspects of the city's budget.

I hope that we will consider legislation at a later date to take some of the guesswork out of setting the annual Federal payment. A rational formula would lend stability to the city's finances but, in the meantime, this is a fair and a necessary bill and deserves your complete support.

I yield back the balance of my time.

Mr. DELLUMS. Mr. Speaker, I move the previous question on the bill.

The previous question was ordered.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. DELLUMS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and include therein extraneous material, on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

EXTRA LONG STAPLE COTTON ACT OF 1983

Mr. HUCKABY. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3190) to establish an improved program for extra long stable cotton, as amended.

The Clerk read as follows:

H.R. 3190

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Extra Long Staple Cotton Act of 1983".

SEC. 2. Section 347 of the Agricultural Adjustment Act of 1938, as amended, and section 101(f) of the Agricultural Act of 1949, as amended, are repealed effective beginning with the 1984 crop of extra long staple cotton.

SEC. 3. Sections 342, 343, 344, 344a, 345, 346 and 377 of the Agricultural Adjustment Act of 1938, as amended, shall not be applicable to the 1984 and subsequent crops of extra long staple cotton.

SEC. 4. Effective beginning with the 1984 crop of extra long staple cotton, section 103 of the Agricultual Act of 1949, as amended, is amended by adding at the end thereof a new subsection as follows:

"(h)(1) For purposes of this subsection, extra long staple cotton means cotton which is produced from pure strain varieties of the Barbadense species or any hybrid thereof, or other similar types of extra long staple cotton, designated by the Secretary, having characteristics needed for various end uses for which American upland cotton is not suitable and grown in irrigated cotton-growing regions of the United States designated by the Secretary or other areas designated by the Secretary as suitable for the production of such varieties or types and which is ginned on a roller-type gin or, if authorized by the Secretary, ginned on another type gin for experimental purposes.

"(2) The Secretary shall, upon presentation of warehouse receipts reflecting accrued storage charges of not more than sixty days, make available to producers nonrecourse loans for a term of ten months from the first day of the month in which the loan is made at a level which is not less than 50 per centum in excess of the loan level established for each crop of Strict Low Middling one and one-sixteenth inch upland cotton (micronaire 3.5 through 4.9) at average location in the United States. If authorized by the Secretary, nonrecourse loans provided for in this subsection may, upon request of the producer during the tenth month of the loan period for the cotton, be made available for an additional term of eight months. The loan level for any crop of extra long staple cotton shall be determined and announced by the Secretary not later than November 1 of the calendar year preceding the marketing year for which such loan is to be effective and such level shall not thereafter be changed.

"(3)(A) In addition, payments shall be made for each crop of extra long staple cotton to producers on each farm at a rate equal to the amount by which the higher of—

"(i) the average market price received by farmers for extra long staple cotton during the first eight months of the marketing year for such crop, as determined by the Secretary, or

"(ii) the loan level determined under paragraph (2) of this subsection for such crop,

is less than the established price per pound times, in each case, the farm program acreage for extra long staple cotton (determined in accordance with paragraph (6) or paragraph (8)(A) of this subsection, but in no event on a greater acreage than the acreage actually planted to extra long staple cotton for harvest), multiplied by the farm program payment yield for extra long staple cotton (determined in accordance with paragraph (7) of this subsection).

"(B) The established price for each crop of extra long staple cotton shall be 120 per centum of the loan level determined for such crop under paragraph (2) of this subsection.

"(C) If the Secretary establishes an acreage limitation program for a crop of extra long staple cotton in accordance with paragraph (8)(A) of this subsection and determines that deficiency payments will likely be made for such crop of extra long staple cotton under subparagraph (A) of this para-

graph, the Secretary may make available advance deficiency payments for such crop to producers who agree to participate in the acreage limitation program. Such advance payments shall be made available to producers as soon as practicable after the producer files a notice of intention to participate in such acreage limitation program and in such amount as the Secretary determines appropriate to encourage adequate participation in such program, except that such amount shall not exceed an amount determined by multiplying (i) the estimated farm program acreage for the crop, by (ii) the farm program payment yield for the crop, by (iii) 50 per centum of the projected payment rate, as determined by the Secretary. In any case in which the deficiency payment payable to a producer for a crop, as finally determined by the Secretary under subparagraph (A) of this paragraph, is less than the amount paid to the producer as an advance deficiency payment under this paragraph, the producer shall refund an amount equal to the difference between the amount advanced and the amount finally determined by the Secretary to be payable to the producer. If the Secretary determines that no deficiency payments are due producers on a crop, the producer who received advanced payments on such crop shall refund such payments. If a producer fails to comply with the requirements under the acreage limitation program after obtaining an advance deficiency payment under this paragraph, the producer shall immediately repay the amount of the advance, plus interest thereon in such amount as the Secretary shall prescribe.

"(4) The Secretary shall establish for each crop of extra long staple cotton a national program acreage. Such national program acreage shall be announced by the Secretary not later than November 1 of the calendar year preceding the year for which such acreage is established. The Secretary may revise the national program acreage first announced for any crop year for the purpose of determining the allocation factor under paragraph (5) of this subsection if the Secretary determines it necessary based upon the latest information, and the Secretary shall announce such revised national program acreage as soon as it has been made. The national program acreage shall be the number of harvested acres the Secretary determines (on the basis of the estimated weighted national average of the farm program payment yields for the crop for which the determination is made) will produce the quantity (less imports) of extra long staple cotton that the Secretary estimates will be utilized domestically and for export during the marketing year for such crop. The national program acreage shall be subject to such adjustment as the Secretary determines necessary, taking into consideration the estimated carryover supply and the stocks not accounted for by official domestic consumption and export data, so as to provide for an adequate but not excessive total supply of extra long staple cotton for the marketing year for the crop for which such national program acreage is established. In no event shall the national program acreage be less than sixty thousand acres.

"(5) The Secretary shall determine a program allocation factor for each crop of extra long staple cotton. The allocation factor (not to exceed 100 per centum) shall be determined by dividing the national program acreage for the crop by the number of acres that the Secretary estimates will be harvested for such crop.

"(6) The individual farm program acreage for each crop of extra long staple cotton shall be determined by multiplying the allocation factor by the acreage of extra long staple cotton planted for harvest on each farm for which individual farm program acreages are required to be determined. The farm program acreage shall not be further reduced by application of the allocation factor if the producers reduce the acreage of extra long staple cotton planted for harvest on the farm from the acreage base established for the farm under paragraph (8)(A) of this subsection by at least the percentage recommended by the Secretary in the announcement of the national program acreage. The Secretary shall provide fair and equitable treatment for producers on farms on which the acreage of extra long staple cotton planted for harvest is less than the acreage base established for the farm under paragraph (8)(A) of this subsection, but for which the reduction is insufficient to exempt the farm from the application of the allocation factor. In establishing the allocation factor for extra long staple cotton, the Secretary may make such adjustment as the Secretary deems necessary to take into account the extent of exemption of farms under the foregoing provisions of this paragraph.

"(7) The farm program payment yield for each crop of extra long staple cotton shall be determined on the basis of the actual yields per harvested acre on the farm for the preceding three years, except that the actual yields shall be adjusted by the Secretary for abnormal yields in any year caused by drought, flood, or other natural disaster, or other condition beyond the control of the producers. In case farm yield data for one or more years are unavailable or there was no production, the Secretary shall provide for appraisals to be made on the basis of actual yields and program payment yields for similar farms in the area for which data are available. Notwithstanding the foregoing provisions of this paragraph in the determination of yields, the Secretary shall take into account the actual yields proved by the producer, and neither such yields nor the farm program payment yield established on the basis of such yields shall be reduced under other provisions of this paragraph. If the Secretary determines it necessary, the Secretary may establish national, State, or county program payment yields on the basis of historical yields, as adjusted by the Secretary to correct for abnormal factors affecting such yields in the historical period, or, if such data are not available, on the Secretary's estimate of actual yields for the crop year involved. If national, State, or county program payment yields are established, the farm program payment yields shall balance to the national, State, or county program payment yields.

"(8)(A) Notwithstanding any other provision of this subsection, the Secretary may establish a limitation on the acreage planted to extra long staple cotton if the Secretary determines that the total supply of extra long staple cotton, in the absence of such limitation, will be excessive taking into account the need for an adequate carryover to maintain reasonable and stable prices and to meet a national emergency. Such limitation shall be achieved by applying a uniform percentage reduction to the acreage base for each extra long staple cotton-producing farm. Producers who knowingly produce extra long staple cotton in excess of the permitted acreage for the farm shall be ineligible for extra long staple cotton loans and payments with respect to that farm. The acreage base for any farm for the purpose of determining any reduction required to be made for any year as a result of a limitation under this subparagraph shall be the average acreage planted on the farm to extra long staple cotton for harvest in the three crop years immediately preceding the year prior to the year for which the determination is made. For the purpose of the preceding sentence, acreage planted to extra long staple cotton for harvest shall include any acreage which the producers were prevented from planting to extra long staple cotton or other nonconserving crops in lieu of extra long staple cotton because of drought, flood, or other natural disaster or other condition beyond the control of the producers. The Secretary may make adjustments to reflect established crop-rotation practices and to reflect such other factors as the Secretary determines should be considered in determining a fair and equitable base. There is hereby established for the 1984, 1985, and 1986 crops an acreage base reserve equal to 5 per centum of the total of the farm acreage bases established for the crop under the foregoing provisions of this subparagraph. Such reserve shall be in addition to the total of the farm acreage bases and shall be used by the county committees, in accordance with regulations of the Secretary, for making adjustments of farm acreage bases to correct inequities and prevent hardship, and for establishing bases for farms on which no extra long staple cotton was planted during the preceding four years. A number of acres on the farm determined by dividing (i) the product obtained by multiplying the number of acres required to be withdrawn from the production of extra long staple cotton times the number of acres actually planted to such commodity, by (ii) the number of acres authorized to be planted to such commodity under the limitation established by the Secretary, shall be devoted to conservation uses, in accordance with regulations issued by the Secretary, which will assure protection of such acreage from weeds and wind and water erosion. The number of acres so determined is hereafter in this subsection referred to as 'reduced acreage'. The Secretary may permit, subject to such terms and conditions as the Secretary may prescribe, all or any part of the reduced acreage to be devoted to sweet sorghum, hay and grazing, or the production of guar, sesame, safflower, sunflower, caster beans, mustard seed, crambe, plantago ovato, flaxseed, triticale, rye, or other commodity, if the Secretary determines that such provision is needed to provide an adequate supply of such commodities, is not likely to increase the cost of the price support program, and will not affect farm income adversely. If an acreage limitation program is announced under this paragraph for a crop of extra long staple cotton, paragraphs (4), (5), and (6) of this subsection shall not be applicable to such crop, including any prior announcement which may have been made under such paragraphs with respect to such crop. The individual farm program acreage shall be the actual acreage planted on the farm to extra long staple cotton for harvest within the permitted extra long staple cotton acreage for the farm as established under this paragraph.

"(B) The Secretary may make land diversion payments to producers of extra long staple cotton, whether or not an acreage limitation program for extra long staple cotton is in effect, if the Secretary determines that such land diversion payments

are necessary to assist in adjusting the total national acreage of extra long staple cotton to desirable goals. Such land diversion payments shall be made to producers who, to the extent prescribed by the Secretary, devote to approved conservation uses an acreage of cropland on the farm in accordance with land diversion contracts entered into by the Secretary with such producers. The amounts payable to producers under land diversion contracts may be determined through the submission of bids for such contracts by producers in such manner as the Secretary may prescribe or through such other means as the Secretary determines appropriate. In determining the acceptability of contract offers, the Secretary shall take into consideration the extent of the diversion to be undertaken by the producers and the productivity of the acreage diverted. The Secretary shall limit the total acreage to be diverted under agreements in any county or local community so as not to affect adversely the economy of the county or local community.

"(C) The reduced acreage and the diverted acreage may be devoted to wildlife food plots or wildlife habitat in conformity with standards established by the Secretary in consultation with wildlife agencies. The Secretary may pay an appropriate share of the cost of practices designed to carry out the purpose of the foregoing sentence. The Secretary may provide for an additional payment on such acreage in an amount determined by the Secretary to be appropriate in relation to the benefit to the general public if the producer agrees to permit, without other compensation, access to all or such portion of the farm, as the Secretary may prescribe, by the general public, for hunting, trapping, fishing, and hiking, subject to applicable State and Federal regulations.

"(9) An operator of a farm desiring to participate in the program conducted under paragraph (3) of this subsection shall execute an agreement with the Secretary providing for such participation not later than such date as the Secretary may prescribe. The Secretary may, by mutual agreement with the producers on the farm, terminate or modify any such agreement if the Secretary determines such action necessary because of an emergency created by drought or other disaster or to prevent or alleviate a shortage in the supply of agricultural commodities.

"(10) The Secretary shall provide for the sharing of payments made under this subsection for any farm among the producers on the farm on a fair and equitable basis.

"(11) The Secretary shall provide adequate safeguards to protect the interests of tenants and sharecroppers.

"(12) If the failure of a producer to comply fully with the terms and conditions of the program formulated under this subsection precludes the making of loans and payments, the Secretary may, nevertheless, make such loans and payments in such amounts as the Secretary determines to be equitable in relation to the seriousness of the failure. The Secretary may authorize the county and State committees established under section 8(b) of the Soil Conservation and Domestic Allotment Act to waive or modify deadlines and other program requirements in cases in which lateness or failure to meet such other requirements does not affect adversely the operation of the program.

"(13) The Secretary may issue such regulations as the Secretary determines necessary to carry out the provisions of this subsection.

"(14) The Secretary shall carry out the program authorized by this subsection through the Commodity Credit Corporation.

"(15) The provisions of subsection 8(g) of the Soil Conservation and Domestic Allotment Act (relating to assignment of payments) shall apply to payments made under this subsection.

"(16) Notwithstanding any other provision of law, compliance on a farm with the terms and conditions of any other commodity program may not be required as a condition of eligibility for loans or payments under this subsection.

"(17) In order to encourage and assist producers in the orderly ginning and marketing of their extra long staple cotton production, the Secretary shall make recourse loans available to such producers on seed cotton in accordance with authority vested in the Secretary under the Commodity Credit Corporation Charter Act.

"(18) References made in sections 402, 403, 406, 407, and 416 to the terms 'support price', 'level of support', and 'level of price support' shall be considered to apply as well to the level of loans for extra long staple cotton under this subsection; and references to the terms 'price support', 'price support operations', and 'price support program' in such sections and in section 401(a) shall be considered as applying as well to the loan operations for extra long staple cotton under this subsection.".

SEC. 5. Section 407 of the Agricultural Act of 1949, as amended, is amended by adding at the end thereof the following: "Notwithstanding any other provision of law, beginning upon the enactment of the Extra Long Staple Cotton Act of 1983, the Commodity Credit Corporation may sell extra long staple cotton for unrestricted use at such price levels as the Secretary determines appropriate to maintain and expand export and domestic markets for such cotton.".

SEC. 6. Section 1101(1) of the Agriculture and Food Act of 1981 is amended by deleting "and rice" and inserting in lieu thereof "extra long staple cotton, and rice".

The SPEAKER pro tempore. Is a second demanded?

Mr. STANGELAND. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Louisiana (Mr. HUCKABY) will be recognized for 20 minutes, and the gentleman from Minnesota (Mr. STANGELAND) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Louisiana (Mr. HUCKABY).

Mr. HUCKABY. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 3190, as reported by the committee, is designed to provide extra long staple cotton growers with a more market-oriented program, giving them the opportunity to meet the needs of the marketplace while at the same time maintaining a system of income protection.

Extra long staple cotton is a specialty type cotton with an individual fiber length of at least 1⅜ inches. American pima cotton is the only extra long staple cotton grown in the United States. It has been used mostly in the manufacturing of high quality sewing thread but is now being used to a limited extent in quality knit shirts, sheets, and towels. In recent years ELS cotton has been grown only in three States—Texas, New Mexico, and Arizona. U.S. production of the crop last year totaled 99,000 bales, compared with 11.9 million bales of upland cotton.

The current extra long staple cotton program is entirely different from the upland cotton program because production is strictly controlled through acreage allotments and marketing quotas.

The loan level is currently established at a minimum of 175 percent of the upland cotton loan, a level which, in light of worldwide economic conditions and price reductions by other ELS exporting nations, has resulted in domestic ELS cotton prices which are not competitive in world markets. Because of this, exports have declined, stocks have increased, and large volumes of ELS cotton are being pledged as collateral in the loan program.

The carryover from the 1982 crop will be approximately 104,000 bales, an amount in excess of a year's production and the largest since 1969. Of this, about 45,000 will be in CCC stocks. Moreover, since CCC cannot sell its stocks of ELS cotton at less than 115 percent of the loan rate plus carrying charges, stocks likely will continue to build and Government outlays will continue to increase unless substantive changes are made in the program.

Mr. Speaker, H.R. 3190 is designed to restore our overseas competitiveness, reduce Government costs, and give growers greater production freedom and flexibility.

First, this bill eliminates allotments and quotas. Thus, beginning with the 1984 crop, extra long staple cotton will be treated in the same manner as the programs for upland cotton, wheat, feed grains, and rice. This will provide growers with greater production flexibility and greater freedom to determine the most effective use of their resources.

Second, this bill lowers the ELS loan rate from 175 percent to 150 percent of the upland cotton loan rate. Under existing law, the ELS loan rate for 1984 is projected to be not less than 96.25 cents per pound. Under the provisions contained in this bill, the 1984 loar rate is projected to be about 82.5 cents per pound, a reduction of almost 14 cents, which will make American pima competitive in the world market.

Third, the bill provides a target price set at 120 percent of the ELS loan and contains deficiency payment provisions to provide a safety net for ELS

growers in the event of unreasonably low market prices.

Fourth, H.R. 3190 contains supply management provisions similar to those for other major commodities, including discretional authority for an acreage reduction program and a paid diversion, which, if utilized correctly, should reduce the need for deficiency payments.

Finally, in order to enable the Secretary to dispose of CCC stocks, this bill authorizes the Secretary to sell these stocks for unrestricted use at prices he determines appropriate.

Mr. Speaker, prior to the mid-1970's, most of the American Pima cotton was marketed domestically. In the larger world market, Egypt and Sudan have long been the primary producers of ELS cotton, and their prices are established each year by their respective governments. Thus, our ability to export is greatly dependent on supply/demand and prices in these two countries.

In the mid-1970's, American pima became more competitive in the world market, and our exports increased dramatically, from only about 5,000 bales in 1972 to a high of 52,000 bales for the 1979 crop. Subsequently, due to a number of factors, including the worldwide recession, the strength of the dollar, dramatic price reductions by the Governments of Egypt and Sudan, and the Polish crisis which reduced sales of American pima by some 12,000 bales, U.S. exports of ELS cotton began to plummet. Exports from the 1982 crop are expected to total only 13,000 bales.

The provisions contained in H.R. 3190, as reported by the Agriculture Committee, will restore the overseas competitiveness of ELS cotton, yet at the same time provide income protection to growers. The Congressional Budget Office has estimated that this bill, if enacted, will save $12 million in Government outlays in fiscal year 1985, and approximately $26 million in fiscal years 1985-88.

Mr. Speaker, this bill was reported unanimously by the Agriculture Committee, and I urge my colleagues support it.

□ 1230

Mr. STANGELAND. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as the ranking minority member on the Cotton, Rice, and Sugar Subcommittee, I also want to express my strong support for H.R. 3190 and urge the full House to act favorably on this important bill.

H.R. 3190, as amended, already has been passed by unanimous voice vote in both the Cotton, Rice, and Sugar Subcommittee and the full House Agriculture Committee.

As has already been noted, H.R. 3190 makes a number of reforms in the existing extra long staple cotton program which are supported by ELS cotton growers, the textile industry, and the administration. The elimination of marketing quotas and acreage allotments, the reduction in the minimum price support loan rate, the establishment of production control mechanisms for the Secretary of Agriculture to address future potential problems of oversupply, and authority for the sale of Government-owned ELS cotton at any price the Secretary deems appropriate to maintain and expand domestic and export markets, are all important provisions in the bill which will allow ELS growers to better respond to changing market conditions and enhance their ability to compete in both the domestic and export markets.

Although the original version of H.R. 3190 that was proposed by the administration did not include a target price provision, during hearings on the bill the Department of Agriculture indicated that they would not oppose a reasonable target price level.

It is my view that the modest target price level contained in this bill—set at 120 percent of the ELS loan rate—will help maintain the income stabilization safeguards that are necessary for domestic ELS growers to compete in this fragile and volatile market.

Another important factor that should be emphasized is that, according to Congressional Budget Office projections, this bill will save the Federal Government almost $27 million over the next 5 years. These savings will primarily come from the sale of existing Government-owned surplus stocks of ELS cotton, with additional savings accruing from reduced storage costs and smaller commodity loan outlays.

H.R. 3190 is the result of years of negotiations between the U.S. Department of Agriculture and ELS cotton growers. The ELS growers are to be commended for their support of these important legislative reforms that will put the Government program for ELS cotton on the same basis as the existing program for upland cotton.

This legislation has the potential to enhance both international and domestic demand for ELS cotton, while at the same time providing a reasonable level of price support protection and allowing our ELS growers more freedom to meet changing world market needs. I strongly urge my colleagues to support the passage of H.R. 3190.

● Mr. DE LA GARZA. Mr. Speaker, I rise in support of H.R. 3190, as reported by the Committee on Agriculture.

The bill changes the program for extra long staple cotton to a more market oriented program. It is noncontroversial, has the support of the industry, and will save the Government approximately $27 million over a 5-year period.

Extra long staple cotton is a specialty type cotton with an individual fiber length of at least 1⅜ inches. For many years it has been the subject of a special program that differs from the program for upland cotton.

At the present time, production is limited to the holders of allotments, and the price is supported at a loan rate of 175 percent of the upland cotton loan rate. This level is too high. It has resulted in domestic prices which are not competitive in world markets. U.S. exports have declined, domestic stocks have increased, and large stocks of cotton have been pledged to the Commodity Credit Corporation under the loan program or forfeited to the Corporation. The carryover from the 1982 crop far exceeds a year's production of the commodity.

The restrictions on the price at which CCC can sell its stocks of cotton compound this problem. Under current law, sales for unrestricted use cannot exceed a minimum of 115 percent of the loan rate, plus carrying charges. Accordingly, Government stocks have been increasing without any foreseeable possibility for their disposition in the commercial market.

H.R. 3190 does much to correct the problems of current law. It frees up production of the commodity and permits any producer who wishes, for the first time, to engage in production of extra long staple cotton. The loan rate is sharply reduced to a minimum of 150 percent of the loan rate for upland cotton, and the CCC is authorized to sell its stocks for unrestricted use at any level the Secretary determines appropriate.

Finally, this legislation provides a safety net to producers by authorizing deficiency payments for the difference between the target price and the lower of the loan rate or the market price. The target price would be 120 percent of the loan rate. Also, the Secretary would be given authority to provide for an acreage reduction program if the Secretary determines that the total supply of the crop would otherwise be excessive. Producers would be required to comply with the acreage limitations in order to obtain program benefits. The Secretary would also be authorized to initiate a paid land diversion program. Deficiency payments and diversion payments would be subject to a payment limitation. The program I have described is comparable to the programs provided for upland cotton and the other major commodities which have been in effect for many years.

Mr. Speaker, I would like to thank Mr. HUCKABY, chairman of the subcommittee, for his efforts in moving this legislation. I urge the Members to

join me in support of this much needed legislation.●

● Mr. COLEMAN of Texas. Mr. Speaker, I rise in support of H.R. 3190, the Extra Long Staple Cotton Act of 1983. Extra long staple (ELS) cotton, primarily grown domestically in three States, including my district in west Texas, is known as the "Cadillac of Cotton." This is because ELS is a specialty fiber used mostly in the manufacture of high-quality knitted products as well as sewing thread. Production of the specialty fiber compared with that of the more common upland cotton is on a much smaller scale—U.S. production last year of ELS cotton was 99,000 bales compared with an upland figure of 11.9 million bales.

This bill would go a long way to affording those farmers who grow ELS cotton a greater degree of flexibility in making their planting decisions and in their ability to be competitive in both the domestic and export markets. At the same time that quotas and acreage allotments are eliminated for ELS cotton, a mechanism is set in place to guard against overproduction and depressed prices.

Some of the key provisions of this legislation that should be noted include:

The minimum price support loan for ELS cotton would be 50 percent above the rate established for upland cotton;

A target price program would be created for ELS cotton, with the target set each year at 20 percent above the price support loan rate;

Existing legal authority for acreage allotments would be terminated; and

Should the Secretary of Agriculture determine that ELS suppliers were in danger of becoming excessive, he could require compliance with an acreage reduction program as a condition for price support loans and target price protection.

Mr. Speaker, this legislation represents the hard work of many diverse interests in the ELS cotton growers community, the textile industry, and the USDA. It is legislation that is aimed at a specific commodity and that seeks to address the special needs of those who must grow this precious crop. I am extremely pleased to be able to vote for this constructive legislation that helps a vital constituency not only within my district of west Texas, but also throughout a tristate area in the Southwestern United States.●

Mr. HUCKABY. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Louisiana (Mr. HUCKABY) that the House suspend the rules and pass the bill, H.R. 3190, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended, the bill, as amended, was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. HUCKABY. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

PERMISSION FOR COMMITTEE ON AGRICULTURE TO FILE REPORT ON H.R. 1510, IMMIGRATION REFORMS AND CONTROL ACT OF 1983

Mr. HUCKABY. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture may have until midnight tonight, June 27, 1983, to file a report on H.R. 1510, the Immigation Reforms and Control Act of 1983.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

PERMISSION TO HAVE UNTIL MIDNIGHT TOMORROW TO FILE CONFERENCE REPORT ON H.R. 3135, LEGISLATIVE BRANCH APPROPRIATIONS, 1984

Mr. FAZIO. Mr. Speaker, I ask unanimous consent that the managers may have until midnight tomorrow, June 28, 1983, to file a conference report on the bill (H.R. 3135) making appropriations for the legislative branch for the fiscal year ending September 30, 1984, and for other purposes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

MAKING IN ORDER CONSIDERATION OF CONFERENCE REPORT ON H.R. 3135, LEGISLATIVE BRANCH APPROPRIATIONS, 1984

Mr. FAZIO. Mr. Speaker, I ask unanimous consent that it may be in order at any time on June 29, 1983, or any day thereafter, to consider the conference report and any amendments in disagreement of the bill (H.R. 3135) making appropriations for the legislative branch for the fiscal year ending September 30, 1984, and for other purposes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

ANNUAL REPORT ON FEDERAL ACTIONS IN CONSERVATION AND USE OF PETROLEUM AND NATURAL GAS—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Energy and Commerce:

(For message, see Senate proceedings of today, Monday, June 27, 1983.)

ANNUAL REPORT OF COUNCIL ON ENVIRONMENTAL QUALITY—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Merchant Marine and Fisheries.

(For message, see Senate proceedings of today, Monday, June 27, 1983.)

ENERGY CONSERVATION DAYLIGHT SAVING ACT OF 1983

The SPEAKER pro tempore. Pursuant to House Resolution 201, and rule XXIII, the Chair declares the House in the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 1398.

IN THE COMMITTEE OF THE WHOLE

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 1398), to promote energy conservation by providing for daylight saving time on an expanded basis, and for other purposes, with Mr. HUCKABY in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. Pursuant to the rule, the first reading of the bill is dispensed with.

Under the rule, the gentleman from New York (Mr. OTTINGER) will be recognized for 30 minutes, and the gentleman from California (Mr. MOORHEAD) will be recognized for 30 minutes.

The Chair recognizes the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in strong support of H.R. 1398, the Energy Conservation Daylight Saving Act of 1983, which I am pleased to sponsor together with the ranking minority member of the subcommittee which I chair, the Subcommittee on Energy Conservation and Power, the gentleman from California (Mr. MOORHEAD). The bill

would move the starting date for daylight saving time to the first Sunday in March from its current starting date of the last Sunday in April, thus making daylight saving time have equally long evening hours on either side of the summer solstice, which is the longest day of the year.

There would be, in other words, the same amount of daylight in the evening or darkness in the morning in March and April under this bill as presently exists in September and October.

The House passed the same bill last Congress by a vote of 243 to 165 but the Senate failed to act on the issue.

The bill is supported by the Reagan administration, as it has been by previous administrations,

Passage of this legislation would be a simple and effective way to save energy.

The Department of Transportation has concluded that 100,000 barrels of oil equivalent per day would be saved during the extra period of daylight saving.

Studies by electric utilities have reached similar conclusions.

Extending daylight saving time would have other benefits demonstrated in 1973 and 1974 when we had extended daylight saving time, in response to the oil crisis with which we were then faced.

Those benefits are: A reduction of 0.7 percent in traffic fatalities, according to a National Highway Traffic Safety Administration study, which was actually experienced during the months of March and April during that time of extended daylight saving time.

Also a reduction of 10 to 13 percent in violent crimes based upon a study by the Law Enforcement Assistance Administration in the District of Columbia; increased recreational and shopping opportunities to spur economic recovery; and improved sight and mobility for those suffering from night blindness.

Public opinion polls have consistently reflected preference for a March to October daylight saving period by a 2-to-1 margin.

Although there had been some concern that extending daylight saving time could create safety problems for schoolchildren waiting for morning buses, exhaustive studies of the extended daylight saving experiment in 1973-74 concluded that there was no evidence of increased school-age traffic fatalities in March and April. Any school district which feels it has a problem can adjust school hours, as indeed some have done in the past. Because the bill makes the period of daylight saving symmetrical around the summer solstice, the Sun would rise in March and April no later than it now rises in September and October, as I indicated earlier.

This is an important but simple step we can take in the areas of conservation, crime reduction, traffic safety and economic recovery. I urge my colleagues to support the bill.

I would like to advise my colleagues that we have been told that an amendment will be offered by the gentleman from Indiana (Mr. COATS) when we consider this bill. The amendment would, in effect, allow any State to opt out of the additional 2 months of daylight saving time we have provided in the bill. The Reagan administration opposes this amendment very strongly and, in fact, it would create many problems throughout the Nation.

□ 1245

The Uniform Time Act of 1966 was designed for just the purpose of creating uniformity, to provide a uniform system of time across the country. It was deemed essential for the free flow of interstate commerce to have uniform dates for the start and end to daylight saving time.

The act did, however, recognize the rights of States by permitting any State to opt out of daylight savings time entirely. And in fact the State of Indiana, from which the gentleman from Indiana comes, is a State in which the eastern portion of the State has chosen to opt out of daylight savings time entirely.

In the case of States which are split by a time zone, the entire or either side of the State may choose to opt out. And our bill preserves this State right.

The amendment of the gentleman from Indiana would go much farther, through permitting States to choose to observe daylight time of zero, 6, or 8 months. This would create a crazyquilt patchwork of States and times. It would cause havoc for railroads, truckers, airlines, network broadcasters and others who would have to constantly adjust their timetables to these differing time zone schemes.

In short, we would return to the past when there was serious confusion in time observed from State to State.

The administration opposes this amendment. I have just received today a letter from Jim Burnley, General Counsel of the Department of Transportation. The letter say in part:

As originally enacted, the Uniform Time Act of 1966 permitted any State to exempt itself from the observance of DST established in that Act. However, any such exemption had to be a total exemption. The choice permitted to the States was DST in accordance with the Act or not at all. Even though Congress has amended the Act, this requirement that any exemption be for the entire year has never been relaxed, because partial exemptions could recreate the chaotic situation which led to enactment of the current law.

In 1966, when the Uniform Time Act was enacted, although 90 million people were observing DST from the last Sunday in April to the last Sunday in October, enough were observing some other period of DST to have an adverse effect on interstate and foreign commerce. Various beginning and ending dates created considerable confusion and expense, as transportation and communication schedules were constantly revised to reflect the differences in local choice. The solution which Congress devised was to establish one beginning date and one ending date for DST each year. This has proven highly successful. Airline schedules on this continent, for example, need to be changed on a large scale only twice each year, at the changeover dates to and from DST.

Were H.R. 1398 to become laws with this amendment attached—

Which I will add parenthetically is the amendment proposed to be offered by the gentleman from Indiana—

the number of DST beginning dates each year would double, reintroducing the lack of uniformity which Congress sought to correct in 1966. It would also require many businesses to incur additional and unnecessary expense just when the country is showing strong signs of economic recovery. For these reasons, we oppose adoption of the amendment.

Mr. Chairman, I strongly urge adoption of the bill as reported out by the committee and supported by myself and my good friend and colleague, the gentleman from California, and resistance to the amendment that may be offered by the gentleman from Indiana.

Mr. Chairman, I reserve the balance of my time.

Mr. MOORHEAD. Mr. Chairman, I yield 5 minutes to the gentleman from Minnesota (Mr. STANGELAND).

Mr. STANGELAND. Mr. Chairman, once again the House has before it a bill extending daylight saving time an additional 2 months by changing the starting date from the last Sunday in April to the first Sunday in March. This is an ill-advised and unnecessary piece of legislation and I urge my colleagues to join me in opposing H.R. 1398.

A large number of the Minnesotans in my district are farmers. Farmers are morning people. Their work day begins at sunrise. Their daily schedule is determined on how much farmwork they get done. Many of my constituents are greatly opposed to moving the clock ahead because farm chores have to be done early in the morning and cannot be made up in the evening. It is difficult for the farmer to get all his daily routine business completed when he sets his schedule by daylight hours while business people and merchants set their schedules by Government decree.

Various Government and nongovernment studies indicate that expanded daylight saving time will produce energy savings. I would like to point out that in northern Minnesota and the northern borders of the country, if we were to rise an hour earlier in the morning at a time when the day is the coldest, we are not going to save

energy. Those thermostats will get turned up when people rise for breakfast and when they have to get breakfast for our schoolchildren so they can get out to the schoolbuses before daylight. Even if there were some identifiable savings, I question whether the savings would actually be realized over a long period of time.

The committee also points out that expanded daylight hours could be beneficial for safety considerations. But if you push the clock ahead an hour during the wintry months of March and April, I am afraid you are going to make going to school a more dangerous venture for our schoolchildren. In rural northern areas, the weather between 6:30 a.m. and 7:30 a.m. daylight saving time in March and April is much more likely to be snowy and icy, making the roads more dangerous for everyone. Rural schoolchildren usually have no sidewalks to walk on. They walk and stand on the sides of the roads to get their schoolbuses. This could be very dangerous on icy, snowy roads before daylight. So where are we providing safety for our youngsters?

It would also appear more reasonable to give the States the option of determining whether or not they wish to participate in the additional 2 months of daylight saving time according to their needs and geographic location. In fact, the only option a State has is to accept the full 8 months of daylight saving time or not have daylight saving time at all. In this legislation, daylight saving time is an all or nothing proposition. If a State or part of a State did not want the expansion, its only recourse would be to drop out completely.

I believe this bill is ill-advised. You do not save daylight. The Sun rises in the morning and sets in the evening which creates a certain period of daylight. No law can lengthen the day or shorten it. We have so many hours of daylight on any day of the year, and no law changes that. We are just giving more daylight to the end of the day rather than at the beginning of the day. This proposal is totally unacceptable to the Minnesota farmer and I suspect to the millions of farmers throughout the country. These folks resent the Government's intrusion into their work schedules. I urge my colleagues to join me in opposing H.R. 1398. Too many questions remain unresolved for us to extend daylight saving time for an additional 2 months.

Mr. ROBERTS. Mr. Chairman, will the gentleman yield?

Mr. STANGELAND. I yield to the gentleman from Kansas.

Mr. ROBERTS. I thank the gentleman for yielding.

I appreciate the gentleman's comments and I would like to associate myself with his remarks.

I am thinking about an amendment to this bill. I think it is sort of an urban convenience act here. Why not have an amendment that if we go ahead with the extra 2 months when the daylight saving time occurs, we change the Nation's, say, thermometers.

Mr. STANGELAND. Do what?

Mr. ROBERTS. Change the Nation's standard of temperature. I think it would make just about as much sense to reduce the temperature in summer by 10° when we go into daylight saving time and then when we go off into the winter months, why then we could increase the temperature by 10°. Think how much warmer we would be in the winter and how much cooler we would be outside on the steps of the Capitol right now? It makes just about as much sense.

Mr. STANGELAND. A great deal of energy savings.

Mr. ROBERTS. Look at the energy savings we save.

Mr. DASCHLE. Mr. Chairman, will the gentleman yield?

Mr. STANGELAND. I yield to the gentleman from South Dakota.

Mr. DASCHLE. I thank the gentleman for yielding.

I applaud the gentleman's idea. In fact, we could even take it one step further and have a calendar extension. Perhaps 13 months at some time during the year. Obviously there is as much to be said about extending our calendar as there is during the day. Obviously there is a great deal of additional imagination we could lend to the issue. And I would support the gentleman's amendment.

Mr. ROBERTS. I appreciate the gentleman's comments.

Mr. STANGELAND. I will too. And I suggest that we put out a "Dear Colleague" and let our colleagues know how much we can save and how much time we can extend for our farmers to harvest. When harvest weather is good in August we could extend it another month and they could harvest another month. They really have a good thing going here.

Mr. MOORHEAD. Mr. Chairman, I yield 5 minutes to the gentleman from Utah (Mr. NIELSON).

Mr. NIELSON of Utah. Mr. Chairman, I rise in opposition to this bill for two reasons. One, the effect on the farmers has been mentioned. I associate myself with the first part of the remarks of the gentleman from Minnesota (Mr. STANGELAND), not necessarily the last part, however, but I do think the farmer does have a real point. He does have to work with the Sun and particularly the dairy farmer is adversely affected by this particular program.

The second reason I oppose the amendment is that it is an all-or-nothing proposition. I agree with the gentleman from New York in saying we would have a patchwork if allowed an opt out of the 2 months, but I predict many States, such as Utah and those on the western side, will opt out of the entire program if this bill passes in its present form.

In Utah the streets are dark in the mornings in September and October at the time they have to get ready for school. The same thing would be true in March and April, even more so, it is colder then and I think it would be even more adversely affected. PTA's in my State and several other adjoining States have come out against this particular extension. It is a definite interference with the school program. The children are not able to go to bed at night. And they do not see any reasonable way of coping with this situation short of harsh discipline and other forms.

I would like to indicate if I had my personal preference I would prefer daylight savings from Memorial Day to Labor Day, which would then not interfere with the school programs at all and would be, I think, wholeheartedly supported by all of those young mothers who have children to take care of during the school period.

I do not have that option, but I would like to suggest that we should have the option of opting out of this program.

I would like to engage the gentleman from New York (Mr. OTTINGER) in a colloquy for just a moment.

The gentleman indicates the bill does still allow States to opt out of the entire 8-month program. Now, when do they have to do that? Is there a deadline on that?

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. NIELSON of Utah. I yield to the gentleman from New York.

Mr. OTTINGER. I thank the gentleman for yielding.

There is no deadline.

Mr. NIELSON of Utah. They may do that at any time?

Mr. OTTINGER. They can do that at any time.

Mr. NIELSON of Utah. I happened to be speaker of the house when this came up in 1973 in the State of Utah. It failed by only two votes. I predict Utah will be one of the first, along with Iowa and others, to opt out of the entire program. And if, in fact, the gentleman from New York is correct on his energy savings, it will be a net loss in those two States at least, because you will give up 6 months which they now participate in, in order to try to take it to an extra 2 months.

Mr. OTTINGER. If the gentleman will yield further, just to clarify further what the situation is, the bill grandfathers all those States such as Indiana that have already opted out, but then permits any additional States

to do so at any time that they may wish to do so.

Mr. NIELSON of Utah. There is no deadline on how long they have to do that?

Mr. OTTINGER. That is correct.

Mr. NIELSON of Utah. The reason I asked that question is because many States do not meet again until 1985 and therefore we need to have at least 24 months in order to opt out of the program.

Mr. OTTINGER. Mr. Chairman, I yield 5 minutes to the gentleman from South Dakota (Mr. DASCHLE).

Mr. DASCHLE. Mr. Chairman, the subject before us today is—as I can testify from firsthand experience—an extremely important and sensitive one to a great many people. Several months ago, I sent a report about the possible extension of daylight saving time to the 140 weekly newspapers around South Dakota. I asked for comments, never dreaming that I was about to be overwhelmed by the deluge of calls, letters, and cards that followed.

I wish there were time to share from those letters with my colleagues. Most of them were obviously handwritten, a few from elderly people who formed their letters carefully and with obvious difficulty. Others came from farmers or farm wives who apologized for not being certain if their grammar or sentence structure were proper. In short, these were letters from average, down-to-earth citizens—not writing as part of some high-powered, computerized lobbying assault—but simply wondering about an issue that is of deep concern to them, or perhaps their children or grandchildren.

They usually expressed concern about the effect this bill would have on the safety of young schoolchildren walking to classes or waiting for schoolbuses in the colder, darker morning hours of March and April—months which would be brought under daylight time should this bill, H.R. 1398, become law. Those months can be bitterly cold across wide stretches of the North. Snow and ice are common, adding to the dangerous conditions for small children along the roadsides.

Supporters of this bill point to Government studies of our Nation's yearround experiment with daylight saving time in 1973 and 1974. Those studies—limited to only a single comparison between 2 years—found no increase in fatal accidents among schoolchildren in March and April under daylight time.

However, on a matter so highly sensitive as the safety of small children, I prefer—as I am sure my colleagues prefer—to rely on my own commonsense and the good judgment of the people back home in my State. In this case, good judgment and commonsense agree that young schoolchildren are more apt to be injured when they are walking or waiting on icy, dark roads earlier in the morning.

Another problem pointed out by many of my constituents—and shared by the constituents of many other House Members—concerns farmers. For farm families, especially those whose members also must hold down second jobs in town to make ends meet, daylight time would mean trying to do their morning chores in darkness or squeezing those chores into an hour's less time. Given the trials already faced by people in rural America, this is hardly the time to add to their burdens.

These problems—decreased safety for schoolchildren and increased hardship for farm families—are real and justifiable reasons for opposing H.R. 1398.

Yet, if the bill offered counterbalancing advantages, perhaps it would deserve our support despite its considerable shortcomings. For that reason, I have carefully examined the claims put forth by its supporters. Unfortunately they are, in the words of Genesis, "void and without form."

The principal benefit claimed for H.R. 1398 is that it will save electrical energy in the equivalent of 100,000 barrels of oil per day in March and April. This would be approximately 1 percent of the national usage. Second, it is claimed that this bill would bring a reduction in traffic fatalities equaling nearly three-quarters of 1 percent. The basis for both of these claims is the daylight saving time study conducted by the Department of Transportation in 1975.

Yet, a followup study in 1976—requested by Congress and conducted by the highly respected National Bureau of Standards—found no conclusive evidence to support either of the claimed benefits. And, with respect to energy usage, there is another study—cited by Bureau of Standards officials during their 1976 congressional testimony—which points to increased energy usage as a result of daylight saving time during colder months.

In conclusion, Mr. Chairman, I believe we are faced with a simple choice. This bill's two primary promises—a saving of energy and a saving of lives—are not supported by the facts. On the contrary, the National Bureau of Standards found that daylight saving time had no effect in either of those two areas.

We are then left with a bill which would certainly cause difficulty for large numbers of people, but which offers few if any benefits.

Our present balance of time is fair—6 months of standard time and 6 months of daylight time. Certainly there are people on both sides of the issue who would prefer more months of daylight time or more months of standard time. But we can live with what we have now; it is fair; and we should keep it.

□ 1300

Mr. MOORHEAD. Mr. Chairman, I yield 4 minutes to the gentleman from Kansas (Mr. ROBERTS).

Mr. ROBERTS. I thank my colleague for yielding.

Mr. Chairman, we have heard from my urban colleagues several arguments here today as to why we would all be better off with daylight saving time for 2 more months. In the interest of saving energy, I would like to shed some light on these arguments.

As my colleague from South Dakota has just pointed out, the supporters of extension say studies have shown that daylight saving time actually reduces crime. Let me point out that the study my colleagues are citing was not a national study. It was a study only looked at in the District of Columbia, where, rest assured, they have special problems with regard to crime.

Second, in terms of energy use, the Department of Transportation study cited here also states the following:

> Any potential benefits from extending daylight saving time would be small and very difficult to isolate from the larger effects of seasonal variations and of changes in energy availability and prices.

And then there is the argument about traffic accidents. The National Bureau of Standards has reported that, while no significant increase in fatalities was found, there was an increase in fatalities of school-age children during the morning hours. And, as my colleague from South Dakota pointed out, it is just commonsense.

If the majority of the Members of this House want to extend daylight saving time, as we have done in 1981, why, that is fine. But let us not hide behind the false arguments about saving energy and reducing crime and also saving lives.

The efforts to extend this daylight saving time are based on the desire to have more leisure time. I do not care what it is, if you are going to golf or jog or perhaps maybe walk your dog, it is an urban convenience act, nothing more and nothing less.

Mr. Chairman, in farm country our farmers work until the Sun sets. Any energy savings that might occur in urban areas will be offset by the increased energy used in farm country.

I urge my colleagues to find other ways of increasing their leisure time rather than at the expense of the farmer. In my country, we are going to be plowing to the tune or at the time of the land of the midnight Sun. I would urge my colleagues to study the amendment to be introduced by my good friend, the gentleman from Indiana (Mr. COATS), and I will support his amendment. I urge defeat of this effort.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. ROBERTS. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I do not want any misimpressions, and I am sure the gentleman does not either, with respect to the facts as reflected in the legislation.

The National Bureau of Standards, as the actual report reads, found that there was no school-age fatality increase during the months of March and April 1974, which are the months that this legislation would apply.

It did find an increase in school-age fatalities when it was year around, during the winter months of January and February.

Mr. ROBERTS. In the 1974 period?

Mr. OTTINGER. That is correct.

Mr. ROBERTS. I appreciate the gentleman's comment.

Mr. MOORHEAD. Mr. Chairman, I yield 3 minutes to the gentlewoman from Nebraska (Mrs. SMITH).

Mrs. SMITH of Nebraska. Mr. Chairman, I thank the gentleman for yielding this time to me.

Mr. Chairman, I rise in opposition to this legislation which would cast rural America deeper into darkness. This unneeded and unwise legislation would provide for the extenstion of daylight saving time from the first Sunday in March to the last Sunday in October.

It is my hope that this bill will go no further than last year's version of the daylight saving extension which was not acted upon by the other body and therefore died in the 97th Congress.

Mr. Chairman, the committee has dusted off an 8-year-old study by the Department of Transportation to support their legislation. I am dusting off my speech of last year in opposition to similar legislation because I quoted a Bureau of Standards study which found:

> The available data do not lead to any conclusions on the possible energy savings, except that further studies would be expensive to perform.

Now, one of the principle arguments put forth for this legislation is that it would save energy, but the Bureau of Standards said that was not necessarily so. It is my impression that there may be a net increase in energy consumption. Additional shopping and recreational trips would be made under daylight time. One of the original purposes of daylight time was to provide people with more daylight hours for shopping and recreation in the afternoon when they get off work as they do in the big cities. If they are going to use those hours which are so generously provided by Congress, they are going to use more energy.

In Nebraska it can still be very cold in early March. School superintendents would be forced to start their school furnaces earlier in the morning to get buildings warm in time for school to start. Also, many parents feel compelled to drive their children to school rather than let them stand in the dark waiting for a schoolbus or walk or ride a bicycle to school during hours of darkness.

Furthermore, the extension of daylight saving time would have a special impact on farmers and ranchers. Many of those who work the soil these days find it necessary to have a job in town in addition to their farm or ranch work. With daylight time extended, those people will lose that extra hour or so in the morning before going to work in town or have to do their early morning chores in the dark.

During the harvest season many farmers and ranchers must wait until the Sun comes out and the dew disappears before they can begin work in the morning. This applies especially to the combining of small grains, soybeans, and making hay. If rural people are to continue their church and community activities during the evening, they must quit work earlier by the Sun, thereby losing 1 hour of worktime each day.

While this bill does provide the Federal Communications Commission authority to grant waivers for daylight only AM radio stations, these waivers will be made on a case-by-case basis further complicating the lives of these station operators. Farmers and ranchers depend heavily on the market and weather reports provided by these stations and their operating time could be delayed by 1 hour under this legislation.

Mr. Chairman, the best thing for the House to do is to vote down this legislation. Let us ring down the curtain on the daylight saving time follies.

Mr. MOORHEAD. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I was pleased to join with Chairman OTTINGER in introducing H.R. 1398, the Energy Conservation Daylight Saving Time Act of 1983, truly bipartisan legislation that will result in so many benefits for the country.

In addition to an electricity savings of approximately 100,000 barrels of oil equivalent per day during the months of March and April, this legislation will result in increased daylight recreation, tourism, and shopping prime time. I was most interested to note that during our subcommittee hearings on this legislation representatives from Southland Corp. and the National Association of Convenience Stores both testified that H.R. 1398 could well increase employment in the thousands of convenience stores around the country due to business increases resulting from extended daylight. It would be most instructive to know how many hundreds and even thousands of jobs might be created by these and other businesses whose activity will increase after enactment of our legislation.

Enactment of this bill and the increased daylight hours which it provides may result in as many as 100 fewer traffic fatalities per year in this country, according to the Department of Transportation. Also, a potential reduction in violent crime, and—as has been emphasized by the Retinitis Pigmentosa Foundation—a longer period of sight and mobility for those suffering from night blindness are other benefits which this legislation would provide.

The energy conservation and economic benefits which will result from the enactment of this legislation will occur without expanding either the Federal bureaucracy or the national debt. Unlike some other so-called energy conservation legislation, this bill calls for no Federal intrusions into the free market, no burdensome regulations for business and industry, and no increased Federal meddling in the Nation's utility systems.

While I believe this legislation will again be favored by a large majority in the House, it was clear from the debate in our subcommittee and full committee that some Members are not convinced of the value of this legislation for their district or for their State. However, our legislation allows a State to opt out of daylight saving time in whole, or if the State includes more than one time zone, in part, so that no State will be compelled to participate in daylight saving time unless it so desires.

I join with the chairman of my subcommittee in urging you to support H.R. 1398.

Mr. Chairman, I would also like to point out to my agricultural friends that I know a little bit about agriculture, since a large part of my family has been in that industry. I know that if you have milk cows, you get up when the Sun rises in the morning, or a little before, and your work ends about when the Sun goes down or a little bit afterward. Changing the time is not going to affect their workday one tiny bit.

Concerning the churches, churches start at the time that is convenient for their members. If they want to start church a little bit later, they can change the time that church starts, as most of our churches do when summertime is here, anyway, so that they will be able to enjoy a greater part of the day after church for whatever activities they may want to engage in.

The same thing is true of schools in agricultural areas. There is nothing that says that they have to start precisely at 8 o'clock in the morning. If the school board thinks it is to the best interest of the schoolchildren, they can start an hour later and they can finish their work an hour later.

Those things are not tied to the clock. They are tied to the convenience of the people in the community. But it is important that we have a national time schedule so that the television programs and other things that we are engaged in do not have to change their times for any particular locality.

□ 1315

I think this is a good bill. I think it will be an improvement of opportunity for many, many industries, especially the recreational industry, and certainly will be an advantage to the large percent of people in this country.

Mr. Chairman, I ask for an "aye" vote.

Mr. OTTINGER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I very much appreciate the support of my ranking minority member, the gentleman from California (Mr. MOORHEAD).

I would like to point out with respect to some of the objections that have been raised with respect to inconvenience to schoolchildren or to farmers, that the situation is identical in March and April with respect to the length of the day, as it is in September and October under the existing legislation. So there is no more inconvenience.

With respect to inconvenience to schoolchildren in the past, what actually has happened was that this caused a problem for particular school districts on the western end of a time zone and, therefore, had the most pronounced effect on the hour's difference. The school districts have, in fact, changed the school hours and been able to accommodate that particular problem.

As affects any national legislation, there are going to be particular areas that are different in different professions, and so forth. But this bill, provides for real energy savings, and provides for decreases in crime and decreases in automobile accidents, and an opportunity for additional shopping, which is particularly important to many women who will not shop during evening hours for considerations of personal safety but will shop with the extra hour of daylight in the evening that is provided during these 2 months. That is the reason that we have the strong support that we do from the shopping center community. All those considerations on a national basis, I think, make it advisable that this legislation be passed.

Mr. MOORHEAD. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

Mr. OTTINGER. Mr. Chairman, I yield back the balance of my time, and I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. SKELTON) having assumed the chair, Mr. HUCKABY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 1398) to promote energy conservation by providing for daylight saving time on an expanded basis, and for other purposes, had come to no resolution thereon.

PERSONAL EXPLANATION

Mr. NIELSON of Utah. Mr. Speaker, due to official business attending an education conference in Salt Lake City on Friday that necessitated my absence late Thursday evening, I was unable to be present, but had I been present, I would have voted "no" on rollcall No. 216, the McCurdy amendment, because I did not believe the supporters were sincere. Past experience had shown that they did not believe that they would do as they said. The TEFRA bill said they would cut spending by $3 for every $1 in taxes; the actual amount was 57 cents to each dollar.

Mr. Speaker, I would have voted "yes" on rollcall No. 217, the motion to recommit to get a more fiscally and responsible and fair bill.

Mr. Speaker, I would have voted "no" on rollcall No. 218, the tax decrease cap.

POLICY MADE BY ADVANCE MEN

(Mr. ALEXANDER asked and was given permission to address the House for 1 minute, and to revise and extend his remarks and include extraneous matter.)

Mr. ALEXANDER. Mr. Speaker, on one of his numerous campaign appearances, President Reagan had the audacity to admonish Democrats not to turn education into a political football. And yet, the obvious purpose of the President's continuing road show on education is but one single thing—his own reelection next year.

A column which appeared in this morning's Washington Post entitled "Policy Made by Advance Men" clearly demonstrates just how far Mr. Reagan will go in using the education of our children for his own political gain.

The column reports the administration's policy on education is not being determined by professional educators, or those in the Department of Education, or even those responsible for policymaking in the White House. No, Mr. Speaker, the education policies of this administration are being determined by political strategists whose only concern is the President's reelection. The column even quotes the President's advisers as saying, "It's all blue smoke and mirrors."

Mr. Speaker, the President need not worry that we Democrats will turn education into a campaign football. He has single-handedly turned the whole question into a virtual political superbowl.

Mr. Speaker, I include the Washington Post article of June 27, 1983, as follows:

[From the Washington Post, June 27, 1983]

POLICY MADE BY ADVANCE MEN

(By Rowland Evans and Robert Novak)

A 28-year-old former advance man who is President Reagan's chief scheduler on May 9 wrote a six-page memorandum, long on atmospherics and short on substance, that launched the White House education blitzkrieg.

After "reviewing" the scathing report of the National Commission on Excellence in Education, Frederick J. Ryan Jr. said in the memo to his boss, White House Deputy Chief of Staff Michael K. Deaver, "I am convinced that education is an excellent issue for us to make an all out effort [sic]." What followed did not have much to do with education, but laid out a game plan branding the president's name and face on the issue.

From appearing at any meeting, any time and any place that has anything at all to do with education to abandoning Reagan's campaign pledge to abolish the Department of Education, Ryan's memo became educational policy for the Reagan administration. Reminiscent of the Nixon White House's preoccupation with how any issue would play in Peoria, the Reagan White House's education offensive suggests government by advance men.

Deaver, a super advance man, typifies the trend by recent administrations of ex-champaign workers' making policy by guessing how it will look on that night's television news programs and the next day's newspaper headlines. While only vaguely familiar with national issues, Deaver regulates the president's policy agenda by dictating where he goes and who he sees. While unfamiliar with the problems of education, Deaver seized control of the issue after the now-famous commission report was issued April 26.

Deaver delegated the details to his aide, Ryan, who as a young Los Angeles attorney was an advance man in Reagan's 1980 campaign. His memo to Deaver planned how "the news should be dominated by the administration's new thrust in education."

But no "new thrust" emerges from Ryan's prose, save for jettisoning Reagan's only 1980 campaign pledge dealing with education: abolishing Jimmy Carter's Department of Education. Offering no substantive reason, Ryan wrote that to stave off Democratic criticism, it "may be wise" to say that "because of the drastic state of affairs of the American educational system, the plans to dismantle will be delayed." Since "this may upset part of our conservative support base," he suggested a simultaneous renewed commitment to abolish the Energy Department.

That advice was followed, not to the letter but in spirit, with Reagan mothballing his old campaign pledge. But Ryan's memo concentrated on schedule, and nearly all his ideas did or will turn into presidential activity.

Reagan addressed the national PTA convention in Albuquerque, N.M., accepting

Ryan's suggestion that if offered "an excellent opportunity for a big kickoff for the education theme." Reagan's June 29 visit to the vocational education "Skills Olympics" in Louisville follows Ryan's script ("this event has great potential for reaching the blue-collar constituency"). Also proposed by Ryan was Reagan's forthcoming speech to the Los Angeles convention of the American Federation of Teachers, described in the memo as "not as critical [of Reagan] as the NEA [National Education Association]."

Ryan's proposal to address a local PTA meeting was ruled out. But other ideas mentioned in the memo still considered likely are lunching with America's teacher of the year, visiting an "Adopt-a-School" and an adult literacy program, and presenting educational awards.

Not a word was mentioned by Ryan of the one Reagan educational initiative: incentive pay for teachers. Not until after his memo was written did the White House borrow the idea from the "master teacher" plan of Tennessee's Gov. Lamar Alexander. Until then, the incentive pay issue had not been mentioned in the White House. Indeed, almost nothing about education was said there for the Reagan administration's first 27 months.

"You're right," a senior Reagan aide confided to us. "It's all blue smoke and mirrors." Nevertheless, he is euphoric that the president has pre-empted a Democratic issue. The June Washington Post/ABC poll shows voters believe Reagan policies help rather than hurt education by a 46-29 percent margin (reversing the September 1981 sentiment that they hurt more than helped, 49-28 percent). Even Mike Deaver's detractors concede that though he may not know much about education, he is a whiz at saturation scheduling of the president.

But issue polls are notoriously volatile. Merit pay is being slowly embraced by Democrats, and even the NEA is likely to back it in principle. So, thoughtful aides have started to say in private meetings that the time has come for Ronald Reagan to say some serious things about education.

That leaves the president unanswered questions: How much more should be spent on education? Who should spend it? How should it be spent? Those questions are not touched by Ryan's influential memo, but solving real problems never has been the speciality of government by advance men.

AMA RESOLUTION ON DIOXIN UNFORTUNATE

(Mr. DASCHLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. DASCHLE. Mr. Speaker, many of us were surprised and dismayed last week when the American Medical Association (AMA) approved a resolution which in effect said that dioxin is really nothing to be worried about, that the media has exaggerated the dangers of dioxin and conducted a "witch hunt" of the chemical.

Though we all disapprove of exaggerated or inaccurate news reporting, I fail to see how the potential danger of a chemical 170,000 times more lethal than cyanide can be overstated. For the Nation's foremost medical organization to take this position is a disservice to its membership. This position flies in the face of a significant amount of scientific data which indicates otherwise.

In addition to numerous short-term effects observed in humans after exposure, there is a considerable amount of evidence linking the chemical to soft tissue cancers, and to a lesser extent, lymphatic cancer.

Dioxin is also carcinogenic in animals, teratogenic (causes abnormal development of the fetus), and fetotoxic (causes death or other adverse health effects in fetuses) in very small amounts. These are scientific facts, not hearsay.

If the dangers of dioxin are exaggerated, why has the EPA for the last 10 years been trying to have chemicals containing dioxin banned from the marketplace? If the concerns about dioxin are exaggerated, why is the Federal Government sponsoring over $100 million worth of research efforts on the chemical? Finally, if the concerns about dioxin are exaggerated, why has the administration bought out Times Beach?

As the following article reports, there is a great deal of consternation and concern in the medical community about the AMA position. There is certainly no unanimity on these views.

EXPERTS DENOUNCE AMA STAND ON DIOXIN—REAGAN APPLAUDS POSITION THAT IT IS NOT A PROVEN HEALTH THREAT

(By Casey Burkro)

A specialist in environmental health Thursday called the American Medical Association incompetent and ignorant for contending that dioxin is not a proven health threat, a stance applauded here by President Reagan.

"The AMA's contribution in this area is a profound disservice and consistent with their established record of extreme conservatism and lack of information and demonstrated lack of concern for preventive medicine," said Dr. Samuel Epstein, professor of occupational and environmental medicine at the University of Illinois Medical Center in Chicago.

Attacking the AMA for a lack of expertise in environmental problems, Epstein said the nation's largest medical association demonstrates "overwhelming incompetence and ignorance in the area."

The AMA's House of Delegates voted Wednesday to adopt a resolution calling for a public information campaign on dioxin to "prevent irrational reaction and unjustified public fright." The 351-member body also vowed to "prevent dissemination of possible erroneous information."

While much of the reaction to the AMA move evoked puzzlement and consternation, it met with approval by Reagan, who addressed the annual AMA meeting here Thursday. Reagan called the resolution "a positive step toward a more reasonable public debate" on the subject of health and the environment.

The AMA action touched off a flurry of controversy among medical authorities over the threat of dioxin, the discovery of which in trace amounts resulted in the evacuation of Times Beach, Mo. The relocation was followed by the U.S. Environmental Protection Agency's offer to buy the town for $33 million because it was considered unsafe for human habitation.

It is a classic environmental conflict, pushing dioxin to the forefront of a long dispute over the safety of long-term exposure to small amounts of chemicals in the environment. Scientists have argued both sides of the issue for years, often leaving the public to wonder which set of experts to believe.

Dioxin, a component of the chemical defoliant, Agent Orange, also is blamed for sickening thousands of Vietnam veterans who were exposed to the defoliant, used to kill trees in battle zones.

Dioxin, an unwanted byproduct of chemical manufacturing, has been found in the production of herbicides and in face cleansers.

Dr. Renate Kimbrough, a toxicologist for the Center for Environmental Health in Atlanta, said dioxin is a major avenue of health research at the Centers for Disease Control. This includes tests on Times Beach residents and on Vietnam veterans.

"Some of the results seem to indicate problems," she said, adding that there is no doubt that dioxin is a valid health concern.

"I don't understand what they are doing." Dr. J. Donald Ostrow, a Northwestern University professor of medicine who has researched dioxin, said of the AMA action. In his research laboratory, Ostrow noted, dioxin is labeled as a "biohazard," disposed of "in the same fashion as radioactive waste."

The precaution he takes is "not based on newspaper reports; it's based on scientifc information." The use of dioxin is rigidly controlled by the federal government because "that's how dangerous the government considers it," he said.

"There is no question that, in animals and humans, it is toxic," Ostrow said. Research indicates that dioxin in the body acts on enzymes, which are biological chemicals.

"Carcinogens in the environment are not in an active form," Ostrow said. "They almost always have to be activated by an enzyme. Dioxins usually stimulate the activating enzymes."

Carnow, Conibear & Associates, a Chicago consulting firm on occupational and environmental health, distributes a fact sheet on dioxin that calls it "the most potent of all manmade chemicals."

Some medical researchers challenge this description because the dangers of toxic chemicals depend on how much chemical a person is exposed to and how long the exposure lasts.

Carnow, Conibear contend that dioxin can damage several human organs, including the liver, kidneys, gastrointestinal system, brain and nervous system, skin and reproductive organs.

An Oct. 1, 1981, technical report on the health effects of Agent Orange and dioxin, which was cosigned by the AMA, calls dioxin "an inducer of cancer in some strains of rats and mice" but adds that the effect on human beings is uncertain.

James H. Sammons, the AMA's executive vice president, said Thursday, "There is not sufficient evidence to prove that dioxin is responsible for those things some people says it is responsible for."

The conflict often revolves around whether animal-testing data can be applied to human beings. Although dioxin is fatal to guinea pigs, some researchers argue that the effect on humans is more likely to be serious outbreaks of acne.

Rep. John T. O'Connell (D., La Grange), is chairman of the Illinois Agent Orange Study Commission, which has held eight public hearings to hear testimony from Vietnam veterans and their families.

"We've had a commonality of testimony that is striking as to their experience since leaving Vietnam," O'Connell said. These include skin, kidney and nerve disorders and birth defects.

"If the AMA can make a statement that dioxin is not harmful, why is the federal government spending $33 million to buy out Times Beach?" he asked.

Robert L. Metcalf, biology and environmental studies professor at the University of Illinois, said it is "unwise to minimize the hazards of dioxin to humans, especially over a longtime exposure."

CENTRAL AMERICAN REFUGEES: SOCIAL AND ECONOMIC CONSEQUENCES FOR THE UNITED STATES

(Mr. COLEMAN of Missouri asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. COLEMAN of Missouri. Mr. Speaker, U.S. policy in Central America continues to be one of the most emotional and controversial issues in Congress. The debate to date has focused primarily on the security issues in question. However, I believe that the social and economic consequences of continued political deterioration in this region may be even more important. If Communist governments come to power and persecute their domestic populations then we can expect to see a massive influx of refugees into the United States. Historical experience certainly bears this out. The cost, both in dollars and in social and economic terms, would be tremendous. Obviously, this issue warrants our concern and must be brought to the attention of the American people.

A QUESTION OF NUMBERS: HOW MANY REFUGEES?

In attempting to assess just how many refugees might eventually attempt to enter the United States, the task force has utilized a straightforward methodolgy which establishes data based upon past refugee trends.[1] The basis for these figures is fairly simple. If one looks at recent refugee trends, it is clear that the United States is almost invariably the preferred final destination. Furthermore, it appears that a general rule of thumb can be established regarding the percentage of a nation's population which in the final analysis ends up in the United States. For example, since Cuba fell to Communist revolutionaries over 1 million Cubans have come to the United States. This represents over 10 percent of the Cuban population. One could use this as a baseline percentage, but a more conservative figure of 8 percent would seem to represent the normal refugee pattern (NRP). For example, the number of Afghan refugees in Pakistan is estimated at 2.5 million or approximately 16 percent of the total Afghanistan population. However, because of the varying proximity of the Central American countries to the United States, the NRP of 8 percent would appear the best measure of what might be expected. When this figure is applied to the present populations of the Central American nations, the potential results are staggering.

Country	Population	8 percent refugees to United States	10 percent refugees to United States
Costa Rica	2,400,000	192,000	240,000
El Salvador	4,700,000	370,000	470,000
Guatemala	7,500,000	600,000	750,000
Honduras	4,100,000	328,000	410,000
Nicaragua	2,600,000	200,000	260,000
Panama	2,000,000	160,000	200,000
Totals	23,300,000	1,850,000	2,330,000

As this table indicates, the refugees from these six countries could total upward toward 2.3 million people. If one takes into consideration the population of Mexico, a country which many analysts believe is already very vulnerable to leftist insurgency, then the numbers are even more imposing.

	Population	8 percent refugees to United States	10 percent refugees to United States
Mexico	67,000,000	5,360,000	6,700,000
Total	90,300,000	7,210,000	9,030,000

In the case of Mexico, these figures may themselves prove very conservative. There is no way of telling just how many people might try to cross the Mexico-Texas land bridge to flee Communist persecution and oppression. As our present experience illustrates, the Rio Grande is hardly an imposing obstacle to determined people attempting to get into the United States. One can imagine that this determination will be greatly increased if political violence is the impetus for increased flows of Mexicans.

Thus if one takes a look at these figures a number of disturbing possibilities emerge. For example, if one looks only at El Salvador, the fall of that Government and the entrenchment of a leftist government of the Cuban model would probably mean that 300,000 to 400,000 El Salvadorans might suddenly be attempting to gain entry to the United States. If one proceeds one step further and we look at the region as a whole, including Mexico, then the total figure becomes staggering, perhaps as high as 9 million people.

THE COST

A related question which arises if one tries to assess the potential impact of this kind of exodus is just how could our Nation cope financially. Certainly, the American taxpayer would inevitably be forced to bear the financial burden of paying for the upkeep of these refugees. What would the cost be? According to the Department of State, the average cost of providing for a refugee in the United States is between $3,500 and $4,500. This includes the cost of living, eating, and medical expenses at the Federal and State level. The following table illustrates just how much money it would take to provide for refugees from each one of the the Central American countries, as well as for the total including Mexico.

	8 percent refugees to United States	Cost to United States
Country:		
Costa Rica	192,000	$672,000,000
El Salvador	370,000	1,295,000,000
Guatemala	600,000	2,100,000,000
Honduras	328,000	1,148,000,000
Nicaragua	200,000	700,000,000
Panama	160,000	560,000,000
Total	1,850,000	6,475,000,000
Mexico	5,360,000	18,760,000,000
Combined total	7,210,000	25,235,000,000

As one can see from these projections, the potential costs could be astronomical if even one of these nations does fall and normal refugee patterns are followed. And these figures do not cover ancillary costs which might be involved such as increased security, et cetera, which would be an inevitable addition. Using the conservative estimate of 8 percent NRP and the lower cost figure of $3,500 per refugee, the potential price tag for the American taxpayer if just El Salvador fell to Communist insurgents could well total over $1 billion.

In the event that Mexico eventually fell to Communist insurgents and was included in these calculations, then the number of potential refugees could be over 7 million with an estimated cost of over $25 billion to the U.S. Treasury.

If one uses the higher estimates of 10 percent potential refugees and an average cost of $4,500 per refugee, then the figures become even more astronomical. The number of potential refugees then approaches 9 million people with a possible cost of over $40 billion, or approximately $425 for every American taxpayer.

THE IMPACT ON THE AMERICAN JOB MARKET

The impact of a massive influx of refugees on the employment situation would also be dramatic, particularly in the unskilled labor positions where unemployment is already high.

The current workforce of the United States is a little over 112 million Amer-

[1] Congressional Briefing Paper presented by Ambassador-at-Large H. Eugene Douglas, U.S. Coordinator for Refugee Affairs, May 17, 1983.

icans. With current unemployment running at approximately 11.2 million people or 10.1 percent of the workforce, any new influx of labor will have a significant effect on competition for jobs. The following table illustrates some possible consequences of additional laborers on the current U.S. unemployment rate.

Country	8 percent refugees	In percent— Current unemployment rate	In percent— Present rate with refugees added
Costa Rica	192,000	10.1	10.17
El Salvador	370,000	10.1	10.24
Guatemala	600,000	10.1	10.33
Honduras	328,000	10.1	10.22
Nicaragua	200,000	10.1	10.17
Panama	160,000	10.1	10.15
Subtotal	1,850,000	10.1	10.83
Mexico	5,360,000	10.1	12.21
Total	7,210,000	10.1	12.92

Unquestionably, the impact on the employment situation in the United States in the event of the complete collapse of even one of these Central American governments would be significant. A chain reaction would over time have a very dramatic effect on American unemployment. And if the conservative 8 percent NRP proved too low, as many observers argue it might be, then the impact could be even greater. If one uses the 10 percent refugee trend figure, then the U.S. unemployment rate could go as high 13.5 percent.

Certain unemployment sectors would show even more dramatic increases as most of the new arrivals in the United States would have minimal skills, be poorly educated, and speak little English. Job competitions in low skill service industries would be intense and the unemployment rate in these sectors would skyrocket since the impact of these new refugees on the entire job spectrum would be uneven. White-collar jobs would be less vulnerable, but blue-collar jobs would be under great pressure.

Geographically, the impact would also fall unevenly, with Southern States receiving much higher numbers of refugees than other regions in the country. Indeed, these States would experience much highter unemployment rates than the rest of the Nation.

LET US PROTECT THE SOCIAL SECURITY DISABILITY PROGRAM

(Mr. SKELTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SKELTON. Mr. Speaker, last week, the House Select Committee on Aging, of which I am a member, held hearings on the administration's most recent proposals for the social security disability insurance (SSDI) program. Members of this body should be aware of the findings of that hearing; specifically, that the administration's plans will result in an even greater hardship on disabled American elderly than they have been suffering for the past 2 years. We must not allow this to happen.

In an effort to quell criticism of its SSDI case reviews, the administration has announced its plans to temporarily suspend the reviews of certain mentally impaired beneficiaries. While this is a welcome relief for those individuals, it will increase the review rates of other beneficiaries—especially older people with cardiac problems who represent the largest beneficiary group. Others who will become more vulnerable are the elderly suffering from circulatory and respiratory disorders and arthritis.

These older Americans, who worked as long as they were able, and who earned social security disability benefits as they worked, should not be further subjected to the administration's bureaucratic zeal and insensitive implementation of the 1980 Social Security Disability Insurance Amendments. At the time that legislation was passed, social security officials projected that case reviews would reduce total benefit payments by about $218 million over 4 years. However, even with the proposals announced by the administration, Social Security now predicts that benefits will be cut by about $2.7 billion—12.3 times the amount of reduction which Congress has expected.

Another of the administration's alledged reforms would, in fact, be a step backward. Last year, the Social Security Administration terminated benefits for approximately 250,000 SSDI beneficiaries. Nearly two-thirds of these people were later found to have been mistakenly cut off from benefits they both need and deserve. Because the administration's high error rate was causing such severe hardship, Congress passed legislation in December to continue paying benefits to SSDI beneficiaries until all avenues of appeal are exhausted. The administration now wants to stop payments after the first reconsideration hearing. This would result in many deserving people going for 8 months or longer without benefits.

More than one-quarter of the population over the age of 55 is severely disabled. Most of these people will never receive social security disability benefits even though they could qualify. Nevertheless, the administration will spend up to $350 million in fiscal year 1983 to terminate benefits to as many as 400,000 beneficiaries. Experience has shown that most of those terminated will be unjustly cut off from their major source of income, from social security disability benefits which they have earned.

Mr. Speaker, the administration has failed its responsibility to Congress and the American people to be the guardian of the social security disability insurance program. Now, rather than having confidence that the SSDI program will be there when they need it, American workers are once again fearful of becoming disabled and destitute. The administration's current efforts to redeem itself are not an adequate response to their trepidation. Still more needs to be done.

The administration must begin by slowing down the case review process. A reduction in the number of cases reviewed each year will foster greater accuracy in terminations, and will clear up the backlog of appeals which results in unconscionably long waiting periods for terminated beneficiaries.

Second, the administration should return to the medical improvement standard. Prior to 1976, it was Social Security's policy to not terminate a disability beneficiary unless his condition had improved. Since that time, this standard has not been used, and persons originally found to be disabled are now being judged by a different standard. The General Accounting Office has found that as many as 35 percent of those being terminated today are in the same or worse medical condition than when they were originally found disabled. Social Security says its new, stricter guidelines are proper even though at least four court case have struck down this policy. A person's medical condition should be improved, or his vocational skills enhanced, before his benefits can be cut off.

Next, more emphasis should be placed on the medical records of the beneficiary's treating physician. In my congressional district, one heart patient was terminated despite the opinon of his doctor. The doctor happened to be the Director of Cardiovascular Diseases at the Kansas University Medical Center. Too often, the Social Security Administration overlooks the treating physician's records, and depends on the evaluation of a doctor in a nonrelated specialty made in a matter of minutes. This must stop.

Finally, consideration should be given to providing States with additional funding for retraining and employment services for those who lose their benefits. According to the social security law, a person's impairment must be so severe that he is not only unable to do his previous work but cannot, taking into consideration his age, education, and work experience, engage in any other kind of substantial gainful work which exists in the national economy. It does not matter whether such work exists in the area

where the person lives, or whether he could get the job if he applied. Two-thirds of those denied social security disability benefits never return to work. Of those who do, very few are able to earn more than $6,000 a year. This presents a severe hardship on the families of the disabled, and also on the States which have experienced increased welfare costs as a result of the administration's policies. We should have compassion for these disabled, and help retrain them, rather than dump them on the streets.

Mr. Speaker, social security disability insurance is a commitment our government has to the American worker, a commitment the success of which has blurred but not erased the haunting memories of a time when the disabled were forced to live lives of unspeakable degradation. We are the most powerful and wealthy country in the world, but in the end, we will not be judged by these, rather by the way we provide for the less fortunate among us. Let us not retreat from the challenge. Let us find a way to allow all Americans to live in dignity. Let us protect the social security disability program.

BONNEVILLE POWER ADMINISTRATION HAS NO AUTHORITY TO PROVIDE FUNDS FOR CONTINUED CONSTRUCTION OF WPPSS 1, 2, OR 3

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oregon (Mr. WEAVER) is recognized for 30 minutes.

Mr. WEAVER. Mr. Speaker, the Bonneville Power Administration (BPA) has proposed to spend $168 million during fiscal years 1983, 1984, and 1985 directly for construction on Nuclear Project No. 2 of the Washington Public Power Supply System (WPPSS 2). BPA claims that these expenditures are necessary because WPPSS is now unable to obtain sufficient funds from selling bonds to complete this project. Until now, all funds for construction of WPPSS 2 have been provided from the proceeds of WPPSS bonds.

While BPA may have statutory authority to pay debt service on bonds issued by WPPSS to finance construction, BPA has no authority to make outlays of money, whether directly or through net billing, to support WPPSS construction. Any such outlays by BPA would be subject to challenge in Federal court.

I. BPA DERIVES NO AUTHORITY TO PROVIDE FUNDS FOR WPPSS CONSTRUCTION FROM THE FISCAL YEAR 1971 APPROPRIATIONS ACT PURPORTEDLY AUTHORIZING NET BILLING FOR THE WPPSS PROJECTS

The Public Works Appropriations Act for fiscal year 1971 provided the following authority for BPA with respect to the WPPSS projects:

> For construction and acquisition of transmission lines, substations, and appurtenant facilities, as authorized by law, $91,600,000, to remain available until expended: *Provided*, That nor more than $150,000 of the funds appropriated herein shall be available for preliminary engineering required by the Bonneville Power Administration in connection with the proposed agreements relating to three non-federally financed generating plants proposed under the hydro-thermal program to be sponsored jointly or severally by the Washington Public Power Supply System, Seattle City Light, Tacoma City Light, Snohomish County PUD and the Puget Sound Power and Light Company, pursuant to which the Bonneville Power Administration will acquire from preference customers and pay by net billing for generating capability from non-federally financed thermal generating plants in the manner described in the committee report.

Even if it is assumed that this statute properly authorized net billing for the WPPSS projects, it twice refers to these projects as "nonfederally financed generating plants." This language affirmed recognition by Congress that these projects were to be financed by the issuance of bonds by the project sponsors, not by outlay of Federal funds by BPA.

This statute also refers to the committee report. The report of the House Appropriations Committee stated:

> The program includes the construction of seven thermal generating plants between 1971 and 1981. None will be federally constructed, financed or owned. The committee approves implementation of the remainder of the program by the use of net billing as the means of affecting payment by the Bonneville Power Administration for part or all of the generating capacity of nonfederally financed thermal plants, under suitable agreements between Bonneville Power Administration and preference customers to accomplish this purpose. H.R. Repot No. 91-1219, p. 90 (June 18, 1970).

The Senate Appropriations Committee concurred that BPA would "acquire from a date certain, on a cost basis, the preference customers' rights to the generating capability of nonfederally financed plants whether or not they are operable." Senate Report No. 91-1118, p. 56 (August 12, 1970).

Both committee reports, then, approved projects that would be nonfederally financed and would not be federally constructed, financed, or owned. BPA outlay of funds for construction of the WPPSS projects would directly contradict the provisions of the Public Works Appropriations Act for fiscal year 1971 and the congressional reports referred to in the statute.

The House and Senate hearings preceding enactment of this statute contain numerous denials that BPA would be putting up the money for thermal powerplant construction. Tables showing "Estimated Investment Requirements for the Pacific Northwest Power System" show zero for "thermal generation" under the "Federal" category. Senate Appropriations Committee, Hearings on Public Works Appropriations for fiscal year 1971, p. 11 (April 14, 1970); House Appropriations Committee, Hearings on Public Works Appropriations for fiscal year 1971, p. 832 (1970). At the House hearings, BPA explained its proposed authority as follows:

> There is no express authority authorizing these purchases to which you can point your finger and say Congress expressly said you could do this. These net billing agreements are part of the security behind *the bonds that the public agencies will issue to supply the funds with which to build these plants.* Since these bond issues involve such substantial amounts of money, the bond counsel and the underwriting bankers have requested that Congress give express recognition to this existing implied authority to acquire the power. House Appropriations Committee Hearings, pp. 867-68 (1970) (Kenneth Kaseberg, BPA Counsel) (emphasis added).

Thus, the House was told that the projects would be financed by bonds issued by the public agencies, including WPPSS, but not by outlays of money by BPA.

Congressman Robison sought and received further clarification.

> Mr. ROBISON. Federal moneys are to be used in some indirect fashion toward the cost of construction of these privately-owned, privately-constructed facilities?
>
> Mr. RICHMOND (BPA). No, sir.
>
> Mr. ROBISON. They will not?
>
> Mr. RICHMOND (BPA). That is correct. (p. 863)

Congressman WHITTEN then explained his understanding of the arrangements.

> From a policy standpoint, BPA cannot build thermal plants. Under the plan, you are contracting to buy power from the public agencies who can legally build thermal plants. They can't finance their share of the cost without BPA's guarantee to purchase the power output. *They take your contract, borrow the money, build the plant, and BPA ends up with a thermal power source* • • •.
>
> My point is that you are not authorized to build thermal plants. However, these public agencies do have the authorization. Having no money, *they take your contract to buy their power, borrow to finance their share of the plant, and BPA ends up with a supply of thermal power* which it cannot provide directly by construction of the facilities • • •. (p. 864) (emphasis added)

The BPA Administrator agreed "that Bonneville will acquire power from publicly financed steamplants on a long-term basis." (p. 864) Mr. Robison later added:

> BPA is not going to build the plant, as I understand it . . . . *They* [the public agencies] borrow the money to pay for it, and the Federal Government through BPA is helping them to arrange the financing with respect to *their* borrowing. (p. 870) (emphasis added)

As far as outlays were concerned, the BPA Administrator assured the Senate Appropriations Committee that the "Federal effort is related entirely to transmission and hydrofacili-

ties," to which Senator Ellender replied: "I hope you will not ever get the Federal Government into steam production." Senate Appropriations Committee hearings, page 39 (1970).

Neither BPA nor either House of Congress contemplated that BPA would supply funds for the construction of the WPPSS projects. BPA's present contrary assertion is squarely contradicted by the statutory language, the committee reports, and the discussions during the hearings.

Both the House and Senate reports also requested that BPA submit the proposed net-billing agreements to their respective appropriations committees at least 60 days prior to their execution by BPA. The agreements BPA submitted for WPPSS 1, 2, and 3 did not provide for BPA outlays for construction of these projects. Under these contracts, BPA is authorized to pay, through the net-billing arrangement, the amount of each participant's billing statement, which is based solely upon the annual budget. The annual budget "itemizes the projected costs of the project applicable to such contract year." Specifically—

It makes provision for all of Supply System's costs, including accruals and amortizations, resulting from the ownership, operation (including cost of fuel), and maintenance of the Project and repairs, renewals, replacements, and additions to the Project, including, but not limited to, the amounts which Supply System is required under the Project Bond Resolution to pay in each Contract Year into the various funds provided for in the Project Bond Resolution for debt service and all other purposes. Net Billing Agreement, section 1(a).

Deliberately missing from this list of appropriate costs are those arising from construction of the project, because construction is to be funded not from the annual budget but from the separate Construction Budget provided for in each WPPSS Project Agreement.

The "Construction Budget" means the budget adopted by the Supply System which sets forth an estimated schedule of construction expenditures and itemizes all costs related to ownership, design, planning, construction, and financing of the Project, as well as any revision or updating thereof during the course of construction. Project Agreement, section 1(d).

Congress could not have understood that these agreements in any way contemplated BPA funding of WPPSS construction. In addition, these agreements were submitted to the congressional committees after enactment of the Public Works Appropriations Act for fiscal year 1971, so any possible opportunity in these agreements for BPA to provide construction funds—although no such possibility exists, short of amendment to the contracts—does not establish any congressional authorization or acquiescence in any plan by BPA to make outlays for project construction.

II. BPA DERIVES NO AUTHORITY TO PROVIDE FUNDS FOR WPPSS CONSTRUCTION FROM THE FEDERAL COLUMBIA RIVER TRANSMISSION SYSTEM ACT OF 1974

The Federal Columbia River Transmission System Act of 1974 authorizes BPA to finance only the construction of transmission system improvements, not powerplants. It authorizes BPA to make expenditures from the BPA fund—consisting of rate revenues and proceeds of BPA bond sales—to "purchase electric power on a short-term basis to meet temporary deficiencies in electric power which the Administrator is obligated by contract to supply" or "if such purchase has been heretofore authorized or is made with funds expressly appropriated for such purchase by the Congress." 16 U.S.C. 838i(b)(6). It does not authorize BPA to make outlays for construction of the net-billed projects or any thermal powerplant whatever.

III. BPA DERIVES NO AUTHORITY TO PROVIDE FUNDS FOR WPPSS CONSTRUCTION FROM THE PACIFIC NORTHWEST ELECTRIC POWER PLANNING AND CONSERVATION ACT OF 1980

The Pacific Northwest Electric Power Planning and Conservation Act of 1980, known as the Regional Act, mentions the WPPSS projects only once. It provides that the Federal base system includes the Federal Columbia River Power System hydroelectric projects and "resources acquired by the Administrator under long-term contracts in force on the effective date of this Act." 16 U.S.C. 839a(10). This language does not authorize BPA to make any outlays for WPPSS construction; it merely refers to the previously executed contracts.

The congressional committee reports accompanying the Regional Act clarify the understanding of Congress on BPA's authority to construct powerplants. The House Interior Committee report stated:

BPA has no express authority to own, construct, or purchase the output or capability of electric generating plants except to meet short term deficiencies. H. Rept. No. 96-976 Part II, p. 27 (September 16, 1980).

The House Commerce Committee agreed.

BPA is not authorized by law to construct additional resources on its own. H. Rept. No. 96-976 Part I, p. 24 (May 15, 1980).

The Senate Energy Committee stated:

The Administrator was not authorized to construct or operate either hydro or thermal electric generating facilities. S. Rept. No. 96-272, p. 17 (June 30, 1979).

These statements of BPA's pre-Regional Act authority flatly contradict BPA's new assertion that it has authority to make outlays for WPPSS construction. If BPA is not authorized to construct powerplants, it is certainly not authorized to make outlays of funds to continue construction on powerplants owned by other entities.

In sum, BPA's authority with respect to the WPPSS projects is limited to that provided by the Public Works Appropriations Act of 1971. This statute may have authorized BPA to pay debt service on bonds issued by WPPSS to provide the funds for construction of WPPSS 1, 2, and 3, but it certainly did not authorize BPA to provide the construction funds itself.

Now, the BPA Administrator has stated his intention to pay directly from BPA funds some $168 million for construction of WPPSS 2 and $94.6 million for rampdown and preservation of WPPSS 3 during fiscal year 1983, 1984, and 1985.

If the BPA administrator persists in his plan to spend hundreds of millions of dollars from the BPA fund on construction of WPPSS 2 and preservation of WPPSS 3, I now put him on notice that title 31, section 1341 of the United States Code forbids "an officer or employee of the United States Government * * * (to) make or authorize an expenditure or obligation exceeding the amount available in an appropriation or fund for the expenditure or obligation." It also prohibits any officer or employee from involving the Government "in a contract or obligation for the payment of money * * * unless authorized by law." Violation of these provisions carry criminal penalties: up to $5,000 in fines, 2 years in prison, or both. (31 U.S.C. 1350.)

I also warn contractors working on the WPPSS projects: Do not expect to receive payment for your work beyond the funds WPPSS has obtained through sales of bonds. BPA cannot lawfully pay you from BPA funds for construction work on the WPPSS projects. Even if you somehow receive payment, the Federal Government can always recover these funds from you later. The Federal courts have repeatedly ruled that the United States has inherent authority to recover sums which have been paid wrongfully, erroneously, or illegally. Your only recourse will be to sue the Federal officers who unlawfully authorized the payments to you. In that case, the BPA Administrator and other Federal officers may be found personally liable to pay the amounts unlawfully authorized, if the courts rule such authorization to have been undertaken outside the officer's scope of employment.

I will conclude by adding that any attempt by the BPA to underwrite a new short-term loan to finance WPPSS No. 3 would be most imprudent. Borrowing short for long-term construction is an invitation to disaster.

The Subcommittee on Mining, Forest Management and Bonneville Power Administration, which I chair, will be monitoring closely the action of the BPA in these matters.

□ 1340

REVITALIZING OUR NATION'S INDUSTRIAL BASE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oklahoma (Mr. JONES) is recognized for 5 minutes.

● Mr. JONES of Oklahoma. Mr. Speaker, I am today introducing legislation with my colleague from New York (Mr. CONABLE), aimed at revitalizing our Nation's industrial base, where the need for plant and equipment rebuilding is greatest and unemployment is highest.

Our legislation, the Work Opportunities and Renewed Competition Act of 1983 (WORC), is designed to make certain that the nascent economic recovery we have underway will be built and sustained by growth in capital investment. WORC will allow companies to modernize now so that we can emerge from the recession with a competitive industrial and service economy.

History tells us, Mr. Speaker, that if we are to retain our position as the world's leading industrial power, ready to flex our economic prowess, we cannot be a land of smokeless smokestacks. We must explore entrepreneurial frontiers, but we must also retool our vital, basic industrial foundation. To accomplish this goal, we are proposing a one-time progam structured to unlock earned, but unused, investment tax credits when there is reinvestment in new equipment and plants.

The reason we need this legislation, Mr. Speaker, is quite simple. Today the investment tax credit is not functioning as an incentive for capital investment for many companies, particularly those in basic industries. The problem is that while these companies have continued to make heavy investments which generate the credits, in fact $94.64 billion in 1981, the companies have not had sufficient profits recently to absorb the credits against their tax liability. Indeed, nearly 20 percent of the top 500 industrial corporations and two-thirds of the major transportation industries have not been able to utilize fully all of the investment tax credits which have been earned through 1982. By restricting these companies from access to the ITC's, the after-tax cost of their capital is increased, and they are placed at an automatic competitive disadvantage.

WORC would end this inequity by allowing companies unused investment tax credits prior to 1983 to obtain 85 percent of the value of their credits if and when they reinvest in new plant and equipment. In order to insure immediate help to the economy, the reinvestment would have to be made between October 1, 1983, and December 31, 1984. WORC contemplates that the remaining 15 percent of the credit value be dedicated for assistance to workers in industries affected by the recession. WORC requires that companies which obtain these funds pay back to the Treasury not just the 85 percent, but the other 15 percent as well. The principal steps in the operation of the new reinvestment credit mechanism can generally be described as follows:

(A) REINVESTMENT CREDIT ELECTION

Anticipating its inability to use its accumulated ITC's in 1983 through 1985, the company elects to treat all of its 1982 carryovers as the reinvestment credit. These ITC's then cannot be used as carryovers in such years even if the company's tax liability increases due to higher profits.

(B) REINVESTMENT

As the company reinvests in kinds of machinery and equipment in which it has previously invested—not in new business ventures—the Treasury will pay the company an amount equal to 85 percent of the costs of such reinvestments, but not more than 85 percent of the total reinvestment credit relinquished to Treasury.

(C) MANDATORY REPAYMENT

Beginning in 1986 and continuing through 1990, the company must repay the full amount of the reinvestment credit—not just the 85 percent payments—at a rate of 20 percent per year. It is possible that the company will repay a portion of the reinvestment credit prior to the 5-year payback schedule. This can result from an increase in profits in the mid-1980's, that raise tax liability in the absence of the foregone ITC's. This higher tax will reduce the mandatory taxes payable in 1986 through 1990.

(D) REINSTATEMENT OF CREDITS

As the company makes its mandatory repayments in 1986 through 1990, an equal amount of the reinvestment credit will be reinstated as ITC's. However, such reinstated ITC's will have lost the same number of years from the normal 15-year carryover period as though they had been available in every year since 1982.

(E) PENALTIES

Companies claiming more reinvestment credit than the amount to which they are entitled will be penalized. Companies that elect less than the maximum reinvestment credit will also be penalized.

Thus, the concept is a discounted loan through the tax system. The payback mechanism insures higher revenue—which would be reflected in the budget—in the later years—a time it is critical we contain and conquer our massive Federal deficits.

Mr. Speaker, the legislation we are introducing today can swiftly and decisively turn around the decline in our aging industrial sector. It responds to the festering cry that our Nation is losing the battle for our economic future. The proposal is important for a variety of reasons.

A defense force second to none can only be real if we are an industrial power second to none. It is folly to think that we can rely on other countries to supply our material demands in time of national emergency. Our defense posture must be built on an industrial base that is capable of quick expansion to support mobilization required for national security needs.

Second, Mr. Speaker, as many newfound gurus of high-tech policies trumpet their buzzwords on how our future lies in the aggressive pursuit of high technology industries, I think it is abundantly clear one sector can not survive or flourish without the other. High-tech is not a panacea. Our Nation is one of goods and services, and we must create an environment in which both operate in a compatible arena.

Moreover, 4½ million Americans rely on jobs in the basic industry sector. Writing off the basic industries such as steel, automobiles, mining, transportation, and chemicals will mean writing off millions of jobs. Other sectors in our economy cannot absorb most of these workers.

The legislation is vital to all industry in our efforts to regain our competitive edge in world markets. Years of anemic productivity, sagging profits, and protractedly high interest rates have led to a decline in our ability to compete abroad. The call for trade restrictions to protect our industry from foreign competitors will make our industry less competitive, not more, and may cut off the fragile recovery we are seeing globally. Our bill will allow us to meet our competitors outright with better products and technology.

Mr. Speaker, the legislation we are introducing today is not a veiled attempt to give industy a tax break. It is nothing more than a proposal which unlocks earned tax credits creating more jobs, and making American industry more productive.

It is a proposal which has been widely endorsed by both labor and management. Already, the House Steel Caucus has endorsed our bill, and I expect many other groups and organizations to come forward with their comments on how the proposal will foster a healthier, more productive industrial and service economy.

I hope we will act quickly on the legislation so that we may put tools in the hands of the millions of Americans who are wanting to work.

The bill follows:

H.R. 3434

A bill to amend the Internal Revenue Code of 1954 to facilitate industrial revitalization and employment by improving the efficiency of the investment tax credit

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; ETC.

(a) SHORT TITLE.—This Act may be cited as the "Work Opportunities and Renewed Competition Act of 1983."

(b) AMENDMENT OF 1954 CODE.—Whenever in this Act an amendment or an insertion is expressed in terms of an amendment to, or an insertion of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1954.

SEC. 2. EXCESS INVESTMENT CREDIT TREATED AS REINVESTMENT CREDIT.

(a) DETERMINATION OF EXCESS INVESTMENT CREDIT AMOUNT; ELECTION OF REINVESTMENT CREDIT.—Section 46 (relating to the amount of the investment credit) is amended by inserting after subsection (h) the following new subsection (i):

"(i) ELECTION TO TREAT EXCESS INVESTMENT CREDIT AS REINVESTMENT CREDIT.—

"(1) IN GENERAL.—The taxpayer may elect to treat all or any amount of the excess investment credit for the excess credit year as the reinvestment credit for purposes of section 59. In the case of a taxpayer electing under this subsection, the excess investment credit shall not be an investment credit carryback or carryover under subsection (b) except as provided under paragraph (4) thereof.

"(2) TIME AND MANNER OF MAKING ELECTION.—

"(A) IN GENERAL.—An election under this subsection with respect to the excess investment credit for the excess credit year shall be made not later than the later of—

"(i) the last day, including any extension of time, for filing the taxpayer's return of tax imposed by this chapter for the excess credit year, or

"(ii) 180 days after the date of enactment of this subsection.

"(B) CONSOLIDATED RETURNS.—

"(i) AFFILIATED GROUPS AS OF THE END OF THE EXCESS CREDIT YEAR.—In the case of an affiliated group (as defined in section 1504(a)) of corporations that make a consolidated return under section 1501 for the excess credit year, the election under this subsection shall be made by the common parent and shall apply to the consolidated excess investment credit of members of such group except a member of such group that is subject to clause (ii).

"(ii) MEMBERS ADDED TO AN AFFILIATED GROUP AFTER THE END OF THE EXCESS CREDIT YEAR.—In the case of a corporation which becomes a member of an affiliated group after the end of the excess credit year of such group, the election under this subsection shall be made only by such member and shall apply only to the excess investment credit of such member.

"(C) IRREVOCABLE.—The election made under this subsection shall not be revoked, and the amount elected shall not be changed.

"(D) FILING.—The election under this subsection shall be filed with the District Director where the taxpayer's return of tax imposed by this chapter will be filed for the current taxable year.

"(3) DEFINITIONS.—

"(A) EXCESS INVESTMENT CREDIT.—For purposes of this section, the term 'excess investment credit' means the excess of—

"(i) the amount of credit determined under subsection (a)(1) for the excess credit year, as of the close of such year, determined without regard to—

"(I) subsection (a)(1)(C), and

"(II) any amount attributable to the employee plan credit (within the meaning of section 48(o)(3)), over

"(ii) the sum of—

"(I) the limitation determined under subsection (a)(3) for the excess credit year, determined without regard to any carryback of a net operating loss determined under section 172, a net capital loss determined under section 1212, or a foreign tax credit determined under section 904, to the excess credit year or any taxable year preceding such year from a taxable year ending after such year, plus

"(II) the amount of carryback from the excess credit year allowable under subsection (b)(2).

"(B) EXCESS CREDIT YEAR.—For purposes of this subsection, the term 'excess credit year' means the last taxable year which ends before January 1, 1983.

"(4) SPECIAL RULE FOR REVOCATION OF A NET OPERATING LOSS CARRYOVER ELECTION.—Notwithstanding the last sentence of section 172(b)(3)(C) (relating to an election to relinquish a net operating loss carryback), in the case of an election made under such section prior to the enactment of this subsection to relinquish the carryback period with respect to a net operating loss for the excess credit year, such election shall be revoked if the taxpayer—

"(i) elects under paragraph (1) to treat all of the excess investment credit attributable to such revocation as reinvestment credit for purposes of section 59, and

"(ii) attaches a statement of revocation of the election made under section 172(b)(3)(C) to the election made under paragraph (1)."

(b) REINVESTMENT CREDIT.—Subchapter A of chapter 1 (relating to determination of tax liability) is amended by inserting after section 58 the following new part and new sections:

"PART VII—REINVESTMENT CREDIT

"SEC. 59. Reinvestment Credit.

"SEC. 60. Recapture of Reinvestment Credit Refunds.

"SEC. 59. REINVESTMENT CREDIT.

"(a) OVERPAYMENT OF TAX.—

"(1) GENERAL RULE.—An amount equal to 85 percent of each reduction determined under paragraph (2) shall be treated as an overpayment of tax under section 6401(d) for the taxable year which includes the information return period.

"(2) REDUCTION IN REINVESTMENT CREDIT.—The reduction determined under this subsection shall be equal to so much of the qualified investment of the taxpayer in reinvestment credit property as is reported on an information return filed for an information return period.

"(b) REDUCTIONS AND INCREASES IN REINVESTMENT CREDIT.—

"(1) IN GENERAL.—The amount of reinvestment credit, as elected under section 46(i), shall be reduced (but not below zero) by the net reduction as determined under paragraph (2).

"(2) NET REDUCTION.—For purposes of this section, the net reduction is the sum of—

"(A) the aggregate amount of reductions determined under subsection (b), less

"(B) the aggregate amount of any increases in tax under subsection (c).

"(c) RECAPTURE OR SUBSTITUTION OF QUALIFIED INVESTMENT.—

"(1) GENERAL RECAPTURE RULE.—If at any time before January 1, 1986, any reinvestment credit property in which the taxpayer has qualified investment is disposed of, or otherwise ceases to be section 38 property with respect to the taxpayer, the tax imposed by this chapter shall be increased by an amount, determined as of the close of the taxable year, equal to the sum of—

"(A) the net reduction determined under subsection (b)(2), less

"(B) the amount of qualified investment in reinvestment credit property as determined after taking into account all such dispositions or cessations.

"(2) SPECIAL RECAPTURE RULE FOR CASUALTIES, ETC.—Paragraph (1) shall not apply to reinvestment credit property that is disposed of or otherwise ceases to be section 38 property with respect to the taxpayer on account of its destruction or damage by fire, storm, shipwreck, or other casualty, or by reason of its theft.

"(3) SUBSTITUTION.—For purposes of the determination under paragraph (1)(B), the amount of qualified investment in reinvestment credit property with respect to which the disposition or cessation has occurred may be reduced by amounts which would constitute qualified investment in reinvestment credit property if 'January 1, 1986' were subsituted for 'January 1, 1985' in subsection (d)(1).

"(4) SPECIAL RULE.—Any increase in tax under paragraph (1) shall be treated as tax imposed by this chapter except for purposes of determining the amount of any credit allowable under subpart A of part IV of this subchpater.

"(d) DEFINITIONS.—

"(1) QUALIFIED INVESTMENT.—For purposes of this section, the term 'qualified investment' means the aggregate of—

"(A) the basis of each new section 38 property of the taxpayer (as defined by section 48(b)) placed in service by the taxpayer, reduced by the amounts described in subparagraphs (C) and (D) and taken into account with respect to a preceding taxable year,

"(B) qualified progress expenditures (as defined by section 46(d)(3)) of the taxpayer, reduced by the amounts described in subparagraphs (C) and (D) and taken into account with respect to a preceding taxable year,

"(C) to the extent not included in the amounts described in subparagraph (A) or (B) for the taxable year, the amount paid by the taxpayer to another person for acquisition of property by the taxpayer or for construction of property for the taxpayer, and

"(D) to the extent not included in the amounts described in subparagraph (A) or (B) for the taxable year, the amount which is properly chargeable to capital account with respect to property being constructed by the taxpayer

during the period after September 30, 1983, and before January 1, 1985.

"(2) REINVESTMENT CREDIT PROPERTY.—

"(A) IN GENERAL.—for purposes of this section, the term 'reinvestment credit property' means property which is—

"(i) new section 38 property (as defined by section 48(b)),

"(ii) progress expenditure property (as defined by section 46(d)(2)), or

"(iii) property which it is reasonable to believe, based on the facts known at the close of the information return period, will be described in clause (i) when placed in service by the taxpayer.

"(B) EXCLUDED PROPERTY.—For purposes of this section, the term 'reinvestment credit property' does not include—

"(i) public utility property (within the meaning of section 167(l)(3)(A)),

"(ii) property described by the Secretary in any asset guideline class pursuant to section 167, only if the taxpayer (or any predecessor taxpayer) had not placed in service any property in such asset guideline class prior to the end of the excess credit year (as defined in section 46(i)(3)(B)),

"(iii) office furniture and fixtures,

"(iv) property used in carrying out the activities of wholesale, retail or distributive trade.

"(v) property used in providing personal, financial or professional services,

"(vi) property used in the trade or business of providing recreation, lodging, food and beverages, or

"(vii) livestock

"(3) INFORMATION RETURN.—For purposes of this section, the term 'information return' means a return signed by the taxpayer and filed with the District Director where the taxpayer's return of tax imposed by this chapter will be filed for the taxable year, which provides information with respect to the qualified investment in reinvestment credit property.

"(4) INFORMATION RETURN PERIOD.—For purposes of this section, the term 'information return period' means a period beginning after September 30, 1983 and ending before January 1, 1985 and comprising not less than one month and not more than one taxable year, for which an information return is filed by the taxpayer.

"(e) OVERSTATEMENT OF REINVESTMENT CREDIT.—If the net reduction determined under subsection (b)(2) exceeds the excess investment credit (as defined by section 46(i)(3)(A)), the entire amount of such excess shall be treated as an underpayment of tax under section 6651 (relating to failure to file a tax return or to pay tax) and may be assessed in the same manner as in the case of a mathematical or clerical error appearing upon the return.

"(f) TREATMENT OF AFFILIATED GROUP.—For purposes of this section, in the case of an affiliated group that has made an election subject to section 46(i)(2)(B), the affiliated group shall be deemed to be the taxpayer.

"SEC. 60. RECAPTURE OF REINVESTMENT CREDIT REFUNDS.

"(a) INCREASE IN TAX.—There shall be added to the amount of tax imposed by this chapter on a taxpayer electing under section 46(i) the amount determined under subsection (b).

"(b) COMPUTATION OF ADDITIONAL TAX.—

"(1) IN GENERAL.—The amount determined under this subsection shall be the excess of—

"(A) the applicable percentage of the net reduction in the reinvestment credit (as determined under section 59(b)(2)), over

"(B) the sum of—

"(i) the aggregate amount of cancelled credit for the taxable year and for all preceding taxable years, plus

"(ii) the aggregate amount of additional tax imposed by subsection (a) for all taxable years preceding the taxable year.

"(2) APPLICABLE PERCENTAGE.—The applicable percentage of any taxpayer for any taxable year under this subsection shall be determined under the following table:

For the taxable year ending:	The applicable percentage is:
In 1986	20
In 1987	40
In 1988	60
In 1989	80
In 1990	100

"(c) SPECIAL RULE.—Any additional tax imposed under subsection (a) shall be treated as a tax imposed by this chapter except for purposes of determining the amount of any credit allowable under subpart A of part IV of this subchapter.

"(d) CANCELLED CREDIT.—For purposes of this section, the term 'cancelled credit' means the amount by which—

"(1) the credit allowed by section 38 for the taxable year, determined without regard to the election made under section 46(i), exceeds

"(2) the credit allowed by section 38 for the taxable year."

(c) REINSTATED INVESTMENT CREDIT.—Section 46(b) is amended by inserting after paragraph (3) the following new paragraph (4):

"(4) REINSTATEMENT OF AMOUNTS OF EXCESS INVESTMENT CREDIT AMOUNT AS CARRYOVERS.—

"(A) IN GENERAL.—The amount, if any, by which the excess investment credit (as defined by subsection (i)(3)(A)) exceeds the amount of canceled credit (as defined by section 60(d)), determined as of the end of the taxable year, shall be taken into account under subsection (a)(1)(A)—

"(i) to the extent of the unused reinvestment credit, for taxable years ending after December 31, 1984,

"(ii) to the extent of the amount by which the excess investment credit exceeds the reinvestment credit, for taxable years ending after December 31, 1985, and

"(iii) to the extent of the amount of repaid reinvestment credit, for taxable years for which a tax is imposed by section 60(a).

"(B) ORDERING RULE FOR USE OF EXCESS INVESTMENT CREDIT.—The unused credits comprised in the excess investment credit shall be allocated, in the order of the unused credit years to which they are attributable—

"(i) first to the amount of canceled credit (as defined by section 60(d)), then

"(ii) to the amount of unused reinvestment credit, then

"(iii) to the amount, if any, by which the excess investment credit exceeds the amount elected under subsection (i), and then

"(iv) to the amount of repaid reinvestment credit.

"(C) DEFINITIONS.—

"(i) UNUSED REINVESTMENT CREDIT.—For purposes of this subsection, the term 'unused reinvestment credit' means the amount by which—

"(I) the amount elected under subsection (i), exceeds

"(II) the net reduction determined under section 59(b)(2) as of December 31, 1984.

"(ii) REPAID REINVESTMENT CREDIT.—For purposes of this subsection, the term 'repaid reinvestment credit' means the aggregate amount of tax imposed by section 60(a)."

(d) OVERPAYMENT OF TAX; TAX REFUND.—

(1) Section 6401 is amended by inserting after subsection (c) the following new subparagraph (d):

"(d) REINVESTMENT CREDIT.—The term 'overpayment' includes the amounts determined under section 59(a) (relating to the reinvestment credit)."

"(2) Subchapter B of chapter 64 of subtitle F (relating to rules of special application of abatements, credits and refunds) is amended by inserting after section 6430 the following new section 6431:

"SEC. 6431. REINVESTMENT CREDIT.

"(a) REFUND GENERALLY.—The overpayment of tax determined under section 6401(d) (relating to the reinvestment credit) shall be refunded by the Secretary to the taxpayer following the filing by the taxpayer of an information return, as defined in section 59(d)(3). Such refund payment shall be made within 45 days of the filing of such return."

(e) EXCLUSION OF REINVESTMENT CREDIT PROPERTY FROM SAFE HARBOR LEASING ELECTION.—Section 168(f)(8)(D)(iv), as amended by section 208(b)(3) of the Tax Equity and Fiscal Responsibility Act of 1982, is amended by deleting "or" at the end of subclause (IV), by substituting a comma and "or" in lieu of the period at the end of subclause (V), and by inserting after subclause (V) the following new subclause (VI):

"(VI) reinvestment credit property (as defined in section 59(d)(2)) except to the extent of the qualified investment (as defined in section 59(d)(1)) in such property that is in excess of the total amount of qualified investment that is equal to the net reduction determined under section 59(b)(2)."

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. NIELSON of Utah) to revise and extend their remarks and include extraneous matter:)

Mr. MCEWEN, for 15 minutes, today.

(The following Members (at the request of Mr. WEAVER) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 30 minutes, today.

Mr. WEAVER, for 30 minutes, today.

Mr. JONES of Oklahoma, for 5 minutes, today.

Mr. LEVITAS, for 60 minutes, July 29.

Mrs. BOXER, for 60 minutes, July 12.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. NIELSON of Utah) and to include extraneous matter:)

Mr. FIELDS in two instances.

Mr. LENT.

Mr. PORTER in two instances.

Mr. LOWERY of California.

(The following Members (at the request of Mr. WEAVER) and to include extraneous matter:)

Mr. ANDERSON in 10 instances.

Mr. GONZALEZ in 10 instances.

Mr. BROWN of California in 10 instances.

Mr. ANNUNZIO in six instances.

Mr. JONES of Tennessee in 10 instances.
Mr. BONER of Tennessee in five instances.
Mr. COLEMAN of Texas.
Mr. MARKEY in two instances.
Mr. LEVITAS.
Mr. EDWARDS of California.
Mr. FRANK.
Mr. RICHARDSON.
Mr. LOWRY of Washington.
Mr. SIKORSKI.
Mr. KOSTMAYER.
Mr. BOUCHER.
Mr. PATTERSON.
Mr. FASCELL.

SENATE JOINT RESOLUTION REFERRED

A joint resolution of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S.J. Res. 34. Joint resolution designating "National Reye's Syndrome Week," to the Committee on Post Office and Civil Service.

ADJOURNMENT

Mr. WEAVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 40 minutes p.m.), the House adjourned until tomorrow, Tuesday, June 28, 1983, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1424. A letter from the Assistant Secretary of Defense (Manower, Reserve Affairs & Logistics), transmitting additional information on the defense manpower requirements for fiscal year 1984, pursuant to title 10, United States Code, section 138(c)(3); to the Committee on Armed Services.

1425. A letter from the Deputy Assistant Secretary of Defense (Comptroller-Administration), transmitting notice of the Navy's intention to omit the examination of records by Comptroller General clause in contract arrangements with the United Kingdom Government, pursuant to title 10, United States Code, section 2313(c); to the Committee on Armed Services.

1426. A letter from the Principal Deputy Assistant Secretary of the Navy (Shipbuilding and Logistics), transmitting notice of the proposed decision to convert to contractor performance the industrial shop services function at the Chesapeake Bay Detachment, Naval Research Laboratory, Washington, D.C., pursuant to section 502(b) of Public Law 96-342; to the Committee on Armed Services.

1427. A letter from the Chairman, Federal Deposit Insurance Corporation, transmitting the Corporation's annual report for calendar year 1982, pursuant to section 17(a) of the act of September 21, 1950; to the Committee on Banking, Finance and Urban Affairs.

1428. A letter from the Secretary of Labor, transmitting the 70th annual report of the Department covering fiscal year 1982, pursuant to section 9 of the act of March 4, 1983; to the Committee on Education and Labor.

1429. A letter from the Director, ACTION, transmitting final regulations for the Senior Companion program, the Foster Grandparent program, and the retired senior volunteer program, pursuant to section 420(d) of Public Law 93-113, as amended; to the Committee on Education and Labor.

1430. A letter from the Chairman, Federal Trade Commission, transmitting the 14th report on the impact on competition and on small business of the development and implementation of voluntary agreements and plans of action to carry out provisions of the international energy program, pursuant to section 252(i) of the Energy Policy and Conservation Act of 1975; to the Committee on Energy and Commerce.

1431. A letter from the Vice President, Government Affairs, National Railroad Passenger Corporation, transmitting a report on the Corporation's performance evaluation during the first 6 months of fiscal year 1983, pursuant to section 305(l) of Public Law 91-518, as amended; to the Committee on Energy and Commerce.

1432. A letter from the Secretary of the Interior, transmitting notice of a deferral of payment of the annual construction charge installment due for 1981 and 1982 from the H&RW Irrigation District, Pick-Sloan Missouri Basin program, Nebr., pursuant to section 17(b) of the Reclamation Project Act of 1939, as amended; to the Committee on Interior and Insular Affairs.

1433. A letter from the Assistant Secretary of the Army (Civil Works), transmitting a report dated May 4, 1983, from the Chief of Engineers, Department of the Army, on Mill Creek at Moab, Utah, together with other pertinent reports, pursuant to section 6 of the Flood Control Act of 1938; to the Committee on Public Works and Transportation.

1434. A letter from the Deputy Administrator of Veterans' Affairs, transmitting a draft of proposed legislation to amend title 38, United States Code, to expand the scope of the membership of the special medical advisory group; to the Committee on Veterans' Affairs.

1435. A letter from the Board of Trustees, Federal old-age and survivors insurance and disability insurance trust fund, transmitting the 1983 annual report of the Board, pursuant to section 201(c) of the Social Security Act; (H. Doc. No. 98-74); to the Committee on Ways and Means and ordered to be printed.

1436. A letter from the Comptroller General of the United States, transmitting a report entitled "Better Planning and Management of Threat Simulators and Aerial Targets Is Crucial to Effective Weapon Systems Performance" (GAO/MASAD-83-27, June 23, 1983); jointly, to the Committees on Government Operations and Armed Services

1437. A letter from the Assistant Secretary of State for Legislative and Intergovernmental Affairs, transmitting a draft of proposed legislation to implement the Convention on the Conservation of Antarctic Marine Living Resources; jointly, to the Committees on Foreign Affairs, Merchant Marine and Fisheries, and Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

[Pursuant to the order of the House on June 23, 1983, the following reports were filed on June 24, 1983]

Mr. DINGELL: Committee on Energy and Commerce. H.R. 2510. A bill to authorize appropriations to the Nuclear Regulatory Commission in accordance with section 261 of the Atomic Energy Act of 1954 and section 305 of the Energy Reorganization Act of 1974, and for other purposes; with an amendment (Rept. No. 98-103, Pt. II). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROSTENKOWSKI: Committee on Ways and Means. H.R. 2769. A bill to promote economic revitalization and facilitate expansion of economic opportunities in the Caribbean Basin region; with amendments (Rept. No. 98-266). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROSTENKOWSKI: Committee on Ways and Means. H.R. 3398. A bill to change the tariff treatment with respect to certain articles, and for other purposes (Rept. No. 98-267). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROSTENKOWSKI: Committee on Ways and Means. House Joint Resolution 290. Joint Resolution to permit free entry into the United States of personal effects, equipment, and other related articles of foreign participants, officials, and accredited members of delegations involved in the games of the XXIII Olympiad to be held in the United States in 1984. (Rept. No. 98-268). Referred to the Committee of the Whole House on the State of the Union.

SUBSEQUENT ACTION ON A BILL SEQUENTIALLY REFERRED

[Omitted from the Record of June 23, 1983]

Under clause 5 of rule X, the following action was taken by the Speaker:

Referral of H.R. 1510 to the Committee on Energy and Commerce extended for an additional period ending not later than June 28, 1983.

[Submitted June 27, 1983]

Referral of H.R. 3021 to the Committee on Ways and Means extended for an additional period ending not later than June 28, 1983.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BREAUX (for himself and Mr. FORSYTHE) (by request):

H.R. 3416. A bill to implement the Convention on the Conservation of Antarctic Marine Living Resources; jointly, to the Committees on Merchant Marine and Fisheries and Foreign Affairs.

By Mrs. BYRON:

H.R. 3417. A bill to amend the Social Security Act and Internal Revenue Code of 1954 to provide that disability insurance benefits and the medicare program shall be financed from general revenues rather than through the imposition of employment and self-employment taxes as at present, and to reduce the rates of such taxes for purposes of financing the OASI program accordingly; to the Committee on Ways and Means.

By Mr. FAUNTROY:

H.R. 3418. A bill to amend title 11 of the United States Code with regard to certain repurchase agreements; to the Committee on the Judiciary.

By Mr. SAM B. HALL, JR.:

H.R. 3419. A bill to amend title 17, United Stated Code, regarding the Copyright Royalty Tribunal; to the Committee on the Judiciary.

By Mr. PATTERSON (for himself, Mr. BARTLETT, Mr. COELHO, Mr. LEHMAN of California, Mr. FAUNTROY, Mr. FRANK, Mr. CARPER, Mr. TORRES, Mr. SHUMWAY, Mr. MCCOLLUM, Mr. LOWERY of California, Mr. SCHUMER, Mr. PARRIS, Mr. MITCHELL, and Mr. ANNUNZIO):

H.R. 3420. A bill to provide home buyers equitable access to the national secondary mortgage market; to the Committee on Banking, Finance and Urban Affairs.

JOINT RESOLUTION ON DEBT LIMIT PASSED UNDER RULE XLIX

Under clause 1 of rule XLIX, the following joint resolution was engrossed and deemed passed:

H.J. Res. 308. Joint resolution increasing the statutory limit on the public debt.

Under clause 5 of rule X and clause 4 of rule XXII, bills and resolutions of the following titles were introduced and severally referred, as follows:

H.J. Res. 308. Joint resolution increasing the statutory limit on the public debt; engrossed and deemed passed.

By Mrs. SMITH of Nebraska (for herself, Mr. FRENZEL, Mr. EVANS of Iowa, Mr. ROBERTS, Mr. JONES of Oklahoma, Mr. GIBBONS, Mr. HIGHTOWER, Mr. IRELAND, Mr. EMERSON, Mr. MARLENEE, Mr. GINGRICH, Mr. HANSEN of Idaho, Mr. LUJAN, Mr. MORRISON of Washington, Mr. LAGOMARSINO, Mr. STENHOLM, Mr. BEDELL, Mr. SKEEN, Mr. HATCHER, Mr. CHENEY, Mr. MARRIOTT, Mr. DANIEL B. CRANE, Mr. PORTER, Mr. CORCORAN, Mr. NIELSON of Utah, Mr. CONABLE, Mr. WINN, Mr. EDWARDS of Oklahoma, Mr. STUMP, Mr. ROGERS, Mr. DICKINSON, Mr. TAUKE, Mr. LOEFFLER, Mr. GUNDERSON, Mr. GLICKMAN, Mr. PHILIP M. CRANE, Mr. WHITTAKER, Mr. ROBERT F. SMITH, Mr. WEBER, Mr. THOMAS of California, Mr. BEREUTER, Mr. HARTNETT, Mr. COATS, Mr. HYDE, Mr. WATKINS, Mr. KINDNESS, Mr. BROWN of Colorado, Mr. MOORHEAD, Mr. MILLER of Ohio, Mr. ANTHONY, Mr. COLEMAN of Missouri, Mr. WOLF, Mr. SLATTERY, Mr. HEFNER, Mr. GRAMM, Mr. ROBINSON, Mr. CRAIG, Mr. ENGLISH, Mr. LEACH of Iowa, and Mr. HANSEN of Utah):

H. Con. Res. 136. Concurrent resolution expressing the sense of Congress in opposition to further expansion of cargo preference requirements; to the Committee on Merchant Marine and Fisheries.

By Mr. YATRON:

H. Con. Res. 137. A resolution urging the President to implement certain relief measures to remedy the import injury to the U.S. specialty steel industry; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. CONTE introduced a bill (H.R. 3421 for the relief of Mary E. Hock, executrix of the will of Joseph E. LePage; which was referred to the Committee on the Judiciary.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 430: Mr. CLAY.

H.R. 433: Mr. BEDELL, Mr. CONYERS, and Mr. LEHMAN of Florida.

H.R. 1016: Mr. PRICE, Mr. D'AMOURS, Mr. PURSELL, and Mr. FEIGHAN.

H.R. 1226: Mr. WEBER and Mr. DERRICK.

H.R. 1234: Mr. APPLEGATE, Mr. SOLARZ, Mr. SCHEUER, Mr. BERMAN, Mr. PATTERSON, and Mr. WEISS.

H.R. 1676: Mr. BOEHLERT, Mr. CARPER, Mr. CONYERS, Mr. COYNE, Mr. FRANK, and Mr. ST GERMAIN.

H.R. 1797: Mr. HEFTEL of Hawaii, Mr. RATCHFORD, Mr. HARKIN, and Mr. MCCOLLUM.

H.R. 2131: Mr. WEISS.

H.R. 2468: Mr. ROBINSON, Mr. BRITT, Mr. BEILENSON, Mr. MCGRATH, Mr. KASICH, Mr. SIMON, Mr. FROST, Mr. FASCELL, and Ms. KAPTUR.

H.R. 2691: Mr. MOLLOHAN.

H.R. 2814: Mr. COELHO, Mr. SABO, Mr. PURSELL, and Mr. BERMAN.

H.R. 2817: Mr. HOYER, Mrs. SCHNEIDER, Mr. MITCHELL, Mrs. BYRON, Mr. ST GERMAIN, Mr. GOODLING, Mr. DANIEL, Mr. FOGLIETTA, Mr. WOLF, Mr. BOUCHER, Mr. OLIN, Mr. EDGAR, Mr. KOSTMAYER, Mr. WHITEHURST, Mr. FAUNTROY, Mr. SISISKY, and Mr. BLILEY.

H.R. 3024: Mr. BADHAM and Mr. EMERSON.

H.R. 3081: Mr. FORSYTHE, Mr. SKEEN, Mr. DENNY SMITH, Mr. LIVINGSTON, Mr. WEBER, Mr. CORCORAN, Mr. WHITEHURST, Mr. KINDNESS, Mr. DAUB, Mr. BROYHILL, Mrs. VUCANOVICH, Mr. MCCOLLUM, and Mr. NIELSON of Utah.

H.R. 3106: Mr. SPRATT.

H.R. 3251: Mr. SCHUMER.

H.R. 3387: Mr. FRANK and Mr. WAXMAN.

H.J. Res. 139: Mr. HALL of Ohio, Mr. PACKARD, Mr. GEKAS, Mr. DANIEL B. CRANE, Ms. FIEDLER, Mr. BORSKI, Mr. HAMILTON, Mr. MCCANDLESS, Mrs. KENNELLY, Mr. CAMPBELL, Mr. DOWDY of Mississippi, Mr. BADHAM, Mrs. JOHNSON, and Mr. SHAW.

H.J. Res. 218: Mr. VANDER JAGT and Mr. TRAXLER.

PETITIONS, ETC.

Under clause 1 of rule XXII,

149. The SPEAKER presented a petition of the American Association of Airport Executives, Washington, D.C., relative to transportation facilities; which was referred to the Committee on Public Works and Transportation.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 2668

By Mr. DERRICK:

—On page 18, beginning in line 2, strike out "The" and all that follows through "b" in line 9 and redesignate subsection (c) as subsection (b).

H.R. 2769

By Mr. DE LUGO:

—Insert a new paragraph (b)(3) and change subsequent subparagraph enumerations accordingly:

(3) Any bulk rum (classified under item 169.14 of the Tariff Schedules of the United States (19 U.S.C. § 1202)) imported from a beneficiary country the value of which is equal to or less than $3.00 per proof gallon: *Provided,* That, notwithstanding any other provision of law, any rebate, in whole or part, of, or other decrease in, the price actually paid or payable that is made or otherwise effected with respect to or in respect of the sale of such rum after the date of the importation of the bulk rum into the United States shall be taken into account in the determination of the value of the bulk rum: *And provided further,* That, this paragraph shall not apply to the first 200,000 proof gallons total imported from all such beneficiary countries during any calendar year.

SENATE—*Monday, June 27, 1983*

The Senate met at 10 a.m., and was called to order by the President pro tempore (Mr. THURMOND).

PRAYER

The Chaplain, the Reverend Richard C. Halverson, D.D., offered the following prayer:

Let us pray.

Praise the Lord! O give thanks to the Lord, for He is good; for His steadfast love endures forever.—Psalm 106: 1

Merciful God, Thou hast blessed us and our land with incalculable abundance. We enjoy resources as no other nation, we enjoy freedom as no other people. In a world in which most people never have enough of anything, we always have more than enough of everything. Forgive us for our ingratitude, our prodigality and waste.

As the Apostle Paul declared "* * * although they knew God they do not honor Him as God or give thanks to Him * * *" as a result of which "they became futile in their thinking and their senseless minds were darkened." (Romans 1: 20, 21.) Help us Lord to appreciate the unprecedented benefits we enjoy, to be thankful and live thankfully. In Jesus' name. Amen.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. The majority leader is recognized.

Mr. BAKER. I thank the Chair.

AMERICA FOR ME

Mr. BAKER. Mr. President, this week's poem, in honor of the upcoming celebration of our Nation's independence, was written by Henry Van Dyke, and is entitled "America For Me." It was read at the 32d Republican National Convention by the Honorable GUY VANDER JAGT, and I ask unanimous consent that the poem be printed in the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

'Tis great to see the old world and wander up and down
Among historic palaces and the cities of reknown
And admire crumbly castles and the statues of the kings,
But now I think I've had enough of antiquated things.
So now it's home again and home again—America for me.
My heart is turning home again and there I long to be,
In the land of youth and freedom beyond the ocean bars
Where the air is full of sunlight and that flag is full of stars.

Oh London, it's a man's town, there's power in the air.
And Paris, it's a woman's town with flowers in her hair.
And it's sweet to dream in Venice and it's great to study in Rome,
But when it comes to living there is no place like home.
I know that Europe's wonderful, yet something seems to lack,
The past is too much with her, the people looking back,
But the glory of the present is to set the future free.
We love our land for what she is and what she is to be.
So it's home again and home again—America for me.
I want a ship that's westward bound to plow that rolling sea,
To the blessed land of room enough beyond the ocean bars
Where the air is full of sunlight and that flag is full of stars.

SENATE SCHEDULE

Mr. BAKER. Mr. President, today, after the recognition of the two leaders under the standing order, there will be a period for the transaction of routine morning business of not more than 30 minutes in length in which Senators may speak for not more than 5 minutes each.

For some time now the leadership on this side has expressed its desire to redeem a commitment made to Senator HATCH before the Senate adjourned last year, to take up Senate Joint Resolution 3, the Hatch abortion amendment, sometime this year and possibly before summer. We have missed the summer part, but I intend to go ahead with the commitment otherwise. So, after the time for the transaction of routine morning business has expired, it will be my intention to ask the Senate to turn to that measure, which is Calendar order No. 235, Senate Joint Resolution 3.

Mr. President, I expect this debate to consume all of this day. I do not anticipate votes on this resolution. I am told by the principals that amendments to the resolution are not anticipated. Therefore, while it is not impossible that we will have votes today, I think it is unlikely.

Let me repeat what I said earlier, however. If votes are ordered today, they will be conducted today. We will not stack them until tomorrow. Once again, I do not anticipate them today. I anticipate, instead, a vote on final passage or in relation to that sometime tomorrow.

In that connection, Mr. President, I hope the minority leader might be agreeable to explore any possibility of a time certain for consideration of this matter, either on the resolution or in relation to it. I would suggest we do it either just before the two caucuses which occur on Tuesday at noon or just after the two caucuses. I will confer further with the minority leader on that and, of course, with the managers on both sides of this issue.

Mr. President, in addition to this, there are a number of other matters that we have to deal with this week. One that comes to mind is the agriculture appropriations bill which is here. I am told that there is a good prospect that we may work out something on that so it will not take a long time to finish that measure. I will also consult with my friend, the minority leader, if there is some possibility for a time limit on debate of the agriculture bill and perhaps a time certain for final passage.

In addition, Mr. President, we have the tax cap passed by the House of Representatives. It is my intention to schedule that for Tuesday, if possible. I will consult once again with the minority leader on a time and the circumstances, but I hope we can do that in fairly short order, as well.

Earlier this year, I committed to the minority leader that we would schedule that item if it was passed by the House. It has now been passed by the House. He understands, as I have announced before, that I am opposed to it and that it is my hope that the Senate will not agree to the proposal made by the House of Representatives. However, it will be my intention to schedule that tomorrow or the next day.

Mr. President, other matters, such as conference reports, may be dealt with, or appropriation bills if they are available. But I am convinced now that we can finish this week on Thursday instead of Friday, that would be my objective, so that the Senate could go out on the 30th instead of the 1st.

I will ask the officers of the Senate to prepare an adjournment resolution reflecting that possibility and I would propose to pass it here if the Senate is agreeable and send it to the House of Representatives one day this week.

So, in summary, the things we have to do so we can get out of here by Thursday, or even sooner if we can finish them, would be the abortion debate, the agriculture appropriations bill, the tax cap, any conference reports that are available, and any other approriations bills that may become available between now and then.

There is at least one other item that I announced earlier that I had hoped to bring up before the July 4 recess,

and that is Radio Marti. I am sorry to say that cannot be done before the July 4 recess. However, I wish to announce now that it will be my intention to ask the Senate to turn to Radio Marti after we return.

Immediately after we return from the Fourth of July recess, it is presently the intention of the leadership on this side to ask the Senate to turn to the Department of Defense authorization bill. Then there are a number of other contenders thereafter: The coal slurry pipeline, which I have agreed we will schedule some time this year, but I have indicated to my friends on both sides of the aisle I have not agreed to take up immediately after the Department of Defense authorization bill. I thought I had done a brave and generous thing when I said I would take it up at all. But we will take it up. However, it is not likely to be immediately after the Department of Defense bill.

But, Radio Marti is one, of course, and appropriation bills are others and we will address those issues as we get closer to the time involved.

Mr. President, I have three other matters that I would like to address, and I apologize to the minority leader for taking so much time.

(Mr. PRESSLER assumed the chair.)

UNANIMOUS-CONSENT AGREEMENT—H.R. 1183

Mr. BAKER. Mr. President, I ask unanimous consent that when the Senate receives from the House of Representatives the bill H.R. 1183, to amend the Internal Revenue Code of 1954 to limit to $700 the maximum reduction in individual income tax resulting from the third year of the rate cuts enacted by the Economic Recovery Tax Act of 1981, that the bill be considered as having been read twice and held at the desk and that the majority leader after consultation with the minority leader be authorized to make the measure the pending business of the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I thank the minority leader and I thank the Chair.

Mr. BYRD. I thank the majority leader.

CONGRESSIONAL SALARIES AND INCOME

Mr. BAKER. Mr. President, nothing gives the Senate more personal anguish than the matter of our pay and restrictions on income. I have in the past observed and remarked that I think the Congress is institutionally incapable of adjusting its own pay and benefits, at least without great pain and suffering.

I will remark, by the way, that one of the amendments to the Constitution submitted with the original collection of amendments adopted and known now as the Bill of Rights was one dealing with pay to Members of Congress that was not adopted. That amendment would have avoided what I consider to be a patent and fundamental conflict of interest; that is, the requirement that Congress set its own salary. I intend to speak further on that at another time.

It is a matter of more than just historic interest that this question and this difficulty has been with us since the beginning days of the Republic.

I would like to take this opportunity, however, to express my congratulations to the Senator from Utah (Mr. GARN) for offering an amendment which would provide for a limitation on the amount of unearned income that a Member of the Senate might receive during his tenure. The Senate has now placed a limitation on the amount of earned income beyond the salaries Members receive, and I think it is fair and simple equity to indicate that there should be a similar limitation on unearned income. I voted for that amendment. I supported it.

I would observe two things, Mr. President. The first is we are going about this all wrong. We ought to remove that constitutional conflict of interest. Senator LONG and I have introduced and will pursue a constitutional amendment that will remove the pay-setting responsibility from the Congress and place it in a constitutional pay commission.

Second, Mr. President, the whole question of earned or unearned income limitation would never arise if we were not totally dependent for our livelihood, those of us who do not earn income, on the Federal Treasury. We should not be. I will not preach my sermon on the citizen Congress again this morning, but it has long been and is now my contention that there should be no limitation on earned or unearned income. We should not be paid at the levels we are now, but rather, we should be encouraged to have outside activities and have full disclosure so that a political judgment can be made on whether our activities and undertakings are appropriate or inappropriate to the civil trust that devolves upon us as Members of the Senate of the United States.

So, as long as we have the constitutional responsibility to set our salaries, it seems to me that simple equity requires that the restriction should apply equally to earned and unearned income. But it is my ambition, Mr. President, to see that we remove that responsibility from Congress by a constitutional amendment and that we refrain from making ourselves totally dependent on the Federal Treasury in any event by encouraging rather than restricting or prohibiting outside activity which gives us the status of full-time legislators instead of civil servants of the Government on a civil basis.

ADDRESS BY SENATOR HEINZ AT SENIOR POWER DAY RALLY

Mr. BAKER. Mr. President, the senior Senator from Pennsylvania, JOHN HEINZ, chairman of the Senate Special Committee on Aging, recently gave the keynote address at the Senior Power Day rally in Lansing, Mich., urging older Americans to use their influence as a lobbying group for the good of all Americans, and not to pursue self-interest at the expense of the national interest. Judging from the response of the audience, our colleague's message was well received, and stands as a testament to the Republican Party's efforts to convince Americans that pandering to the selective agenda of each and every special interest group does a great disservice to the national interest and, ultimately, to the ability of the Nation to meet the needs of any interest group.

Mr. President, the address of Senator HEINZ reflects the Republican Party's compassion and support for older Americans, and our party's deep and abiding interest in working with and for the good of all Americans. Because his remarks reflect a progressive view of senior power, and because they constructively address some of the major issues we face in our national domestic policy, I believe that we can all benefit from his discussion of the national agenda for older Americans, and I commend his remarks to my colleagues.

I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD as follows:

REMARKS OF SENATOR JOHN HEINZ

Honored Guests and Ladies and Gentlemen, I am honored to be here today with you and to be part of the eighth annual Michigan Senior Power Day. I commend you on a thoughtful eight-point platform, and, as Chairman of the Senate Special Committee on Aging, I look forward to working with you to improve our ability to meet the needs and expand the opportunities of all older Americans.

I'd like to especially thank Republican Senate Leader John Engler for his kind and generous introduction.

I'd particularly like to acknowledge the tremendous job your two co-chairs have done in putting this day together. Keith McCall and Dorothy Walker and their colleagues on the Steering Committee have worked hard to make today's Senior Power Day such a success. Today's gathering is unique—it is the only one of its kind in the nation, and you have done it with only a small budget and volunteer help. Let me congratulate you. And Ladies and Gentlemen, I think they deserve a big round of applause from us all.

Today we are here to celebrate the harvest and bounty of Senior Power. It seems to me that Senior Power has gained tremendous recognition over the past few years as a force to be reckoned with in Washington and across the country. There is no denying that the immediate and massive responses of seniors and their families were critically important in helping to reject the ill-advised efforts of some to make crippling budget cuts in the Older Americans Act, in the Senior Employment Program and in Energy Assistance—all so important to older persons—and to halt arbitrary and counter-productive cuts in the Social Security and Medicare programs so essential to all older Americans.

Yes, Senior Power has been successful and important. But it seems to me that in 1983 we've come to a turning point, a time when the basic policital realities are changing, a time when we should ask—what does the idea of senior power mean for the future?

Does it mean expanding the clout of just another well-organized and well-funded special-interest group, like those which protect tax breaks for oil producers or subsidized water projects for western agribusiness? Does it mean pursuing the politics of immediate self-interest, often at the expense of other worthwhile goals or programs serving important purposes in our society?

Well, I reject this characterization, and I know you reject it too. Instead, we can affirm a more positive and inclusive understanding of Senior Power—one that is based upon a willingness to invest for the future, one that has a sensitivity to the needs of all Americans, young or old, retired or working, healthy or sick, poor or financially secure.

Let me explain why I believe 1983 marks a turning point for Senior Power. Only one year ago, this country was mired in the quicksand of partisan politics over the issue of what to do about saving the social security system. The issue had become the hottest political football of the decade and the subject of some of the worst political demagoguery I've seen in my eleven years of public service. Some political figures weren't honest with the facts, and tried to pretend we could save social security without pain or any hard decisions. As a result, most people with any common sense thought that the system—upon which 35 million Americans depend—was doomed because the Congress couldn't even agree how big the problem was, let alone face up to solving it.

Well, as a member of the National Commission of Social Security Reform, I can tell you that the issue pushed the Congress to the brink of total irresponsibility—we almost didn't do the job we had to do. For a solution to emerge, everyone had to give a little, and every special interest had to yield to a larger public interest.

But, with the bill signed by the President only three weeks ago, we have just taken the most successful step in two decades to ensure that the retirement security promise made to retired and working people today is a promise kept to the workers and retirees of tomorrow.

Now, had the Congress been operating under a selfish, special-interest understanding of Senior Power, the result would have been quite different and, I believe, disastrous. If we had acted on the traditional notion of interest group politics, a notion based on meeting immediate needs without too much thought to future economic implications, what would have happened?

Well, instead of a package that distributed the costs of restoring solvency fairly among workers, employers, taxpayers and the retired, Congress might once again have simply raised payroll taxes to cover social security's deficit—as we've already done every 30 months for the last 30 years and more recently done 6 times in the last 12 years.

But that didn't happen, and it didn't because senior citizens all across America realized that continually raising payroll taxes on jobs raises the cost of jobs, reduces the number of jobs, and hurts their children and grandchildren. And their unemployment in turn threatens our ability to finance the health and retirement programs you depend on.

Of course, the social security bill doesn't make any group happy. But it does represent an extremely important departure from narrow interest-group politics. In short, the Congress finally recognized, as you have, that we can't ensure adequate retirement security without also ensuring economic growth for our nation. The interest of one group is now inseparable from the interest of all. And thanks to you, and to enlightened Senior Power, the old notion of special-interest group politics is becoming the politics of the past.

In this spirit, I want to suggest to you today another challenge for enlightened Senior Power—the question of how we save our jobs and our communities in this, our industrial heartland.

Some people say we shouldn't worry about our basic industries, that computers and an information-based economy are going to solve our problems. Others say "just be patient"—that, in time, maybe a few years, things will get better and then our autoworkers in Detroit and our steelworkers in Pittsburgh will get back in the plants and mills. Still others say we shouldn't care, that we should be indifferent about whether Americans drive Toyotas or Chevrolets.

Well, this is one senator that does care, and thinks you do, too! We know that the day the sun sets on our smokestack industries is the day the sun sets on America's future—and we must not allow that to happen!

Your generation built this country through industrial growth, and now we need your help in preserving it. We need your experience and concern, your common sense and commitment, to help fashion a solution and see it through to its realization.

It's well and good for people to anticipate the "high tech" jobs promised for tomorrow. But you and I both, Americans working and retired together, must be concerned about the jobs and industries of today—industries which employ 100 million Americans in the jobs of today.

Now, part of the problem of steel or autos or farm equipment is foreign import competition, some fair, some unfair.

I'm no protectionist, but there is nothing in our trade agreements that says you or I have to stand idly by while American workers in vulnerable industries are sacrificed to inaction and indifference. And, frankly, there doesn't have to be a choice between a trade war, and acquiesing in the demise of our smokestack industries. We can have strong, competitive industries without making that Hobson's choice. There's no reason why we can't provide reasonable import relief married, through legislation, to a comprehensive recovery plan—agree to by management, labor, and government—that will make an industry truly strong and competitive again. What I propose is to actually link badly needed import relief by law to a labor-management self-help plan to modernize our basic industries.

In many ways, this is exactly what the legislation did that helped Chrysler Corporation, but there, we provided government loan guarantees instead of import relief. As a condition for help, we required Chrysler stockholders to make investments, its banker to put up more money, it workers to make contract concessions, and its management to take pay cuts. Chrysler has been a very big success—but, it's only one company in only one industry.

We need to enact legislation—such as my own Industrial Revitalization Act—that will allow any or all of our hard pressed industries to get import relief, modernize, and regain the strength we used to have so we can re-open production lines and shorten unemployment lines.

You probably didn't expect me to ask you to help save jobs and industry in this country today, but I can't think of a more logical group of people to ask. You understand what our basic industries have meant to our national defense, to our cities, to our region, and what they must always mean to our industrialized, civilized country.

You can let your elected representatives know, and your friends and neighbors in business and labor know, that you want action to get our basic industries moving again, and that you won't accept a business as usual attitude so long as our factories remain shut and so long as jobs are being moved to the sunbelt. Today I urge you: put Senior Power to work so America can get back to work.

Now I'd like to propose an equally vital challenge for Senior Power—one that directly affects your pocketbook as well as that of every American. This is the challenge of controlling health care costs.

As older persons, you know what rising health costs have meant to your own budgets. Senior citizens average out-of-pocket costs are rising at $150 a year—and between $200 to $250 a year here in Michigan—so that persons over 65 are paying an average of over $1200 this year alone in out-of-pocket medical costs, and that cost is inexorably and dramatically rising. You're feeling the effects of dramatic increases in hospital and doctor bills, costs which have increased by two to three times the general rate of inflation over the past several years.

What will happen if these increases are not brought under control? Well, we've already seen proposals to try to keep Medicare solvent by simply shifting these costs to others. Higher costs can be shifted to your children through higher taxes and higher health insurance premiums, and they can simply be transferred to you through ever-higher deductibles and co-payments.

But cost shifting is not cost saving, and it's just not acceptable as a solution.

As a nation, we cannot stand back and let health costs become the greatest threat to the future health and economic security of retired persons. It's time to fight back, and I've got three suggestions for using Senior Power to get health costs under control:

First, we in the Congress need your help as partners to protect our system of health insurance from fraud and abuse. Last year, I chaired hearings which exposed fraud and waste in the marketing of heart pacemakers to the tune of $1 billion a year. We might not have looked at that problem if Mrs. Madeline Garman from Sarasota, Florida, hadn't noticed that Medicare had been billed $3,900 for her replacement pacemak-

er—a replacement that was supposed to have been free under the original warranty. At age 89, she wrote to the Aging Committee to complain. Subsequently, other seniors reported suspicious billings with regard to pacemakers, and a full-scale Congressional investigation was put into motion.

Fraud and abuse cost our Federal health programs an estimated $10 billion each year, almost twenty-cents on the dollar. Neither Congress nor computers can catch up to all of it. The most effective watchdog to keep our health insurance system honest and efficient is an informed and alert consumer. We need your help to keep Medicare healthy instead of letting medicare keep unscrupulous providers wealthy. And it's not just Medicare that needs policing—it's every health insurance plan. And that brings me to my second suggestion:

Older persons can lead the way to being more price and quality conscious in the medical marketplace. When you go food shopping, you are interested in getting good quality for the best possible price. So it should be when you look for medical care and health insurance.

For example, supplemental policies which provide first dollar coverage—Medigap policies many of us call them—are not generally the best insurance buy. Other policies which protect only against dread diseases, or those which pay a flat amount per day if you are hospitalized, may offer only the illusion of protection.

I think there is a tremendous potential for older Americans, as informed health-insurance consumers, to exercise their combined economic clout to promote more innovative and cost-effective forms of health insurance. For example, pre-paid plans typically offer better benefits and more effective cost controls than traditional fee-for-service arrangements. Last year, with the help of many of the national aging organizations, Congress adopted my legislation to make it easier for Medicare beneficiaries to join health maintenance organizations or other pre-paid health plans. Rather than have to worry about extra pills and paperwork every time they get sick, many seniors can now join these plans—which have the same financial interests they do in preventing illness and keeping them well.

Finally, I would suggest that you become advocates for health care reform. Some people say the key to reform is simply to make the patient pay more of the cost; others say the key is simply to cover all costs and have somebody else pay for it. I suggest neither alternative best serves senior citizens and our country.

We've gone through a period of many years in this country of debating various national health insurance plans. Well, in my judgment, the real result of this prolonged debate has been that we, as advocates, haven't been minding the store. We haven't been addressing the real and immediate problems such as unnecessary hospital and nursing home admissions, or the lack of any meaningful budgeting on the part of hospitals. We haven't sufficiently protected against hospital over-building or against duplication in expensive medical equipment. These costs are going to be charged to someone, whether we need the extra beds and equipment or not.

Instead, like a dog chasing its tail, all we've been doing is raising taxes and premiums trying to keep up with runaway costs. Instead of going around in circles, we need to get things straightened out. And we have very little time.

Since 1980, hospital costs have risen at over 18 percent a year—over three times the inflation rate. The result is that Medicare is now projected to run out of funds as early as 1987—only four short years from now—and will accumulate a deficit of over $300 billion by 1995 . . . a solvency crisis even bigger than the one that was facing social security. Clearly, we in Congress can't wait until 1987 to address a threat of this magnitude.

The reason everyone is paying more and more for health care, including Medicare patients, is because the present system is based on a cost-plus concept, emphasizes paying for units of health care rather than patient health maintenance, and encourages expensive hospitalization over out-patient care. The alternatives for dealing with the problem include shifting to a more complete prospective payment system, hospital cost-containment approaches, and changing utilization and physician incentives.

To begin to straighten things out, we've just enacted a significant change in the way Medicare pays hospitals—it's called prospective payment by diagnostic category. While it's an important step toward getting hospitals on a budget, its only a step—not a solution.

I urge you today to help us structure and enact a more comprehensive reform package to get health costs back under control. If you as seniors will once again assert your know-how and power, you will have helped lift a heavy burden off the shoulders of all Americans.

So I ask you, I urge you, I plead with you to join as partners in detecting fraud and waste, to lead the way as informed consumers, and to spearhead the advocacy for progressive health care reform. I make this urgent request because in my experience, you can make all the difference. It is a big job; it's a challenge, and it is fully worthy of your and our best efforts, and together with Senior Power we can and will succeed.

You are fighters. Your generation fought to build this country through two world wars and a great depression. It was you who made possible the greatest economic growth this country has ever seen. It was a big job—and today, Senior Power has a new challenge—another big job.

With your support, we succeeded in restoring solvency to Social Security. Now we need your support in getting industrial America back to work and in fighting inflation in medical bills. Together, we can meet the challenges.

I look upon my chairmanship of the Senate Aging Committee as a special trust to be an advocate for older Americans. What I have discussed with you today is part—but only part—of an urgent national agenda to meet the needs and promote expanded opportunity for older Americans.

In my view, the exciting promise of Senior Power lies not only in the specific agenda of policy and program ideas that affect our political life. The promise of Senior Power goes beyond that. Working together, we can lay the groundwork for a society that respects age and the elderly, and that truly realizes the benefits of the experience, wisdom, and judgment of older Americans. With Senior Power, we can make a brighter future, not only for older Americans, but for our children and our children's children—the older Americans of the future.

Mr. BAKER. Mr. President, once again I apologize to the minority leader for using so much time.

RECOGNITION OF THE MINORITY LEADER

The PRESIDING OFFICER. The minority leader is recognized.

Mr. BYRD. I thank the Chair.

MISSING IN ACTION IN SOUTHEAST ASIA

Mr. BYRD. Mr. President, America is a nation with far-flung interests and commitments in all major regions of the globe. As a great power America today is exercising her responsibilities with particular focus on Central America, the Middle East, NATO, and Soviet relations. Over time, our Nation's interests shift to meet the challenges of the moment. This is in the nature of things, of course, but in executing such shifts in national attention, our collective national memory is too short. Such is the case with reference to Southeast Asia.

It is perhaps inevitable that the stinging disappointments that we experienced in the prolonged Vietnam conflict have resulted in a serious lack of attention to the human tragedy that now engulfs the states of Indochina—Vietnam, Laos, and Cambodia. It is important that we remind ourselves that America always has been and remains an Asian power with important military and commercial interests across the arc of the Pacific. It is important that we maintain a sense of responsibility to that region: An adequate level of awareness of events; an awareness of the interests of our Asian allies in maintaining a sufficient level of involvement there; and a commitment to America's unfinished business.

At the top of the list of America's unfinished business is the matter of the over 2,400 missing in action—both civilian and military—in the Vietnam theater.

Mr. President, 2,494 Americans are listed by the Department of Defense as "missing or otherwise unaccounted for" in Southeast Asia. This list includes military and civilian personnel, men and women, all in the service of their country. I have before me a copy of that list. Seeing so many names is a numbing experience. As I look through page after page of these names, the obvious questions recur. Where are these men and women? Are some of these Americans alive? Are they being held prisoner? Of those who have died, where are their remains? This list raises so many questions. Yet, 8 years after the end of American military involvement in Southeast Asia, we have very few answers. We are left with gnawing doubts, uncertainty, and pain.

Of course, these doubts and pain are most acutely felt by the families of those missing. Through the uncertainty, they retain remarkable strength of

spirit. They have organized vigils, met with officials, written countless letters and articles—all to the end that their fellow Americans not forget their loved ones, and that efforts to obtain their release be intensified. I am not satisfied that the country has shown sufficient resolve in insisting upon a full accounting of those missing. But I want to call upon my colleagues to redouble their efforts, to urge the administration to do all it can do, so that the families of those brave Americans will no longer need to live with uncertainties. Organizations such as the National League of Families of POW/MIA's, the Vietnam Veterans Institute, the American Legion, the Veterans of Foreign Wars, and others have done a great service by the commitment of their membership to resolution of this issue. I know we all benefit from the example of love and devotion that the families and friends of those missing provide.

I feel it is incumbent upon the Congress to call attention to this issue; to summon all Americans to support a full accounting for their 2,494 countrymen. I can think of no more fitting way to accomplish this than by striking a special commemorative national medal to be awarded to those missing or otherwise unaccounted for, and to be presented to their families by the Congress. To that end, I am offering the following legislation to authorize a national commemorative medal in recognition of the sacrifice and untold hardships endured by those missing.

In addition, I ask unanimous consent that the list of those missing and otherwise unaccounted for, as currently provided by the Department of Defense, be included in the RECORD. It contains the names of 26 of my fellow West Virginians, along with all other Americans whose return is of vital concern to this Nation, and free men everywhere, or at least to have the knowledge of what happened to their remains.

There being no objection, the listing was ordered to be printed in the RECORD, as follows:

U.S. CASUALTIES IN SOUTHEAST ASIA

[Alphabetic listing by State]

Military service	Country of casualty	Name	Grade	Date of casualty	Date of birth	City
Alabama (46):						
Marine Corps	VS	Bailey, John Howard	E5	May 1, 1967	July 5, 1947	Docena.
Air Force	LA	Bannon, Paul Wedlake	O6	Jan. 22, 1979	Oct. 15, 1934	Hueytown.
Air Force	VN	Bennett, William George	O5	Sept. 2, 1967	Sept. 15, 1927	Birmingham.
Army	VS	Bobe, Raymond Edward	E6	Nov. 6, 1978	Aug. 30, 1948	Tarrant.
Navy	VS	Burnett, Donald Frederick	E8	Feb. 6, 1968	July 6, 1935	Montgomery.
Army	VS	Burnham, Donald Dawson	O5	Oct. 4, 1978	Apr. 20, 1940	Webb.
Marine Corps	VN	Carlton, James Edmund, Jr	O4	Sept. 23, 1975	July 10, 1939	Birmingham.
Army	VS	Coleman, Jimmy Lee	E6	Aug. 7, 1978	Jan. 20, 1949	Goodwater.
Army	LA	Crear, Willis Calvin	E4	Feb. 15, 1971	Jan. 8, 1950	Brimingham.

Mr. BYRD. Mr. President, I introduce a bill and ask that it be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1541

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress finds and declares that—

(1) 2,494 Americans, military and civilian, are listed as missing or otherwise unaccounted for in Southeast Asia;

(2) those missing or otherwise unaccounted for Americans have suffered untold hardship at the hands of a cruel enemy while in the service of their country;

(3) the families of these Americans retain the hope that they will return home and the loyalty, hope, love, and courage of these families inspire all Americans;

(4) the Congress and the people of the United States are committed to a full accounting for, and release of, all Americans missing or otherwise unaccounted for in Southeast Asia; and

(5) the service of those missing and otherwise unaccounted for Americans is deserving of special recognition by the Congress and all Americans.

SEC. 2. (a) (1) The Speaker of the House of Representatives and the President pro tempore of the Senate are authorized jointly to present, on behalf of the Congress, to those American personnel listed as missing or otherwise unaccounted for in Southeast Asia, to be accepted by next of kin, bronze medals designed by an artist who is an in-theatre Vietnam Veteran, in recognition of the distinguished service, heroism, and sacrifice of these personnel, and the commitment of the American people to their return. For such purpose, the Secretary of the Treasury is authorized and directed to cause to be stricken bronze medals.

(2) There are authorized to be appropriated not to exceed $20,000 to carry out the provisions of this subsection.

(b) The Secretary of the Treasury may cause miniature duplicates in bronze to be coined and sold, under such regulations as he may prescribe, at a price sufficient to cover the cost thereof (including labor, materials, dies, use of machinery, and overhead expenses), and the appropriation used for carrying out the provisions of this subsec-

tion shall be reimbursed out of the proceeds of such sale.

(c) The medals provided for in this Act are national medals for the purpose of section 5111 of title 31, United States Code.

Mr. BYRD. Mr. President, I yield 3 minutes to the Senator from Wisconsin.

NUCLEAR FREEZE WINS FOREIGN POLICY ASSOCIATION POLL WITH 74 PERCENT SUPPORT

Mr. PROXMIRE. Mr. President, reports continue to show the overwhelming support of the American people for a mutual, verifiable, negotiated nuclear weapons freeze between the United States and the Soviet Union,

We are all aware of the fact that there have been nine referendums on the nuclear freeze in the last year and the nuclear freeze won in eight of them. But I think the most recent is even more impressive than that.

The Foreign Policy Association holds a series of seminars in depth in which the people who take part become thoroughly acquainted with the issue and with all sides of the prospects and how to handle the nuclear arms race.

The latest report comes from a survey by the Foreign Policy Association. Each year the association secures responses from groups that take part in foreign policy discussions across the country. Between February and May the association received about 8,000 ballots on various issues including "an immediate, mutual freeze on nuclear weapons, followed by a negotiated reduction in weapons, rather than a buildup of U.S. military strength, as a means of inducing the Soviet Union to negotiate." A smashing 74 percent of the respondents favored such a freeze.

Now, Mr. President, I regard this kind of response as particularly significant. Here is why: The respondents who voted in the Foreign Policy Association poll had conducted discussions, seminars, debates, entertaining different sides and contrary views. My experience with these discussion groups has impressed me with their intelligence, their tolerance to different ideas and their broad exposure to detailed information. These people consider options, and I am sure considered options to the nuclear freeze fairly and carefully. They are not impulsive. They are not knee jerk peaceniks. They are the Nation's opinion leaders on foreign policy issues. A vote of 74 percent for the nuclear freeze represents a remarkable showing.

In this democracy where we believe in rule by the people, this showing should impress us. It follows similar overwhelming popular approval for the nuclear freeze in New England town meetings and in referenda last year. In eight of the nine States where referenda were held the nuclear freeze won, in most cases by overwhelming votes. It is becoming clear, Mr. President, that support for the nuclear freeze comes from Republicans as well as Democrats, from conservatives as well as liberals. And this foreign policy poll shows that it is an opinion held by a large majority of the best informed and most thoughtful Americans. And one of the reasons why this is so reassuring is that so many of the leading pundits in the press have been critical of the nuclear freeze. Two of the leading papers in the country for example: The New York Times and the Washington Post have both opposed the freeze. No one can argue that the freeze represents a liberal-chic fad. Indeed, it represents the considered determination of a very big majority of the American people.

I ask unanimous consent that the article from the Wednesday, June 22, New York Times by Joseph Treaster be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 22, 1983]

SURVEY SHOWS SUPPORT FOR FREEZE

(By Joseph B. Treaster)

The Foreign Policy Association, in an informal nationwide survey, has found overwhelming support for an immediate mutual Soviet-American freeze on nuclear weapons, opposition to United States military aid to Latin American countries threatened by insurgencies and support for self-government for the Palestinians on the West Bank.

The association elicited these responses from participants in a program of foreign policy discussions that it encourages across the country.

Each year in January and February the association, a nonprofit, nonpartisan and educational organization, sells a booklet for use by the discussion groups that gives analyses of eight foreign affairs issues. The booklet includes ballots by which participants can express their opinions.

Between February and May the association received an average of about 8,000 ballots on each of the eight issues.

74 PERCENT FAVOR FREEZE

The association sold 80,000 copies of its booklet this year, but it says it does not have a precise count on the number of people who participated in the discussions.

In the question on the arms race, 74 percent of the respondents said they favored an immediate mutual freeze on nuclear weapons, followed by a negotiated reduction in weapons, rather than a buildup of United States military strength, as a means of inducing the Soviet Union to negotiate.

Eighty-two percent of the respondents urged negotiations on arms control with the Soviet Union despite disagreement on economic and political issues.

QUESTION OF PALESTINIAN STATE

On Latin America, 46 percent of the respondents said that the United States should not provide military aid to governments, such as those in El Salvador and Guatemala, that are struggling against guerrilla forces, while 30 percent said such aid should be provided only if other Latin American countries also decided to do so.

On the Middle East, 43 percent of the respondents said they favored creation of an independent Palestinian state in the West Bank and the Gaza Strip accompanied by recognition of Israel by the Palestine Liberation Organization. Thirty-five percent were in favor of independence in association with Jordan. Seventeen percent favored annexation of the West Bank and Gaza by Israel, with limited self-government for the Palestinians living there.

A NEW BIOGRAPHY OF ELIE WIESEL

Mr. PROXMIRE. Mr. President, Elie Wiesel, survivor of Auschwitz and Buchenwald and now a distinguished professor at Boston University, has devoted his life to preserving the memory of the Holocaust. Mr. Wiesel has attempted to convey the horror of the concentration camps.

Mr. Wiesel lost both his parents and sister to the Nazi persecution and, depite his own doubts about the capacity of the language to portray these traumatic experiences, his powerful accounts have moved many of us.

Mr. Wiesel is the subject of a recently published biography entitled, "Elie Wiesel: Messenger to All Humanity," by Robert McAfee Brown. Tracing Mr. Wiesel's odyssey, Mr. Brown sees him as a latter-day prophet, a messenger of modern society's deepest problems. The message of the Holocaust seems obvious, but Mr. Wiesel argues that the world remains indifferent to it.

Initially, worldwide response to the genocide of European Jews was one of unanimous condemnation. The United States took a leading role in the United Nation's adoption of a treaty declaring genocide an international crime. On December 9, 1948, the Genocide Convention was ratified by 55 to 0 vote in the General Assembly.

Mr. President, the genocidal action by Adolph Hitler is something that shocked the world and also shocked the United Nations into unanimously passing the Genocide Convention at the initiative of the United States, pushed by the administration of Harry Truman. Since then, seven Presidents have supported that treaty. The Foreign Relations Committee has reported it out four times.

Ninety nations have now ratified the convention. All the developed nations, with the exception of the United States, have ratified the Genocide Convention. Seven Presidents have supported the treaty. Four times, the Foreign Relations Committee has reported favorably on the treaty. Yet the treaty has languished, unratified, in the Senate for 35 years.

Mr. President, will we continue to ignore the efforts of men like Elie Wiesel? Genocide is the most egregious of crimes. The premediated eradication of a national, ethnical, racial, or religious group is a grievous loss to all of humanity.

I earnestly hope that our role as a defender of human rights will no longer be compromised by our nonratification of the treaty. Ratification of the Genocide Convention is necessary if we are to demonstrate a consistent human rights stance.

Mr. President, I realize the majority leader and other Senators have heard this many, many times. I understand the Foreign Relations Committee is ready to report it out any time the administration gives it the green light. I hope and pray they will do that.

THE GARRISON DIVERSION PROJECT

Mr. PROXMIRE. Mr. President, during the debate on the Garrison diversion project on Wednesday, Senators ANDREWS and BURDICK introduced an article written by Peter Warren, a Canadian columnist.

In order to correct the impression left by that article, I submit the reply to that article which was given by R. N. Clarkson, the coordinator of the Garrison Focus Office of the Canadian Government. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the materials were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF NATURAL RESOURCES, GARRISON FOCUS OFFICE, WINNIPEG, MANITOBA,
April 29, 1983.

The EDITOR,
Selkirk Interlake and Lake Centre News, Selkirk, Manitoba. R1A 2B2.

DEAR SIR: May I request that you publish the following remarks to correct the impressions left by Mr. Peter Warren in his April 20, 1983 article entitled "Garrison: The Report (1)" which jumps to conclusions and interprets the report "McClusky Canal Fish Screen Development and Verification" in a manner which not even the Bureau of Reclamation has done. It fact the Bureau of Reclamation in its draft Supplemental and Environmental Statement issued on March 29, 1983, states that while the construction of the McClusky Canal Fish Screen is no longer contemplated because the acreage to be irrigated at this time does not affect Canada, "that once Missouri water passes into Lonetree Reservoir, the option of constructing a fish screen in the McClusky Canal is not available. Undesirable fish could freely move into the Reservoir and they probably could not be detected until populations increased substantially. It would then be virtually impossible to eradicate established fish population from the Reservoir."

In dealing with the 3 dish species: rainbow smelt, gizzard shad and Utah chub, which most concern Manitoba, the Draft Supplementary Environmental Statement states "rainbow smelt was reported within the Garrison Diversion Unit in Audubon Lake and has increased its potential for transfer downstream: that the gizzard shad has not been found in Lake Sakakawea but is present in the middle James River, South Dakota: the Utah chub is present in the Upper Missouri River Drainage." Since its introduction in this area in 1935, it has moved downstream a distance of about 300 km."

It must also be pointed out to Mr. Warren that the Canadian/American International Commission has not reviewed the McClusky Canal Fish Screen Development and Verification Report. The International Garrison Diversion Study Board in its report to the International Joint Commission recommended that such a study be carried out and that certain modifications should be made to the screen, modifications which were tested as part of this recent study. The International Joint Commission concluded "that the McClusky Canal Fish Screen, even if modified together with the closed system, cannot be relied upon to prevent transfer of biota from the Missouri River to the Hudson Bay Drainage Basin. The Commission further concludes that the predicted impacts of a biota transfer are so potentially damaging that the closed system does not provide a sufficient guarantee against such an occurrence."

The National Audubon Society in commenting on the Draft Supplemental Environmental Statement on the Garrison Diversion Unit said it well—"the fish screen—or screens—would have about the same degree of security the Maginot Line had for France facing the German invaders in World War II".

Yours truly,

R. N. CLARKSON,
Coordinator.

TRANSBOUNDARY IMPLICATIONS OF THE GARRISON DIVERSION UNIT

BIOTA TRANSFER

The McClusky Canal fish screen was not included in original designs for GDU, but was added prior to 1975 in response to concerns over the possible transfer of foreign biota to the Hudson Bay Drainage Basin. This possibility of a transfer of exotics, that is, the transfer of fish species, fish diseases and fish parasites indigenous to the Missouri River Basin into the Hudson Bay Drainage Basin has been a major concern of the Biology Commitee, the Board and the Commission itself.

In fact, overriding everything else, as it turns out, has been the necessity that such introduction be prevented at all costs. This is not surprising. As the Biology Committee points out, "the introduction, on a worldwide basis, of exotics has led to significant destabilization of ecosystems". The Committee reminded us that unmanaged introduction of such exotics as hares in Australia, sea lampreys in the Great Lakes and carp in North America, have caused untold damage. They also note that within the United States concern over the possibility of interbasin transfers of exotic fish has resulted in recent pressures for their regulation. The Commission has recently been asked by its Great Lakes Research Advisory Board to take steps to advise the Governments that further introduction of exotics into the Great Lakes should be regulated jointly by the two Governments.

Unlike some other adverse consequences that can be minimized by additional mitigating measures or by cessation of operation of the Project, remedial measures to control unwanted exotics are oftentimes futile and, what makes it even more difficult, is that it may be some years before the full adverse impact is apparent.

For all these reasons, the Board insisted that the inter-basin transfer problem be examined in great depth. The United States Bureau of Reclamation had already recognized the necessity of controlling such introduction by proposing the use of fish screens as an early modification to their first plans. The ability of these screens to prevent the transfer of foreign biota was thoroughly reviewed and the Biology Committee found that, among other things, the mesh size was large enough to allow some larvae to pass through. Moreover, as the Board pointed out in their report, fish eggs, fish larvae and perhaps even small adults could pass around the screens because of spaces between screen panels.

This is important because the impact of such a transfer would be irreversible and would become apparent in about 10 years, with full impact in 25 to 50 years. If it were to occur, the undesirable foreign species which have a high reproductive potential could successfully compete for food and space, could replace indigenous forage fish, could alter the balance between existing predators and their prey, could carry parasites and could destroy some of the valuable present species. The inter-basin transfer could also introduce fish diseases by a water medium. In addition to the general ecosystem destabilization that could occur, the population of whitefish, walleye and sauger could be reduced by 50 percent in Lakes Winnipeg and Manitoba. This would, in turn, cause an annual loss of $6 million (Can.) to the commerical fishing industry of Manitoba and could possibly eliminate it. The Manitoba sports fishery could experience an annual loss of 26,000 recreation days and $130,000 in related revenue. Although some of these foreign species may eventually have some value, the Commission cannot assess their stability or their economic potential.

The Board emphasized, and the Commission agrees, that with a development of the magnitude of GDU, it is inevitable that some impacts will not have been identified. It is clear, however, that the overall biological impact through the introduction of foreign fish, fish eggs, fish diseases and parasites from GDU as envisaged is potentially severe. The Commission notes with concern that, historically, actions by man which have substantially changed or altered the natural environment often produced results not contemplated when the action took place. Once these changes are made they may be irreversible.

Nevertheless, the criteria at the present time should be the one expressed by the Biology Committee: "There must be a 100 percent assurance of fish passage prevention over an infinite time."

The Commission concludes that the McClusky Canal fish screen, even if modified, together with the closed system, cannot be relied upon to prevent the transfer of biota from the Missouri River to the Hudson Bay Drainage Basin. The Commission further concludes that the predicted impacts of a biota transfer are so potentially damaging that the closed system does not provide a sufficient guarantee against such an occurrence.

CHAPTER IX—RECOMMENDATIONS

The International Joint Commission, in the light of its conclusions on this inquiry, recommends:

1. That because the "closed system" and the McClusky Canal fish screen cannot with any certainty prevent biota and disease transfers which would cause severe and irreversible damage to the ecosystem and, in particular, to the commercial and sport fisheries in Canada, those portions ofthe Garri-

son Diversion Unit which could affect waters flowing into Canada not be built at this time. This is not intended to preclude construction of Lonetree Reservoir, subject to the conditions set forth in Chapter VIII.

The McClusky Canal, a conveyance channel with a design capacity of 1,950 cfs, will provide a direct connection between the Missouri River and the Hudson Bay watershed. Increased flows and oxygen levels in the James River will also enable fish to more upstream from South Dakota to where they could be transferred into the Wild Rice River in the Hudson Bay watershed. Twenty species of fish that could be introduced into the Hudson Bay watershed as a result of the GDU were identified. Nine of these species are considered as problem species in that each could be introduced, become established and have adverse impact on Manitoba fish populations. All but one of these species, gizzard shad, occur in the Missouri River system in or above Lake Sakakawea and could be introduced via the McClusky Canal. Six of the nine species, including the gizzard shad, occur in the lower James River. The potential for each of these problem species to impact Manitoba fish populations is summarized in Table VIII-2. Expected impacts of each of these problem species on important native species are summarized in Table VIII-3. Some species such as Utah chub, smelt and young gizzard shad would serve as forage for walleye, sauger and northern pike. They would, however, displace other forage species and it is unlikely that the overall forage conditions in most Manitoba waters would be improved by these introductions.

Rainbow smelt have been identified as one of the more serious problem species. Analyses of the significance of the GDU project as a means for introducing the species into Manitoba is complicated by the fact that it has already been introduced into the headwaters of the Rainy River system in Ontario and Minnesota. Smelt have been in these headwaters for at least seven years and have not been reported in the Rainy River or farther downstream. In some other waters smelt have dispersed rapidly from the point of introduction. All 5 Great Lakes were occupied within 25 years and smelt moved at least 250 miles downs the Missouri River within 4 years of being introduced into Lake Sakakawea. Smelt may or may not reach Lake Winnipeg via the Rainy River; however, the GDU provides a second direct route for the transfer of smelt and once the interbasin connection is completed the transfer is expected to take place within a relatively short time.

Carp were identified as the 10th problem species. They already occur in Manitoba sections of the Souris River; however, with increased flows and oxygen levels in the Souris it is predicted that the species will be introduced, established and have adverse impact in North Dakota and Saskatchewan reaches of the river.

The impact of introductions of foreign fish will probably become apparent within 10 years of completion of the interbasin connection and full impact of the introductions is likely to occur within 25-50 years of completion of the project. None of the problem species that are likely to be introduced as a result of the GDU project are expected to have a positive impact on commercial species of fish and commercial fisheries in Manitoba. Paddlefish and smelt could have a minor beneficial impact on recreational fishing in Manitoba.

Existing physical barriers between the Missouri-Hudson Bay and the St. Lawrence-Hudson Bay watersheds presently prevent the upstream movement of GDU potential problem species to all but one of the areas where interbasin connections have or are known to occur. There is a possibility of transfer of two foreign fish species, shortnose gar and gizzard shad, between the Missouri and Hudson Bay watersheds. The potential for transfer occurs at Lake Traverse-Big Stone Lake during times of very high flows in the Little Minnesota River or extremely high water levels in Lake Traverse. Distribution records indicate that one species, the stonecat, may have moved into the Red River system through this linkage sometime during the last 10,000 years. A dyke separating the two watersheds has been constructed; however, a culvert that was later added to the dyke reestablished the potential for interbasin flow. Shortnose gar occur in Big Stone Lake and gizzard shad are present in the Minnesota River downstream of the Granite Falls Dam. This very intermittent connection has not resulted in the movement and establishment of shortnose gar across the divide.

The McClusky Canal fish screen is currently under construction. Its purpose is to prevent the interbasin transfer of fish, fish larvae and fish eggs from the Missouri River watershed into the Hudson Bay watershed. The structure, as designed, will not prevent the interbasin transfer of all fish, fish fry or fish eggs. For example, larvae of rainbow smelt and Utah chub can pass through the screens and because of spaces between screen panels, fish eggs, fish larvae and perhaps even adults could pass around the screens.

Two fish diseases are likely to be introduced into Canada as a result of the interbasin transfer of Missouri River waters to the Red and Souris Rivers. Infectious hemopoietic viral necrosis (IHVN), and enteric redmouth (ERM), a bacterial disease, have a high probability of being introduced to Manitoba waters. These pathogens can be carried directly by a water medium although the usual mode of transfer is through the transfer of diseased fishes. The greatest incidence of disease usually occurs where stress conditions are present. Hatchery stocks of whitefish and trout are particularly vulnerable. A paddlefish parasite, Polypodium sp. may be introduced and infect lake sturgeon of the Hudson Bay watershed. The potential for other fish diseases and fish parasites to be introduced and have impact appears to be low.

There is little likelihood that the GDU project will result in the introduction of plant diseases, terrestrial noxious weeds or aquatic plants into Manitoba as alternate, more effective methods of introduction already exist.

Operation of the GDU project will result in the introduction of invertebrate species into the Hudson Bay watershed. Examples include caddisflies of the genus Rhyacophila and the mayfly, Hexagenia bilineata which will probably be introduced in the Assiniboine, Souris and Red Rivers. They are of concern because adult swarms of some of these species have often resulted in increased incidence of asthmatic and allergenic problems in human populations.

Four reptile species and one amphibian species may be introduced into Manitoba as a result of GDU. The probability that the prairie rattler and the bull snake would be introduced could not be estimated and it seems unlikely that the GDU project would result in the introduction of the yellow-bellied racer or the Great Plains toad. On the other hand there is a high probability that the project will result in the introduction of the western spiny softshall turtle to Manitoba waters. This species have an adverse impact on fish populations in the Souris, Red and Assiniboine Rivers.

Changes in water quality and water quantity are likely to have some effects on Manitoba fish populations, especially those in the Souris River where the relative impact of GDU-derived waters will be greatest. Changes in water quality and water quantity are also expected to alter species composition and abundance of aquatic invertebrates in the Souris River and increased flows may increase present blackfly problems on the Souris River. Some changes in the composition of aquatic plants are also expected to occur, primiarily as a result of increased salinity. Changes in flood stage and duration are too minimal to affect upland species of wildlife along Manitoba waterways.

GDU-derived nutrients will contribute to the nutrient load entering Lakes Winnipeg and Manitoba and will help to accelerate eutrophication of these waters.

INTRODUCTION POTENTIAL OF FOREIGN FISHES INTO THE HUDSON BAY WATERSHED

Species	Potential for introduction	Potential for survival in Hudson Bay basin	Potential for biological impact	Potential for negative impact on Manitoba	Availability of information for evaluation
Pallid sturgeon	Low	High	Medium	Low	Low.
Shovelnose sturgeon	Low	High	Medium	Low	Low.
Paddlefish	Medium	High	Medium	Low	Medium.
Shortnose gar	Medium	High	Medium	Medium	Low.
Gizzard shad	High	Medium	High	Medium	High.
Rainbow smelt	High	High	High	High	High.
River carpusucker	Medium	High	Medium	Low	Low.
Smallmouth buffalo	Medium	High	Medium	Low	Low.
Utah chub	Low	High	High	Medium	Low.

MORATORIUM ON BANK ACQUISITIONS

Mr. PROXMIRE. Mr. President, I am pleased to join in support of legislation introduced by Senator GARN last Thursday establishing a moratorium on the acquisition of so-called nonbank banks and savings and loan associations by nonbanking firms. The moratorium would also stop bank holding companies from expanding into areas not functionally related to banking by taking advantage of favorable State laws such as the one recently enacted in South Dakota.

Normally I am reluctant to support a moratorium on new developments in the marketplace, especially when they involve innovative changes that will lead to improved goods and services for the people. But I do not think the recent developments in the banking industry can accurately be called innovations. Instead, they more closely resemble the actions of clever attorneys attempting to find a way around established public policy. To be sure, these policies need to be reassessed in the light of our modern economy. But if there is to be change, it should come as a product of careful deliberation by the Congress and not through the creative exploitation of loopholes by expansionist firms and their regulatory allies.

The basic policies that are threatened with erosion are those which seek to separate the business of banking from other commercial endeavors and especially the securities business. Why do we have such policies in the first place? One reason, of course, is to maintain the safety and solvency of our banking system by limiting risk. But equally important, in my judgment, is the desire to avoid a conflict of interest between the function of banking and other commercial and industrial activities. Banking is clearly an industry affected with a public purpose. The essence of banking is to allocate a scarce resource—credit—to those enterprises where it can be most productively employed. If bankers do their job well, the entire society benefits through higher economic growth. If bankers do poorly, society loses through lower rates of growth and productivity. Thus we all have a stake in seeing that bankers make their important credit judgments based solely on the economic merits of a project and not on the basis of some other competing consideration such as a desire to protect their own equity investment in a company.

This is why we do not permit banks to buy stocks and why we confine their activities to areas that are closely and functionally related to banking. We want to be sure that bankers are as impartial as they can possibly be in allocating credit among alternative uses.

The two laws which implement these concerns are the Glass-Steagall Act and the Bank Holding Company Act. The central purpose of Glass-Steagall is to separate the business of commercial banking from investment banking. The law grew out of the abuses during the 1920's when many large banks established securities affiliates. This was a nice arrangement for the bank, but it proved to be disastrous for the public. If, for example, a large New York bank made too many loans to a company or foreign government overburdened with debt, it did not have to run to the IMF of the Federal Government for a bail-out. It could bail out its own bad loans by refinancing them as bonds and selling them to their unsuspecting customers and correspondent banks. When the Great Depression came, many country banks found themselves loaded down with worthless paper sold to them by the security affiliates of their big city correspondent bank. The Congress decided to avoid such conflict in the future by separating the business of commercial banking from the business of investment banking.

Likewise, the Bank Holding Company Act is designed to keep commercial banks in the business of banking. The Bank Holding Company Act came about because banks and their attorneys had figured out a way to get around the direct restrictions placed on banks by the States and the Congress. For example, the National Banking Act limits national banks to certain enumerated powers plus all other powers incidental to the business of banking. Holding companies were formed primarily to enable banks to do indirectly through a holding company affiliate what they could not do directly as a bank—namely engage in activities that were not incidental to the business of banking.

Congress reacted to these developments in the marketplace by passing the Bank Holding Company Act of 1956 with amendments in 1970. The major thrust of the Bank Holding Company Act is to limit the activities of bank holding companies to those that are functionally related to banking. Thus while the powers available to bank holding companies are somewhat broader than the the powers of individual banks, there is still a fairly strict separation between banking type activities and other types of businesses.

I believe the major purposes behind these laws were valid when they were enacted and that they remain valid today. This is not to deny that these acts should not be broadened to permit a somewhat broader range of activities. Indeed, I have supported legislation permitting banks to underwrite municipal revenue bonds and to offer mutual funds. However, these decisions must be made carefully by the Congress on a case-by-case basis in order to preserve the underlying objectives these acts were designed to achieve. I certainly would not favor a wholesale repeal of the Bank Holding Company Act or the Glass-Steagall as some officials of the Reagan administration have suggested.

It is always possible, of course, that those who favor repeal are right in their contention that these laws no longer serve any legitimate public policy purpose. However, if this is what a majority in the Congress really believes, then these laws should be repealed directly by the Congress in a straightforward and upfront manner. The Congress should not by its silence or inaction be presumed to sanction the wholesale erosion of these laws by those who seek to get around them. In the absence of a definitive judgment by the Congress, the policies embodied in existing law must be deemed to be legitimate and valid.

This, then, brings me to the need for a moratorium to close several loopholes in our banking laws that have emerged in recent months. One loophole is the so-called nonbank bank whereby a nonbanking firm can acquire a bank outside the framework of the Bank Holding Company Act if the bank refrains from either making commercial loans or accepting demand de-

posits. When this occurs, the bank is deemed to be not a bank for purposes of the Bank Holding Company Act. This means any corporation in any line of business can acquire, own, and operate a bank as long as the bank does not accept demand deposits or does not make commercial loans. It would thus be entirely possible for a bank to raise money other than through demand deposits—while engaging in a full-scale commercial lending business and avoid regulation under the Bank Holding Company Act. General Motors could buy Chase Manhattan and legally operate it by converting its demand deposits to some other type of account or liability.

The second loophole is the dangerous precedent created by a South Dakota law allowing its State chartered banks to engage in all forms of insurance activities as long as the activities are conducted outside the State of South Dakota. South Dakota law also permits out-of-State bank holding companies to buy a State-chartered bank in South Dakota. The effect of these two laws is to allow a large bank holding company such as Citicorp to buy a South Dakota bank and use that bank to acquire a large insurance company that operates in the other 49 States.

The South Dakota law is especially egregious because it retains the traditional separation between banking and insurance within its borders. The potential for anticompetitive tie-in sales is, in effect, exported by South Dakota to the other 49 States. This is tantamount to a selective repeal of the Bank Holding Company Act by one State for the other 49. If other States follow this precedent, the Bank Holding Company Act will become a toothless shell.

I believe the Congress can and should address these issues on a permanent basis. But in the meantime, I believe we need a little time to preserve our options while we are considering legislation to further restructure the financial services industry. The Senate Banking Committee is nearing completion of a comprehensive series of oversight hearings on the financial services industry with particular attention being given to the need to update Glass-Steagall and the Bank Holding Company Act in the light of today's economy.

It is not my intention to use the moratorium as an excuse for avoiding decision on these difficult issues. Indeed, I believe a moratorium could have just the opposite effect of giving Congress a fixed deadline by which to complete action on whatever legislation may be needed to liberalize Glass-Steagall and the Bank Holding Company Act. In the meantime, we should not allow the actions of a few expansionist firms to foreclose or preempt the right of the Congress to reach a reasoned and deliberate judgment.

GOLDEN FLEECE AWARD FOR JUNE

Mr. PROXMIRE. Mr. President, I gave my Golden Fleece of the Month Award for June to the National Institute of Education (NIE). They failed, and failed badly, to keep tabs on a $900,000 Government contract. This failure resulted in about $500,000 of the taxpayers' money being blown on everything from unsecured personal loans to purchasing a disco and promoting a rock concert. Instead of doing their homework, the NIE bureaucrats were caught napping.

In my grade book, the NIE gets an F– for protecting the Nation's taxpayers but an A+ for promoting waste, fraud and abuse. They should be given a dunce cap, a good rap on the knuckles, and made to stand in the corner for a fiscal year.

This month's fleece, like most, has a humorous twist to it, but this one also merits review by the Justice Department. Therefore, I am sending the Attorney General a copy of the internal audit reports done by the Education Department. These reports are the basis of this fleece.

The NIE sponsors a number of conferences each year on topics such as Urban Superintendents Network and National State-of-the-Art Conference on Principalship. They hire consulting firms to arrange these conferences—a doubtful idea in itself.

These consultants are responsible for setting up the meetings, reimbursing those who attend for their travel costs, and paying honoraria when earned. The consultants submit their bills to NIE which should review them for accuracy and only then pay the tab. This is how things should work. But here is what the NIE let happen between January 1980, and May 14, 1981, when a bankruptcy spilled the dirty linen.

The NIE stood by while over $100,000 in personal loans were made. According to the Education Department auditors, "Our review showed that—the consulting firm—loaned three of its corporate executives $100,676 which was not repaid."

They turned a blind eye while Federal funds were used to support private, profitmaking businesses. At least nine unrelated firms were run from the same offices paid for through the NIE consulting contract. Yet up to 98 percent of overhead costs, including travel and pay costs, incurred by these unrelated businesses were charged to the NIE and, ultimately, to the taxpayer.

The auditors said that these businesses added to the Government's cost by using "administrative staff, space, communications, and so forth, at little or no cost to themselves." In addition to rock concerts and discos, these firms were involved in real estate speculation, mining ventures in Greece, and aircraft sales to Bangladesh.

The NIE handed over more than $70,000 to cover travel costs and honoraria for several conferences. Investigators discovered that this money did not go to the intended recipients. Because the NIE later had to pay these overdue bills, the poor taxpayers were socked twice with the same bill.

The NIE had received numerous indications that the contract had problems. They received five earlier warnings that travel costs were not being paid but continued with business as usual.

How could the NIE watch this mess develop and not stop it? The answer: the Contract Division thought the project officers, who were responsible for supervising the conferences, should also check the bills to make certain they were proper. The project officers—guess what—thought the Contract Division should be doing the checking. The bills, of course, were not checked, only paid.

Mr. President, I yield the floor.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I inquire if there is an order for morning business?

The PRESIDING OFFICER. There is. Under the previous order, there will now be a period for the transaction of routine morning business not to exceed 30 minutes, with statements therein limited to 5 minutes each.

LA FESTA ITALIANA IN OMAHA, NEBR.

Mr. ZORINSKY. Mr. President, one of the truly special things about my hometown of Omaha is its ethnic diversity. Thanks in part to the railroad and meatpacking industries, Omaha is blessed with large populations of Poles, Lithuanians, Czechs and Croatians, among other groups.

The foundation of fiber of Omaha reflects the culture of these groups and their contributions to the city have been most noteworthy. Their presence gives Omaha a diversity and international flavor that is both significant and unique.

One of the most active of Omaha's ethnic groups is its American Italian community. More than 44,000 city residents are of Italian descent and Omaha's American Italian population has a consistent record of service to the city and its people.

The pride of Omaha's American Italians was demonstrated a year ago with the staging of a major Italian festival by the city's American Italian Heritage Society. "La Festa Italiana" ex-

plored Italian culture and heritage through songs, dances, food and handiwork.

So successful was the festival that more than 20,000 people attended and an even greater turnout is expected July 15 to 17 when the second annual La Festa Italiana is scheduled.

In honor of this event, Mayor Mike Boyle has proclaimed the week of July 11 "American Italian Heritage Week" in Omaha. I certainly join Mayor Boyle in this effort to say a small "thank you" to Omaha's American Italian community for its very considerable contribution to our city over the years.

Mr. President, the British orator and stateman, Edmund Burke, wrote that, "People will not look forward to posterity who never look backward to their ancestors." During the week of July 11 and especially during La Festa Italiana July 15 to 17, Omaha's American Italian community will be pausing to remember and revere its Italian roots. In doing so, I have no doubt it will also be going a long way toward assuring a permanent place in Omaha's future for this very special segment of the city's population.

LEGISLATIVE BRANCH APPROPRIATIONS BILL

Mr. MATHIAS. Mr. President, the provision in the legislative branch appropriations bill passed last Thursday by the Senate which provides for the procurement of computer equipment by Senators' offices is an example of legislation on an appropriations bill that often results in unintended consequences because adequate opportunity is not provided for the committee of substantive jurisdiction to consider the matter. It is ironic that this action has been taken when we are midway in a test or experiment that will lead to new computer acquisition policy.

The amendment opens up the possibility for monumental waste of money and time, unless there are adequate administrative safeguards.

The purchase of computer equipment which is both economical and suitable for an office's requirements requires technical knowledge that some Senators may have and some may not. As in any field, advertisements and demonstrations are often not adequate to provide a basis of comparison between different options. It is only through extended use that the differences become clear and some products are revealed to be suitable and others not.

Computer equipment is more expensive and the technical considerations more complex than is the case with other supplies and equipment that Senators have discretion to purchase. These procurements can amount to hundreds of thousands of dollars. In the case of supplies and equipment that Senators can now purchase, if a mistake is made, the dollar impact is not disastrous. Mistakes in the purchase of computers could run in the millions of dollars. Also, no one in the Government has the option of large purchases without adhering to fair and competitive consideration of all legitimate suppliers, and it should remain necessary for the Senate to continue to follow the same kinds of procedures.

Under the proposed provision, I can foresee individual staff members persuading their office managers to buy the latest gadget they have seen advertised, only to find out that it does not do much of anything useful for them or work out as they expected. After the novelty wears off, we might not have enough warehouse space to store the discards from this new process.

I am aware that some offices are unhappy with the current correspondence management system. We know that CMS, which was once among the most advanced systems, has been superseded by new technology, and we are now in the process of providing for a replacement. Like CMS, the replacement will be the most advanced and most economical system available and will be tailored to the needs of the Senate. We also are in the middle of a test of office automation equipment to address the other needs of Senators' offices. Twelve offices are experimenting with equipment from six vendors and we will be evaluating the results in a few months. Then we will move to acquire office automation systems for Senators. With the help of the offices participating in the test and of other Senators and committees, we are confident that this process will produce systems that meet Senators' requirements in an economical manner. This could be a single system or it could be multiple systems from which offices could choose.

The provision in the legislative appropriations bill does not distinguish between Washington and home State offices. As Senators know, there is no inventory control over equipment in home State offices, and the potential for scandal in the diversion of such equipment to private use should be of great concern. If anyone doubts this possibility, I refer them to an article in a recent Washington Post about large scale losses of equipment at the University of the District of Columbia as a result of similar procedures.

The diversity of equipment that could result would greatly complicate training and support. Operators skilled on one system would not necessarily be able to use systems in other offices, thus restricting employment opportunities and destroying the pool of expertise that helps all offices through the exchange of information among users.

I am concerned about the far-reaching potential for waste and inefficiency. Fortunately, the provision requires that such purchases have the prior approval of the Committee on Rules and Administration. The Rules Committee has always taken seriously its reponsibilities to insure that appropriate and cost-effective services were provided to the Senate, in ways that were fair to all potential vendors of such services, and in ways designed to protect the Senate from the kinds of procurement scandals that one so often reads about in government agencies. We will, of course, continue to do so. The Rules Committee will meet soon to consider what procedures and criteria should be applicable to these procurements. I invite Senators to share their views on this subject with us.

MAXIMUM ALLOWABLE RATES FOR USE OF PRIVATELY OWNED AUTOMOBILES

Mr. MATHIAS. Mr. President, I wish to announce that as of June 19, 1983, the maximum allowable rate for use of privately owned automobiles is 20.5 cents per mile instead of the current 20 cents per mile. I ask unanimous consent that a copy of a letter I have sent to all senatorial offices explaining this order be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON
RULES AND ADMINISTRATION,
Washington, D.C., June 17, 1983.

DEAR SENATOR: This is to inform you that the Administrator of General Services has, under the provisions of Section 5707 of title 5 of the United States Code, issued regulations which have increased the maximum allowable rate for use of privately owned automobiles from 20 cents per mile to 20.5 cents per mile for all travel on and after June 19, 1983.

Under the authority vested in this Committee by subsection 8 of section (n)(1) of rule XXV of the Standing Rules of the Senate and by section 68 of title 2, United States Code, the above increased rate is hereby made effective for Senate travelers for all travel on or after June 19, 1983.

Please note that the rates for use of privately owned motorcycles and privately owned airplanes will continue to remain at 20 cents per mile and 45 cents per mile respectively.

Your attention is again called to the fact that, as in the past, the above rates are the maximum allowable rates and that it is the responsibility of each Senator and Chairman to set such rates as will most nearly compensate the traveler for necessary expenses.

Sincerely,
CHARLES MCC. MATHIAS, JR.,
Chairman.

TRUCK SIZE AND WEIGHT LIMITS

Mr. SYMMS. Mr. President, last December Congress passed the Surface Transportation Assistance Act of 1982 (STAA), a much needed law that will raise more than $72 billion over 5 years to help restore and rebuild our Nation's highways. The groundwork for this legislation had been established over a period of more than 1 year in the Surface Transportation Committee of Senate Public Works, which I chair. Given its size and scope, the STAA was one of the most important pieces of legislation this body considered and passed last year.

One of the key provisions in STAA was the establishment of nationwide uniform truck size and weight limits which included the mandatory gross vehicle weight limit of 80,000 pounds to be applied in all States and the requirement for all States to allow the use of twin trailers. It should be noted that most States already had similar size and weight provisions. In the case of the weight, for example, all but three States already allowed 80,000 pound trucks; regarding the twin trailer requirement, 36 States were permitting their operation. The STAA size and weight requirements were necessary to being the remaining States into the prevailing norm and thereby produce a system of contiguous interstate size and weight requirements, as well as to enhance for a free flow of commerce in our country.

These changes were also important to help boost productivity and efficiency in our beleaguered trucking industry. Indeed, these productivity improvements were widely regarded as a trade-off for the steep tax increases that were levied on the trucking in the STAA—increases that in the heavy vehicle use tax alone exceeded 800 percent.

To implement the new law, the Federal Highway Administration announced on April 6 an interim network of Federal aid highways to which the new size and weight laws apply. After the announcement, a few States objected, and in most cases, their objections are now being addressed by FHWA. One, though, Connecticut, took the extreme action of defiantly passing a State law banning twin trailers within the State, effective April 5. This led the Justice Department to take Connecticut to court, challenging their unilateral ban, on May 27.

I, for one, am glad to learn that on June 13, U.S. District Court Judge Jose Cabranen issued an injunction on the ban. In part, his decision reads, "Where federal and state statutes conflict, the Supremacy Clause of the United States Constitution, Article VI, provides that the State statute must give way," he stated. "In general, the power of Congress to pre-empt state legislation affecting interstate commerce is sweeping."

Mr. President, I applaud Judge Cabranen's decision, which upholds the integrity of our interstate system of commerce and respect the recent work of this body in the Surface Transportation Assistance Act of 1982.

As a reflection of my feelings on this matter, I would like to share with my colleagues an editorial from the June 15 edition of the Journal of Commerce which further elaborates on the decision, and encourages Connecticut of rejoin our interstate system. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FOREGONE CONCLUSION

Could anyone have doubted that Connecticut's ban on tandem-trailer truck rigs would be found unconstitutional, as it was this week in a federal court in Hartford? Can anyone believe that the higher courts to which Nutmeg State officials appeal will find otherwise?

The answer to each question has to be an emphatic "no." It is difficult to believe that even politicians in Connecticut think their ban on interstate commerce—in direct violation of a new federal law—does not violate the Constitution.

But those politicos vow in ringing tones to take the case all the way to the Supreme Court. They already have begun the process, which could take months.

And that strikes us as rather cynical conduct. For there can be only two beneficiaries of such litigation: the Connecticut politicians, who can make political hay even if they know they will lose the case, and the lawyers who handle the litigation.

To recap briefly, the Surface Transportation Assistance Act of 1982 was passed to raise more than $5 billion for the nation's deteriorating highway system.

Most Americans will feel the law only through its nickel-a-gallon increase in the federal gasoline tax. The act hits recession-battered truckers, however, with crushing tax hikes—for example, raising the current highway user tax of $240 to a new tax of $1,900 for the heaviest trucks.

As quid pro quo, the equity of which truckers still question loudly, the act increased nationwide limits on truck size and weight and authorized small twin-trailer rigs to help truckers boost productivity. Most states already had similar limits; 36 allow the twin-26-foot tandem rigs the law authorizes and a number allow triple rigs and twin-45-foot tandems.

The Federal Highway Administration unveiled April 6 an interim network of interstate and other primary federal-aid highways on which the new truck-size limits apply. A handful of states objected. Most have been talking it out with federal government; not so Connecticut, which acted pre-emptively on April 5 with a law banning tandem rigs. After attempting to negotiate, the federal government went to court May 27.

U.S. District Judge Jose Cabranes best summed up the situation this week as he issued his injunction against the ban. It was not a difficult constitutional question, he said.

"Where federal and state statutes conflict, the Supremacy Clause of the United States Constitution, Article VI, provides that the state statute must give way," he said. "In general, the power of Congress to pre-empt state legislation affecting interstate commerce is sweeping."

Clearly, it is time for Connecticut to back off, follow the law that even its own congressmen favored, and work with the federal government in trying to fine-tune the law's provisions.

THE LEGISLATIVE VETO AND U.S. TRADE LAW

Mr. DANFORTH. Mr. President, last week's Supreme Court decision striking down the so-called legislative veto is likely to have a profound impact on several provision of U.S. trade law. Among these are provisions of the Trade Act of 1974 relating to relief from injurious imports and extension of nondiscriminatory (MFN) trading status.

In the coming months, it is my intention to reexamine those provisions of trade law affected by the Supreme Court's decision. As chairman of the Subcommittee on International Trade of the Committee on Finance, I would expect to hold hearings and, as necessary, seek changes in U.S. trade law to insure that they continue to function as intended by Congress.

As with all matters related to the regulation of commerce, the Constitution grants the power to regulate foreign trade to the U.S. Congress. Congress has chosen, over the years to delegate much of the responsibility for the administration of our trade laws and the negotiation of trade agreements to the Executive. Instruments, such as the legislative veto, have been used by Congress to safeguard its interests in the operation of our trade laws. Whether with respect to the granting of import relief under section 201 of the Trade Act, the freedom of emigration provisions relating to East-West trade, or other parts of trade law, it is of paramount importance that Congress retain control over the process.

Mr. President, that said, I look forward to working with my colleagues in the reexamination of those provisions of U.S. trade law affected by the recent Supreme Court decision.

Mr. HEINZ. Mr. President, I think the Senator from Missouri is quite right in his concern about the implications of the Supreme Court's decision on our trade laws, particularly section 201. The last three Presidents have a nearly unbroken record of deviating from International Trade Commission recommendations, invariably to the detriment of the domestic industry.

Despite that record, the legislative veto in the escape clause provision has never been successfully used. In fact, to my knowledge, it has been attempted only twice, both during the Carter

administration. On one occasion the Subcommittee on Trade of the House Ways and Means Committee voted to override a Presidential decision on industrial fasteners. The matter got no farther than that when a compromise was worked out which involved initiating a national security investigation under section 232.

The second case involved the President's decision in 1980 not to provide any relief beyond adjustment assistance in the leather wearing apparel case, despite a unanimous commission vote. The Senate overrode that decision, but the Subcommittee on Trade of the Ways and Means Committee failed to do so by one or two votes.

Despite this modest history, the presence of this provision has clearly had an impact in encouraging the President to adhere more closely to Commission recommendations. The leather apparel close vote, for example, I am convinced was an influential factor in the President's decision on mushrooms a month later.

As the Senator from Missouri knows, I have long been a critic of the interagency process used to produce deviations in these cases. My observation—and I have watched these episodes very closely—has been that the various agencies take predictable positions for or against import relief and that the bargaining that ensues produces satisfactory political compromise between agencies but loses sight of what makes economic sense for the affected industry. The result, more often than not, has been less than half a loaf which creates the illusion of relief but provides no real help and promotes no real adjustment.

Last year, in an effort to solve that problem I included in my omnibus trade bill (S. 2497) a requirement that Congress authorize, by resolution, any action the President proposed to take that differed from the ITC recommendation.

This year my industrial revitalization Act (S. 849) requires the imposition of the ITC recommendation, although it also includes a major, even decisive, role for the Government in fashioning the proposed relief at an earlier point in the process.

Mr. President, those are longer term solutions that will need the study and hearings the Senator from Missouri suggests. Right now, however, we have a more immediate problem, and that is the pending specialty steel 201 case. The President must make a decision in that matter by July 5.

This decision will be a critical test for the statute, not to mention the industry. The President himself initiated this case last November, and came close to determining its outcome as well in his public statement. The President said:

The injury to the domestic industry is clear. The specialty steel industry is an efficient, technologically up-to-date and export-oriented branch of the steel industry. Its output is used in a wide range of demanding applications critical to an industrial economy and thus commands a price far higher than ordinary steel.

A partial remedy against unfair imports can be rendered meaningless by a substitution of new foreign suppliers for those whose shipments are affected. Thus, the specific subsidy complaints could lead to a remedy that fails to resolve the overall import problem. Moreover, dealing with the specific subsidy problem itself probably would not have a great impact on world steel trading environment in which our industry must compete. Subsidies are only one of a wide range trade restrictive and trade distortive practices that many of our trading partners engage in to protect their industries and to stimulate exports. If we are ever to put an end to constant trade disputes in steel, we must stop dealing with discrete import and export issues in insolation and instead begin a coordinated approach to the problem.

Mr. President, if ever there were an appropriate candidate for the use of the escape clause mechanism, it is the specialty steel industry. The President asked for the case. Injury is clear—the Commission was unanimous except for one product. There is also no dispute that the imports coming into the United States are unfairly traded. The industry has initiated and won a series of dumping and subsidy cases against most of the major producers. Unfortunately those actions will not provide sufficient relief. The subsidizing producers will simply subsidize all the more: which, by the way is the argument against tariffs and for quotas as a form of relief. In addition, our laws move so slowly, a number of the cases have only recently been completed.

The industry effectively utilized its last period of import relief, from 1976 to 1980, to modernize, install new technology, and make itself competitive with any producer in the world, as long as they play by the same rules. Unfortunately during that same period 500,000 to 700,000 tons of new capacity was built elsewhere in the world, much of it subsidized, most of it for exports. Thus the U.S. industry, despite doing everything it was supposed to do, finds itself similarly threatened today by producers uninterested in the free market and uninterested in where real comparative advantage lies.

Mr. President, I have in the past spoken at length on the Senate floor on the specialty steel industry, its problems, and its importance to our economy and our national security. I will not repeat those remarks now.

I do want to make clear, however, what will happen if adequate relief is not approved.

First, there will be a serious, and I expect successful effort to restore the specialty metals clause to the defense appropriation. The industry acquiesced in the weakening of this clause, through the inclusion of the so-called NATO waiver, in the supplemental appropriation. In doing so, they gave up permanent and significant protection in the expectation of temporary but GATT-consistent import relief. If they do not get it, the specialty metals clause will return.

Second, the Congress will have to act to reverse the President and impose appropriate relief. The Supreme Court decision makes the use of the existing legislative veto problematical. Accordingly I am today introducing legislation to amend the escape clause mechanism to provide that the President must either implement the ITC recommendation, or, if he chooses to do something else, he must submit it to Congress as legislation which would be considered in 30 days under the fast-track procedures in section 151 of the Trade Act of 1974. Under these procedures the President's proposal could neither be delayed nor amended. A vote would be guaranteed. At the same time Congress would continue to have the role provided by the legislative veto. I ask that the text of the bill be printed at this point in the RECORD.

There being no objection, the text of the bill was ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION. 1. Section 203(a) of the Trade Act of 1974 (19 U.S.C. 2253) is amended to read as follows:

"(a)(1) If the President proclaims the import relief recommended by the Commission, or announces his intention to negotiate one or more orderly marketing agreements pursuant to the Commission's recommendation, the President shall on the date such proclamation is made transmit to Congress a document setting forth the action he is taking under this section.

"(2) If, on the basis of advice received under section 202(b), the President determines that the provision of the import relief recommended by the Commission is not in the national economic interest of the United States and that there are alternative recommendations which offset the material injury or threat thereof to the industry to the same extent to which the Commission's recommendations offset such injury or threat thereof, the President shall transmit to Congress a document which sets forth—

"(A) such determination,

"(B) the reasons why providing that import relief recommended by the Commission is not in the national economic interest,

"(C) information with respect to—

"(i) what actions (other than adjustment assistance programs immediately available) the President proposes to take to help the industry overcome material injury or threat thereof and the workers to find productive employment, and

"(ii) how such actions will overcome such material injury or threat thereof to the same extent as the Commission's recommendations, and

"(D) proposed legislation to implement the President's recommendations.".

SEC. 2. Section 203(b) of the Trade Act of 1974 (19 U.S.C. 2253) is amended to read as follows:

"(b)(1) The President's proposal under subsection (a)(2)(D) shall be treated as an implementing bill pursuant to the provisions of section 151, except that, for purposes of section 151(c)(1), no trade agreement shall be required and the day on which the implementing bill is submitted shall be treated as the day on which the trade agreement is submitted; and for purposes of section 151(e) (1), and (2) the 45-day period shall be reduced to 15 days.

"(2) The President shall no later than the 31st day after the submission of such proposal—

"(A) proclaim the actions recommended by the Commission under section 201(d) if Congress fails to enact legislation under paragraph (1), or

"(B) take the action recommended by him if the Congress has enacted the legislation under paragraph (1).".

Mr. HEINZ. Mr. President, I believe this proposal can stand on its own merits. However, I would also like to see it enacted in time to respond to an unsatisfactory specialty steel situation, should that prove necessary.

Can the Senator from Missouri provide some encouragement in that regard?

Mr. DANFORTH. I certainly appreciate the concerns expressed by the Senator from Pennsylvania. Should import relief be denied in the specialty steel case—particularly in view of the virtually unanimous ITC recommendation—the operation of section 201 without the veto provision would immediately be called into question.

Although I have not had the opportunity to examine the Senator's legislative proposal, it seems to me that his or a similar arrangement may turn out to be the way to proceed. In any event, I, too, will be watching the specialty steel decision and would expect it to influence the actions of the Congress as we move to reexamine section 201 in the coming months.

As I indicated in my initial comments, I will do my best to schedule hearings on the impact of the Supreme Court's decision as soon as practicable.

PRESIDENTIAL CLASSROOM

Mr. GLENN. Mr. President, as someone deeply concerned about the quality of American education, I am particularly pleased to congratulate the 1983 Presidential Classroom of Young Americans, especially the six students selected from the State of Ohio.

They are: Craig Aaron Kaiser, Teays Valley High School, Ashville; Lisa C. Young, West Jefferson High School, West Jefferson; Darrin N. Chatman, Malabar High School, Mansfield; Kevin Todd Kinsey, Mansfield Senior High School, Mansfield; Kristin Lyn Lutz, Malabar High School, Mansfield; and Sarah Stahlheber, Mansfield Senior High School, Mansfield. Each of these students compiled as impressive record as leader, scholar, and participant in school and community activities.

As they prepare for careers, I know these students will continue a commitment to the same high-quality performance that merited their selection for the Presidential classroom program. It is refreshing to know that some students still place a high value on academic excellence. As we look to the future, these students remind us that inquisitive young minds represent our best hope to harness knowledge for human purpose. Just as they have learned to demand so much from themselves, these young leaders will be expected to contribute much to their society. I know they are equal to the challenge.

Again, I say congratulations to these outstanding students, but also to the families, friends, and teachers who contributed to their achievement.

TIMOTHY Q. KIME—A VERY SPECIAL OHIOAN

Mr. GLENN. Mr. President, on Thursday, June 30, the American Optometric Association will meet here, in Washington, to confirm a very special Ohioan, Timothy Q. Kime, O.D. of Toledo, to its highest elective office. It is a pleasure for me to join his friends and colleagues in honoring Dr. Kime on his election as president of this fine organization.

Dr. Kime has served his profession and the people of Ohio with great distinction for over two decades. Since graduating from the Ohio State University College of Optometry in 1961, Dr. Kime has devoted much of his time to the advancement of optometry and eye care at the local, State and national levels. At the same time, Dr. Kime has given freely of himself to many noble civic endeavors. His many hours of community and professional service include serving as president of the McKinley School PTA, member of the board of directors of the Conlan Center for the Severely Handicapped, secretary of the Health Planning Association of northwestern Ohio, president of the Maumee Valley Optometric Association and president of the Ohio Optometric Association.

Throughout his career in the health care field, Dr. Kime has exhibited an overriding commitment to improving the vision care and health of all Americans. It is most fitting that this commitment has been recognized and rewarded by his colleagues. I am proud that a fellow Ohioan has reached the top of this important health care profession, and I wish Dr. Kime great success during his tenure as president of the American Optometric Association.

PRESIDENTIAL SCHOLARS

Mr. GLENN. Mr. President, as someone deeply concerned about the quality of American education, I am particularly pleased to congratulate the 1983 class of Presidential scholars, especially the two selected from the State of Ohio. Brian D. Bryant, Walnut Hills High School in Cincinnati, and Jan Fischer, Upper Arlington High School in Columbus, compiled impressive records as leaders, scholars, and participants in school and community activities to earn this recognition. The highlight of National Recognition Week was the awards of Presidential medallions to the 141 distinguished young men and women during special White House ceremonies.

As they prepare for careers, Brian at Stanford University and Jan at Wake Forest University, I know these graduating seniors will continue a commitment to the same high-quality performance that merited their selection as Presidential scholars. It is refreshing to know that some students still place a high value on academic excellence. As we look to the future, Brian and Jan serve to remind us that inquisitive young minds represent our best hope to harness knowledge for human purpose. Just as they have learned to demand much from themselves, so the Presidential scholars will be expected to contribute much to their society. I know that Brian and Jan are equal to the challenge.

Again, I say congratulations to these outstanding students, but also to the families, friends, and teachers who contributed to their achievement.

DISABLED PERSONS

Mr. GLENN. Mr. President, I would like to express my strong support for amendment No. 1400 to the supplemental appropriations bill. This amendment suspends periodic reviews of disability beneficiaries having mental impairments until the Social Security Administration reforms the disability determination process. It is the same as S. 1144, a bill I have cosponsored. This temporary moratorium is urgently needed to protect mentally disabled persons who are particularly vulnerable and defenseless under the continuing disability review program.

In 1980, Congress passed amendments to the Social Security Act to tighten up eligibility for the disability program. The law requires the Social Security Administration to review the cases of disabled workers at least once every 3 years. Reports by the General Accounting Office and the Social Security Administration indicated that many beneficiaries in the program, perhaps 20 percent, were not really disabled.

Congressional action to improve the disability program by weeding out nondisabled persons was necessary and sincere. However, the Administration's implementation of the 1980 amendments has been overzealous. Since the review process began 2 years ago, the Social Security Administration has terminated 45 percent of the beneficiaries reexamined. Investigations by several congressional committees indicate that many severely disabled persons are being erroneously terminated from the disability insurance program, only to wait, without benefits, through the lengthy appeals process. In my State of Ohio during 1982, 18,000 disabled beneficiaries were reviewed by the Social Security Administration and 42 percent of these persons were terminated from the rolls. However, if the terminated beneficiary appeals his case to the administrative law judge level, disability benefits are reinstated at a 67-percent rate. In the meantime, these persons suffer financial hardship and emotional trauma. Some disabled persons have committed suicide, others have died of medical conditions that were ruled "non-disabling," and others have lost their homes after being terminated from the disability program.

Many of the persons terminated from the disability program have been mentally impaired persons. At the request of the Special Committee on Aging, the General Accounting Office (GAO) examined 75 cases and interviewed about 200 disability examiners in Ohio and three other States. The results of the GAO study were presented at a hearing of the Aging Committee and indicate that the procedures used to review the cases of mentally ill people are seriously flawed. Among the shortcomings in this process, GAO found that 10 States did not employ any psychiatrists for use in the review process, mentally ill persons were not given a realistic evaluation of their ability to work, and examiners were encouraged to stress the positive activities that a beneficiary could do—such as feeding a cat or watching TV. Severely ill persons without the capacity to relate to other human beings have been terminated from the disability rolls because of their ability to boil an egg or attend a movie. The GAO findings parallel the ruling of a Federal court which decided in favor of a group of mentally disabled persons. The court found the Social Security Administration procedures to be arbitrary, capricious, and irrational.

Last week the Department of Health and Human Services announced a series of disability reforms which include a temporary moratorium on the reviews of about two-thirds of the mentally disabled. This action will apply to persons suffering from psychotic disorders. While this moratorium is helpful, it does not go far enough. Other persons with severe nonpsychotic disorders, such as mental retardation and suicidal depression, should also be exempt from the reviews. This amendment will halt the reviews of all mentally impaired persons for a 6-month period until the Social Security Administration, in consultation with psychiatric experts, revises the criteria used to determine mental disability.

While this amendment addresses the critical problems faced by mentally impaired individuals during the disability review process, additional comprehensive reforms are needed in the review process for all disability beneficiaries. I have cosponsored S. 476, a bill which corrects the most serious shortcomings in the review process. I urge my colleagues to adopt both of these bills so that we can improve the disability program and more effectively remove nondisabled persons without unfairly hurting truly disabled persons.

AIRCRAFT SAFETY

Mr. GLENN. Mr. President, the recent tragedy which resulted in the loss of human life aboard an Air Canada flight despite the outstanding performance of the flightcrew and the air traffic control service in bringing the aircraft down at the Greater Cincinnati Airport has drawn attention to the need for action to enhance prevention, detection and control of fire aboard aircraft.

On Friday of last week, President John A. Gannon of the International Association of Firefighters (AFL-CIO) noted in a Washington news conference that 10 years have passed since an onboard fire took 124 lives despite another successful landing at Paris, France. He asserted that "years of neglect" have gone by without effective action, and added that a pending recommendation could result in reduced crash and fire protection at numerous domestic airports.

Mr. President, I am pleased that hearings have begun before the Transportation, Aviation and Materials Subcommittee of the House of Representatives on aircraft cabin fire safety research and other critical safety issues. And I commend the International Association of Firefighters and especially its president, Jack Gannon, for forcefully pressing this issue, and I ask unanimous consent that Mr. Gannon's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON THE NEED FOR CONGRESSIONAL HEARINGS ON AIRCRAFT CRASH/FIRE SAFETY, IN FLIGHT AND AT AIRPORTS BY JOHN A. GANNON

On behalf of the membership of the International Association of Firefighters, AFL-CIO, we strongly urge Congress to hold hearings immediately to determine why the Federal Aviation Administration has not taken action to enhance aircraft safety regulations in the following areas: aircraft interiors, smoke detector systems, crash/rescue manpower/training, firefighter protective clothing, firefighter respiratory protection, extinguishing agents.

While public attention has recently been focused on the airplane fire problem as a result of the recent Air Canada tragedy, the problem is not a new one. Ten years ago, in 1973, an aircraft made an emergency landing in Paris, France, after a fire in a plastic waste basket near the lavoratory was discovered. Despite a successful landing, some 124 people died from inhaling toxic fumes given off by the burning synthetic materials used in the aircraft's interior.

While the FAA has lagged behind in issuing regulations to enhance the fire safety of aircraft interiors, it is considering taking actions that could further jeopardize the safety of aircraft passengers during an emergency situation. The FAA has been reviewing various recommendations in a contract study which, if and when adopted, would permit airports to keep existing certification without crash/fire rescue units stationed at the airports. Consideration of this proposal is based on a false idea of "Economy". These actions could eliminate all crash/fire protection services for several hundred class AA, A and B airports. In an emergency, there might not be any professionals present to put out a fire, or save the victims of a crash.

Furthermore, training of flight crews frequently requires knowledge only of the extinguishing systems onboard without provision for any practical experience with the systems.

Effective interior aircraft fire fighting and rescue efforts are also hindered by the fact that the FAA has not kept up with advances in protective clothing and equipment for fire fighters. There is no national standard for airport fire fighter protective clothing: coats, pants, gloves, and hoods. As a result, varying protection is afforded fire fighters, depending upon which airport they serve. Many current protective garments are currently made of asbestos, which poses a cancer risk to the fire fighters, even though safer materials, such as aluminized kevlar, are now readily available.

Likewise, there is no FAA requirement for firefighters to wear self-contained breathing apparatus and as a result it is not usually furnished. Firefighting and rescue efforts in the interior of the aircraft are thus severely limited, due to the smoke and other toxic products of combustion produced by the burning of synthetic materials present in aircraft interiors. Furthermore, most aircraft firefighting protective clothing is not designed to interface properly with self-contained breathing apparatus.

It is also evident that the extinguishing systems most commonly utilized by the airline industry have particular problems. For example, Halon 1211 when heated decomposes into toxic substances that could result in death. Further research efforts are needed to produce extinguishing systems that are both effective and nontoxic.

Materials used in airplane interiors include polycarbonate, polypropylene, polyurethane and polyvinylchloride, which when burned break down into various chemical fumes which may be odorless and colorless and are sometimes toxic and carcinogenic. Often, these toxic fumes begin to be

given off long before the plastic actually catches fire.

The FAA has been researching materials which can reduce toxicity and flammability since the early 1970's. Yet, there are still no requirements for airlines to install materials that are nontoxic and nonflammable. FAA has also refused to issue regulations requiring smoke detectors in all aircraft lavoratories despite recommendations to do so from the National Safety Transportation Board about 10 years ago.

Years of neglect have gone by without action from the FAA. It is time that our elected representatives in Congress demand that FAA take actions to improve aircraft safety.

CONCLUSION OF MORNING BUSINESS

Mr. BAKER. Mr. President, I see no other Senator seeking recognition. Will the Chair inquire if there is further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

CONSTITUTIONAL AMENDMENT ON ABORTION

Mr. BAKER. Mr. President, I ask unanimous consent that the Chair lay before the Senate Calendar No. 235, Senate Joint Resolution 3.

The PRESIDING OFFICER. The joint resolution will be stated by title.

The assistant legislative clerk read as follows:

A joint resolution (S.J. Res. 3) to amend the Constitution to establish legislative authority in Congress and the States with respect to abortion.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which has been reported from the Committee on the Judiciary with an amendment, as follows:

On page 2, strike line 6, through and including line 10, and insert "Constitution";

So as to make the joint resolution read:

S.J. Res. 3

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

"ARTICLE. —

"SECTION . A right to abortion is not secured by this Constitution.".

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Assistant Secretary of the Senate proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, the reason for the delay this morning, after laying before the Senate the resolution, was the hope that we might be able to get a unanimous-consent agreement that would provide against any amendment to this resolution, which I understand is the wish of the principal sponsors and the principal opponents, and that we might get a time certain for final passage or limitation on the time for debate.

It would be a little short of a miracle if we got that, but I wish to report that on our side at least it looked as if we may be able to do that. I hope we will be able to get such an agreement a little later, but it is not possible for a variety of reasons relating to the presence of Members in the Chamber to do so now.

Therefore, the managers on both sides have agreed to go forward with their opening statements and the beginning of debate.

I wish to say, however, that it is my intention to try to get such an agreement sometime during the course of this morning.

Mr. President, I yield the floor.

Mr. HATCH. Mr. President, a decade ago, the Supreme Court inaugurated our nationwide policy of abortion on demand, an abortion policy more radical than that of any nation with the possible exception of the People's Republic of China. Moreover, this decision changing the life of every American was neither the product of a vote of our people nor enacted by our legislators. Nor a single State had such an unrestricted abortion doctrine before the Court decreed such to be our single national policy of January 22, 1973. The consequences of this act are undeniable: the death of more than 15 million unborn children is a grim monument in this country.

In the intervening years since that judicial edict, this body has often convened to discuss tangential aspects of the questions raised, but not disposed of, by the Surpeme Court. We have discussed Federal funding of abortions; we have discussed limitations on Federal court jurisdiction relative to abortion; we have even discussed insurance coverage for abortions. Today, however, we are embarking on an historic debate. For the first time, the Senate will examine directly the merits of our radical abortion policy. This is the debate amongst representatives of the people that was not held 10 years ago when America fell subject to this indulgent policy. This is the chance America did not have then to carefully weigh all the implications of permitting wholesale abortions. This is the opportunity Americans did not enjoy then to participate in the decision by apprising their Senators of their own unique and informed vantage points. This is the occasion America did not have to consider what other options might guarantee maternal safety while protecting the unborn. This is our national opportunity to reconsider *Roe* v. *Wade*, 410 U.S. 113 (1973).

Roe against Wade and its companion case, *Doe* v. *Bolton*, 410 U.S. 179, (1973) granted abortion the elevated status of a fundamental constitutional right and invalidated almost all effective restrictions on abortion throughout the 9 months of pregnancy. The only apparent restriction in Roe's abortion policy, permission for a State, in the third trimester of pregnancy, to regulate abortion, unless necessary to preserve the "health of the mother," 410 U.S. 132, was simultaneously withdrawn by Doe which defined the health exception broadly enough to encompass the mother's physical, emotional, or psychological well-being. 410 U.S. at 192. In the words of Prof. John Noonan of the University of California Law School, the absolute and plenary right to abortion created by the Court was curbed in the final stages of pregnancy only by the "necessity of a physician's finding that she needed an abortion." Noonan, Private Choice, 12 (1979). In short, no significant legal barriers of any kind whatsoever exist today in the United States for a woman to obtain an abortion for any reason during any stage of her pregnancy. Any lingering misconceptions about the extreme scope of the right to abortion created by the Court were laid to rest on June 15, when the Court struck down even simple State laws requiring a 24-hour waiting period for elective abortions and requiring the attending physician to inform the patient of the risks and effects of abortion.

Frankly, it is this rule of abortion on demand imposed upon a citizenry whose values are sharply at variance that has caused a decade of intensive divisions and passions on the issue of abortion. I have said that we are embarking on our first true debate of the abortion controversy, but in a sense, we are only continuing a debate that has already raged amongst the people of the United States for more than 10 years. The focus of the Senate aspect of this intense national confrontation will be Senate Joint Resolution 3, the human life Federal amendment. Senate Joint Resolution 3 is a modest measure, in that it merely overrules Roe against Wade without establishing a national policy on abortion.

I heard on network news this morning that this amendment's purpose is to overrule abortion. This amendment makes no such claim.

The only claim of this amendment is to overrule Roe against Wade without, and I emphasize "without," establishing a national policy on abortion.

Senate Joint Resolution 3 simply reverses Roe and thus restores the status quo that existed for nearly two centuries. The States could replace the Supreme Court's extreme policy with policies tailored to respect, to the maximum degree possible, both maternal health and the life of the unborn.

I will return to explain more fully the legal operation of Senate Joint Resolution 3.

Meantime, we are left to contemplate the policy which Senate Joint Resolution 3 will replace, namely the Roe decision. Its effects are painfully apparent. The primary effect is, of course, the loss of more than 10 times more American lives than were lost in all of our Nation's wars lumped together.

We prepared this first chart to show that. We have left off a few wars, but basically even if you add those to the wars already listed, very few casualties would be added to the total. The war on the unborn has cost 10 times the human lives of all of our wars put together. It is a stark fact, and I think the American people need to know that there have been 15 million abortions in this country since Roe against Wade. I think that is pretty important to understand.

Of course, when the cost of Roe in terms of lives is at stake, I must unequivocally reiterate my utmost dedication to preserving the life of the mother, even to the point of denying the unborn child's right to life if absolutely necessary. Preserving a mother's life is hardly at stake, however, when abortions are performed in America at the rate of over 4,000 per day, nearly 170 per hour, and 3 per minute. Preserving the life of the mother is hardly at stake, when in some American cities, like the Nation's Capital and its largest city, more children are aborted than are permitted to be born alive. Nor can preserving the life of the mother be the explanation for the skyrocketing increase in total abortions since Roe.

This chart shows how the increase of abortion has dramatically skyrocketed since the 1973 decision of Roe against Wade. A significant aspect of this particular chart shows that illegal abortions still continue.

The information on this table has been gathered from the U.S. Center for Disease Control, from Alan Guttmacher Institute, and Syska, Hilgers, and O'Hare, "New Perspectives on Human Abortion," chapter 13.

I might emphasize these are very conservative figures; they are not liberal figures. I personally believe, and there is much evidence of the fact, that we are aborting the unborn at a rate of almost 2 million, if not more, annually.

The next chart to which I wish to draw my learned colleague's attention should put into perspective some inflated claims regarding total numbers of abortions before and after the Supreme Court's abortion rulings of 1973. The claim has been made that over 1 million illegal abortions were performed annually before the legalization of abortion, and therefore that legal abortions have simply replaced those previously performed without sanction of the law. This chart shows that legalization has actually led to a remarkable increase in the total number of abortions.

The lower broken line on this chart represents the estimated number of illegal abortions from 1952 to 1978. Illegal abortions, by their very nature, cannot be directly recorded, and the debate on this issue has been plagued by wild guesses. In 1958, for example, a Planned Parenthood conference in the United States concluded that the number could be "as low as 200,000 and as high as 1.2 million * * * there is not objective basis for the selection of a particular figure between these two estimates."

More recently, however, Dr. Thomas Hilgers of Creighton University and his colleagues have arrived at a way of determining the number more objectively. These researchers recognized that while there were no records of illegal abortions as such, there were fairly complete records of maternal deaths due to illegal abortion. It may be easy to hide an abortion, but it is certainly not easy to hide a woman's dead body, and it is impossible to mask the fact that she died of a badly performed abortion. If anything physicians who favored legalization in the 1960's had a vested interest in reporting illegal abortion deaths conscientiously, so the figure could be used to argue for liberalized abortion laws.

The researchers' other working assumption was this: Illegal abortion was more dangerous than natural pregnancy. This, again, was an assumption shared by supporters of legalized abortion. Why else campaign to make abortion "safe and legal," unless illegal abortion is an unusually dangerous procedure—much more so than the alternative of childbirth?

Based on statistical estimates that illegal abortion was between 3 and 15 times more dangerous to the woman than natural pregnancy, Dr. Hilgers calculated a possible range for the total number of illegal abortions. The line on the graph is his maximum figure, based on the estimate that illegal abortion was only three times more dangerous than pregnancy. If illegal abortion were more dangerous than this, then the maternal deaths from abortion would have been produced by a smaller total number of abortions performed. So this is the highest reasonable estimate.

The other two lines represent legal abortions, beginning with the first major trend in liberalized abortion laws in the late 1960's. After 1973, we have two lines because the U.S. Centers for Disease Control and the Alan Guttmacher Institute both published abortion statistics after this point. It is widely acknowledged that even the Guttmacher Institute's figures provided a mimimum figure—that a significant number of legal abortions may still go unreported. So the discrepancy between abortions before and after legalization as shown here is as conservative as I can make it.

With official legal approval of abortion as a solution to social and personal problems, the total number of abortions has increased at an alarming rate and still continues to rise. In some cities, such as Washington, D.C., abortions outnumber live births. My colleagues will also note that despite the virtually unrestricted legalization of abortion by the Supreme Court, some illegal abortions—that is, abortions performed by a nonphysician—continue to be performed every year. And every year, these abortions continue to claim the lives of some American women.

Dr. Hilgers' study group estimates that the most likely average figure for illegal abortions in the prelegalization era is 98,000 a year, with a maximum of 210,000 in 1961—"New Perspectives on Abortions," 69 (1981). This is based on a moderate estimate of the risk of death from illegal abortion. In that case, the total number of abortions has increased exponentially since legalization by a factor of sixfold to elevenfold. Hilgers found that legalization did result in a modest decrease in illegal abortions from 1971 to 1974, but that no further decrease in illegal abortions has taken place since 1974 despite the continued sharp increase in legal abortions. It has taken as many as 18 legal abortions to eliminate each illegal abortion. If that figure is translated into financial terms, than at a rate of $200 per legal abortion, it costs about $3,600 to eliminate a single illegal abortion. In any event this chart shows that the number of abortions has skyrocketed upward.

This obvious and dramatic rise in the incidence of abortions can hardly be attributed to any of the so-called hard cases; namely, abortions necessary to preserve the life of the mother or to terminate pregnancies caused by rape or incest. As a result of Roe, a right to abortion was effectively established for the entire term of the pregnancy for virtually any imaginable reason, including for the sake of personal finances, social convenience, or individual lifestyle.

One ardent proponent of abortion, Dr. Irvin Cushner estimated that only 2 percent of all abortions could be justified as medically expedient—hearing on constitutional amendments, 97th Congress, 1st session (1981). Even increasing his liberal estimate by 50 percent still means only 3 percent of all abortions are really necessary to prevent medical complications. Several other qualified physicians have averred that never in their lengthy medical careers had they encountered an abortion necessary to save the life of the mother.

Chart 3 asks the question "Why do American women have abortions?" Ninety-seven percent of all abortions are performed for social, emotional, financial, and other reasons unrelated to the mother's life or the mother's health, or as a result of rape or incest.

Our second chart gives an idea of the reasons why abortion is sought so frequently at present. The figure of 97 percent is, I believe, a reasonably conservative estimate. This is based on several sources, but I would like to cite two in particular.

The first is our experience with medicaid funding of abortion from 1977 to 1981. When the Hyde amendment began restricting these funds to those circumstances generally regarded as "hard cases"—for example, damage to physical health, life of the mother, rape, and incest—medicaid reimbursement claims for abortion swiftly dropped by over 99 percent.

The second source is testimony presented by Dr. Irvin Cushner before the Senate Subcommittee on the Constitution on October 14, 1981. Dr. Cushner is employed by the school of medicine and the school of public health of the University of California at Los Angeles; his testimony leaves no doubt that he supports unrestricted legalization of abortion. But Dr. Cushner also testified:

> Something on the order of 2 percent of all of the abortions in this country are done for some clinically identifiable entity—physical health problem, amniocentesis and identified genetic disease or something of that kind. The overwhelming majority of abortions in this country are performed on women who for various reasons do not wish to be pregnant at this time—hearings, supra, at 158.

No other witness at our subcommittee hearings expressed as exact a numerical estimate, but many expressed agreement that the number of abortions performed in one of the "hard cases" is a very tiny percentage of the total number.

For example, Dr. Barnard Nathanson, who estimates that he himself has presided over about 75,000 abortions during his lifetime, could recall only one case in which the mother's life could reasonably be said to have been at stake. For various reasons, pregnancy from rape is so rare that it is difficult to pin down a percentage figure for its occurrence, but most studies indicate that it could only be a tiny fraction of 1 percent of the current abortion rate.

Abortion for fetal handicap is a tiny subset within the minority of abortions performed around or after the 20th week of pregnancy—amniocentesis can only be performed beginning around the 16th week, and test results can take weeks to obtain because of the time needed to culture the cells obtained in the procedure. Dr. Nathanson testified that these eugenic abortions were "a tiny, insignificant and vanishingly small fraction of the total number of abortions done in the United States."—hearings, supra, at 169.

Another practicing obstetrician-gynecologist, Dr. Jasper Williams of Chicago, testified that "the number of medical cases in which abortion is an indicated and appropriate part of the treatment is practically nil."—hearings, supra, at 266. Dr. Williams said he had not seen a case of abortion necessary to save a woman's life since 1953.

Even Bella Abzug, testifying before our subcommittee to oppose legal restrictions on abortion, defended abortion primarily as a "method of birth control"—though, to be sure, she described it as "the least desirable method of birth control"—hearing, supra, at 1174.

By emphasizing how "soft" the reasons for the great majority of abortions are, I do not intend in any way to imply that women take this in a frivolous way. In fact, one of the most striking features of the published interviews with women having abortions is that, in one way or another, the abortion is something she is going into with outside influence and even a certain amount of pressure.

In many cases, the offer of an abortion has become a way for men to escape responsibility for their own sexual behavior. It has become a way for parents and relatives to avoid the burden and scandal of a pregnant but unwed family member. It has become an escape valve for married couples who face serious personal and financial problems of various kinds but who, instead of confronting those problems squarely, are persuaded by the mores of our society to place the burden of those very real problems on the defenseless unborn child. The blame for this scandalous situation must fall upon all of us.

This chart is particularly relevant to the constant debate over the public opinion polls on abortion. It is very easy to find polls that claim to show majority support for abortion being "between a woman and her physician." The problem here is that the survey question implies a genuine medical consultation for some health-related condition—and as we see from this chart, that is a very rare occurrence indeed. The Supreme Court has just told us that the city of Akron cannot even require that the woman talk with the physician before he performs an abortion upon her. When ABC-TV broadcast the documentary called "Abortion Clinic," hosted by Jessica Savitch, one of the most revealing comments made by the young abortion counselor at the clinic was that even she did not know which abortionist would be performing a particular abortion until the pregnant woman was already lying on the operating table and the physician walked into the room for the 10-minute procedure. In this context, the "woman and her physician" slogan seems a hollow phrase.

Fortunately, the Gallup organization has conducted much more precise and impartial set of polls on this question; and because the same questions have been asked from 1975 to 1981, with remarkable consistency in the answers, these polls should be given special attention. The people surveyed were simply asked whether abortion should be illegal in all, some, or no circumstances. Those who supported legalization were asked further about those particular circumstances and the stage of pregnancy in which the abortion should be allowed.

Consistently, a majority of Americans wanted even early abortion to be legal only under very specific circumstances: Danger to the mother's life or physical health, or pregnancy due to rape or incest. Less than 25 percent want legalization for all reasons, even in the first trimester—which is our present situation. According to this series of five careful surveys taken over the last 8 years, about 97 percent of the abortions now performed would not be permitted if the majority of Americans had their say in the matter. And if I may anticipate a possible objection about the "gender gap," Gallup found that women were more opposed to legalization than men were.

I hasten to add, however, that we must not allow these statistics about the extent to which abortion has become a tool of convenience to obscure the individual tragedy of each abortion. Consider the case, based on fact, of a woman weighing the consequences of the pregnancy of which she has just learned. She announces to her physician that her husband is an alcoholic with a syphilitic infection; that one of her children was born dead, another is blind, and another had tuberculosis. Finally she confesses that her family has a history of deafness. Given the absence of standards in Roe, there is no question that the physician could recommend termination of her present pregnancy. Indeed when this hypothetical situation was posed for classes of medical students,

they reached that conclusion almost without exception. This hypothetical fifth child of the woman seeking medical advice perfectly describes Ludwig Von Beethoven. Moreover who can question that every child is really an irreplaceable Beethoven able to make his own unique contribution to his family, community, nation, and indeed to all mankind? We will hear much about the nebulous principle of "freedom of choice" later in this debate. I will ask further questions: "Freedom to choose what? Freedom to choose to deny life to Beethoven or any human being?" In essence, this frames the real abortion dilemma, posed concisely by President Reagan:

Roe v. *Wade* has become a continuing prod to the conscience of the nation. * * * We cannot survive as a free nation when some men decide that others are not fit to live and should be abandoned to abortion or infanticide. * * * Americans do not want to play God with the value of human life. It is not for us to decide who is worthy to live and who is not.—Human Life Review, spring 1983.

The President's characterization of the abortion crisis is not overstated. Our Nation has regrettably witnessed hundreds of thousands of late-term abortions since 1973. Experts verify that 15,000 abortions a year are performed after the child's 20th week, the verge of viability when the child could be delivered and live on its own. Abortions after this point are more accurately described as judicially legalized infanticides.

I might mention that of the 1,400 or more who are aborted after the 26th week 400 to 500 are born alive during abortions and are allowed to die unceremoniously.

(Mr. MATTINGLY assumed the chair.)

Mr. HATCH. Mr. President, I might mention that this chart concerns late term abortions. On the left is the gestational age. The next column would be developmental landmarks by this age. The next column would be appearance, the average size and weight of an unborn child. The last column is the approximate number of abortions performed annually after this age.

Again, I emphasize that these are very conservative figures. When we say 15,000, we are talking really about many more than 15,000.

At 12 weeks gestational age, this chart shows developmental landmarks of brain waves and the ability to feel pain. That is already well established. The heartbeat is easily recorded on an electrocardiograph. All organ systems are formed and functioning; fingernails are present; and thumbsucking is common.

I might add that we hear the audible heartbeat after 8 weeks of gestation. The average size and appearance of the unborn child is 3 to 4 inches and 1 ounce. There are an approximate number of abortions performed annually after this age of about 133,200.

At 20 weeks gestational age, the child can punch, kick, go through the motions of crying, and its movements are felt by the mother. Appearance is identical to that of a newborn infant. Fetal surgery is possible for a number of ailments, and it is on the verge of viability.

Children born at 21 to 22 weeks have survived abortion. They are 7 to 8 inches long, and 1 pound in weight. We are aborting on an annual basis in excess of 13,900 of these normally formed infants.

After 26 weeks gestational age, most children can survive. All development after this point is simple growth.

At that stage, the baby is 10 inches long, generally, 1½ to 2 pounds, and, as I mentioned before, even with abortions, 400 to 500 are born alive during the abortions that are performed.

These are based on the figures from the Alan Guttmacher Institute and from the U.S. Centers for Disease Control.

The present characterization of the abortion crisis, I think, is not overstated. Our Nation has, regrettably, witnessed hundreds of thousands of late-term abortions since 1973.

Although the 15 million abortions performed legally since 1973 are all tragedies, there is a special horror to the hundreds of thousands of late-term abortions which the Court's policy has permitted. Biologically, the life of each human individual comes into existence at conception; but even the most unsophisticated glance at an unborn child after the 12th week recognizes him or her immediately as a distinctive member of the human family. All of these children have distinctively human brain waves, easily recorded heartbeats, and a full array of formed and functioning organ systems. They can move spontaneously, manipulate their limbs, and react immediately to painful stimuli.

As the Supreme Court noted in its recent abortion rulings, the most popular method of abortion after the 12th week is something called dilation and evacuation, in which the unanesthetized unborn child is literally torn to pieces with a strong forceps. This is done because at this late stage, cartilage and bone have begun to harden too much to allow for complete success with the suction curette. The body parts are removed from the womb—sometimes the skull and rib cage must be crushed to accomplish this—and manually reassembled on a nearby table to insure that none is missing.

When dilation and evacuation is used, of course, the chances for the child's survival are nil. But other techniques—most notably the use of saline and prostaglandin and the surgical removal of the child by hysterotomy—are known to result at times in live births. The U.S. Centers for Disease Control estimate that this occurs more than once every day in the United States. These newborn children usually die soon after they leave the womb, due to the effects of the abortion technique and their low birth weight. In 1979, a Pennsylvania law which required life-saving treatment for abortion survivors who might be viable was knocked down as unconstitutional by the Supreme Court, *Collautti* v. *Franklin*, 439 U.S. 379 (1979). A few days ago, the Court ruled that a State has discretion as to whether or not to require a second physician in the case of abortions performed well after viability, so that these children will not die of neglect after birth. Akron, supra. The Court seems to be saying that even newborn infants, if their live birth is unintended, are not legal persons demanding equitable treatment. Can there be any doubt that the Court's extremism has brought us to the brink of legalized infanticide?

Once again, we need to be specific about what is being aborted. I was very deeply impressed by the impactful story of an atheist obstetrician who presided for years over the largest abortion clinic in New York City. Indeed he was one of four founders of the National Abortion Rights Action League (NARAL). A skillful and able physician, he began to study an advancing new field of medicine, fetology, study of the unborn human. He can describe in detail his growing awareness of the humanity of the unborn. At 3 weeks, the new life has already developed its own blood cells; at 4 weeks, a muscle may flex—this will become a beating heart within a few weeks, a heart which is fully audible at 8 weeks; at 6 weeks, the child's skeletal system is complete; at 7 weeks, electrical brain patterns are discernible; at 12 weeks, all organ systems are functioning—stomach, liver, kidney, brain—in fact, some infants will have already acquired a thumb-sucking habit; at 20 weeks, the fetus is punching, kicking, swimming, and hears his mother's voice; at 22 weeks, he can survive outside the womb. With these observations at his disposal, Dr. Nathanson, for medical reasons, abandoned his earlier point of view, stopped performing abortions, and began actively campaigning to acquaint the Nation with the scientific reasons that the fetus is a distinct, living human. In the doctor's own words:

I changed my mind because of advances in the field of fetology which have allowed us to understand the fetus much more completely and much more carefully than we ever did before. This has posed a very severe philosophical problem, in that you can't be operating on the fetus and giving it drugs to cure it, and at the same time be destroying it. (Washington Times, 3C, Jan. 17, 1983.)

This brings to mind comments by two notable persons, separated in time

but not in respect for life. The first, Justice Sandra Day O'Connor, aptly noted in her remarkable dissent last week, that:

> The *Roe* framework is clearly on a collision course with itself. * * * As medical science becomes better able to provide for the separate existence of the fetus, the point of viability is moved further back toward conception. *Akron*, — U.S. —, June 15, 1983, Slip. Op. at 7.

The other spokesman is Dr. Martin Luther King. At one point when jailed for seeking civil rights in another human cause, he was asked, "Why are you in jail?" Given the circumstances, his telling reply was "Why are you not in jail?" Given the undeniable scientific evidence about the unique humanity of each unborn infant, I feel compelled to reply to those who question "Why are you bothered by abortion?" with the same logic employed by Dr. King: "Why are you not bothered?" And again, to those who employ the slogan "freedom of choice," I ask, "Freedom to choose what?" Freedom to choose to terminate a being that science identifies as a separate, living individual.

Because our fellow citizens have been confronted with the irrefutable findings of fetology and have been informed by their President of the "excruciating pain the unborn must feel as their lives are snuffed away," speech to National Religious Broadcaster's Convention, January 31, 1983, it is very understandable why reliable opinion polls demonstrate that 80 to 90 percent of Americans see abortions at some stage as the destruction of a living being. On the question of when the fetus becomes a living being, there is a gender gap. Most women believe life begins at conception.

I call to the attention of the body the fifth chart which shows that a majority of American women believe that life begins at conception. The blue line shows where the men are and the pink line shows where the women are.

Fifty-eight percent of the women believe that life begins at conception; 43 percent of the men.

At quickening: 16 percent of the women believe that life begins at quickening and 15 percent for the men.

At viability: 11 percent of the women believe life begins at viability; 14 percent of the men.

At birth: Only 10 percent of the women believe life begins at birth, while 20 percent of the men do.

Those who do not know: 5 percent of the women and 8 percent of the men.

These are brought forth by Judith Blake in her article "Supreme Court's Abortion Decisions and Public Opinion in the United States," in the Population & Development Review.

This chart shows there certainly is a "gender gap" on abortion. But that gap is in the opposite direction from the current stereotype. Women, making up that segment of the population which actually experiences pregnancy, "quickening," childbirth and abortion, have a much stronger conviction than men do that life begins at conception. A similar gap has been demonstrated in many other surveys: Women are more likely to say that abortion is morally wrong, and more likely to oppose unrestricted abortion, than men are.

Since we have drawn special attention to the woman's point of view, we should also examine the claim of those who will maintain that this is actually an issue involving primarily the right of life of pregnant women. This argument maintains that only legalized abortion can protect women from the merciless knife of the back-alley abortionist. To the contrary, legalization should receive little credit, if any, for saving women's lives. Since 1941, the biggest factors leading to a drop in women's abortion deaths have been simple medical advances: Sulfa drugs, penicillin, and finally the widespread use of the safer suction curette instead of the sharp curette, a 1970 innovation. The regime of elective abortion is intended to secure far different values than those associated with maternal safety. Every State's body of law prior to 1973 acknowledged and permitted abortion necessary to save the life of the mother.

As you can see, abortions were reduced dramatically as we developed these lifesaving drugs. As you can also see, this chart dispels one of the leading myths with regard to abortion, that thousands of women annually lose their lives in back alley abortion parlors. None of us want back alley abortion parlors. None of us want any woman to lose her life; none of us want any woman to go through that type of procedure.

On the other hand, since 1973, you can see there are still deaths from abortion. Even since 1973, there were about 50 known deaths in this country.

A common argument used to justify Roe, is that legalization has saved women's lives, by replacing dangerous illegal abortions with "safe and legal" abortions. Our fifth chart shows the situation is not so simple. Maternal mortality from abortion has been dropping at a rapid rate since 1940, chiefly because of medical advances of various kinds. By far the largest number of abortion-related deaths has always been due to infection, and these deaths have been averted by the development of better drugs to treat or prevent sepsis—first by the development of sulfa drugs, then by the discovery of penicillin. After these two advances produced their effect, abortion deaths essentially leveled off again until the late 1960's, and took a sharp drop again in 1970. This is the year that abortion on demand was legalized in New York—but it is also the year when the sharp curette, which had previously been the method used in most abortions, was largely replaced nationwide in the practice of both legal and illegal abortion by the suction curette. The sharp curette, which had been used to scrape the uterine wall, had been responsible for many a perforated uterus and therefore many dangerous infections; suction curettage used a soft plastic instrument and induced abortion by a vacuum action, eliminating many of the risks from the older procedure.

Dr. Bernard Nathanson, testifying before the Senate Subcommittee on the Constitution in 1981, emphasized that it was this technological advance and not legalization that caused the sudden further decrease in maternal abortion deaths. Dr. Nathanson emphasized in his testimony that the specter of unsafe "back alley" abortions in the event of renewed restrictions on abortion is a myth based on outdated assumptions about the available technology.

It is of interest that after 1973, when the Supreme Court legalized abortion on demand throughout the country, maternal deaths did not continue to drop but leveled off instead, They actually went up again slightly in 1975, and again in 1977. There seems to be general agreement among statisticians that, even if abortion is now safer than ever before, total maternal deaths from abortion are not continuing to drop because the total annual number of abortions continues to rise alarmingly. Some abortion clinic scandals in recent years, most notably in Chicago and Miami, indicate another possible reason: some "safe and legal" clinics operate no more conscientiously than the old "back alley" abortionists did, and the Federal courts have placed serious obstacles in the way of State and city authorities that try to regulate these clinics to protect women's lives and health. Some illegal abortions continue to be performed every year and to result in some women's deaths.

If 10 years ago, the Supreme Court had possessed the same scientific and medical data we have today, it is difficult to conjecture whether they would have made the same finding as appears in Roe. And since they based their most recent ruling on the judicial principle of stare decisis, it is difficult to conjecture whether they might have reversed Roe if they had reconsidered its holding on the merits. Nonetheless it is clear that the American citizenry has the scientific evidence at its disposal. This, again, is reflected in their rejection of abortion as an acceptable ethic for a moral life. Moreover, they reach this conclusion

in nearly the same proportions regardless of political persuasion.

The two-thirds majority opposed, on moral grounds, to abortion is by no means a "soft number." This majority is clearly willing to back up its convictions with meaningful action when a loved one faces the question of abortion.

Chart No. 7 shows that the majority of each political party believe that abortion is morally wrong. Sixty-two percent of the independents of this country believe it to be morally wrong. Sixty-four percent of the Republicans believe it to be morally wrong. Sixty-eight percent of the Democrats believe abortion to be morally wrong.

This was compiled by the Connecticut Mutual Life report on American values in 1981.

According to this finding, two-thirds of those surveyed said they would not recommend abortion if a 15-year-old daughter were pregnant. Another way of handling the problem would be found.

Of course, statistics show that almost half of the unwed teen pregnancies do end in abortion at present. One factor here is that since 1976, the Supreme Court has consistently invalidated any law which might be construed to provide what the Court calls a "parental veto" of an unwed minor's abortion. It insists that the minor must be given the alternative of a court hearing, at which a judge can decide she is mature enough to get the abortion without her parents' knowledge or that an abortion is in her "best interests"—this last could potentially become a very large hook on which to hang the judge's personal predilections about abortion. On June 15 of this year, the Supreme Court ruled it was unconstitutional even to require parental involvement in the abortion decision of an unemancipated minor under the age of 15, Akron, supra. In other words, the parents surveyed in this poll would most likely never have the opportunity to counsel with their 15-year-old daughter to find an alternative to abortion under the law as set forth by the Supreme Court and under this recent Supreme Court decision.

This chart shows the ABC News-Washington Post poll in 1981 that demonstrates the majority of the people in this country would not advise abortion for their 15-year-old daughter, 23 percent would advise, and 11 percent are other answers.

In most States, a minor is still required to have parental consent before marrying, getting a job, undergoing surgery, attending an adult movie, or, in some cases, even getting her ears pierced.

In order to get her ears pierced she has to have her mother with her and get her mother's consent.

If the counselors in school want to give our kids aspirin because they have a headache or are not feeling well, or because they have a cold, as a general rule in almost every State in the Union they have to call the parents and get their consent.

By Court decree, however, a 15-year-old can have an abortion without any parental consultation whatsoever. This logic even contradicts the reasoning of Roe. Roe placed great importance on the woman's decision to have an abortion. Yet a 15-year-old minor may not have the capacity to make such decisions in their own best interest without parental involvement. For precisely this reason, States have traditionally sought to protect children from their own immature decisions by requiring parental consent for a wide variety of activities. Yet abortion, notwithstanding its remarkable consequences, can be performed on a minor without the slightest parental participation.

It really makes you stop and pause and wonder. It is not very difficult to understand why our Nation is considered the most permissive in regard to abortion in the world today, yet this Nation has been founded on Christian principles.

The two-thirds majority opposed to abortion on moral grounds is by no means a soft estimate. This majority is clearly willing to back up its convictions when a loved one faces the question of abortion.

This next chart is the New York Times-CBS poll of August 18, 1980. It shows that a majority of our people want a constitutional amendment to protect the life of the unborn. Fifty percent say there should be a constitutional amendment, 39 percent say there should not be, and 11 percent are undecided. This was taken before the latest Supreme Court decision that virtually outlawed any restraint upon abortion in America. I suspect that if the American people knew these facts—I hope this debate will help to bring the facts to their attention—that this 50 percent would go up. I believe it will rise if people realize how bad the situation in America is.

Finally—and I suppose this could be called the punch line—this strong personal opposition to abortion does translate into support for a constitutional amendment to protect the unborn child, even when it is not specified in question whether the proposed amendment would constitute a total ban on abortions or a neutral proposal like Senate Joint Resolution 3 which adopts no national policy on abortion.

I would like to show the next chart. This chart basically says, as we explained before, that people are seriously concerned, that they are prepared to consider a constitutional amendment. Unlike the others, it is not 66 percent, but it is a pretty hefty margin over the others who feel otherwise.

This is perhaps an appropriate time for me to describe briefly the history and operation of Senate Joint Resolution 3 because I think some of our national media have not realized what Senate Joint Resolution 3 is.

I do not blame them because it is such a difficult, complex issue to understand. People think it is a simple issue. I do not think it is simple. I think it is difficult and I think it is difficult for both sides.

Senate Joint Resolution 3 which states, in its entirety, that "A right to abortion is not secured by this Constitution," has already been the subject of extensive examination and consideration in the Senate Judiciary Committee. In the last two Congresses, the Constitution Subcommittee has held 11 days of hearings and entertained over 80 witnesses to ascertain the constitutional, philosophical, legal, moral, medical, and social aspects of the controversy created by Roe against Wade.

On March 24, 1983, the Subcommittee on the Constitution voted to report out Senate Joint Resolution 3 after adopting an amendment. This change was the recommendation of Senator THOMAS EAGLETON, Senator EAGLETON suggested striking the second sentence of Senate Joint Resolution 3, as introduced, which included language giving the Federal Government a role in legislating and setting policy with respect to abortion. Senator EAGLETON noted that limiting the amendment to its first 10 words would "wipe out the legal status afforded to the 'abortion right' by Roe against Wade and return us to the status quo ante" when abortion was a matter for the people in each of the States to decide through their elected representatives. By adopting Senator EAGLETON'S suggestion, the subcommittee established its intent to remove Federal institutions from the policymaking process with respect to abortion and reinstate State authorities as the decisionmakers for this sensitive issue.

As I have mentioned, the genesis of this constitutional dispute was a controversial and ill-conceived decision of the Supreme Court. Senate Joint Resolution 3 is carefully crafted to nullify that decision and restore the balance it upset. In the decade since Roe, Federal courts have faced a flood of abortion litigation, Congress has spent countless hours trying to correct tangential problems relating to abortion, and the number of unborn aborted annually has increased to over 1.5 million. These violent disruptions of our social fabric were accomplished by an equally wrenching disruption of our constitutional fabric. In short, Roe did not carry out the intent of the Constitution, but upset the Constitution's intended balance.

Although, in the words of Prof. John Hart Ely, the constitution "simply says nothing, clear or fuzzy about abortion," Ely, "The Wages of Crying Wolf," 82 Yale L.R., 920, 947 (1973). The Supreme Court created a constitutional right to abortion. This upset the preexisting constitutional balance that for nearly 200 years had allowed State legislative processes to carry out the will of the people with respect to this sensitive social policy.

The new right created by Roe overturned the Texas abortion statute and related laws in each of the 50 States. Not only did this decision upset the federalistic balance between State and National institutions, it also disturbed the constitutional separation of powers between legislative and judicial functions. Prof. Lynn Wardle of Brigham Young University Law School makes this point very eloquently:

> By giving the right to choose abortion the status of a fundamental right, the Supreme Court substantially restricted the authority of the Legislative branch to legislate concerning the subject and substantially increased the responsibility of the judiciary for defining and monitoring regulation of the fundamental right. (Statement of Feb. 28, 1983).

In essence, Roe made abortion a constitutional doctrine. Despite my great reluctance to amend the Constitution, Roe upset the constitutional balance. Thus, it is incumbent upon this Senate in my view, to take the appropriate constitutional steps to restore that balance.

The most simple, direct, and effective way to accomplish that objective without disturbing other established constitutional doctrines is to nullify the Roe ruling. If Roe were fully deprived of legal significance, the constitutional balance that existed prior to 1973 would be restored. The people in the States would be reenfranchised to shape abortion policy through their legislators. Policymaking that for a decade has been centralized in the nonrepresentative judicial branch would be subject again to democratic processes. Only by restoring this constitutional balance and permitting the people to participate directly in this policymaking process will the Nation ever achieve a consensus on this divisive question.

The primary effect of the Roe decision was to make abortion a legal entitlement deserving of the strict constitutional protections afforded fundamental liberties. 410 U.S. at 728.

The right to abortion became, by court edict, a fundamental liberty which a State's legislature could limit even in the slightest degree only by demonstrating a compelling justification. 410 U.S. at 728. This compelling State interest standard is very exacting. *Kramer*, 395 U.S. 621 (1969). Even such seemingly inconsequential State regulations as a 24-hour waiting period prior to an abortion failed to meet this standard of review. Akron, supra. Although the Supreme Court has repeatedly conceded that protecting maternal safety and the life of the unborn are legitimate State interests, *Roe*, 410 U.S. at 732, Akron, etc., these profound interests have not risen to the level of compelling in the eyes of the Court. Accordingly, the right to abortion has operated time and again to strike down the will of State legislatures. Protected by the Court's constitutional interpretation, one absolute extreme on abortion, namely abortion on demand throughout all 9 months of pregnancy, has become enshrined as an unassailable tenet of American law.

This amendment, Senate Joint Resolution 3, removes the abnormally elevated status afforded the right created in Roe. After ratification of this amendment, a State statute concerning abortion would be subject to ordinary standards of constitutional review. This standard requires a State to demonstrate a rational relationship between its policy and a legitimately protectible State interest, the rational basis test. Since the Court has already acknowledged at least two legitimate State interests, maternal safety, and unborn human life, any statute rationally related to these objectives would pass constitutional muster. Thus, the will of the people, as reflected in State legislatures, would be respected. The traditional constitutional balance which governs other aspects of domestic relations law, namely State regulation in practically all aspects, would be restored.

In short, this amendment removes the right created in Roe. The removal of this impediment to the traditional operation of the Constitution permits the framework of our Nation's foundational document to govern in this sensitive area of social policy as it did for nearly two centuries until 1973. Hence, our vote may be construed as a vote to endorse the system of governance created by the framers of the Constitution in 1787 or the special right created by the Supreme Court in 1973.

Some critics of Senate Joint Resolution 3 will, I suppose, accuse Senator EAGLETON, myself, and the other proponents of this amendment of attempting to impose our personal moral values upon others with this proposal. Frankly the amendment itself rebuts that assertion. It does not contain my personal position on the question of abortion at all. If I could ratify an amendment reflecting my personal moral values, it would contain a guarantee for the right to life of the unborn, except when necessary to preserve the life of the mother. This amendment does nothing of the kind. Instead it merely eliminates one absolute extreme moral position, abortion on demand as legalized by Roe, and frees the people in the States to set their own standards of governance on this subject, instead of making the whole Nation subject to the outdated doctrines of a few men in black robes. I would have said "men and women in black robes," but the woman in question should not be associated with the majority of the men on the Court on this issue.

No doubt some critics will also raise a hue and cry about this amendment injecting Government into the bedrooms of America. On the contrary, this amendment was carefully crafted to avoid any jeopardy to doctrines of privacy. The term "right to abortion" is specifically limited to affect only legal entitlements for abortion, not the right to privacy. Other extensions of the right of privacy, such as in contraception birth control, or family privacy cases, would not be affected in the slightest by the narrow language of the amendment.

In a more general sense, abortion can hardly be classified as a matter of privacy in the sense of something done alone, at home, in a confidential manner. The abortion right is exercised with the help of a trained professional and depends on a large medical support staff. This is a right that has required over 100 lower Federal court decisions and 18 Supreme Court decisions to guarantee its continued effectiveness. This is a right which, its champions maintain, cannot be exercised without public funding. This is a right, ultimately, whose effect is not private at all in the sense of touching upon only intimate personal matters of the one exercising the right, instead it has a devastating impact on at least one other, the unborn child. To call this right private is to convolute that term. As stated by the 78th national convention in 1976 of the Union of Orthodox Jewish Congregations of America: "Abortion is not a private matter between a woman and her physician. It infringes upon the most fundamental right of a third party—that of the unborn child."

This amendment will remove the misleading character of this entire question as well as the special right created by Roe. The removal of this impediment to the traditional operation of the Constitution permits the framework of our Nation's foundational document to govern in this sensitive area of social policy as it did for nearly two centuries until 1973. Hence, our vote may be construed as a vote to endorse the system of governance created by the framers of the Constitution in 1787 or the special right created by the Supreme Court in 1973.

By deconstitutionalizing the issue of abortion, the proposed amendment would allow the States a wide variety of options with respect to this matter. In their best judgment, the States might choose to have no policy regard-

ing abortion or might restrict and condition it in a variety of ways.

For example.

First. They could place restrictions of some form upon late-term abortions;

Second. They could impose obligations upon physicians to save the lives of fetuses capable of surviving an abortion;

Third. They could place limitations upon genetic engineering and other experimental and medical research involving the use of human embryos and fetuses;

Fourth. They could require that women contemplating abortions be fully apprised of the risks of abortion and the alternatives to abortion;

Fifth. They could require some form of parental consent to abortions performed upon minors;

Sixth. They could require some form of spousal consent to abortions;

Seventh. They could establish some minimum waiting period before an abortion could take place or require some form of professional consultation prior to an abortion;

Eighth. They could establish rights of refusal to perform abortions by physicians or nurses, or in entire hospitals;

Ninth. They could limit the commerce in abortifacient devices;

Tenth. They could prohibit abortion generally subject to certain well-defined exceptions and safeguards; or

Eleventh. They could undertake any other form of restriction or regulation upon the abortion procedure.

For the sake of clarity, I would like to list what this amendment would and would not do. Ratification of Senate Joint Resolution 3, as amended, would accomplish the following:

First. It would nullify the special right to abortion created by the Supreme Court in 1973. Even the Supreme Court has referred to the right created in Roe as the "right to abortion." *Conn.* v. *Menillo*, 423 U.S. 9, 10. More than 80 Federal court cases have also used this phrase as shorthand for the new Roe right. This amendment simply, cleanly, directly, conclusively states that: "A right to abortion is not secured by this Constitution."

Second. It would prevent the creation of any other right to abortion in the harbor of the Constitution. The article "a" makes the scope of the repeal broader than if the article "the" were used. "The" might be construed as limiting the repealer to the particular doctrine or doctrines that have developed in Roe and its progeny as a justification for abortion. Use of the article "a" makes it clear that no other "right to abortion," however conceived or justified, is provided by the Constitution. Under Senate Joint Resolution 3, there would exist no constitutional authority for any right to abortion.

Third. It would avoid any unnecessary repudiation of the doctrine of privacy. The use of the careful phrase "right to abortion" clarifies that the amendment only repeals the abortion decisions. Other extensions of the right to privacy, such as in contraception or family privacy cases, would not be affected by the narrow language of the amendment.

Fourth. It would mean that State statutes concerning abortion would be subject to ordinary standards of judicial review, that is, the rational basis test instead of the compelling State interest test. An obvious point of explanation is needed at this point to clarify a higher standard would still apply to a State enactment that infringed some other constitutional rights unrelated to the "right to abortion" question—for example, a law prohibiting only black women from obtaining abortions would still be examined under a compelling standard—or strict scrutiny—due to the obvious racial classification, not due to any remaining right to abortion.

Fifth. It would restore to the States their general police power to restrict and prohibit abortion, or—and I think this is important for those who are against my position—elect to refrain from doing so. The States would be restored to the legal status they enjoyed prior to Roe.

Sixth. It would reenfranchise the people, acting through their elected State representatives to participate in the formation of abortion policy. Abortion policymaking that has been centralized in the nonrepresentative judicial branch will be returned to State legislative discretion. This will facilitate the kind of compromises and consensus formation that is impossible in the judicial branch.

Seventh. It would restore the constitutional balance of powers between the States and Federal Government and between the legislative and judicial branches. In sum, it would restore the status quo ante Roe insofar as the power and responsibility to resolve abortion issues is concerned.

Senate Joint Resolution. 3, as amended, would not do the following:

First. It would not establish any new constitutional right favoring either an absolute right to life or an absolute right to abortion. It would simply restore the operation of the constitutional system, favoring States' rights to resolve abortion issues that existed prior to 1973.

Second. It would not compel the adoption by any State legislature of any legislation restricting abortion.

Third. It would not preclude judicial review of abortion laws or prevent a court from holding abortion laws unconstitutional. A court could hold abortion laws invalid if they failed to comply with the Constitution except to the degree that such a ruling would create a "right to abortion." Thus, racially discriminatory abortion laws would be invalidated, but not ordinary abortion restrictions.

Fourth. It would not affect State constitutions. It would not prohibit the citizens in any State from adopting—or, for that matter, any State supreme court from fashioning—a right to abortion under the State constitution.

Fifth. It would not grant Congress any power to directly restrict or prohibit abortion. Congress would retain its authority under its enumerated constitutional powers to regulate interstate commerce and other areas that might tangentially touch upon abortion. This limited authority is nothing more than exists for every other form of domestic relations law—or any other law for that matter—which is subject to the plenary jurisdiction of the States.

Sixth. It would not give to the States any new authority to regulate abortion. Their general police powers to regulate abortion would be restored, but would not be enhanced.

Seventh. It would not alter the constitutional allocation of power between the State and Federal Governments, or between the legislative and judicial branches.

In conclusion, I think we would profit by measuring the abortion regime established by Roe against the basic tenets that animated the creation of our Republic. Those principles were best articulated by Thomas Jefferson in the Declaration of Independence:

> We hold these truths to be self-evident, that all men are created equal, that they are endowed by their creator with certain inalienable rights, that among these are Life, Liberty, and the pursuit of happiness. That to secure these rights, Governments are instituted among men, deriving their just powers from the consent of the governed.

Thus, our infant Nation established the protection of human life as the foremost duty of Government. Roe's blatant conflict with this fundamental national value is apparent. In the words of President Reagan: "We cannot diminish the value of one category of human life—the unborn—without diminishing the value of all human life." Human Life Review, supra at 8. Perhaps only one act of our Government has conflicted more with the founding tenets of our Republic than Roe and that was the last infamous Supreme Court case that denied the value of certain classes of humanity, the Dred Scott case. Dred Scott was not easily corrected either. It took more than a decade and an intervening war to secure a constitutional amendment reinstating constitutional protections for blacks. Indeed, securing a constitutional amendment is never an easy process. The women's suffrage amendment, the 19th, was

first rejected by the Senate in 1868 and failed twice more to gain approval in the Senate before its adoption in 1919 and ratification in 1920. Nonetheless correction of the Dred Scott error serves as an excellent analog for our consideration of the modern civil rights disagrace, Roe against Wade.

In his farewell address, President George Washington remarked that: "It is substantially true that virtue or morality is a necessary spring of popular government. The rule indeed extends with more or less force to every species of free government." His insightful thesis that the strength of our freedoms springs from the shared morality and convictions of our people lies at the heart of this great historic debate. This is a great moral issue. This is a great human rights issue. I posit with President Washington that, in ways more fundamental than we may now realize, the future of our free Nation may depend upon the outcome of this debate. Consider for a moment the role of the family as an institution promoting respect for other people, their dignity, and inherent rights. Consider for a moment that if the family fails to teach principles of decency, our governments—already struggling to maintain civil order in the face of a crime epidemic—will be compelled to use more force to protect our liberties. Consider for a moment the essential role of individual responsibility in parents for raising their children. Consider for a moment an ethic that treats a child's entrance into his or her own family as if it were a matter of whether he were wanted. Consider for a moment whether such callous attitudes and practices as are fostered by the abortion regime promote a society in which the instinctive acceptance of others is supplanted by a more self-centered and grudging attitude. Combined with the Federal courts tendency to treat abortion in terms of the totally isolated pregnant woman and her decision, this aspect of legalized abortion on demand could have long-term effects on the strength of those interpersonal bonds which hold our society—indeed any society—together.

Consider as well these insightful comments by national leaders:

It seems to be as clear as daylight that abortion would be a crime.—Mahatma Gandhi.

* * * The child, by reason of his physical and mental immaturity needs special safeguards and care, including appropriate legal protection, before as well as after birth.—Declaration on the Rights of the Child, United Nations, 11/20/59.

It is a very great poverty to decide that a child must die so that you may live as you wish.—Mother Teresa.

We will stand up every time that human life is threatened. When the sacredness of life before birth is attacked, we will stand up and proclaim that no one even has the authority to destroy unborn life.—Pope John Paul II.

No woman is the final arbiter about the disposition of her body and the embryonic human life flourishing therein. Doctors, too, must face up to the moral dilemma whether they can play havoc with the basic worth and dignity of human life when they freely perform abortions at all stages of pregnancy * * *.—Rabbi Bernard L. Berzon, President of the Rabbinical Council of America.

No right is more fundamental than the right to life itself and no innocent human life already begun can be deliberately terminated without offense to the author of all life.—National Conference of Catholic Bishops.

I fear the power of choice over life or death at human hands. I see no human being whom I would ever trust with such power—Not myself nor any other. Human wisdom and human integrity are not great enough.—Pearl S. Buck.

Social acceptance of abortion has begun to dull society's respect for all human life, leading to growing occurrences of infanticide, child abuse, and active euthanasia.—Resolution, Southern Baptists Annual Convention, 1981.

The unborn belongs neither to father nor mother, and not even to the self, but to God.—Very Rev. Thaddeus P. Wojcik, a Priest of the orthodox Church in America.

This is a moral issue, a moral issue literally, of life and death. Life and death of a society as well as countless unborn children.

Perhaps the foremost objective of the proposed amendment is to facilitate the development of a social consensus on the difficult issue of abortion. The abortion issue, if it is to be elevated into an issue of constitutional proportions, should be elevated only through the normal consensus-building procedure of the article V amending process rather than through the process of judicial reinterpretation. Senate Joint Resolution 3 would reenfranchise all the people in fashioning a solution to the abortion controversy or, if not a solution, at least an equilibrium. This can only be done by placing this issue back within the representative branches of State governments where it should have remained all along.

I might add that there are those who believe that the country has changed and that the majority of people are in favor of abortion on demand today as announced by the Supreme Court of the United States. Even if that were true—and it is not—why then would they be afraid of having the debate take place among elected representatives in a consensus-building manner? I think the reason is because they know the American people would rise up and make changes in the status quo. They might not make them the way I would like them to be made, and they may not make them the way that the Right to Life Committee would like to have them made. Maybe they will. But at least they would have a right to participate in the process, a right to participate and help to change the process, to make it better and to help to resolve this issue.

If the result is that difficult legislative compromises are reached through bitter sessions of negotiation and give-and-take—compromises that are not entirely satisfactory to those on either end of the spectrum on this issue—then the issue of abortion will have been dealt with in the same manner that most other difficult matters are dealt with in a democratic system of government.

If the social divisions that have beset this country since the Roe decision are to be overcome, they will have to be overcome through a process in which all shades of opinion are considered and weighed, not simply those of a small minority of the citizenry. There is no more appropriate forum in a free society for these kinds of controversies to be debated and resolved than in State representative, legislative forums. Although some may observe—correctly—that basic issues of individual rights are not subject to referendum in a free society, this, of course, begs the basic question, which is precisely what those rights are and what their relative priorities are. It is the resolution of these precise questions that is unlikely to occur in the absence of a constitutional amendment of the sort of the human life federalism amendment.

I state, in conclusion, that this Nation, with the possible exception of Communist China, has the most radical abortion laws of any nation in the world. The values of our people are different from those laws. The only way to change it now is for the people to let their elected Representatives know of those values.

I am very grateful for the kindness of my colleague who is on the other side of this issue, who has waited through this rather lengthy explanation of this constitutional amendment, and some of the things I had on my mind with regard to it.

I am grateful to the distinguished Senator from Oregon for working to allow this amendment to come up so that we could have this historic debate on the floor of the Senate. I know that he is sincere in his beliefs, and he knows that I am sincere in mine. That is why elected representatives can sometimes help to build a consensus better than unelected judges who are accountable to nobody but themselves.

I am grateful that we have this opportunity, and I thank my learned colleage for his forbearance.

Mr. President, I ask to have printed in the RECORD a poem entitled "Abortion."

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

ABORTION

Abortion is a frightening occurrence,
One that makes even hard hearts soft,

It's a mixed up thing—It is misconstrued,
There are many who fathom nothing about it,
It's shocking to me and personally abhorrent,
That 35 to 50 million unborn are killed each year,
A million and a half here in the freest land of all,
In this nation built upon religious liberty,
With laws protecting almost everybody else.
In the old days, women claimed offense,
Because of clandestined abortion mills,
Because Planned Parenthood had nowhere to recommend
Young girls to go and find relief,
Young women to find rationalization,
Women to have excuses for absolving themselves
Of the inconvenient.
New technology has frightened everyone more,
Sonograms show fetuses alive and well,
Sonograms are amazing things—they show a formed life,
Almost from day one,
By day 64 the outlined head, shoulders, body, legs,
Arms, fingers, feet and toes are clearly visible,
I saw a baby with hand in mouth, pop it out
As real babies sometimes do,
And then suck on it again.
Trimesters become reality to some,
Especially for 15,000 little ones,
Either separated from the placenta,
And allowed to suffocate to death,
Or with crushed skulls within the doctor's bare hands,
The stark reality of it all.
Even the feminists blanched,
Even they gasped with fear and shock.
How could a doctor reach inside the mother,
And crush the infant's skull
Within hands made by God?
I don't think all people who abort,
Or have abortions, for whatever reason,
Are bad or ungodly people,
I do sometimes wonder, however,
What they think, when quiet thoughts come,
Concerning the act or even acts they have done,
Do you feel good, do they wonder, do they worry?
I think so,
I don't know how they could help but worry,
"Have I done the right thing?"
"Have I pleased my God—and my Lord?"
"Have I hurt my spiritual and physical being?"
One would think that unless such questions come,
The person, not thinking them, is hard,
A supreme rationalist, or a blunted conscience,
Perhaps a wanting or wanted soul.
Whence cometh from afar, that little one,
Why life at all, if not God there be,
How inter-connected, the little one and God,
How bright our glory, once realization
Dawns upon our souls,
Now or part of life,
With all the zest for life,
And hope of eternal things.

Mr. PACKWOOD. Mr. President, I congratulate my colleague from Utah for a very erudite and learned statement. I also thank him for the manner in which he has dealt with me during this issue.

In this business, we very seldom deal with each other in writing. Your word is your word, literally, and your bond. On many, many occasions, people will make agreements which they may wish they had not made, but will stick with them. In the 1 year Senator HATCH and I have been working to get a vote on this amendment, he has never misled me, I have understood his position exactly, and he has acted as a gentleman and a peer in every respect, and I appreciate it very much.

Mr. President, this is the 15th year I have been in the Senate, and I have seen many great issues come and go in that time—Vietnam; the SST; the antiballistic missile system; Haynsworth and Carswell; the resignation of Vice President Agnew; Watergate, and the resignation of President Nixon—but no issue has been as long standing and as passionately felt as has been the issue of whether or not a woman has the right to decide for herself whether she wants an abortion.

It goes back longer than 10 years. It goes back prior to the Supreme Court's decisions of 1973, because in many States you had movements toward legalized abortion. You had four States that legalized it prior to 1973, and I think you would have had more legalize it but for the decision by the Supreme Court in Roe against Wade.

However, at last, today, we are met and joined together in what promises to be a meaningful and significant debate concerning a major issue that has faced this country for many years. That is the issue of whether or not a woman, without fear for her health or safety or her privacy, shall be allowed to make a decision for herself as to whether or not she wishes to have an abortion. As I say, it is a controversy that has swirled in this country for many years prior to Roe against Wade in 1973. In that decision, the right to have an abortion was delineated and established. When I say "delineated," I mean it exactly in that term.

I emphasize that Roe against Wade does not allow abortion on demand. Despite statements to the contrary—despite the fact that the President, in an article he has written for a major publication, says that the Supreme Court has allowed abortion on demand for 9 months—that simply is not true.

The Supreme Court has said, in essence, that for the first 3 months of a pregnancy, it is a woman's decision as to whether or not she wants to have an abortion, and the State can put no limitation on that. In the second 3-month period, the State can put certain limitations on that, although those limitations cannot demean or limit her fundamental right to decide whether or not she wants the abortion. But the State can decide, for health reasons, medical reasons, or others, to improve certain limitations.

In weighing the balance of a woman's privacy on one hand versus fetal rights on the other in the third trimester the court, came down on balance on the side of fetal rights and said they would allow abortions only in very unusual circumstances.

Two weeks ago, in the case of Akron against the Akron Center for Reproductive Health, the Court said the following:

> Since Roe was decided . . . the Court repeatedly and consistently has accepted and applied the basic principle that a woman has a fundamental right to make the highly personal choice whether or not to terminate her pregnancy.
>
> Arguments continue to be made . . . that we erred in interpreting the constitution. Nonetheless, the doctrine of stare decisis . . . is a doctrine that demands respect in a society governed by the rule of law. We respect it today, and reaffirm Roe against Wade.

I say to my distinguished colleague and my fellow Senators that if the Supreme Court had wanted to reverse Roe against Wade, they could have done so in the case they decided 2 weeks ago. Instead, they chose the other option once again, a decade later, of reaffirming that basic right.

Today, we are debating Senate Joint Resolution 3, which is a constitutional amendment and which overturns Roe against Wade and the cases following it, including the Court's recent decision of 2 weeks ago.

Before proceeding further in this debate, however, I compliment Senator HATCH for proceeding in the proper constitutional way for overturning a Supreme Court decision.

If someone disagrees with a Supreme Court decision which is based on the Constitution, the way to change it is through a constitutional amendment. It allows those who agree and those who disagree with the decision of the Court to debate it on the merits and on the substance. It is a fair, open, and honest challenge to a decision with which one disagrees.

Many, many constitutional amendments have been offered to overturn Supreme Court decisions in the almost 200-year history of our Congress. Those offered amendments are normally an emotional response to a court's decision disliked by a number of Members of Congress. As time passes and passions cool, the support for such amendments usually withers. However, four times in our history we have passed constitutional amendments to overturn Supreme Court decisions.

We did it with the 11th amendment, in Chisholm against Georgia, which related to lawsuits against a State by a citizen of another State.

The 14th amendment overturned the decision in the Dred Scott case.

The 16th amendment was in response to Pollock against Farmers Loan & Trust Co., in which the Supreme Court had said that a national income tax was unconstitutional. We did it again in the 26th amendment, not too many years ago, when we overturned a Supreme Court decision which said that an act of Congress which lowered the voting age to 18 for State elections was unconstitutional.

Senator HATCH and I are diametrically opposed on the Court's decision legalizing abortion. I agree with it. He opposes it. But I totally agree with him and laud him for the procedures and the process he has followed in an effort to change that decision.

There are others who have attempted to undermine the Supreme Court's decision by attempting to statutorily redefine what the Court has defined constitutionally or by attempting to limit the Court's jurisdiction to hear certain types of cases.

These kind of attacks do harm to our constitutional processes and endanger the liberties of every one of us in a variety of areas far beyond the subject of abortion.

So disagree though I may with Senator Hatch on this amendment, I compliment him for following the procedure outlined in our Constitution and the one most guaranteed to assure our liberties rather than trying to subvert or undermine the Constitution by nefarious statutory means.

As I said before, Mr. President, Senator HATCH's amendment, Senate Joint Resolution 3, is a constitutional amendment which overturns Roe against Wade and cases following it. It negates the constitutionally protected right of a woman to choose whether or not to have an abortion.

Senator HATCH has worked hard, diligently, and patiently to get a vote on this amendment. He has waited for well over a year to get a vote on this constitutional amendment. He deserves a vote on this amendment, and it is not my intention to delay a vote on this amendment.

I hope my fellow Senators will grant Senator HATCH the right to vote on this amendment without delaying it or altering it.

Mr. President, it is important to understand at the start of this debate one fundamental fact. Senate Joint Resolution 3 is not a States rights constitutional amendment nor does it return the law to the status that it occupied prior to Roe against Wade.

Let me explain, if I might, why I think we have this type of amendment before us. There is a split in the anti-abortion movement between those who want a federally preemptive constitutional amendment, one that would simply say abortion is illegal throughout this country, and those who want a States rights constitutional amendment. The federally preemptive amendment has utterly no chance of passage in this Senate now or, I think, in the foreseeable future.

There are those, therefore, who say let us take the best we can get. Let us have a genuine States rights amendment and attempt to turn the law back to what it was prior to Roe against Wade, although I will emphasize the amendment before us does not do exactly that. The problem with that amendment, however, is if you are a genuine right-to-lifer, if you really believe deep in your heart that abortion is murder, then in good conscience you cannot support a States rights amendment. If you really deep down are convinced that abortion is the unjustified taking of innocent human life, then you cannot bring yourself to say, "But I will vote for an amendment that says it is OK in New York but not in Pennsylvania; it is OK in Oregon but not in Idaho; it is OK in California but not in New Mexico." If you truly believe that abortion is murder and wrong, it is hypocritical to support that kind of an amendment.

The amendment that we have before us is an artfully devised device to attempt to bridge the gap between Federal preemption and so-called States rights.

This amendment does not turn over to the States and solely to the States the right to pass legislation and make judicial interpretations involving abortion. All that Senate Joint Resolution 3 does is say that a right to abortion is not secured by this Constitution and even if we were to adopt that, that is not the law prior to Roe against Wade.

Mr. President, as I indicated, this amendment does not return the law to the status it occupied prior to Roe against Wade. At that time there were no words in the Constitution similar to this amendment that says a right to abortion is not secured by this Constitution. State courts were free to interpret in their States as they chose the U.S. Constitution and decide for themselves what they thought should be the law in that State as they interpreted the U.S. Constitution.

Consequently, those States were free to weigh the right of privacy, on one hand, versus fetal rights, on the other, and reach what conclusions they wanted in balancing the scale.

If we adopt the language that is in this amendment we are destroying the balance and we are saying that, henceforth in weighing a case in a State court in which a Federal constitutional argument is raised, the State courts may not consider whether a right to abortion is secured by the Constitution, and that is something they could consider prior to Roe against Wade.

So make no mistake. This not a States rights amendment nor do I think it was intended to be a States rights amendment. We have had other States rights amendments considered in past Congresses. If you wanted to draft a States rights constitutional amendment one could be drafted.

But in passing this kind of an amendment I think it is clear what some groups hope, let me read from the National Right to Life News of April 28, 1983, an article by James Bopp, Jr., who is an attorney active in the right-to-life movement and an occasional adviser to Right to Life. This is in their newsletter. They are talking about the amendment as it has come out of committee, and this article says:

THE HATCH/EAGLETON AMENDMENT: ITS LEGAL IMPACT

On April 9, 1983, National Right to Life Committee endorsed the Hatch/Eagleton Amendment, S.J. Res. 3, as the first amendment in a two amendment process of restoring legal protection to the unborn. The second amendment is NRLC's Unity Amendment, S.J. Res. 9.

On March 24, 1983, the Senate Subcommittee on the Constitution unanimously approved the Hatch/Eagleton Amendment. On April 19, 1983, the full Senate Judiciary Committee voted it out for floor debate.

The Hatch/Eagleton Amendment provides as follows:

"A right to abortion is not secured by this Constitution."

The Hatch/Eagleton Amendment, while similar in wording to the Hatch Federalism Amendment is fundamentally different from SJR 110. This Amendment is a reversal type amendment which is intended, according to its author, Senator Thomas F. Eagleton (D-Mo.), to "wipe out the legal status afforded to the 'abortion right' by *Roe v. Wade* and return us to the legal *status quo ante.*".

Thus, there would be no constitutionally protected right to abortion which provides the most substantial impediment to regulation of abortion by the states and Congress and would return the power to regulate abortion to the states and Congress.

This reversal type amendment formulation was originally suggested by Senator Eagleton in a speech to the Annual Prolife Convention of the Archdiocese of St. Louis, Missouri on October 3, 1982. This amendment is the first sentence of the original Hatch Federalism Amendment. It deletes the second sentence of the Hatch Federalism Amendment which specifically provided that Congress and the several state shall have concurrent power to restrict and prohibit abortion and provided that a provision of a law of a state which is more restrictive than a conflicting provision of a law of Congress shall govern.

In his testimoney before the Subcommittee on the Constitution February 28, 1983, Senator Eagleton recommended that this formulation be adopted. The testimony of other witnesses before the Subcommittee on February 28 and March 7 was directed at a careful examination of the effect of this proposed amendment. As a result of this testimony, the Subcommittee on the Constitution reported out the Hatch/Eagleton Amendment in accord with Senator Eagleton's suggestion.

A reversal type amendment, such as the Hatch/Eagleton Amendment, is fundamentally different in approach from a legislative authorization type amendment such as the Hatch Federalism Amendment. A reversal type amendment abolishes the constitution-

ally protected right to abortion found originally in *Roe v. Wade* and *Doe v. Bolton* and subsequently expanded in later decisions. This constitutionally protected right, found by the Supreme Court in the consitutional right of privacy, prevents effective state or federal regulation of abortion.

While a reversal type amendment does not restore to the unborn the status of person under the 14th Amendment, it would remove the consitutional impediment to effective protection of the unborn. A second amendment restoring personhood, such as the Unity Amendment, is necessary to restore personhood.

A reversal type amendment, therefore, does not imply or suggest that there is no obligation in another part of the Constitution requiring protection for the unborn. Indeed, it invites one to examine other parts of the Constitution to determine if such protection is mandated. If such protection is not found, it invites—almost demands—its restoration by a subsequent step, either by another amendment or by other legislative acts.

In this way, the Hatch/Eagleton Amendment is philosophically quite different from the original formulation of the Hatch Federalism Amendment. Some have argued that by its second sentence, the Hatch Federalism Amendment implies that the question of the regulation of abortion is settled; i.e. it is within the discretion of the state legislatures and Congress. While most authorities find this argument unconvincing, under this reasoning a second amendment after the Hatch Federalism Amendment would almost contradict the first by creating an obligation to protect. The Hatch/Eagleton Amendment, as the first amendment in a two step strategy, creates no such possible contradiction and thus would be more suitable for a first step amendment.

In addition, any legislative authorization type of amendment grants power to the state and/or Congress to regulate abortion specifically. It reverses *Roe v. Wade* only as a practical effect, but does not reverse *Roe v. Wade* in principle. Thus, a legislative authorization type amendment leaves *Roe v. Wade* intact but renders it ineffective by granting power to the states and Congress to act.

A reversal type amendment, however, specifically reverses *Roe v. Wade* in principle, with the practical effect of restoring to Congress and the states the power to protect unborn life. The nature and extent of that power is examined below.

The intent of the Hatch/Eagleton Amendment is to fully reverse the *Roe v. Wade* Supreme Court decision which grants to a woman a constitutional right of privacy to decide whether or not to terminate a pregnancy. The purpose of Hatch/Eagleton is to preclude reliance upon any provision of the Constitution as authority for recognition of any right to abortion, and thus abrogates this right, whatever its alleged constitutional basis.

In particular, this amendment is intended to reverse *Roe v. Wade* and its companion *Doe v. Bolton*, insofar as these cases hold that the Constitution protects that abortion liberty. The testimony of Senator Robert Packwood and Professor Lawrence Tribe, both testifying at the hearings against the amendment, agreed that the Hatch/Eagleton Amendment would be fully effective in accomplishing the results.

The importance of this foundation was high-lighted by the testimony of Rhonda Copelon, Esq. of the Center for Constitutional Rights in her testimony before the Subcommittee during the 1983 Hearings. In her testimony, she identified a lengthy series of constitutional bases for a right of privacy.

These include "the right of bodily integrity," "the constitutional right of association" which "embraces the right to form a family, to choose our most intimate associates and guide the raising of children." The First Amendment which protects the right of women to "speak" with their bodies in childbearing which protects the "right to follow religious and conscientious convictions," and the 13th Amendment which prevents involuntary servitude which, Copelon said entitles women "to say no to the unparallelled labor demanded by pregnancy, childbirth and childrearing and to the expropriation of her body and services for the sake of another." But the adoption of the Hatch/Eagleton Amendment would ensure that no right to abortion could be found in any provision of the Constitution.

Removal of the last two sentences of the Hatch Federalism Amendment to form the Hatch/Eagleton Amendment, therefore, changes its essential nature and character. The Hatch/Eagleton Amendment, therefore, is in principle a reversal amendment rather than a legislative authorization type. Removal of a specifically granted power to the states or Congress in the amendment itself, however, raises the question of the power that would exist in Congress and the states to regulate abortion after its adoption. As pointed out by Professor Rosenblum, "the slate would be wiped clean: as far as judicial precedent is concerned, it would be as if *Roe* and its progeny had never existed."

With regards to state legislation, according to Prof. Rosenblum, "the nullification of '(a) right to abortion' accomplished by the Amendment would allow legislative proscription of abortion."

States, acting within the traditional spheres of jurisdiction, could, Rosenblum said, "legally proscribe or regulate abortion practices on behalf of their continuing, already judicially recognized, legitimate interest in protection of fetal life. This means that those laws that proscribe abortion which remain codified could be revived, and that new laws could be enacted . . . to proscribe or to restrict abortion." The states, in exercise of their police power could certainly prohibit abortion except in those cases where an abortion is required to save the life of the mother.

A more substantial concern is the effect of the Hatch/Eagleton Amendment on the scope of federal powers that could be brought to bear to restrict or prohibit abortion. In this respect, according to Prof. Rosenblum, the Hatch/Eagleton Amendment "would not so fully effectuate the opportunity to protect the unborn on a national basis as would the Hatch Amendment's grant to the Congress of full plenary to restrict and prohibit abortion."

It would, however, restore to Congress those powers it had prior to *Roe v. Wade* to do so.

In this respect, other parts of the Constitution must be examined to determine whether or not there is power there to directly or indirectly restrict or prohibit abortion. This power may not now be exercised due to the constitutional right to abortion found by the Supreme Court in *Roe v. Wade*. After the adoption of the Hatch/Eagleton Amendement, however, this right to abortion would be removed and the residual powers of Congress could be exercised.

There exists in the Constitution both direct and indirect powers which may be brought to bear on abortion. Any *direct* power that Congress might have to regulate abortion, i.e. private killing, could be found in Section 5 of the 14th Amendment.

This section, activated on behalf of the unborn by the adoption of a Human Life Bill—which would define the unborn as a human being for the purpose of protecting the right to life under the 14th Amendment—would bring to bear the 14th Amendment's protections of persons for the unborn.

Currently, a Human Life Bill's constitutionality is threatened by the Supreme Court decision in *Roe v. Wade*. Once that decision were removed, the likelihood of a Human Life Bill's constitutionality is much more secure. Such a bill, properly drafted, could include the power to restrict or prohibit private abortions in addition to limiting state government involvement in abortion. Such a bill is a logical second step after the adoption of the Hatch/Eagleton Amendment.

In addition there are indirect ways by which abortion may be regulated. These include the exercise of the commerce clause, the taxing power, and the power of the purse. These have been fully examined by other authorities.

The Hatch/Eagleton Amendment is a newly formulated and novel approach directed at abortion. This Amendment is the first of the reversal type amendments to be offered in Congress. Its adoption would clearly repudiate the Supreme Court's finding of the constitutional right to abortion and prevent its recreation in any other portion of the Constitution. The full plenary powers of the state and other preexisting federal power would be restored to restrict and prohibit abortion. With the adoption of the second step, either a life protection amendment or a Human Life Bill, the obligation to protect unborn life would be fully restored.

This amendment we have is a hybrid. Indeed, it would allow the States to act in matters of abortion and it would allow the Federal Government to act in matters of abortion, but as all constitutional scholars know, the U.S. Constitution and acts thereunder are supreme and, therefore, Congress could pass any act it wanted to so long as it acted under the commerce clause or the 14th amendment section 5 or some other provision in the Constitution and preempted State laws, and very clearly that is what Right to Life has in mind.

(Mr. TRIBLE assumed the chair.)

Mr. PACKWOOD. They knew they could not get a Federal preemptive constitutional amendment so what they want is a constitutional amendment that in essence allows either Congress or the States to operate and then try to get a statute passed through Congress to achieve the same thing they are unable to get by a constitutional amendment.

I do not want any Senator to think if Senate Joint Resolution 3 is passed we are done with this subject forever in Congress. We are not. If this resolution is passed, and if it passes the

House and is ratified by the States, we will still be faced with human life bills in Congress, we will still be faced with bills prohibiting the shipment in interstate commerce of medicine and instruments used in abortions, we will still be faced with bills prohibiting Federal funding of hospitals that allow abortions, and we will be faced with other efforts at the Federal level to pass legislation prohibiting choice nationwide.

Everyone who participates in this debate, everyone who casts his or her vote on this resolution should be under no illusions they are shedding themselves of this subject at the congressional level if this amendment is ratified. They are not.

If Senate Resolution 3 is adopted, both State legislatures and Congress shall have the right to legislate in the field of abortion

Mr. President, since the Supreme Court's decision in Roe against Wade in 1973, public opinion poll after public opinion poll have been taken on the subject of abortion. The question has been asked over and over, "Do you support the Supreme Court's decision on abortion?" Now we all know that pollsters allegedly can be found to give any answer to any question. In my experience most pollsters are honest, and if most good pollsters are given identical questions to ask, they come up with results that are reasonably close to each other.

There is no question but that about two-thirds of the American public, when posed the question year after year after year, "Do you support the Supreme Court's decision of 1973?" say yes.

But that is the last time I am going to argue that statistic because I do not think basic civil liberties should be determined by a majority vote. The basic liberties enshrined in our Constitution were put there by our Founders to protect the minority against public opinion. They are designed to protect minorities against the transitory blowing to and fro of the winds of public opinion. Those rights are too precious to be put to a majority vote. I will argue instead that a constitutional amendment should be the result of a developed consensus on an issue, and we should not change the Constitution unless there is a long and strong showing of a consensus for that change.

Rather than a consensus for the change proposed in Senate Joint Resolution 3, the consensus is the opposite. The consensus is that there should be no change in the Supreme Court's decision regarding abortion.

Mr. President, I could continue indefinitely with my discussion of the constitutional, legal and civil liberty ramifications of Senate Joint Resolution 3. The humanistic ramifications are the most moving response, however, to defeat this amendment. The gravest consequences of this amendment if it were passed would fall on women. By seeking to force all women into childbearing, Senate Joint Resolution 3 undermines their ability to control their bodies and their lives. No other Supreme Court decision has meant more to the health, well-being, freedom and dignity of women than Roe against Wade. That decision recognizes women's rights to make childbearing decisions and those are rights fundamental to equality for women in this society. Without that decision there can be no equality for women in this society.

A woman's right to make childbearing decisions is part of her right of bodily integrity. The right of bodily integrity is one of the foundations of the right to privacy, and I might add here that the right to privacy is not a right mentioned in the Constitution either. My good friend and distinguished colleague from Utah indicated that abortion is not mentioned in the Constitution—nor is privacy. The Constitution is an ongoing document I have heard no great outcry we should somehow reverse the Supreme Court's decision on privacy because most of us agree that when the Supreme Court started to move in that area, and the decisions go back many, many decades, they are not recent, the bulk of the country felt they were moving in a direction that was proper, and that our founders would have approved.

The Supreme Court held in 1891 that no right is more sacred than the right of every individual to the protection and control of his own person, free from all restraint or interference of others. This same right was strongly reaffirmed 2 weeks ago in the Akron decision. Those who criticize Roe show little concern for the massive invasion of physical integrity and privacy that denial of choice involves.

Most significantly Senate Joint Resolution 3 will not prevent abortion. History proves that women will do anything to rid their bodies of unwanted pregnancies, and all Senate Joint Resolution 3 will do is restore illegal, unsanitary, and lethal backstreet abortions resulting in thousands of deaths to the women, and to no benefit to society.

Now, Mr. President, why is it we are involved in a debate about the Supreme Court's decision on abortion when we are not involved very often in a discussion about Supreme Court decisions in other areas where the argument is made that the Court has moved into an area that had previously been left to the States, and that decision should be reversed? Mr. President, you can come to only one conclusion as to why. Those who are pursuing the overturning of the Supreme Court decision do not like the morality of the decision. It offends their personal or religious or other very deeply held views, and they want to impose their morality on others who do not share those very deeply moving and personal and religious views. Because they do not have the votes to do it by an outright amendment that simply bans abortion nationwide, once and for all, period, they will try to do it with some artifice that attempts to bridge the gap between so-called Federal and States rights.

And why do I say their motivation stems basically from moral, deeply held convictions? Because in a whole variety of areas in the last 20 years the Supreme Court has struck down a variety of State actions and Congress has done little or nothing. There have been a few amendments introduced, and within a few weeks or months the passion passes to overturn the court decisions. Miranda in the criminal field, where we finally said that a defendant must be advised of his constitutional rights to self-incrimination, and if he is not so advised, statements that the defendant makes to the police officer or others before advised are probably inadmissible in court. With that decision we wiped out roughly 150 or 160 years of State law that said that did not violate self-incrimination. There were a few complaints from police chiefs, a spate of irritated speeches in Congress, but no reversals.

What about Gideon where the Supreme Court finally said that the States could no longer deny to an indigent defendant the right to counsel in a criminal trial and if the defendant could not afford counsel for himself or herself, the State had to pay for it. This overturned the better part of a century of constitutional law because we said the States no longer have the right to deny that liberty? No serious complaint from Congress.

What about the reapportionment decisions? You talk about the Court getting into a decision it had never been in before? In the reapportionment decisions the Court, the U.S. Supreme Court, from time immemorial had not only faced up to the issue, they had faced up to it and said it is a political issue and it is not one that the Court should be involved in. And every time a case would come up saying, "Must the State legislatures and must the U.S. Congress be apportioned on the basis of population?" they said, "No, that is not a judicial issue." Then in the midsixties they simply flipped and said, "Whatever the decisions in the past may have been, they are overruled, and henceforth legislative bodies must be reapportioned on the basis of population," with the exception, of course, of the U.S. Senate which, in the Constitution, is apportioned on the basis of two Senators per State.

Now, we had again a spate of irritation in the Congress and State legislatures, a few constitutional amendments offered and some attempts to overturn the Court statutorily, and it died out. It died out, I suspect, because, once the new districts were created and once some incumbent had been defeated and new Members had been elected under the new districts apportioned barely, they obviously had no desire to change the districts.

So let us not say by this argument that the Supreme Court has moved into an area for the first time that it never had moved into before and the precedent of moving into it is justification for reversing it. If that is going to be the theory of the operation of this Congress, then we better start going down a lot of Supreme Court decisions and laws for the last century and deciding which ones the Court moved into for the first time and whether or not we like them and reverse them on that basis. That is not justification for overturning a Supreme Court decision. Let us argue this on the merits.

Again, I compliment my colleague from Utah for being willing to argue it on the merits. I say to him I will not filibuster this. I have no intention of speaking at length. I hope he gets a vote on the merits up or down on his amendment that he has labored so long and so hard to get.

I yield the floor.

Mr. HATCH. Mr. President, I thank my colleague for his kind remarks about me. I feel good about the fact that we are taking time to debate what both of us consider to be an extremely important issue in the U.S. Congress.

He raised a couple of issues about whether or not this is a States rights amendment. I think I would like to respond to that, at least to this extent.

This is a States rights amendment in the sense that any area of law under our Constitution is reserved to the States. The States, under our constitutional system, govern every body of law not found within the enumerated powers of the Federal Government in articles I through III, primarily article I, section 8 which defines and confines Congress power to legislate. Nowhere in those enumerated powers is there any mention of domestic relations, or familial relations, or general police powers, or any other designation that would suggest a Federal power to regulate abortion. Thus, the States have plenary authority over the subject, just as the States enjoy plenary authority, within the obvious limits of the Constitution such as the first amendment, to regulate corporation and business association laws, property laws, trust and estates laws, insurance laws, and any other potential topic of legal concern outside of the specific Federal powers granted by the Constitution.

In recent debates, some Senators have attempted to redefine the concept of "States rights" which is as old as the Constitution in an effort to make this amendment appear to be something it is not. For the duration of our Republic, States rights has meant nothing more nor less than what our Constitution defines; namely, the extensive power of the States to govern within their constitutional jurisdiction as qualified by the power of the Federal Government to govern within its constitutional jurisdiction. This is the traditional, indeed, the only definition of "States rights" because it is the definition given by the defining document, the Constitution.

Those who would redefine the concept of "States rights" for the purposes of this debate maintain that this is not a States rights proposal because it permits the Federal Government to continue to act within the limits of its jurisdiction. Those who would redefine the concept of States rights overlook a most vital point. Allowing the Federal Government to act within its jurisdiction still does not authorize it to prohibit abortion. Although the Federal Government may exercise its authority to regulate interstate commerce in a manner that tangentially relates to abortion; that is, placing conditions on interstate transport of abortifacients, it still is not exercising any authority over abortion but only regulating interstate commerce.

As long as our Constitution has set up two tiers of government, the State and the Federal, to act within their specified parameters, there has been some limited interface between their respective powers. This is true of all matters reserved to the States, domestic relations, wills, criminal laws, and so forth, and all matters ennumerated as within Federal control, interstate commerce, postal authorities, authority to coin money and raise armies, and so forth. The States, acting within their jurisdiction, may influence the Federal Government and vice versa. For instance, when some States legalized gambling, they had an obvious effect on interstate commerce, a Federal power. These tangential impacts on each other's authorities, however, are no reason to say that the States rights or the Federal rights have ceased to exist. Yet those who would redefine "States rights" using something other than the Constitution as their dictionary maintain that this is not a States rights amendment solely because the Federal Government may continue to operate within its jurisdiction. If this argument prevails, it will be a new and terribly sad chapter in our constitutional history.

Let me list again the reasons that this is undeniably a States rights amendment:

First. The amendment simply deprives the special constitutional right created by the Court in Row against Wade of any further legal significance. Thus, abortion would be henceforth regulated as it was prior to 1973, namely, within the reserved powers of the States.

Now, I have to admit that we are not going to go right back to the legal status of 1973 because those State laws will not all be resurrected. I have to admit that it will be a new day. But the States will have the power and the right to act as they did before Roe was handed down.

Second. The legislative history of this amendment has stated repeatedly that our objective is to return to the legal status quo ante Roe when States governed the abortion questions. The States had enjoyed plenary power to set and alter their own abortion policies prior to Roe. Indeed, in the 5 years prior to Roe, 18 States had changed their abortion laws—all in the direction of more liberal allowance of abortion, nevertheless, much less than what Roe against Wade has imposed upon the American people and upon the lives of the innocent unborn.

Third. Senate Joint Resolution 3 was deliberately amended in committee to delete language that granted the Federal Congress concurrent authority to restrict abortion. By this action, the committee, and indeed the whole Senate which will ratify that action, established its intent to remove Federal institutions from the policymaking process with respect to abortion and to reinstate State authorities as the primary locus of decisionmaking for this sensitive issue.

Fourth. By simply nullifying the right created in Roe, this amendment allows the Constitution to operate as it did before Roe to vest authority over abortion in the States. If Federal authorities possess some limited residual authority to the extent that some enumerated Federal power tangentially touches upon abortion policy, this limited residuum of authority is nothing that does not exist with regard to every other field of law under our Constitution.

Fifth. In the absense of special constitutional status for abortion, it would be treated as any other domestic relations law. The Supreme Court has clarified that treatment on numerous occasions: "The whole subject of the domestic relations of husband and wife, parent and child, belongs to the laws of the States, and not to the laws of the United States." In re Burris 136 U.S. 586, 593, (1889) (This principle was reaffirmed in 1930, 1944, 1979.)

Sixth. An alternative line of constitutional reasoning reaches the same result with respect to the extent of State authority in the absence or Roe. State power to set criminal standards

is unquestioned. Justice Frankfurter explained:

> Broadly speaking, crimes in the United States are what the laws of the individual states make them, subject to the limitations of Art. I § 10, cl. 1 in the original Constitution prohibiting bills of attainder and ex post facto laws and of the Thirteenth and Fourteenth Amendments. *Rochin* v. *Cal.*, 342 U.S. 165, 168 (1952).

With Roe overturned by this amendment, abortion would not be subject to the protections of the fourteenth amendment or any other provision of the Constitution. Accordingly, abortion misdemeanors, such as the States had enacted prior to 1973, would be again "what the laws of the individual States make them." Id.

Seventh. Finally, I state again for the RECORD and as my intent as the author of this amendment in conjunction with Senator EAGLETON who shares my view on this point: We understand this amendment to restore to the States full authority to restrict, prohibit, or refrain from restricting and prohibiting abortion.

The Federal Government is to have no authority over abortion per se, but only authority within its established constitutional limits. This is a States rights approach to the abortion controversy in the sense that anything in our Constitution can be said to be a States rights matter. Moreover, beyond the terms of the Constitution, a popular understanding or misunderstanding of States rights has no meaning. Those who argue that this is not a States rights proposal have not consulted the document which defines all States rights.

That is the Constitution of the United States. I think this would be an improvement over what we have and it would return this mater to the elected representatives of the people. A lot of people in this body are happy to have the courts decide things because it takes Congress off the hook. But, frankly, that is what we are here for, to be on the hook, to have to debate and stand up for our constituents' beliefs.

If, as my distinguished colleague and friend from Oregon asserts, the polls show that people support the Supreme Court decision, I suspect if you ask the average person whether or not he supports the Supreme Court decision they will say yes because very few people fully understand the implications, the import, the many aspects of this Supreme Court decision.

But if it were true even as he interprets it, then what does he have to fear? Why not let the elected representatives act for the people? I think we do act, for the most part, on these issues with regard to the way the people have said.

I yield to the distinguished Senator from Oregon.

Mr. HATFIELD. Mr. President, I thank the Senator from Utah for yielding. I commend him for his leadership on this very sensitive issue.

Mr. President, few issues prompt the depth and intensity of feeling as does abortion. On either side of the question, the ardent protagonist seems more frequently compelled by thoughtless passion and even vindictiveness than by sensitive reason. Such fervor and fury are understandable, for this issue touches on the most personal of beliefs and affects in the most intimate way of lives of women.

An issue marked by such intensity and divisiveness invites public neutrality on the part of the politicans, quite candidly; it usually seems pragmatically imprudent to become strongly and unapologetically committed on either side of this controversy.

I have wrestled with my beliefs about abortion—morally, legally, biologically, sociologically, and theologically. In doing so, convictions that I find totally compelling have been deeply affirmed. Moreover, I am persuaded that how society regards this question directly relates to whether we will choose to nourish and enhance all life, for the development of full humanity, or whether we shall make quiet compromises about the sacredness of human life, until the fundamental worth of any life becomes subject to society's discretion.

It would be simple if one concluded that convictions about abortion, however deeply felt, were "personal" beliefs that should be followed individually, but not applied to society. But the belief in life's fundamental right to be has inevitable consequences. I do not, after all, believe merely in my right to be; I believe in the right of all life to be. It would be hypocritical cowardice to hold such a conviction, but not to propose, as a legislator, that society embrace this view. We have suffered so many assaults on the sacredness of human life that our conscience is insensitive and numb. The dominant materialism of our culture is eroding our respect for the quality and value of human life. Our consumptive society sells us a lifestyle that emphasizes getting and having. The frequent result is that things become valued more than people; "possessions" become more important than "relationships." If our lives are held captive to the values of materialism, we can never give priority to the sanctity of human life.

Such values, and the patterns of depersonalization, have eroded the bonds of family, and the quality of our relationships. The warmth and primacy of the family strikes many as being obsolete. There is a tendency to keep relationships, both inside and outside the family, "second" to the primary demands of job, ambition, a sense of personal freedom, the accumulation of money and of possessions. The malaise that strikes at the heart of our times is the fear of responsibility in and to human relationships; this force cripples us as humans and has devastating effects on our society as a whole. If people cannot extend mutual responsibility and care within a relationship, they will be unlikely to demonstrate concern for society, and the well-being of one's fellow citizens. If people are afraid and unable to deal with the complexities of interpersonal relationships and to build strong family units, they become so self-oriented that they can be immune to tragedy.

The evidence of how life can be degraded, cheapened, and dehumanized by forces and attitudes in our society is painfully obvious. Should it come as any surprise, then, that our society has come to regard abortion as an increasingly permissible and acceptable form of human behavior? Is it any wonder that people should believe that liberal abortion laws, which make it easier and legal to take human life, will somehow liberate us and make our society more humane?

Abortion is a form of violence. It is condoned by a society that has become callous and indifferent to the ultimate value of human life. It is undergirded by a whole moral climate that elevates selfish personal convenience to a supreme status in human decisionmaking. This attitude, when applied by individual citizens to decisions concerning the neighborhoods in which they live, the schools to which they send their children, the use to which they put their material resources, and the way they regard their families and relationships, can only result in social deterioration. When expressed in our national character, this same attitude results in oppression against minority groups, exploitation and misuse of our natural resources, and reckless, destructive foreign policy.

Abortion is symptomatic of a retreat from mutual responsibility toward one another to self-seeking personal perogatives as the ultimate norm. Let us recognize that, often, abortion is submitted to by women who have been dehumanized, by relationships lacking either commitment or responsibility. These same abortions are ignored, or even encouraged, by the men who caused the pregnancy since the convenience of abortion eliminates the necessity to view that woman, and the relationship, as an integral part of his life, calling for responsibility and care.

The dehumanization of life in much of our society has led us to the dehumanization of sex. An exploitive attitude toward sex flourishes in society, reducing men and women to objects and things. Once having dehumanized the act of sex, it becomes easy to dehumanize the result, and destroy that life by resorting to abortion.

There is a tendency to approach the essential questions about life from purely sociological, or legal framework, without reference to biological realities. Sociologically, we discover that unwanted children can often face severe and debilitating burdens. We find that mothers with an unwanted pregnancy may not properly nourish themselves, and thus, the life of their developing child. Retardation of that child may be the consequence. Further, we see that society leaves a man who is the cause of an unwed mother with no responsibility, and barely even any guilt. Yet the mother faces the emotional and physical demands of a 9-month pregnancy, plus the psychological pain that can result, and then the guilt from a judgmental society. Also, we know that our planet, as well as a poverty-stricken family, has limits to the amount of life that can be fully nurtured and sustained. These are all tragic, terrible realities. But despite the harshness of such truths, these are not the criteria for determining when human life begins, or whether the existence of that life has value.

The landmark Roe against Wade decision revolutionized American abortion law and, in essence, overturned 50 State statutes, thereby imposing what may be the most permissive abortion policy in the world on the Nation. In that decision, the Supreme Court created a new right that is not inferable from the Constitution, in any values derived from provisions in it or in the intent of its Framers. Legal scholars noted that the Court's decisions had been controversial before—but never had their reasoning been so spurious, so lacking in careful scholarship, or so overtly based on a philosophy of relativism.

The Court sets limits to the legal definition of personhood—limits which cannot be justified by more fundamental biological reality. The Court, and our Nation, have dealt in the past with the legal definition of personhood. The truth of history is that the most tragic consequences have directly resulted when we, or another nation, have taken a too restrictive view of personhood and the value of all human life. The institution of slavery, reducing human beings to the level of economic commodities, the ovens at Auschwitz, and the slaughter at all the My Lais of Indochina demonstrate what becomes possible, tolerable, and even legal from a philosophy of human life and personhood too narrowly conceived. The Nation's definition of personhood, as set forth by its system of law, has potentially profound and crucial consequences on the rights of every citizen. To set a legal precedent for restricting the view of personhood according to certain artificial criteria is to open the way for the abuse of our most fundamental and treasured ideals.

We are obligated to formulate and to defend a system of law that guarantees the freedom and safety of persons within the public domain that we are called to serve. But we must not view the range of that "public" to nearsightedly. In our collective memory, we honor most those lawmakers of the past who were able to hear and think beyond the vocal din of their day and to reflect justly on the needs and plight of those who had no public voice. It is difficult to bring to mind an advocate of justice whom history has condemned for a too "liberal" view of the range of human life and personhood.

The point is this: What the lessons of history teach us is that where societies have erred, they have erred on the side of bigotry and narrowmindedness. They have more often than not erred in the direction of failing to grant rights where those rights were subsequently recognized to be legitimate.

I recognize that everyone may not agree about the certainty of where personhood begins, but I suggest that, if we are to err, then let us err on the side of being too liberal about the definition of human life. Even if one is unsure about when personhood originates, that does not automatically condone adopting a more restricted, limited view regarding what constitutes a human being. For if one is to argue that unborn life may be taken, more or less at will—outside of the case where there is a threat to the life of the mother—then there must be convincing certainty that a human being does not exist when that life is eliminated. The burden of proof lies with those who would advocate abortion to demonstrate conclusively that they are not taking human life. It is hard to imagine where the evidence exists—biologically, philosophically, or in any way—to confirm certainty to that belief. Our commitment to life's ultimate, intrinsic value dictates that we never be careless with so crucial a question, whatever our initial views may be. The task must be to safeguard and preserve human life, rather than rationalized its expendability.

Mr. President, that is the liberal position on the question of abortion. That is why I reject the proabortion position as being anything other than a conservative position.

The reason is that, throughout history, Mr. President, those who have sought to expand the rights of life have been the liberals in the political movements. It has been the conservatives who have wanted to maintain the status quo of maintaining property rights over human rights. I am proud to stand on this floor and take the liberal position on the question of abortion.

The reason why it has become so difficult and even perilous to discuss the issue of abortion is because of the growing realization by women that they have inner gifts to express, and roles in society to explore, that have previously been disregarded and resisted by society—or more specifically, by men. Women have suffered deeply and even been dehumanized by society's discrimination of them and the socially enforced stereotypes every woman has been expected to fulfill. A review of our country's lamentable history in granting to women the very same right we have been discussing—full personhood under the law—makes us realize how tragically we have contradicted our ideals about human rights as far as women are concerned. Further, the depth of the culture's discriminatory attitudes, as also in the case of racism, makes this problem far more complex than merely one of legal injustice.

Many women today believe deeply that their worth is defined in ways that far transcends their ability to bear children. They see new possibilities vocationally, and new ways to express their gifts and capabilities to society. In the process, they reject the notion that the only normal, worthy, and respectable role they should play is that of being a mother. Rather, that is an option that can be chosen and embraced, if desired, rather than arbitrarily imposed by society's expectations. I believe they are right.

I fully respect these feelings, for I deeply believe that every person who comes into this world has unique gifts which only he or she can give to others. There must be an atmosphere of freedom to allow their expression—freedom from arbitrary roles, rules, and expectations, which means freedom from prejudice.

In pursuing these convictions, some believe that the woman's choice over whether or not to become a mother must be guaranteed not just by the preventive techniques of contraception, but by an unquestioned right to abortion. They further buttress this claim by pointing out that society, as well as biological reality, makes the women's life bear the full weight, burden, and guilt of an unwanted pregnancy, rather than the father.

The harsh and reprehensible treatment, and the deep suffering, that can be inflicted upon the unwed mother, or a life unwanted by its parents, is painfully obvious in many instances. But the crimes of society do not exempt an individual from moral responsibility; they cannot be invoked to numb the conscience and rationalize what is wrong into something easily excusable or inherently justifiable. Sociological tragedy does not alter the biological reality of a life's existence.

Further, I cannot condone any liberation movement that demands the sacrifice of innocent human life. You

do not liberate life by destroying life. The goal, after all, is the human liberation of all humankind. It is a tragic and frightful delusion to believe that goal will be enhanced by granting the right to take life at will, claiming this can make one more fully human. The humanization of mankind will never come through condoning the slaughter of unborn life. Ghandi's words apply directly: "The means is the end in the making."

Many cases where abortion is considered are lives faced with compounded personal tragedy. In human terms, nothing can totally erase depth of tragedy from such lives; that is the province of religious faith. But society can and must take steps to at least alleviate this tragedy, and assume responsibility for the nurturing of all life.

Let me simply outline society's obligations, which have yet to be assumed with true faithfulness and commitment. Every unborn life has a birthright; for life that is unwanted by unwed parents, society must insure that right. This necessitates maternal care and support so that the psychological, medical, nutritional, and financial needs of the mother are fully cared for, with compassion and acceptance. It means that adoption laws need substantial revision, so especially the mixed-blood or handicapped child will find the warmth and love of a family. Our whole approach to foster care must be humanized.

To prevent the tragedy of unwanted pregnancies, we must promote an uncompromising commitment to sex education and family planning services. Destroying the myths and teaching the truth about sex, and origin of life, can instill the fundamental reverence for the miracle of new life, preventing tragic pregnancies and scarring of lives.

Further, we must recognize the plurality of sexual morality that exists in our society. That is not likely to change. But the result need not be unwanted life. Thus, there should be widespread knowledge and availability of contraceptive options. This should be steadfastly and forthrightly pursued so that life will not be created unless it is desired.

Those who advocate abortion often cite their genuine concern for the plight of the poor. It is felt that those who are poverty stricken should not be subject to the burden of trying to support children they may not have planned to bear. Yet I believe the dispossessed should be listened to, and allowed to speak for themselves about their needs. The truth is that in general they have not been the ones asking for abortion laws to be liberalized. Quite to the contrary, the Rev. Jesse Jackson has termed abortion a form of genocide practiced against blacks. He condemned "the moral emptiness and aloofness that comes when protecting human life is not considered sacred."

When we realize that society has been more ready to provide assistance for the poor to have abortions than for the poor to have children, maintained by an adequate standard of living, we recognize the truth spoken by those who view abortion as another form of our oppression of the poor.

The reality we face is our reverence for life. On many fronts today we are being asked and urged to save life. We want to save endangered species from extinction; we are asked to spare animals the abuse they suffer at rodeos or from experimentation; we hear pleas to find homes for the thousands of stray dogs populating our dog pounds; we all know the urgent demand to preserve our natural life—to nurture the rare species of plants, to reverence the value of nature's beauty, and to protect and enlarge major portions of our natural habitat from man's destructive encroachment.

Why should this urge to reverence life, based as it is on a recognition of life's transcendent value, exclude a commitment to save unborn human life? I only plea that we recognize and seek to preserve and nurture the sacredness of life in all its forms.

Abortion is a form of violence. This is the undeniable reality. It is the destruction of life. It futhers the dehumanization of life. It cheapens life.

Let me echo the sentiments expressed by C. Eric Lincoln in the Christian Century:

> I, for one, am sick of blood and blood-letting—in the streets, on the battlefields and in the safe aseptic privacy of a doctor's office. In our continuing retreat from responsibility, we are too ready to wipe out the consequences of our private and public acts with a shrug and a resort to blood. But there are consequences to human behavior—economic, political, social, psychological, and sexual; and neither the bayonet nor the scalpel is the ideal means of setting things straight.

The Hatch/Eagleton human life amendment would overturn Roe against Wade allowing States to once again regulate abortion as they choose. I feel that Senate Joint Resolution 3 is a constitutional and realistic approach for changing this country's abortion policy. Passage and ratification of this constitutional amendment would allow the people in the States to shape abortion policy through their elected officials. Only by restoring this direct citizen participation in the formulation of abortion policy can the Nation expect to achieve a moral consensus on this sensitive social question. Therefore, I support passage of Senate Joint Resolution 3.

Mr. JOHNSTON. Mr. President, once again we are gathered to discuss an issue of great controversy, this time, abortion. Very few issues have consistently demanded the attention or stirred the inner emotions of the public as much as abortion has since the Supreme Court first handed down its decision in Roe against Wade 10 years ago. This emotion has just been rekindled to an even higher degree due to the Court's decision in three abortion related cases just a couple of weeks ago. In these cases, the Justices reaffirmed their decision in Roe and, in some respects, even broadened the right of a woman to have an abortion.

The most significant of these cases is Akron against Akron Center for Reproductive Health. In Akron, the Supreme Court invalidated as unconstitutional an Akron city ordinance which attempted to place reasonable restrictions on both abortion and the disposal of the fetus.

I have been a strong critic of the 1973 Supreme Court decision legalizing abortion. I believe it was wrong in 1973 and the Court's recent affirmation of that decision convinces me that it is wrong now. Consequently, Mr. President, today I am pleased to express my support for Senate Joint Resolution 3.

Due to the Court's action in Akron, passage of this resolution is needed now more than ever. The approach of Senate Joint Resolution 3 is short and simple. This proposed amendment specifically states that "The right to an abortion is not secured by the Constitution." Clearly if this amendment is approved, one may draw the obvious conclusion that if an abortion is not a "right" then our legislatures are free to set policy on the matter. Consequently, a vote for the Hatch-Eagleton amendment could mean any number of things. For example, it could result in an absolute opposition to abortion. Or, it may result in the conviction that abortion is a matter capable of being treated in the legislative forum. However, a vote against this amendment means only one thing because it tells the world, "I accept and I ratify the current abortion policy as it has been created by the judiciary." A vote against Hatch-Eagleton will reaffirm the Supreme Court's decisions because the Court has let it be known that even State laws enacted with the intent of increasing the safety of the mother during the abortion process will be judged under a test of the strictest scrutiny.

Due to the Court's reaffirmance of the Roe decision, I think it is important to review the current status of abortion policy. It is only after such a review that all present will understand exactly what it is that we are being asked to vote on.

In handing down its decision in Roe against Wade in 1973, the Court created a new right under the prenumbra of a number of constitutional provisions, the most important of which is the 14th amendment. Claiming that

abortion is encompassed under the right to privacy, the Court created for women an almost unqualified right to abortion. Equally important to the creation of this right, the court broke the term "pregnancy" into three equal parts, called trimesters, and it then claimed to find inherently in the Constitution some very specific rules for each trimester.

During the first trimester; that is, up to about the 12th week of pregnancy, the Court said that "the abortion and its effectuation must be left to the medical judgment of the pregnant woman's attending physician." That may sound reasonable in theory, but in order to understand the hallowness of these words one must look at the actual abortion procedure.

There is no requirement that the attending physician be the woman's own physician. Rather, the physician can be, and very often is, a full time abortionist operating out of a free standing abortion clinic. Consequently, it is likely that the physician has never seen the woman before, and, unless she comes back for a second abortion, will never see her again. The first time he sees her may well be when he enters the room to perform the abortion.

This probability was just heightened by the Court's decision in Akron where the Court held as unconstitutional, a city ordinance that required the physician performing the abortion to tell the patient before she consents to abortion such fundamental facts as the status of her pregnancy; the development of the fetus; the date of viability of the fetus; the physical and emotional complications after abortion; the availability of birth control, adoption, or childbirth information; or the risks of pregnancy and the abortion technique to be used. Consequently, it appears that the only counseling constitutionally given to the woman is the pep talk she is likely to receive from nonmedical staff who have usually had abortions themselves.

In short, the "woman and her physician" phrase is nothing more than a euphemism for something much more like an assembly line than a medical procedure. This conclusion was affirmed at Senate Judiciary Committee hearings where physicians who support abortion agreed that less than 2 percent of the 1.5 million abortions performed each year have anything to do with an identifiable clinical indication.

In 1978, investigative reporters at the Chicago Sun-Times discovered just how unregulated a first-trimester abortion is under Roe against Wade. Their investigation of several abortion clinics in downtown Chicago uncovered numerous and sometimes ghastly abuses. Abortions were performed before the anesthetic had even taken effect on the woman, because the physicians were racing to see how many procedures they could do in an hour; they were performed on women who were not even pregnant; they were done in such a quick and shoddy manner than a number of previously unreported complications and even deaths were found to have occurred as a result. As the investigation proceeded, it came to light that the city of Chicago had been aware of some of these abuses and had tried to regulate the clinics, but a Federal court had invalidated the regulations as unduly burdening the right to a first trimester abortion. An appeal from this decision was denied by the Supreme Court.

Consequently, it appears that a State cannot even cross the threshold of these clinics in any regulatory way which might affect the right of a woman to have an abortion, even if that regulation is enacted to help preserve the woman's health. It appears that the only allowable requirement is that the abortionist be a doctor. However, the State may not go so far as to require that he be either a good or responsive doctor.

Under Roe against Wade, the States were allowed to begin regulating the abortion procedure in order to protect the woman's health during the second trimester. However, they could not take any action that might be construed as expressing an interest in the survival of the unborn child. Abortion still had to be allowed for any reason. Even regulations banning particularly painful and risky abortion techniques have been investigated by the court with the strictest scrutiny and invalidated. Furthermore, just the other day, the Supreme Court in Akron, invalidated as unconstitutional that part of a city ordinance that required all abortions performed after the first trimester of pregnancy to be performed in a hospital. The Court said this requirement imposed a heavy and unnecessary burden on a woman's access to inexpensive, accessible and safe abortions. According to Justice Powell, improved medical technology allows safe abortions outside of hospitals. However, as Justice O'Connor points out in the dissent, that same medical technology has also made it easier for fetuses to survive earlier outside the womb. Consequently, the Akron decision has now expanded "assembly line" abortion clinics to operate at least into the middle months of pregnancy.

Finally, in Roe, the Court drew the line at viability—the point at which the unborn child is capable of surviving outside the mother's womb—and said that the State was allowed to regulate or even forbid abortion unless the mother's "life of health" was at stake. Superficially this, too, seems like a substantial qualification on the "right of abortion," but the Court then went on, in Doe against Bolton, to stipulate that a threat to "health" in this context should be understood "in the light of all factors—physical, emotional, physchological, familial and the woman's age—relevant to the well-being of the patient." The decision of whether a woman's emotional or "familial" health was actually threatened by the failure to provide an abortion in the last weeks of pregnancy was to be left up to the physician performing the abortion.

In 1979, the Court expanded its ruling further by explaining that this same physician must be allowed to determine for himself whether a particular fetus is viable in the first place. This ruling also invalidated a law requiring life-saving treatment for a possibly viable child born alive during an abortion, because this requirement might have a "chilling effect" on the right to have a late-term abortion. To add insult to injury, in Akron, the Supreme Court invalidated as violating due process principles an ordinance which required the physician performing the abortion to insure that the fetal remains were disposed of in a "humane and sanitary manner."

This "right" then, has already been assessed as more important and fundamental than the protection of life itself, even after birth in some circumstances. This radical character of the Supreme Court's abortion policy is hard to overemphasize, since the very idea of a "postviability" abortion was created by the Court in 1973. Up to then, induction of labor after viability was medically defined simply as premature childbirth, and the fatal neglect or direct killing of a child born in this way was considered infanticide. Yet our abortion statistics now report that almost 1 percent of abortions—about 12,000 a year—are performed after the 20th week of pregnancy. According to the Center for Disease Control, about 400 to 500 babies are born alive during abortions every year, only to find that the law cannot protect them against fatal neglect by the doctor attempting to abort them. Furthermore, as we have seen, the Court is not even willing to grant them a humane burial.

To put it quite bluntly, in many ways the policy which the Supreme Court claims is required by the U.S. Constitution is the most radical in the world. No other country requires by law that abortion be so unregulated, and no other country has gone so far in defining the new category of "postviability abortion." This policy has not been reached by democratic consensus, nor is it a bit of temporary legislative experimentation. Rather, by a radical Supreme Court ruling it has been locked into the most fundamental law of our land as the necessary unfolding of a newly discovered constitutional "right."

I hope my colleagues will think long and hard before casting a vote against Senate Joint Resolution 3. Is virtually unrestricted abortion until birth worth defending as a permanent and fundamental element of our legal system? Or is it, at the very least, a matter on which reasonable people can differ, and on which some degree of regulation or restriction may be appropriate? This is the question raised by Senate Joint Resolution 3 as an alternative to the status quo.

Mr. President, I ask unanimous consent to have printed in the RECORD a summary of Supreme Court decisions.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF SUPREME COURT DECISIONS, JUNE 15, 1983

AKRON V. AKRON CENTER FOR REPRODUCTIVE HEALTH

Significantly, this decision contains language largely reaffirming the Roe decision of 1973. Following are the findings of the Court with respect to an Akron, Ohio, city ordinance on abortion:

1. The requirement that all abortions performed after the first trimester of pregnancy be performed in a hospital is unconstitutional except in the interest of protecting the woman's health. This requirement imposes a heavy and unnecessary burden on women's access to inexpensive, accessible, and safe abortions.

2. The requirement that a minor under the age of 15 must obtain the consent of a parent or an order from a court before a physician may perform an abortion is unconstitutional. This requirement makes a blanket determination that all minors under 15 are too immature to make an abortion decision or that an abortion is never in the minor's best interest.

3. The following requirements with respect to "informed consent", or what a physician must tell a patient before she consents to an abortion are unconstitutional:

(a) Status of pregnancy;

(b) Development of fetus;

(c) Date of viability of fetus;

(d) Physical and emotional complications after abortion;

(e) Availability of birth control, adoption, and childbirth information;

(f) Risks of pregnancy and abortion technique to be employed.

The Court states that a State may not adopt regulations designed to influence the woman's informed choice between abortion and childbirth.

4. The requirement of a 24 hour waiting period after a woman signs an abortion consent form is unconstitutional. There is no legitimate state interest in an arbitrary and inflexible waiting period.

5. The requirement that physicians dispose of fetal remains pending abortion be done so in a human and sanitary manner is unconstitutional. This violates the Due Process Clause by failing to give a physician fair notice that his contemplated conduct is forbidden.

The decision was 6-3, justices Powell, Burger, Brennan, Marshall, Blackmun, and Stevens concurring and Justices O'Connor, White and Rehnquist dissenting.

PLANNED PARENTHOOD ASSOCIATION OF KANSAS CITY, MISSOURI V. ASHCROFT

In this 5-4 decision, the Court found the following with respect to Missouri abortion laws:

1. That requirements for parental or court consent are constitutional only in the interest of protecting immature minors. However, here the Missouri statute provided a judicial alternative, whereas the Akron statute provided for blanket consent for all minors under 15;

2. That requirements that a second physician be present during an abortion is constitutional with respect to health-related state concerns;

3. That requirements for pathology reports are constitutional as not significantly burdening a woman's abortion decision.

Here, there was no majority opinion, there was only a majority judgment.

SIMOPOULOS V. VIRGINIA

In this decision, the Court held states cannot require abortions to be performed in full-service hospitals, but have the right to demand that such operations take place in licensed outpatient clinics. Here, the Court upheld a Virginia doctor's conviction for performing an abortion in a clinic not licensed for surgery.

The PRESIDING OFFICER. The Senator from Nebraska is recognized.

Mr. ZORINSKY. Mr. President, 10 years ago the Supreme Court in the case of Roe against Wade handed down a decision which identified for the first time a constitutional right to abortion. This decision resulted in overturning 31 State laws which totally protected the life of the unborn child. Of the remaining 19 State laws, all but 4 allowed abortion only under certain limited circumstances.

Since then, the number of abortions has increased dramatically so that it is now the most common medical procedure performed on adults. Approximately one in four pregnancies is terminated by abortion. It has become so easy to obtain that it is not even a procedure of last resort in most cases. Although for some women it is only way they perceive to solve the problem of an unwanted pregnancy, in reality it is now being used as a substitute for contraception. According to one study by Planned Parenthood, prior to abortion 45 percent of the women had not used contraception at any time in the previous 3 or 4 months, and 83 percent had not acted consistently to prevent conception. Another area of concern is the increasing number of women having repeat abortions. This year it is expected that 50 to 60 percent of all abortions will be performed on women who have had at least one previously.

How can we hold such a callous view of the taking of human life at any stage? What has happened in our society that the slaughter of baby harp seals arouses more concern than the slaughter of innocent lives in the womb? I believe that in order to justify their arguments, advocates of abortion must allow themselves only to think of the unborn child as an unformed, abstract mass that has no relationship to a living person. They do not want to face the reality of a developing fetus with recognizable human characteristics. What is worse, they ignore the fact that the fetus is not without feeling—that the procedures used in an abortion can cause real pain and suffering. These procedures result in dismemberment by suction, or later in the pregnancy by the use of forceps, and burning away of the outer skin by injecting a salt solution into the sac surrounding the fetus. This is not a pleasant subject for discussion, but we cannot in good conscience continue to ignore it either. Although the unborn child is not able to communicate pain, there is ample scientific evidence that it can experience pain as early as 8 to 10 weeks gestation, and definitely by 13½ weeks.

If those persons who are prochoice will come to grips with these facts, perhaps they will begin to weigh the reality of life within the womb against the hardships to women of having a child they do not want. I do not mean to appear callous about the traumatic effect upon a woman of an unwanted pregnancy, but when she rids herself of that pregnancy, she denies another's right to life. Her "right" is based upon another's death. We have not focused on this fact. Abortion has become a matter of course for many persons. It has become so easy to obtain that other choices are not given the consideration they might otherwise receive. There are tens of thousands of persons who want babies desperately—who would find the greatest joy in the world in being able to adopt the baby that the mother-to-be considers a tragic occurrence in her life.

Mr. President, this legislation is intended to preclude reliance upon the Constitution as authority for recognizing any right to abortion. It rightfully restores to the States the authority to legislate with respect to abortion and will enable the people once again to determine abortion policy through their elected Representatives. I urge my colleagues to support this resolution.

I commend Senator HATCH and Senator EAGLETON for their continued support of prolife.

Mr. HATCH. Mr. President, I thank my esteemed colleagues from Oregon and Nebraska for the sound and intellectually proven statements they have made here today. It means a lot to me, and I appreciate their kind remarks, and I am very grateful that they participated with us.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HATCH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. HUMPHREY). Without objection, it is so ordered.

Mr. HATCH. Mr. President, I should like to ask my esteemed colleague from Oregon one or two questions.

After the Akron case, which came down just a week or so ago, which said that even a 24-hour waiting period and informed consent statutes are unconstitutional, what limits does the Senator find on abortions under Roe? The Senator indicated in his opening remarks that Roe does limit abortions and that it is not abortion on demand, but I would like to know what limits he finds.

Mr. PACKWOOD. In the third trimester, in weighing the balance against privacy and fetal rights, the Court, by and large, has tilted on the side of fetal rights. In the third trimester, only in very unusual circumstances does the Court tilt on the side of allowing the woman to have the abortion.

In the second trimester, they pretty much affirmed what they said in Roe about the State's rights to set conditions. But in Akron they found the real reason for the conditions, and in some of the other cases—they were not motivated in their passage nor in their actions by concern for the health or welfare of the woman. They were attempting to persuade the woman not to have an abortion, and the Court said you cannot do that. You can lay down reasonable restrictions in the second trimester, but these were not reasonable.

To the extent a State—or a city, I assume—can issue reasonable restrictions that generally relate to the health and safety of the woman, I think the Court would find them in the second trimester constitutional. But they simply did not do so in those cases.

Mr. HATCH. I submit that it is easy in most any case for a woman or the doctor to claim that the life or health of the mother is involved and thus justify an abortion under Roe. In no State are abortions, even in the third trimester, forbidden. This is because even in the ninth month the physician who performs the abortion is the one who decides that an abortion is necessary within the broad health definition of Doe.

I think Akron makes the case that Roe places few, if any, limits on abortion rights. I cannot imagine anything more reasonable than a 24-hour waiting period to allow a woman to stop to consider what she is going to go through. Nonetheless, the Court knocked out informed-consent statutes.

Mr. PACKWOOD. I do not know if the Senator from Utah has had a chance to read the newspapers at the time of the passage of the Akron legislation. It is very clear what the opponents of the legislation had in mind. They were trying to stop the woman from making a decision to have an abortion. That was motivating it—not her safety or health, but hoping she would change her mind by virtue of whatever pressures might be brought by the doctor or otherwise.

Mr. HATCH. I believe there were people who wanted that to be the result, but I also believe there were sincere people who felt that if the woman could have 24 hours to reflect, once she made the decision to have an abortion, she might change her decision, based upon fact and maybe upon emotion. I think that this 24-hour waiting period had more substance than merely trying to stop abortion. In fact, it was trying to make sure that the decision to have an abortion, of which Roe talks extensively, is a well-considered election by the woman.

Mr. PACKWOOD. The Court also said that in abortions, the longer you wait, the more dangerous it is to the health of the woman. They found that a woman who is going to have an abortion has already weighed the circumstances over a long period of time. It is not something she leaps into willy-nilly, without thought. On balance, they could find no justification for this 24-hour waiting period.

Mr. HATCH. I appreciate the Senator's comments.

I have some other questions. I notice Senator RANDOLPH is here and he has agreed to speak. I am happy to yield to Senator RANDOLPH.

Mr. RANDOLPH. Mr. President, I thank the concerned Senator from Utah, Mr. HATCH, and I also thank all Senators participating in this debate, including Senator PACKWOOD who has engaged in a helpful colloquy with Senator HATCH.

There are many of us who join in support of this legislation whose two principles sponsors are Senator HATCH of Utah and Senator EAGLETON of Missouri. Oftentimes we think of this body as being divided on issues between the majority and the minority. We have the dividing line down the center and from time to time there are more desks on this side and less desks on that side. But there are many, many occasions when the subject matter debated here in this historic forum is not one that is influenced by the party to which Members hold their allegiance. The abortion issue is one such matter in which a position taken, one way or another, is not based on political affiliation, but it is a matter that is of bipartisan concern, with positions taken on an individual basis—as this is a subject that affects individuals, mothers in particular, families, and ultimately the entire structure of our American life.

I had a dear friend long years ago who wrote a book of poems and he called it "The Light of a Baby's Smile." I remember the first poem that he included in that book of poems, and I shall not give all of the lines of the poem, except to say that Tipton Tolbert I think caught the spirit of the newborn child when he said: "The world will never grow worthwhile except in the light of a baby's smile."

I think there is more here than just the rhythm of a poetic line. This poem illustrates for us the joy and the faith that comes when children come into a family, when children come into a community, and when children come into this country of yours and mine.

I am grateful that my statement is included in the RECORD, as will be the statements of others on both sides of this issue, because the debate should, if possible, produce not only the factual, but should spark the emotional feelings that are held by Members of this body.

So it is not only a privilege for me to join with Senator HATCH and Senator EAGLETON, and the others who sponsor this amendment, but it is also my responsibility to do so.

There are many times during Senate consideration of the hundreds of bills that pass before us in subcommittee, in committee, and ultimately during floor debate, when we feel that we should make the record very clear as to how we stand upon a matter. The ultimate, of course, is when we cast a vote for or against a proposal that we have here in the Senate.

Today you have the opportunity—and I say this to Senator HATCH, also, to Senator HELMS who is in the Chamber, and also to our very able Presiding Officer, Senator HUMPHREY in the chair—to use your vote, in this Senate to let it be known to your constituencies how you and how the membership of the Senate will act on this measure. Our action I hope will be positive.

The votes that we shall make upon this amendment are not transferable. These are decisions that must be made. A vote that is not cast ceases to exist. The position of a Senator in this Chamber, must be expressed but it is not always necessary, for Members to speak here on a subject. But when the time comes to be recorded upon the measure, let your constituency know how you feel. If you feel strongly about a matter, certainly stamp it, by the casting of your vote.

(At this point in the proceedings there occurred a colloquy regarding a proposed unanimous-consent agreement, which by unanimous consent is printed in the RECORD following Mr. RANDOLPH's remarks.)

Mr. RANDOLPH. Mr. President, I would like to ask one of the authors of the amendment whether or not the

life of the mother is protected in this measure, specifically when the medical profession determines that the life of the mother is endangered.

Mr. HATCH. Mr. President, this amendment certainly would enable the life of a mother to be fully protected. Prior to 1973, every State's body of law fully protected the life of the mother. Given the sensitivity of the States to the need to protect the life of the mother and the fact that the States fully protected this interest prior to Roe, the mother's life is certain to be fully protected under the State statutes permitted by this amendment.

Mr. RANDOLPH. I thank Senator HATCH and others who support this amendment.

I have been requested to yield the floor for Senator THURMOND, of South Carolina, who wishes to speak, although I had thought to take perhaps 10 minutes more.

Mr. President, I have joined my concerned colleagues, Mr. HATCH and Mr. EAGLETON and other Members, in expressing strong support for Senate Joint Resolution 3, the human life federalism amendment—a proposed constitutional amendment that would reverse the Roe against Wade Supreme Court decision, restoring to our States, authority to legislate with respect to abortion.

By simply stating that: "A right to an abortion is not secured by this Constitution", this proposed amendment would strike the High Court's 1973 decision, a decision which was again upheld by the Court in recent weeks, that guarantees a woman, as her constitutional right, the right to choose to terminate her pregnancy during its first trimester, free of the restraints imposed by State law—and allowing States to regulate access to abortions during the second trimester only if the limits are designed to protest the woman's health. In addition to the reversal of Roe against Wade, passage and ultimate ratification of this amendment would prevent the creation of any other right to abortion in the harbor of any other provision of the U.S Constitution, at some future date.

Mr. President, the time for such a constitutional amendment is now. It has become evident that the Supreme Court will continue to uphold its Roe against Wade interpretation of the Constitution—protecting a woman's rights to abortion, as indicated by their June 15 rulings. Although I vehemently disagree with this interpretation of our Constitution, I am more convinced than ever that a constitutional amendment, such as that proposed in Senate Joint Resolution 3, is the necessary vehicle for clarifying that our U.S. Constitution does not guarantee the right to abortion. I, along with countless other Americans, do not feel that our forefathers who wrote the Constitution to protect the rights of our people, envisioned the inclusion of the right to abortion as one of our inalienable rights. I do not believe that they would have totally ignored the rights of the millions of unborn Americans who are senselessly deprived of life each year due to a right to abortion. Thus, I feel that ratification of this proposed constitutional amendment, clarifying that "a right to an abortion is not secured by this Constitution"—incorporating this language into our Constitution—is the only sure way of reducing if not ending this plague of readily available abortions on our Nation.

Mr. President, it cannot be argued that the legalization of abortion has drastically increased the number of induced abortions in our Nation since the 1973 decision. Statistics are hard to clarify in this regard, as prior to Roe against Wade, abortions in most States were illegal, and thus not recorded. However, in recent years, many studies have been conducted, one of which estimated that the number of abortions since its nationwide legalization have increased six to elevenfold. In a study conducted by the Alan Guttmacher Institute, it was determined that 1.5 million abortions were performed in 1979 alone. In my home State of West Virginia, statistics show that over 3,000 abortions were performed in the State in 1980 and that 5,490 residents of West Virginia received abortions either in or outside of the State. Even more tragic, these numbers are increasing, and are expected to continue to do so as abortion becomes more readily available and is seen as an acceptable form of dealing with an unwanted pregnancy. It has also been found that repeat abortions accounted for 29 percent of all abortions performed in 1978, with 21,000 performed on women who had had three or more abortions. These numbers are also increasing—and I might add, that this is a frightening fact.

Mr. President, the record shows that I have always, and will continue to be opposed to abortion on demand. I am opposed to abortion under any circumstances except in cases where it is necessary to save the life of the mother, or in special instances such as in pregnancies resulting from rape or incest. Futhermore, my voting record proves this position, as I have consistently supported measures such as the Hyde amendment to appropriations bills since 1976, prohibiting medicaid funds to be used for the purpose of performing abortions, except in saving the life of the mother. There have been many proposals since the 1973 decision ranging from measures seeking to restrict Federal funding for abortions, to measures seeking to outlaw abortion on demand, nationwide. Again, I have in the past and will continue to support legislation seeking a reduction if not total elimination of abortions where not necessary to save the life of the mother or under the other special circumstances stated above. However, it is my sincere belief that this proposed constitutional amendment is the surest way to reach our goal of stopping this tragic plague on our country—a plague that is robbing us of millions of unborn Americans.

I again commend the Senators from Utah and Missouri for their foresight in introducing this legislation and I am a cosponsor and ardent supporter of this amendment as we consider it in this Congress. Let us carry it through to its ratification in the States and its eventual incorporation into our Constitution.

I only close on this personal thought. A little more than 2 years ago, Mary, my wife, was taken away by a cruel plague called cancer. We were together for more than 48 years.

During those years, we had the opportunity, which we felt was the most wonderful privilege that we shared, in bringing two sons into this world. She was the mother of Jay, 48, and Frank, 44, our two sons. She talked about them and worked with them. She gave them strength as they grew from babyhood through childhood into young manhood where they took on many new responsibilities, including parenthood.

I look back upon it. I only hope that as we act on this matter today and tomorrow, we will consider our individual responsibilities, and do what we truly feel is right. After intense deliberation on this issue and particularly this amendment, it is this Senator's determination that a favorable vote on Senate Joint Resolution 3 is the right and the only action that I could take.

I thank the Chair.

(During Mr. RANDOLPH's statement, the following occurred:)

Mr. RANDOLPH. Mr. President, with the understanding of the Chair, I would like to cease talk and yield for a request from the majority leader (Mr. BAKER). I thank my colleague, the minority leader also.

Mr. BYRD. And let this occur without interruption of the speech of the Senator from West Virginia.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT

Mr. BAKER. Mr. President, I thank the Senator from West Virginia for his characteristic and consistent courtesy in this matter.

We have been working now for some time to try to get a program for the final consideration and disposition of both the abortion amendment and the tax cap, and I believe we have such an agreement now, and I would like to state a unanimous-consent agreement

which contemplates an arrangement for both matters to be dealt with.

Mr. President, first I ask unanimous consent that during the Senate's consideration of Senate Joint Resolution 3, a joint resolution to amend the Constitution to establish legislative authority in Congress and in the States with respect to abortion, that the amendment reported from the Judiciary Committee without recommendation be considered as agreed to, and that Senate Joint Resolution 3, as amended is as follows: "A right to abortion is not secured by this Constitution" and it be considered under the following time agreement: 10 hours on the joint resolution, as amended, to be equally divided between the Senator from Utah (Mr. HATCH) and the Senator from Oregon (Mr. PACKWOOD) or their designees; that no amendment be in order; that there be 30 minutes equally divided on any debatable motions, appeals, or points of order if they are submitted to the Senate; that no tabling motion be in order against the resolution.

I further ask unanimous consent that when the Senate reconvenes on Tuesday, June 28, that at the hour of 9 a.m. on Tuesday, June 28, the Senate resume consideration of the abortion amendment, and that debate thereon continue for a period of 1 hour under the same terms and conditions.

I ask unanimous consent then, Mr. President, at the hour of 10 a.m., the Senate temporarily lay aside Senate Joint Resolution 3 and turn to the consideration of H.R. 1183, the Tax Equity Act of 1983, and that that measure be considered under the following time agreement: That all time between the disposition of Senate Joint Resolution 3 and 8 p.m. on Tuesday, be equally divided between the majority leader and the minority leader or their designees, and that no amendment be in order.

I further ask unanimous consent that following the conclusion or yielding back of time on H.R. 1183, the Senate proceed to vote without any intervening debate, motion, appeal, or point of order, and that such vote occur not later than 8 p.m. on Tuesday, June 28.

Mr. President, I further ask unanimous consent that on Tuesday from the hour of 10 o'clock until 12 o'clock that debate proceed on the tax cap proposal so-called, and that the time be equally divided between the majority leader and minority leader or their designees; that at the hour of 12 noon on Tuesday, the Senate stand in recess to accommodate the caucuses of Senators on both sides of the aisle which are held away from the floor, until the hour of 2 o'clock.

Mr. President, I ask unanimous consent at the hour of 2 o'clock, the Senate resume consideration of the abortion amendment, Senate Joint Resolution 3, under the same terms and conditions, and that a vote occur on the abortion amendment at 4 p.m., and that following the disposition of that matter, the Senate resume consideration of the tax cap measure as aforesaid.

Mr. BYRD. Mr. President, reserving the right to object——

Mr. BAKER. Mr. President, one thing I think I said, but anyway I meant to say, that all of the time on the tax cap debate will be equally divided. I do know I said that as concerns the 10 to 12 noon time tomorrow, but I wish that to extend throughout the entire period allowed for debate on that measure.

The PRESIDING OFFICER. Does the Senator also ask to waive paragraph 4 of rule XII?

Mr. BAKER. I cannot remember whether it is paragraph 4, rule XII, or paragraph 12, rule IV. I cannot remember which one it is. I ask that it be waived.

The PRESIDING OFFICER. Is there objection?

Mr. BAKER. Mr. President, just a moment.

Mr. HELMS. Mr. President, reserving the right to object, I wonder if I might ask the indulgence of the distinguished majority leaders, Mr. HATCH, and Mr. PACKWOOD if I might proceed for a couple of minutes, and then I would like to make the majority leader a proposition that I hope he cannot refuse.

Mr. BAKER. Mr. President, I am perfectly willing for the Senator from North Carolina to do that on this reservation or by unanimous consent.

Mr. HELMS. I thank my friend, I would emphasize that I do not want to impose on the Senators, and I will not be long. As the Senators know, I am opposed to Senate Joint Resolution 3 both on its substance and in its strategy. I will discuss my objections to its substance at a later time. It is, however, my view that any attempt to pass a constitutional amendment at this time is doomed to frustration. I have in the past proposed statutory remedies, and it is my intentions to do so again. However, Mr. President, I see no reason why there should be two protracted debates on the right-to-life issue. It is the wish of the Senator from North Carolina that we could go ahead and resolve the matter by voting on both a constitutional amendment and a statutory remedy at this time and be done with the issue this year.

Let the record be clear that the reason that the unanimous-consent proposed by the distinguished majority leader is possible is because Senator PACKWOOD knows that there is nowhere near 67 votes for the pending proposed constitutional amendment. So the propounding of this unanimous-consent motion is a victory of sorts for the distinguished Senator from Utah in that the Senate is at least discussing a constitutional amendment. But nobody is deceived or misled concerning the situation that exists on the floor today. The votes simply are not here for a constitutional amendment, and especially this one. I have some problem with the pending proposal myself, I will remind the Senator from Oregon.

About 3 weeks after I had the honor to be sworn in as a U.S. Senator in 1973, the Supreme Court declared war on unborn children. With one stroke of the judicial pen, the Court in Roe against Wade reduced a class of living human beings to a status no better than that of chattel. Over 12 million legal killings have thus far resulted.

When I ran for the Senate in 1972, I never dreamed that over the next decade Congress would be called upon to restore traditional legal protection for unborn children. I assumed that the question of such legal protection had been settled long ago. To me, the right to life for all living human beings seemed part of the fixed landscape of our American heritage. It was we Americans, after all, who had declared in 1976 that all human beings are endowed by their Creator with the unalienable right to life.

My assumption in 1972 proved wrong. It was wrong, however, not because of the American people and our democratic process, but because of an elite on the Supreme Court determined to import an alien view of law and society into American culture. Discarding the moral compass that Judeo-Christian ethics had always provided American law, the Justices of the High Court overrode the democratically enacted laws against abortion in all 50 States and invented a right to abortion nowhere mentioned in the Constitution.

Since that January day in 1973 when Roe was decided, I have felt compelled in conscience to do what I could in the Senate to restore legal protection for the unborn. Recently the National Abortion Rights Action League—thinking that it was leveling a damaging attack on me—instead paid me an unwitting compliment when it wrote in a fundraising letter:

> No one individual has done more in the last 10 years to endanger the right to reproductive freedom of choice than the notorious Jesse Helms.

Notorious or not, I do strongly believe that the law should protect the unborn as well as the born, and while I am in the Senate, I will continue to make this case with my colleagues.

As a result of my commitment on this issue, I am all the more distressed that I cannot support the constitutional amendment proposed by the distinguished Senators from Utah and Missouri. I would like to be able to support any measure to improve the pros-

pects for protecting the right to life. The unfortunate fact is Senate Joint Resolution 3 does not advance the principle that human life is inviolable. Instead, it surrenders forever this principle in exchange for the illusory hope that some lives may be saved.

Without impugning the conclusions reached by others, my personal judgment is that Senate Joint Resolution 3 is defective constitutional theory. Its ratification would represent at best a Pyrrhic victory for the unborn.

Before detailing the reasons for my opposition to Senate Joint Resolution 3, I want to express my gratitude to all those, both my colleagues in the Senate and my fellow citizens, who have worked long and hard and in good faith on behalf of Senate Joint Resolution 3. Their efforts speak for themselves. Furthermore, their sacrifices for the sake of the unborn will ultimately be counted on the side of justice and will help pave the way for effective laws to protect the unborn. Alerting the public to the evils of legalized abortion remains central to the success of the prolife movement, and the proponents of Senate Joint Resolution 3 have done much in this regard. No matter how any of us come out on the merits of Senate Joint Resolution 3, we can all acknowledge that its advocacy has raised the general level of understanding about abortion one notch higher. For this result we should all be grateful.

The basic problem with Senate Joint Resolution 3 is that, instead of recognizing the unborn child's inalienable right to life, it merely rebuts the concept of a right to abortion. After ratification, the Federal and State governments apparently may or may not, as they choose, secure the right to life for unborn children. In this regard, Senate Joint Resolution 3 would institutionalize in the text of the Constitution, the idea that abortion is a matter of choice for the governing authorities. Moreover, it would thereby undercut the correct understanding that the 5th and 14th amendments protect all human persons including the unborn. In short, Senate Joint Resolution 3 runs contrary to the animating moral principle of the prolife movement that no government ever has the authority to sanction the destruction of unborn human life.

The fact that freedom of choice is at the root of Senate Joint Resolution 3 is confirmed by this language on page 7 of the Judiciary Committee's report:

> Unlike many other proposed amendments on the subject of abortion, it would not obligate the States to legislate; it would simply restore to them the authority to do so. By "deconstitutionalizing" the issue of abortion, the proposed amendment would allow the States a wide variety of options which respect to this matter. In their best judgment, the States might choose to have no policy regarding abortion or might restrict and condition it in a variety of ways. For example—
>
> (1) They could place restrictions of some form upon late-term abortion;
>
> (2) They could impose obligations upon physicians to save the lives of fetuses capable of surviving an abortion;
>
> (3) They could place limitations upon genetic engineering and other experimental and medical research involving the use of human embryos and fetuses;
>
> (4) They cold require that women contemplating abortions be fully apprised of the risks of abortion and the alternatives to abortion;
>
> (5) They could require some form of parental consent to abortions performed upon minors;
>
> (6) They could require some form of spousal consent to abortions;
>
> (7) They could establish some minimum waiting period before an abortion could take place or require some form of professional consultation prior to an abortion;
>
> (8) They could establish rights of refusal to perform abortions in physicians or nurses, or in entire hospitals;
>
> (9) They could limit the commerce in abortifacient devices;
>
> (10) They could prohibit abortion generally subject to certain well-defined exceptions and safeguards; or
>
> (11) They could undertake any other form of restriction or regulation upon the abortion procedure.

Obviously this statement in the committee report reflects an understanding that ratification of Senate Joint Resolution 3 would allow abortion in the discretion of the governing authorities. Such understanding is inconsistent with the traditional concept of American law that all human lives have intrinsic worth and equal value. It is also inconsistent with the proper meaning of the 5th and 14th amendments. My position is, therefore, that it would be unwise and imprudent to seek some legal protection for the unborn at the expense of abandoning the principle upon which the protection of all human life depends. In this sense, ratification of Senate Joint Resolution 3 would indeed be a pyrrhic victory.

The position that approval of Senate Joint Resolution 3 would be a setback is held by many legal scholars, including John S. Baker of Louisiana State University Law School, Robert M. Byrn of Fordham University Law School, Charles E. Rice of Notre Dame University Law School, and Joseph P. Witherspoon of University of Texas Law School. Without elaboration, let me briefly quote from these gentleman. Their statements were first made about Senate Joint Resolution 110 in the 97th Congress but apply to the current Senate Joint Resolution 3 as well.

Professor Rice has written as follows:

> [S.J. Res. 110] wholly accepts this basic premise of Roe v. Wade, that the unborn child is a nonperson. The amendment subjects his right to life to the total discretion of Congress and state legislators.—Charles E. Rice, "The Hatch Amendment Is Not the Answer," The Wanderer, page 6 (Nov. 26, 1981).

Professor Baker has stated the following:

> Not only does [S.J. Res. 110] not establish "personhood," it impliedly affirms the judgment of the Supreme Court in Roe: because one could not allow the States or Congress to permit abortions if the unborn child is a Fourteenth Amendment "person."—John S. Baker, The Hatch Amendment: A Legal Analysis, page 11 (National Committee of Catholic Laymen, Inc., 1981).

Professor Witherspoon has written the following:

> The proposal does not recognize the personhood of the unborn child. Indeed, [S.J. Res. 110] makes the holding of the Supreme Court that the unborn child is not a person protected by the Constitution an integral part, a central girder of the Constitution itself. It accomplishes this result not only by failing to overrule that fundamentally evil and legally erroneous holding of the Supreme Court and leaving it wholly intact as an interpretation of the Constitution but also by giving to Congress and State Legislatures the absolute discretion to provide no protection to unborn children against abortion.—Joseph P. Witherspoon, "Constitutional Protection of Unborn Children: An Examination of the Hatch Amendment," page 4 (Memorandum of Feb. 3, 1982).

Professor Byrn has stated the following:

> The amendment institutionalizes in our fundamental law the notion promulgated by the Court in Wade that some human beings may be categorized as rightless things. Were it otherwise, Senate Joint Resolution 110 would be prohibitory not permissive. Fundamental rights would not be put at the disposition of legislatures.—Robert M. Byrn, "Memorandum in Opposition to Senate Joint Resolution 110," page 2 (undated).

I am not unaware of certain statements in the report of the Judiciary Committee on Senate Joint Resolution 3 to the effect that the proposed amendment does not preempt a finding of personhood under the 14th amendment. For example, the report states on page 57:

> Senate Joint Resolution 3 does not deny that the unborn are "persons" within the context of the 14th amendment and, as such, entitled to the protections of that amendment.

Despite such statements, however, it is clear that the fundamental purpose of Senate Joint Resolution 3 is to allow governmental choice on abortion, and such choice is inherently inconsistent with personhood. As an amendment coming after the 5th and 14th amendments, Senate Joint Resolution 3 would be subject to the customary rule of construction that a later specific enactment controls an earlier general enactment relating to the same subject. Hence, the report's assurances about retaining personhood in the text of the Constitution after ratification of Senate Joint Resolution 3 are not persuasive.

In addition to the above problems, Senate Joint Resolution 3 suffers from

another serious flaw. Many proponents of Senate Joint Resolution 3 seem to believe that ratification of this measure would turn the abortion issue over to State legislatures where it would be subject to the normal democratic process. In one major way, this understanding is not correct.

Since the abortion decision in 1973, a body of case law has grown up extending the jurisprudence of Roe against Wade. Where State courts have used this jurisprudence to find a right to abortion under State constitutions, the State legislatures will be severely limited in their discretion to enact State statutes. Indeed, State restrictions on abortion in those cases will not be possible despite Senate Joint Resolution 3 unless State constitutions are amended as well.

The American Law Division of the Library of Congress has made this point clearly in its own analysis of Senate Joint Resolution 3 dated May 9, 1983. On page 9 of that analysis, the following statement appears:

(W)hile in terms of the relative balance of federal and state authority in the abortion area, the amendment may restore the status quo ante in Roe, this does not necessarily mean that the state legislatures will be writing on a clean slate in those states where a "right to abortion" has been judicially found to inhere in the state constitution. Rather, those legislatures may remain subject to the same state constitutional constraints that presently limit their powers to restrict abortion, or those that may emerge in the future as the result of the continued evolution of judicial doctrine.

For the above reasons, I have regretfully concluded that I cannot support my good friends, Senators HATCH and EAGLETON, in their advocacy of Senate Joint Resolution 3. It pains me to take this position because of the support Senate Joint Resolution 3 has received in some quarters of the prolife movement. I respect these individuals, I admire their hardwork and dedication, and I look forward to working with them in the future on this vital cause. As I believe Senators HATCH and EAGLETON have acknowledged, their proposed constitutional amendment will not come close to the necessary two-thirds vote.

As to the future, the recent Akron case demonstrates beyond argument that the Supreme Court has made abortion purely a matter of power politics. What Justice White called "an exercise of raw judicial power" in Roe in 1973 has been repeated by the Court in Akron in 1983. The fact remains that the Constitution does not sanction a right to abortion despite these corruptions by the Court.

Accordingly, the tasks before the President and Congress, in restoring the integrity of the Constitution and protecting the unborn, remain clear. The President must continue to nominate Supreme Court Justices who respect the text and history of the Constitution, and Congress must press for passage of statutes that contradict the interpretation in Roe and Akron. This process of checks and balances, applied to the Court by the President and Congress, holds out the best hope for coming up with effective legal protection for the unborn in the near future. To this process I am unalterably committed.

But, however, the Senate decides to proceed, Mr. President, I hope we can divorce ourselves from rancor in the discussion. I noticed the distinguished Senator from Oregon a while ago referred to—and I wrote down the words—"nefarious statutory means." He was obviously referring to my various proposals to limit the jurisdiction of the Supreme Court and the Federal courts with respect to right to life. I have also made the same proposal with respect to the tragic decisions by the Supreme Court in the early 1960's with regard to school prayer. I hope the Senator from Oregon will not contend that article III, section 1 and section 2 of the Constitution are nefarious statutory means. In any case, I want to assure the Senator from Oregon that I shall never, never impugn his motives nor his character when he and I strongly disagree on this issue or any other.

Having said that, I hope, first of all, that we can agree to have one debate this year, and only one debate on the issue. I would like to do that either by offering the star print of S. 26 as a substitute amendment to the pending proposal or by having the vote on Senate Joint Resolution 3 immediately followed by freestanding consideration of the star print of S. 26.

So, Mr. President, I wonder if the majority leader would be willing to ascertain the desires of the Senator from Utah and the Senator from Oregon as to whether there could be a vote on the language of the star print of S. 26, which relates to this matter? I will be delighted to have a time agreement of 30 minutes, 15 minutes on a side.

Mr. BAKER. Mr. President, let me answer the question this way. I have said on the floor previously, and will repeat now, that nothing in this agreement in any way precludes the opportunity of the Senator from North Carolina to offer another amendment on this subject, including the star print of S. 26. But I cannot say to the Senator when that will be done. I could simply say that I will not make any effort to avoid it happening and, indeed, I fully expect that it will happen.

Now, whether it happens as an amendment or whether it happens as a freestanding measure I suppose is a matter that we still must discuss. But there is nothing in this proposal that would in any way circumscribe the opportunity of the Senator from North Carolina to exercise his full rights, which I will jealously protect, to offer that proposal as an amendment to some other measure or as a freestanding bill.

Mr. HELMS. But the Senator is referring to a later time on another piece of legislation—not the pending Senate Joint Resolution 3?

Mr. BAKER. Yes, I am referring to a later time.

Mr. HELMS. Because this proposed unanimous consent stipulates no amendments would be in order on Senate Joint Resolution 3.

Mr. BAKER. Yes; not to this bill. Mr. President, I am referring to some future time. It would not be in order under this agreement at this time.

Mr. HELMS. The majority leader does understand that the Senator from North Carolina does not want to tie up the Senate unnecessarily in consideration of the legislation remedy which he feels would better address the right-to-life question. There was some misunderstanding last year and I do not want a recurrence of that. The unanimous-consent request propounded by the distinguished majority leader would leave the Senator from North Carolina no option except to offer the language of S. 26 as an amendment to another piece of legislation later on.

I want to emphasize again that I will be willing to enter into a time agreement on my proposal, whenever it occurs, whether it is on the measure now pending or some subsequent measure. But the point is, Mr. President—and I make this observation as courteously and agreeably as I know how—that we have a very good chance of a majority vote on the proposal that I intend to offer later on.

Now, the Senator from Oregon can count votes, and so can I. He knows, and I know, that there are not nearly enough votes to approve the pending constitutional proposal. And I understand the Senator's strategy in consenting to this debate on the Hatch-Eagleton proposal.

I do want to say to the majority leader that I shall not object to this unanimous-consent request, but I do want him to understand, and I want my fellow Senators to understand, that it will not be my desire to tie up the Senate with respect to this issue at some future time. If the Senate is tied up, it will not be my doing. I will be willing to enter into whatever time agreement Senator PACKWOOD and Senators who support his point of view are willing to make with the majority leader. If they are unwilling to limit the debate, it will confirm my assessment that there very well could be a majority in favor of the language of star print S. 26.

Mr. BAKER. Mr. President, I thank the Senator. I understand fully. As I

have already indicated, while this agreement, if granted, would preclude that amendment to this resolution, it would not preclude it to any future measures that come before the Senate.

Mr. HELMS. I thank the Senator. With that understanding, I do not object.

Mr. BAKER. Mr. President, I have been advised by Senators that the second half of my request dealing with the tax cap is maybe not ripe yet. It has not yet matured to the place where we can safely agree to the arrangement I suggested. Therefore, I withdraw that portion of the request.

For the sake of clarity, let me repeat the request now in its revised form.

Mr. President, I ask unanimous consent that on today, Monday, June 27, during the Senate's consideration of Senate Joint Resolution 3, a joint resolution to amend the Constitution to establish legislative authority in Congress and in the States with respect to abortion, the amendment reported by the Judiciary Committee without recommendation be considered as agreed to; and that Senate Joint Resolution 3, as amended as follows: "A right to abortion is not secured by this Constitution," be considered under the following time agreement:

Ten hours on the joint resolution, as amended, to be equally divided between the Senator from Utah (Mr. HATCH) and the Senator from Oregon (Mr. PACKWOOD), or their designees;

That no amendments be in order;

That there be 30 minutes equally divided on any debatable motions, appeals, or points of order, if so submitted to the Senate; and

That no tabling motion be in order against the resolution.

I further ask unanimous consent that, when the Senate reconvenes on Tuesday, June 28, following a period for the transaction of routine morning business, the Senate resume consideration of Senate Joint Resolution 3, as amended, and that following the conclusion of debate on Senate Joint Resolution 3, as amended, the Senate proceed to vote on Senate Joint Resolution 3, as amended, without any intervening debate, motion, appeal, or point of order, and that such vote will occur no later than 3 p.m.——

Mr. BYRD. Could you make that 5 p.m.?

Mr. BAKER. No later than 5 p.m. on Tuesday, June 28.

Finally, Mr. President, I ask unanimous consent that paragraph 4 of rule XII be waived.

Mr. President, before the Chair puts the request, might I also include in the request that time from the beginning of debate on this measure today until the granting of this order be divided equally charged against the time allowed by this order.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. BYRD. Wait a minute. What is so ordered? The Senator had two requests pending.

Mr. BAKER. Mr. President, I wish to amend the request again in this respect:

First, the amendment to the request that I have already stated; that is, the time between the beginning of consideration of this measure and this moment be charged equally against the parties and against the 10 hours granted by this order; second, Mr. President, that the vote occur at 5 p.m., rather than no later than 5 p.m. on tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. The Chair has granted the entire request; is that correct?

The PRESIDING OFFICER. That is correct.

Mr. BAKER. Mr. President, I thank all Senators.

Let me say I still hope we can work something out on the tax cap. If we cannot, we cannot. But, to tell you the truth, I think we could finish this measure, finish the tax cap, and finish the agriculture appropriations bill in time to get out of here Thursday, and maybe Wednesday. I do not mean to hold a carrot out for Senators, but if they see one out there, I will not dispute their vision. [Laughter.]

Mr. BYRD. Mr. President, it never hurts to hold the carrot out.

Mr. BAKER. I thank the Senator.

Mr. BYRD. Mr. President, I wish to thank my distinguished senior colleague for his kindness and patience in yielding as he has.

Mr. RANDOLPH. I thank both the majority and minority leaders who know that I can always wait for those necessary procedures within this body that have to do with legislation being considered.

(Conclusion of earlier proceedings.)

The PRESIDING OFFICER. The Senator from Utah.

Mr. HATCH. Mr. President, while we are waiting for Senator THURMOND to arrive in the Chamber, let me just embellish to a degree one of issues raised by the distinguished Senator from Nebraska when he spoke. He addressed himself to the pain an unborn child must experience during an abortion.

Mr. President, during the past year or two, increasing attention has been paid to the "animal rights" movement. There are a number of sizable organizations which are seeking Federal and State legislation to curb what they see as various forms of unnecessary suffering imposed on animals. For example, legislation has been introduced in Congress to regulate the use of animals in medical research. Some of these groups seek to protect baby seals from fur hunters, to ban certain types of animal traps, and so on.

Now, I perhaps would not go as far as some of these groups on certain points. But certainly, their humane concern for the suffering of animals is commendable. I do find it rather curious, however, that many people who express great concern about the suffering of our furry friends, seem to show much less concern for unborn humans and the pain they experience in abortion.

For example, I read last year that my distinguished colleague from the State of Oregon (Mr. PACKWOOD), publicly expressed outrage that certain American scientists were planning to kill, with harpoons, a number of porpoises for research purposes.

In his 1981 essay, "The Experience of Pain by the Unborn," Prof. John T. Noonan, Jr., of the University of California-Berkeley Law School, wrote:

> Can those who feel for the harpooned whale not be touched by the situation of the salt-soaked baby? We should not despair of urging further the consciences of those who have curtailed their convenience to spare suffering to other sentient creatures. ["New Perspectives on Human Abortion," University Publications of America, 1981.]

I have given some thought to this matter. Perhaps those who worry about cruelty to animals, but would permit greater cruelties to unborn human beings, are ignorant of the functional capacities of unborn children at various stages of development. They are perhaps unaware of the persuasive evidence that unborn children can and do experience organic pain from an early stage of development.

This is not a particularly pleasant subject to discuss, Mr. President. Perhaps there will be some who characterize this discourse as "emotionalism." But I believe that we must attempt to strip away some of the dehumanizing euphemisms which often surround abortion, and examine objectively the reality behind the rhetoric.

Advocates of legal abortion stress the hardships—in many cases, the genuine hardships—which unwanted pregnancy can bring on a woman. They argue that every woman should have the right to avoid such suffering through abortion. But in order for these arguments to be compelling, abortion advocates must first dehumanize the unborn child. The child must be reduced to a mere potentiality, a blob of tissue or even, in the words of the then-chief of the abortion surveillance branch of the Federal Center for Disease Control, "the No. 2 sexually transmitted condition" (the No. 1 sexually transmitted condition was gonorrhea).

Mr. President, I ask unanimous consent that an article entitled "Abortion as a Treatment for Unwanted Pregnancy: The No. 2 Sexually-Transmitted Condition," as it appeared in Ad-

vances in Planned Parenthood, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ABORTION AS A TREATMENT FOR UNWANTED PREGNANCY: THE NUMBER TWO SEXUALLY-TRANSMITTED CONDITION*

(By Willard Cates, Jr., M.D., M.P.H., David A. Grimes, M.D., and Jack C. Smith, M.S.)

(From the U.S. Department of Health, Education, and Welfare Public Health Service, Center for Disease Control, Bureau of Epidemiology, Family Planning Evaluation Division, Atlanta, Georgia.)

ABSTRACT

Using data from national surveys of reproductive behavior, we estimated that unwanted pregnancy was the second most prevalent sexually-transmitted condition in the country in 1974; gonorrhea was the first. For women who wish to terminate their unwanted pregnancies, the preferred approach is legal abortion by suction curettage. This procedure compares favorably in efficacy and safety with the available treatment for other sexually-transmitted conditions.

Basándonos en datos nacionales relacionados con el comportamiento en el área de la reprodución, hemos podido determinar que durante el año 1974 el embarazo no deseado fué, en frecuencia, la segunda condición más común de transmisión sexual; la gonorrhea fué la primera. El tratamiento de elección para el embarazo no deseado es el aborto legal mediante la succión durante el primer trimestre del embarazo. La morbilidad y mortalidad de este procedimiento se compara favorablemente en cuanto a su eficacia y grado de seguridad con los tratamientos de que se dispone para las otras condiciones de transmisión sexual.

INTRODUCTION

Sexually-transmitted diseases are currently epidemic in the United States (1). In 1974 there were almost 900,000 reported cases of gonorrhea and about one-tenth that number of syphilis (2). During the same year, unwanted pregnancies were also epidemic. To provide epidemiologic perspective on this problem, we will consider unwanted pregnancy as a sexually-transmitted condition, estimate its incidence in the United States, and compare the treatment of unwanted pregnancy with that for gonorrhea.

UNWANTED PREGNANCY AS A SEXUALLY TRANSMITTED CONDITION

Although rarely classed as a venereal disease, unwanted pregnancy is transmitted sexually, is socially and emotionally pathologic (3), and has many other characteristics of the conventional veneral diseases. The incubation time, defined as the period between exposure (mid-cycle coitus) and the development of initial symptoms (usually missed menses), averages approximately 2 weeks. As with sexually-transmitted diseases, there appears to be intrafamilial predisposition to unwanted pregnancy (3). Moreover, 10 percent recurrence rate has been reported (4), and prevention is more effective if simultaneous treatment of sexual partners is undertaken through contraceptive counseling (5).

As with other sexually-transmitted conditions, unwanted pregnancy occurs primarily in the most sexually-active age groups. Both unwanted pregnancies and venereal diseases seem to have seasonal variations (6). Finally, the barrier methods used to prevent unwanted pregnancy also serve to prevent venereal diseases (7).

INCIDENCE OF UNWANTED PREGNANCY

Having suggested that unwanted pregnancy be considered a sexually-transmitted condition, what do we know about its epidemiology? One way of determining the incidence of unwanted pregnancy is to extrapolate data from surveys about reproductive behavior (Table I). When stratified by marital status, these studies demonstrate remarkably similar percentages of mistimed, unwanted, and unplanned pregnancy, especially considering the multiple differences among regions studied, dates covered, populations interviewed, and questions used. For example, marital unplanned pregnancy ranged from 35–43 percent, while unmarried unplanned births ranged from 73–79 percent. Although most of these studies have concentrated on unplanned or unintended pregnancy, for our estimates we will focus only on unwanted births, defined as failures in "number" rather than "timing". Therefore, our data probably tend to underestimate the true incidence of undesired pregnancy.

The 1970 National Fertility Study revealed that between the years 1966 and 1970 14 percent of births to married women were unwanted (8). The Albany Area Survey of 1974 found the same percentage of marital unwanted pregnancy in the years 1969–1974 (9). On the other hand, the National Natality Study of 1972 determined that only 8 percent of marital births that year were unwanted (10); differences in how the questions were asked may have accounted for the discrepancy between the studies.

TABLE 1.—PERCENTAGE OF BIRTHS UNWANTED, MISTIMED, AND/OR UNPLANNED FROM STUDIES OF REPRODUCTIVE BEHAVIOR, BY MARITAL STATUS

Study	Region	Date	Marital status	Percentage of births		
				Mistimed (1)	Unwanted (2)	Unplanned (3) = (1) + (2)
NFS [1]	National	1966–70	Married	29	14	43
Albany [2, 3]	Albany	1969–74	Married	27	14	41
			Unmarried	74	5	79
Teen-agers [4]	National	1971	Unmarried	—	—	78
Hawaii [5]	Hawaii	1970–71	Married	—	—	39
			Unmarried	—	—	73
Atlanta [6]	Atlanta	1966–71	Married	—	—	36
National natality study (NCHS) [7]	National	1968	Married	28	13	41
		1969	Married	26	12	38
		1972	Married	27	8	35

Because the surveys dealt primarily with the years prior to 1974, they are outdated for our current estimates. Using a linear extrapolation from the 1969 and 1972 National Natality Study, adjusted for birth order, we estimate conservatively that about 6.7% of births to married women in 1974 were unwanted (11), for a total of 185,300 (Table II).

Unwanted births also occur to unmarried women. The Albany Survey determined that 5% of out-of-wedlock births were unwanted; another 74% of births were unplanned (12). If the conservative 5% figure is applied to the out-of-wedlock births in 1974, an additional 20,900 births can be estimated to have been unwanted among unmarried women, for a total of 206,200 unwanted births. If we assume that each unwanted birth equals 1 unwanted pregnancy, there were at least 206,200 unwanted pregnancies in 1974. However, this estimate takes into account only births and does not include those unwanted pregnancies that were terminated prior to a birth.

The best available indicator of unwanted pregnancies not resulting in birth is the annual incidence of legally-induced abortion in this country. Although many abortions, especially those to unmarried women, terminate pregnancies resulting from failures in timing rather than number, we will consider them as operationally unwanted for the purposes of estimation. In 1969, the Center for Disease Control (CDC) initiated national surveillance of legal abortion. CDC's data come from the central health agencies in most states and from individual hospitals and clinics in those states without reporting systems (13). Nearly 763,500 legal abortions were reported to CDC by these sources in 1974. This number of reported abortions was probably less than the actual number performed. A nationwide survey of abortion facilities by the Alan Guttmacher Institute (AGI) found that an estimated 900,000 abortions had been performed during 1974 (14). In public health surveillance, survey data

and reported cases frequently differ, with the reported cases reflecting a lower number.

TABLE II.—ESTIMATED NUMBER OF UNWANTED PREGNANCIES, REPORTED GONORRHEA, AND REPORTED SYPHILIS—UNITED STATES, 1974

Category	Number of births [1]	Number of births, unwanted		Estimated number of unwanted pregnancies
		Number	Percent	
In-wedlock	2,741,900	185,300	[2] 7	
Out-of-wedlock	418,100	20,900	[3] 5	
Legal induced abortions				[4] 763,500
Total		206,200		969,700
Reported gonorrhea—1974				[5] 898,900
Reported syphilis—1974				[5] 83,800

[5] Center for Disease Control: Morbidity and Mortality Weekly Report, Annual Supplement—1974, 23(53), July, 1975.

As shown in Table II, when the smaller CDC figure of 763,500 abortions in 1974 is added to the estimate of unwanted pregnancies based on birth data, a total number of 969,700 unwanted pregnancies can be estimated for the United States during that year. We emphasize that this represents only a crude minimum estimate of unwanted pregnancy because: we used the most conservative percentages from surveys of unwanted fertility; we did not consider mistimed births, but dealt only with births in excess of the desired number; as emphasized above, we used only the reported number of abortions and not the more realistic estimate by the AGI of the actual number performed; and we made no upward adjustment for those unwanted pregnancies terminated by spontaneous abortion.

How does the estimate of unwanted pregnancy compare with the incidence of sexually-transmitted diseases? In 1974, 898,000 cases of gonorrhea were reported to CDC: thus, even our conservative estimate of unwanted pregnancy is over 70,000 cases higher than that for gonorrhea (Table II). However, because of the large amount of underreporting which occurs with gonorrhea, a more likely estimate of the total number of gonorrhea cases for 1974 is in the 2 million range (1). Therefore, figuring conservatively, unwanted pregnancy appears to be the second most prevalent sexually-transmitted condition in our country.

One important qualification should be made. Several sexually-transmitted infections are not routinely reported to public health authorities. Such conditions as nongonococcal urethritis and salpingitis and vaginal trichomoniasis are sexually transmitted (15), but no reporting system exists for them. Therefore, it is not possible to estimate accurately the incidence of these diseases within the United States. Authorities have suggested that each of these conditions involves more individuals than individuals with gonorrhea (1, 15). Nevertheless even if inclusion of other sexually-transmitted diseases lowers the ranking of unwanted pregnancy, the absolute magnitude of this condition throughout the nation remains remarkably high.

TREATMENT OF UNWANTED PREGNANCY

What about the outcome of unwanted pregnancy? Without treatment, the natural history of unwanted pregnancy involves either a spontaneous abortion or a term delivery. Approximately 1 in 6 of all pregnancies will spontaneously abort, most in the first 2 months (16). If the pregnancy is unwanted and carried to term the mother is often faced with the difficult choice of either keeping the child or putting it up for adoption. Moreover, term birth carries risks of morbidity (17) and mortality (18). The risk of death from term birth is 9 times greater than the risk associated with first-trimester abortion (13).

For women who want to end an unwanted pregnancy, the preferred approach is legal abortion by suction curettage during the first trimester. In 1974, the typical woman choosing abortion was young, white, and unmarried (13). Pregnancy terminations for females under 20 years of age comprised almost one-third of all abortions; the 20-to 24-year-old age group accounted for another one-third, and the other one-third were 25 years of age or older. The age-specific abortion ratios indicate that pregnant women less than 19 and over 40 were more likely to have abortions than women of other ages, averaging 1.2 abortions for every 2 live births. This is a function of the large number of unwanted pregnancies occurring at both ends of the reproductive age spectrum.

Between 1972 and 1974, the perentage of abortions obtained by women of races other-than-white increased from 23 percent to 30 percent. This changing distribution continues the trend noted since 1971 which may indicate the increasing availability of abortion for the other-than-white population.

In 1974, the distribution of abortions by marital status and number of living children was very similar to the pattern for previous years. Over two-thirds of the women were in the unmarried category, which includes women who are widowed, separated, or divorced and women who have never married. Nearly 50 percent of abortions were performed on women with no living children.

There is a definite geographic variation among patients treated by legal abortion, when analyzed both by the state where the abortion occurred and the state of residence. In 1974 all 50 states and the District of Columbia reported that abortions had been performed within their boundaries. As in the past several years, New York and California were the largest providers of abortion in 1974, accounting for 39 percent of all reported procedures. However, because the Supreme Court decisions of 1973 led to a redistribution of abortion services, the combined percentage for these 2 states had declined markedly over the last 2 years. As expected, fewer women tended to get abortions outside their state of residence as availability of abortion services increased in their own states. In 1974, 13 percent of women went out-of-state to obtain an abortion, compared with 44 percent in 1972.

The overwhelming majority of women obtaining legal abortion for unwanted pregnancy are having it performed by the preferred approach—legal abortion by suction curettage. In 1974, 78 percent of all abortion procedures were performed by suction curettage, 12 percent by sharp curettage, 8 percent by saline instillation procedures, and only 0.6 percent by hysterotomy or hysterectomy. Moreover, 8 of 9 women who obtained abortions did so prior to 13 menstrual weeks' gestation. Thus, it appears that for the nation as a whole, women who choose abortion when faced with an unwanted pregnancy are obtaining the preferred medical treatment.

LEGAL ABORTION AND PENICILLIN AS TREATMENTS FOR SEXUALLY TRANSMITTED CONDITIONS

When evaluation any therapy, the 2 main criteria are effectiveness and safety. Therefore, it is important to consider these factors for legal abortion. Just how effective and safe is first-trimester suction curettage?

To put this question into some perspective, we compare first-trimester abortion as a treatment for unwanted pregnancy with intramuscular penicillin as a treatment for gonorrhea (Table III). Based on results from 2 multicenter prospective studies of abortion complications, the first conducted by the Population Council in 1970 and 1971 (19) and the second by CDC in 1971–1975 (13), first-trimester suction abortion has a failure rate of 0.3 percent or 3 per 1,000 procedures. This contrasts with a 3.2 percent failure rate or 32 per 1,000 cases for intramuscular penicillin in treating gonorrhea (20). Thus, abortion is 10 times more effective for treating unwanted pregnancy than penicillin is for treating gonorrhea.

TABLE III.—COMPARISON OF LEGAL ABORTION AND PENICILLIN AS TREATMENTS FOR SEXUALLY-TRANSMITTED CONDITIONS

	Legal abortion for unwanted pregnancy	Penicillin for gonorrhea
Method of treatment	Suction curettage at 13 < weeks' gestation.	Intramuscular procaine penicillin.
Efficacy (failure rate)	0.3 percent [1]	3.2 percent.[2]
Morbidity:		
Minor	5.0 percent [1]	0.3 to 10 percent.[3] [4]
Major	0.4 percent [1]	0.001 to 0.04 percent [3] [4]
Mortality	1.8/100,000 [1]	1.4 to 2.0/100,000.[3] [4]
Cost/treatment	$186 [5]	$17.70.[6]

[6] Venereal Diseases Division, Center for Disease Control: Personal communication October, 1976.

Comparison of the safety of these 2 therapeutic entities is also revealing. Suction abortion, a surgical procedure employing either local or general anesthesia, would be expected to hold more dangers than the ubiquitous penicillin, an antibiotic of low toxicity. However, suction curettage has a 5 percent total-complication rate and a 0.4 percent major-complication rate (13). Penicillin, on the other hand, causes mild allergic manifestations in 0.7 percent—10 percent of cases and leads to severe anaphylactic reactions in 0.001—0.04 percent of patients treated (21, 22).

Moreover, the risks of death from abortion and intramuscular penicillin are also similar. The death-to-case rate for first-trimester suction curettage is 1.8 per 100,000 abortions (13) compared with the World Health Organization and CDC estimates of 1.4—2.0 deaths per 100,000 patients treated with intramuscular penicillin (21, 22). Therefore, in terms of morbidity and mortality risks for the 2 treatments, abortion compares favorably with penicillin.

Although suction curettage is more efficacious than, and as safe as, penicillin, it costs more. The average cost per patient treated with suction abortion is roughly 10 times higher than the per-patient cost of gonorrhea treated with penicillin (Table III). However, case-finding costs are not included in the penicillin-treatment estimates, and thus the penicillin costs are minimum figures. Moreover, although legal abortion is more expensive than penicillin, it is less costly than the non-treatment of unwanted pregnancy, usually a term birth. Thus, the cost-benefit ratio of legal abortion is probably favorable (23).

In summary, unwanted pregnancy is the second most prevalent sexually-transmitted condition in this country. Women who have had legal abortion as a treatment of unwanted pregnancy are more likely to be young, white, and unmarried. Eight of 9 women have had their abortions in the first trimester, a time when the risk of death from the procedure is similar to that of penicillin for gonorrhea. Therefore, we conclude that unwanted pregnancy should be considered a sexually-transmitted condition of epidemic proportions; Moreover, legal abortion is an effective, safe, curative treatment for that condition.

Mr. HATCH. Those who employ such euphemisms are naturally reluctant to consider the question of fetal pain. I believe that columnist George F. Will said it well in his 1981 column titled "Abortion Does Cause Pain to Its Victims."

Most pro-abortion persons have a deeply felt and understandable need to keep the discussion of abortion as abstract as possible. They become bitter when opponents use photographs to document early fetal development. The sight of something that looks so much like a child complicates the task of trying to believe that there is nothing there but "potential" life. And if fetal pain is acknowledged, America has a problem: its easy conscience about 1.6 million abortions a year depends on the supposition that such pain is impossible.

Mr. President, well over 100,000 abortions a year are performed after the first trimester of pregnancy. At this stage they can no longer be performed with the powerful vacuum device used during the first trimester, because the unborn child is large and has a well-developed skeletal structure. The abortion method now preferred by most abortionists for abortions after the 12th week is called dilatation and evacuation or D&E, for short.

The D&E procedure basically consists of the dismemberment of the living unborn child with powerful forceps. An article coauthored by the former chief of the abortion surveillance division of the Center for Disease Control described the D&E procedure this way:

Ossified parts, such as the skull, must often be crushed. The bone fragments must be extracted carefully to avoid tearing the cervix. Reconstruction of the fetal sections after removal from the uterus is necessary to ensure completeness of the abortion procedure. [Rooks and Cates, "Emotional Impact of D&E vs. Instillation," Family Planning Perspectives, Nov.-Dec. 1977]

Dr. Walter Hern, an abortionist and a nationally recognized expert on the D&E procedure, described it this way in a 1978 address:

There is no possibility of denial of an act of destruction by the operator. It is before one's eyes. The sensations of dismemberment flow through the forceps like an electric current . . . some part of our cultural and perhaps even biological heritage recoils at a destructive operation on a form similar to our own. [Address, Association of Planned Parenthood Physicians, October 1978]

As the U.S. Supreme Court noted in its June 15, 1983, decision in Planned Parenthood Association against Ashcroft, some abortionists now use this technique "on 28-week pregnancies, well into the third trimester." The technique is considered to have several advantages over the salt-poisoning method, which had formerly been preferred. For one thing, the D&E method never produces the dreaded complication of late-term abortions—a live baby.

Now, obviously being dismembered in such a manner would cause pain—excruciating pain—to all of us. All of us are aware that newborn infants are sensitive to pain. Indeed, long before an infant smiles or speaks, she cries. The infant does not hesitate to communicate to us her distress at hunger pangs, a misplaced diaper pin, or whatever.

The unborn child cannot communicate her pain to us in this way. But there is ample evidence that from an early stage of development—at least by 13½ weeks after conception, and perhaps 1 month earlier—the unborn child is capable of experiencing organic pain.

Mr. President, the State of Illinois has enacted a statute which requires that, in certain circumstances, women seeking abortions be advised of the availability of drugs which could alleviate the pain which the abortion will cause to the unborn child. In defense of this law, several medical experts have submitted affidavits on fetal pain to the U.S. District Court for Northern Illinois (*Charles* v. *Carey*, Nos. 79-C-4541, 79-C-4548). I would like to read a few excerpts from those compelling affidavits.

Consider, first, the following statement by Prof. Vincent J. Collins. Dr. Professor Collins is a leading authority on pain. He is professor of anesthesiology at the University of Illinois Medical Center in Chicago, and chairman of the department of anesthesiol-

ogy at Cook County Hospital in Chicago.

Dr. Collins told the district court:

As early as eight to ten weeks gestation, and definitely by thirteen and a half weeks, the human fetus experiences organic pain. Between the eighth and tenth weeks the thalamus starts emitting special brain waves in response to noxious stimuli. At that time thalamic function is thereby indicated. Because a functioning thalamus evokes organic suffering, the fetus between eight to ten weeks thus may suffer when exposed to noxious stimuli. But certainly by thirteen and a half weeks the fetus aversively reacts to noxious stimuli with integrated responses at all nervous system levels. The total organic response at that point is more sophisticated than mere reflex. Thus, it is certain that a fetus senses organic pain at least by thirteen and a half weeks gestation.

Induced abortion will cause pain to a fetus with a functioning central nervous system if the method used stimulates the pain receptors and excites the neural pathways. Dilatation and evacuation (D&E) or saline instillation are two abortion methods capable of stimulating pain receptors and exciting neural pathways.

Mr. President, I ask unanimous consent that Professor Collins's entire affidavit be entered into the RECORD.

There being no objection, the affidavit was ordered to be printed in the RECORD, as follows:

AFFIDAVIT OF VINCENT J. COLLINS, M.D., COOK COUNTY, ILL.

Vincent J. Collins, M.D. being duly sworn, deposes and states as follows:

1. I am currently Chairman of the Department of Anesthesiology at Cook County Hospital, Chicago, Illinois, and a Professor of Anesthesiology at the University of Illinois Medical Center in Chicago. I have researched and written extensively on the subject of pain, *i.e.*, its causes, physiology, and control. I am a board-certified Anesthesiologist. A copy of my curriculum vitae is appended to this affidavit.

2. I have read and am familiar with section 6(6) of the Illinois Revised Abortion Statute regarding fetal pain.

3. The statements in this affidavit are based on my medical experience and knowledge, and best medical judgment. As an Anesthesiologist, I am qualified to make judgments concerning the presence of pain and about ways to abolish or alleviate pain.

4. The purpose of this affidavit is to characterize and discuss the presence of organic pain in the fetus and to describe those safe, effective methods available to abolish or alleviate organic fetal pain caused by abortion.

5. In general:

(a) Organic pain results when a noxious force of substance stimulates special pain receptors and that stimulus passes through the neural pathways of the central nervous system to the thalamus;

(b) Noxious stimulation of the central nervous system may produce a reflexive response or a more sophisticated aversive response. Reflexive responses involve only the spinal column: the reaction is simple and direct, i.e., of the type which occurs in the leg when the knee is tapped with a light hammer. The thalamus and cortex are not involved in reflexive responses. On the other hand, aversive responses involve the whole central nervous system, including the thalamus. Aversive responses are the body's attempt to escape from or avert painful stimuli. For a fuller description of these and other aspects of organic pain, see my book Principles in Anesthesiology (Philadelphia: Lea & Febeger, 1976), pp. 906-934.

(c) When an individual reacts aversively to noxious stimuli, it must be concluded that the pain structures of the central nervous system are functioning and that organic pain has been registered.

6. As early as eight to ten weeks gestation, and definitely by thirteen and a half weeks, the human fetus experiences organic pain. Between the eighth and tenth weeks the thalamus starts emitting special brain waves in response to noxious stimuli. At that time thalamic function is thereby indicated. Because a functioning thalamus evokes organic suffering, the fetus between eight to ten weeks thus may suffer when exposed to noxious stimuli. But certainly by thirteen and a half weeks the fetus aversively reacts to noxious stimuli with integrated responses at all nervous system levels. The total organic response at that point is more sophisticated than mere reflex. Thus, it is certain that a fetus senses organic pain at least by thirteen and a half weeks gestation.

7. Induced abortion will cause pain to a fetus with a functioning central nervous system if the method used stimulates the pain receptors and excites the neural pathways. Dilatation and evacuation (D&E) or saline instillation are two abortion methods capable of stimulating pain receptors and exciting neural pathways.

8. Pain can be abolished through the use of anesthetics and analgesics. Anesthetics are drugs which prevent the central nervous system from registering pain in either of two ways. First, general anesthetics prevent pain by acting directly on the spinal column, thalamus, and cortex. Robert D. Dripps, James E. Eckinhoff, and Leroy Vandam, Introduction to Anesthesia (Philadelphia: W. B. Saunders Company, 1977), p. 250. Second, local anesthetics act directly on the pain receptors, thus blocking the entrace of painful stimuli into the central nervous system altogether. *Id.* at 251.

9. General anesthetics are an effective means to anesthetize a fetus in utero. In abortions such as D&E, where the procedure is relatively short, a general anesthetic will abolish organic pain for the length of the abortion. Importantly, general anesthetics will cross the placenta from the maternal bloodstream when given to a woman with child. It is known that anesthetics supplied to a woman before childbirth will reach and effect the fetus. As a result, anesthesiologists have developed special methods to resuscitate anesthetized fetuses after birth. Robert D. Dripps, et al., pp. 349-353. Thus, before an abortion, a woman could be given a general anesthetic (such as nitrous oxide, pentothol, or halothane) which is readily available and safe for the woman. The anesthetics, after crossing the placenta, would then act to abolish fetal sensitivity to noxious stimuli and could be effectively used during the course of a D&E abortion.

10. In addition, narcotic analgesics are available to alleviate, if not abolish, fetal organic pain. Demerol, for example, is a safe, effective analgesic; when given orally to the woman, Demoral crosses the placenta and reaches the fetus the same way an anesthetic would. In abortions like saline amnio-infusion, where the fetus is exposed to the corrosive, burning effect of the saline solution for 24 to 48 hours and where anesthetics could not be employed because of the duration of the procedure, Demerol could be effectively and safely employed. If given in 50 milligram amounts to the woman every four to six hours, Demerol will control fetal organic pain throughout the length of the abortion. Again, like anesthetics, narcotic analgesics, including Demerol, would pose no significant health risks to the woman if used properly.

11. In fact, both analgesics and anesthetics are offered routinely to women before childbirth. It would, therefore, be logical and consistent to offer available analgesics and anesthetics to women who abort.

12. In sum, a fetus is sensitive to noxious stimuli at least by thirteen and a half weeks, if not by eight to ten weeks. Abortions such as D&E and saline instillation, if done after thirteen and a half weeks, will certainly cause organic fetal pain. Furthermore, anesthetics, especially general anesthetics and analgesics will cross the placenta and abolish or alleviate fetal sensitivity to noxious stimuli. Effective anesthetics such as nitrous oxide, halothane, and pentothol are widely available, and are safe for the women. Effective analgesics, such as Demerol, are also available and are safe for the woman. Therefore, it is logical, consistent, and good medical practice to offer anesthetics and analgesics to women before those abortions certain to cause fetal pain.

Respectfully submitted,

VINCENT J. COLLINS, M.D.

Mr. HATCH. Also submitting an affidavit to the district court was Dr. William Natviuw, a board-certified obstetrician-gynecologist in Illinois. I would like to read from Dr. Matviuw's affadavit:

In view of the fact that fetal sensitivity to pain exists at least as early as eight weeks, it is obvious that any form of induced abortion which excites pain receptors and/or stimulates the neural pathways will cause organic fetal pain at any time thereafter.

For example, abortions by dilatation and evacuation and saline amnio-infusion represent noxious stimuli capable of causing organic pain in a pain sensitive fetus.

D&E abortions are performed after the 12th week of pregnancy (and are performed up to and including the period of viability) when fetal bones are too large and brittle and the size of the fetus is too great for standard first trimester abortion techniques. D&E involves the progressive dismemberment of the fetus prior to extraction to facilitate removal of the fetal parts from the uterus. The slicing and crushing involved in dismemberment of the fetus in D&E abortions would obviously excite pain receptors and stimulate the neural pathways, thereby evoking an aversive response in a fetus whose central nervous system is functioning.

Abortions by saline amnio-infusion are performed after the 14th week up to and including the period of fetal viability. The procedure involves the insertion of a hypodermic needle into the amniotic sac to remove the amniotic fluid. In return, a hypertonic (highly concentrated) solution of sodium chloride is injected into the sac. The solution disrupts the placenta, causing fetal expulsion in up to 48 hours after the time the solution is injected. During that period, the corrosive effects of the saline burn away the upper skin layers of the fetus. The esophagus and mouth are burned as well when the fetus swallows the saline. By the time the fetus is expelled there is extensive edema and submembranous degeneration.

By changing the surface of the fetus in this fashion, saline would excite pain receptors and stimulate the neural pathways of a functioning central nervous system for the length of the abortion or until the fetus dies • • •.

In sum, the fetus at eight weeks possesses at least some of the requisite organic pain structures. By thirteen and a half weeks, the fetus responds aversively to noxious stimuli. The averse response involves the total central nervous system, and is more sophisticated than a mere reflex. Thus, by thirteen and a half weeks, and certainly by the time D&E or saline amnio-infusion abortions are performed, the fetus senses organic pain.

Mr. President, the court also received an affidavit from Dr. Thomas D. Sullivan, who is a board-certified neurologist in the State of Illinois. Dr. Sullivan told the district court:

Any form of abortion which excites nociceptors and/or stimulates neural pathways is a noxious stimulus. Thus, such an abortion would exact organic pain if done on a fetus whose central nervous system is functioning. Dilatation and evacuation, for example, where fetal tissue is progressively punctured, ripped, and crushed, and which is done after 13½ weeks when the fetus certainly responds to noxious stimuli, would cause organic pain in the fetus. Saline amnio-infusion, where a highly concentrated salt solution burns away the outer skin of the fetus, also qualifies as a noxious stimulus.

I, therefore, conclude, based on my best medical judgment: (a) that the human fetus suffers organic pain at least after 13½ weeks of gestation, and (b) that any abortion which excites nociceptors is a noxious stimulus, and (c) dilatation and evacuation and saline amnio-infusion are types of abortion that can and do inflict organic pain.

I ask unanimous consent that the affidavits of Drs. Matviuw and Sullivan be entered into the RECORD.

There being no objection, the affidavits were ordered to be printed in the RECORD, as follows:

STATE OF ILLINOIS, COUNTY OF COOK:
AFFIDAVIT

William Matviuw, M.D. being duly sworn, deposes and states as follows:

1. I am a board certified Obstetrician-Gynecologist. My practice is in the State of Illinois. A copy of my curriculum vitae is appended to this affidavit.

2. I have read and am familiar with section 6(6) of the Illinois Revised Abortion Statute regarding fetal pain.

3. The statements in this affidavit are based on my medical experience and knowledge and best medical judgment.

4. I have read Drs. Sullivan's and Collins' affidavits and agree that organic pain occurs when pain receptors are stimulated and neural pathways within the human central nervous system are excited by noxious stimuli, thereby causing an aversive physiological response.

5. I also agree with Drs. Sullivan and Collins that organic pain can be diagnosed in a non-communicative patient when an aversive physiological response to noxious stimuli is detected.

6. Thus, a fetus can sense organic pain when the pain structures within the central nervous system are developed and functioning. As an Obstetrician, I am qualified to describe pre-natal development of the central nervous system, the pre-natal behavior of the fetus, and those procedures which may affect the fetal central nervous system.

7. The purpose of this affidavit is to describe the pre-natal development of the central nervous system and to detail those aspects of fetal behavior that indicate that a fetus may register organic pain. Finally, the effect of abortion on the fetal central nervous system is discussed.

8. As described in Dr. Sullivan's affidavit, the sensory structures of the central nervous system include nociceptors (pain receptors), neural fibers or pathways, spinal column, thalamus, and cortex. Sensory nerves, including nociceptors, reach the skin of the fetus by the ninth week of gestation. The first detectable brain activity in response to noxious stimuli occurs in the thalamus between the eighth and tenth weeks. The movement of electrical impulses through the neural fibers and spinal column takes place between eight and nine weeks gestation. Stanislaw Reinis and Jerome M. Goldman, The Development of the Brain (Springfield: Charles C. Thomas Publishers, 1980), pp. 223-235. (Appended hereto.)

9. Concurrent with the development of the sensory structures is the emerging sensory behavior of the fetus. By the end of the seventh week, a tap on the mouth of the fetus will cause the lips to draw back. By ten weeks, the palms of the hands are sensitive to touch, and at eleven weeks the face and extremities likewise respond to tactile stimuli. Reinis and Goldman, p. 252. By thirteen and a half weeks, organic response to noxious stimuli occurs at all levels of the nervous system, from the pain receptors to thalamus. Thus, at that point, the fetal organic response to pain is more than a reflexive response. It is an integrated physiological attempt to avert the noxious stimuli. V. J. Collins, Principles of Anesthesiology, (Philadelphia: Lea & Febiger, 1976), pp. 922-923.

10. Thus, various parts of the central nervous system function at least as early as eight weeks, and by thirteen and a half weeks the central nervous system functions as a whole in all parts of the body (except in the skin at the back of the head). Therefore, at least by eight weeks, and definitely by thirteen and a half weeks, the fetus is sensitive to organic pain. Reinis and Goldman, p. 232. See also Bjorn Westin, Rine Nyberg, and Goran Enhoring, "A Technique for the Perfusion of the Previable Fetus," Acta Paediatrica, 47:339 (1958), for a description of fetal responses to painful experiments performed on twelve to sixteen week old fetuses. The responses observed included movements of the head, body, and limbs. These movements were vigorous, and consisted of ventro- or dorsoflexion of the trunk, flexion of the limbs, and turning of the head. This indicates the presence of acute fetal pain.

11. In view of the fact that fetal sensitivity to pain exists at least as early as eight weeks, it is obvious that any form of induced abortion which excites pain receptors and/or stimulates the neural pathways will cause organic fetal pain at any time thereafter.

12. For example, abortions by dilatation and evacuation and saline amnioinfusion represent noxious stimuli capable of causing organic pain in a pain sensitive fetus.

(a) D & E abortions are performed after the 12th week of pregnancy (and are performed up to and including the period of viability) when fetal bones are too large and brittle and the size of the fetus is too great for standard first trimster abortion techniques. D & E involves the progressive dismemberment of the fetus prior to extraction to facilitate removal of the fetal parts from the uterus. Ralph C. Benson, Handbook of Obstetrics and Gynecology (Los Altos: Lange Medical Publications, 1980), p. 434; Willard Cates, Jr., "D & E after 12 Weeks: Safe or Hazardous?," Contemporary OB/GYN, 13:23 (1979). The slicing and crushing involved in dismemberment of the fetus in D & E abortions would obviously excite pain receptors and stimulate the neural pathways, thereby evoking an aversive response in a fetus whose central nervous system is functioning.

(b) Abortions by saline amnio-infusion are performed after the 14th week up to and including the period of fetal viability. "Second Trimester Abortion: A Symposium by Correspondence," The Journal of Reproductive Medicine, 16:2 (1976), 47, 56. The procedure involves the insertion of a hypodermic needle into the amniotic sac to remove the amniotic fluid. In return, a hypertonic (highly concentrated) solution of sodium chloride is injected into the sac. The solution disrupts the placenta, causing fetal expulsion in up to 48 hours after the time the solution is injected. Ralph C. Benson, Handbook of Obstetrics & Gynecology, p. 437. During that period, the corrosive effects of the saline burn away the upper skin layers of the fetus. The esophagus and mouth are burned as well when the fetus swallows the saline. By the time the fetus is expelled there is extensive edema and submembranous degeneration. By changing the surface of the fetus in this fashion, saline would excite pain receptors and stimulate the neural pathways of a functioning central nervous system for the length of the abortion or until the fetus dies.

13. In other procedures besides abortion, where the procedure may pose risk of harm or discomfort to the fetus, it is standard medical practice to provide the woman with information on analgesics and anesthetics, and advise her of ways available to minimize harm or discomfort. For example, the woman is customarily provided with information on methods to abolish or alleviate pain in childbirth. It would, therefore, be logical and consistent to provide a woman with information concerning fetal pain and ways to abolish or alleviate pain before abortions certain to cause organic fetal pain.

14. In sum, the fetus at eight weeks possesses at least some of the requisite organic pain structures. By thirteen and a half weeks, the fetus responds aversively to noxious stimuli. The averse response involves the total central nervous system, and is more sophisticated than a mere reflex. Thus, by thirteen and a half weeks, and certainly by the time D & E or saline amnio-infusion abortions are performed, the fetus senses organic pain.

Respectfully submitted.

WILLIAM MATVIUW, M.D.

STATE OF ILLINOIS, COUNTY OF COOK;
AFFIDAVIT

Thomas Sullivan, M.D., being duly sworn, deposes and states as follows:

1. I am a board-certified Neurologist with a subspecialty in Pediatric Neurology. I practice in the State of Illinois. A copy of my curriculum vitae is appended at the end of this affidavit.

2. I have read and am familiar with section 6(6) of the Illinois Revised Abortion Statute regarding fetal pain.

3. The statements in this affidavit are based on my medical experience and knowledge and best medical judgment.

4. The purpose of this affidavit is to describe how a Neurologist determines if and when a non-communicative subject, such as a human fetus or infant, senses organic pain.

5. It is relatively simple to conclude pain exists if the subject is able to verbalize to a physician that "it hurts here or there." But if the subject cannot communicate his or her pain through words—i.e., if it is a dog or cat, or if human, he or she is an infant or is comatose—then the physician faces a problem: how can pain be detected in a non-communicative subject?

6. To overcome this problem physicians must rely on other criteria to detect pain. Specifically, physicians must look for organic, as opposed to psychological, pain. Psychological pain results when individual can anticipate or imagine harmful or unpleasant sensations. Organic pain is a physiological and neurological response to noxious stimuli. John S. Liebeskind and Linda A. Paul, "Psychological and Physiological Mechanisms of Pain, "American Review of Psychology 28 (1977): 42.

7. Neurologists conclude that a non-communicative subject, such as a fetus, sense organic pain when: a) the requisite structures are present to sense noxious stimuli, and b) the subject reponds aversively to noxious stimuli.

8. The requisite pain structures are in the central nervous system. Special pain receptors (nociceptors) are located in free nerve endings and are scattered throughout the body. Nociceptors are sensitive to pressure, mechanical stress (i.e., stress that results when body tissue is punctured, crushed, or broken), heat, and chemical invasion. When a nociceptor is excited by a noxious stimulus, it discharges. As a result, an electrical impulse passes through a connecting nerve fiber and travels to the spinal cord. Neurons within the spinal cord act as elevators, lifting the incoming signal to the brain. Upon arrival to the brain, the impulse enters the thalamus and eventually may reach the cortex. (The thalamus is the end organ for the sensation of organic pain. The cortex may participate, but only to supply the psychological reactions and directed physical responses to pain.) The thalamus, and sometimes the cortex, fire new impulses outward. These signals spur motor nerves into action to initiate the body's response to pain. See generally, Vernon B. Mountcastle, "Pain and Temperature Sensibilities" in Medical Physiology, Volume 1, Vernon B. Mountcastle, ed. (St. Louis: The C.V. Mosky Company, 1980), pp. 391-427. The requisite pain structures of the central nervous system exist in a human fetus perhaps as early as eight weeks, but certainly by 13½ weeks. See Affidavit of Dr. Matviuw.

9. Noxious stimulation of the central nervous system causes a response. This neurophysiological response occurs even when the subject cannot react psychologically. There are two types of responses: reflexive and aversive. Reflexive responses involve only the nociceptors, nerve fibers and spinal column. Organic pain may not accompany reflexive responses. An example of a reflexive response is a "gagging reflex" induced when endo-tracheal tubes or fingers, for example, are inserted into the back of the mouth. On the other hand, aversive responses involve all the levels of the central nervous system from the nociceptors to thalamus. Aversive responses are far more sophisticated and complex than reflexes—they involve the whole body's attempt to escape or avert noxious stimuli. Aversive responses, therefore, indicate that the pain stimulus has reached the brain, where organic pain is perceived. Thus, when a subject reacts to noxious stimuli with an aversive, as opposed to a reflexive, response, the central nervous system, including the thalamus, is necessarily functioning and it must be concluded that the subject suffers organic pain. W. F. Ganong, Review of Medical Physiology, 9th ed. (Los Altos: Lange Medical Publications, 1979) p. 77.

10. It is clear that a fetus responds to noxious stimuli as early as eight weeks. See Affidavit of Dr. Matviuw. By 13½ weeks, the fetal response is aversive, not merely reflexive. Thus, the fetus perceives organic pain by at least 13½ weeks of gestation.

11. Any form of abortion which excites nociceptors and/or stimulates neural pathways is a noxious stimulus. Thus, such an abortion would exact organic pain if done on a fetus whose central nervous system is functioning. Dilatation and evacuation, for example, where fetal tissue is progressively punctured, ripped, and crushed, and which is done after 13½ weeks when the fetus certainly responds to noxious stimuli, would cause organic pain in the fetus. Saline amnio-infusion, where a highly concentrated salt solution burns away the outer skin of the fetus, also qualifies as a noxious stimulus.

12. I, therefore, conclude, based on my best medical judgment: (a) that the human fetus suffers organic pain at least after 13½ weeks of gestation, and (b) that any abortion which excites nociceptors is a noxious stimulus, and (c) dilatation and evacuation and saline amnio-infusion are types of abortion that can and do inflict organic pain.

Respectfully submitted,

THOMAS SULLIVAN, M.D.

Mr. HATCH. Finally, Mr. President, I would also like to quote briefly from testimony presented last month to a committee of the Florida Senate by Dr. Denis Cavanagh, who is professor of obstetrics and genecology at the University of South Florida.

Some years ago a Swedish gynecologist called Westin made a film documenting that during the second trimester of pregnancy, that is the 12th-24th week, the fetus responded to electrical stimulation. During these experiments, electrodes were introduced into the mother's uterus, with the violent response of the fetus to the pain stimulus photographed through a fetoscope. Thus, there is not question that the fetus feels pain, and Westin has recorded this on film.

Second-trimester abortions are often preformed by injecting strong salt solution into the amniotic sac surrounding the fetus. These are legal in the State of Florida and approximately 1,000 are done every year. If any of this salt solution gets into the tissues of the mother, she complains of severe pain. Thus it is logical to assume that the fetus suffers pain, but like the "dumb animal" cannot tell us. Further evidence that the unborn suffers severe pain is the fetal response with convulsive movements and an increased heart rate. As the fetus dies over the course of several hours, the movement become less, and the heart finally stops as in the case of any human victim of strangulation.

In this State, most first trimester abortions are done by suction curettage. During this process, a vacuum pump sucks out the fetus in pieces and a sharp instrument called a curette cleans out the remnants. There are uncertainties about the precise time in fetal development at which particular types of sensation are experienced. However, observations using ultrasonography indicate that by the 56th day a fetus can move. Between the 8th and 9th week, tactile stimulation of the mouth produces reflex action. By the 11th week, the fetus develops sensitivity to touch on hands, feet and gential areas. At this time too it begins to swallow, and as Professor Liley has demonstrated in swallows more slowly if a bitter tasting substance is injected into the amnotic sac. Beginning with the presence of sense receptors and spinal responses, there is as much reason to believe that the unborn are capable of feeling pain as they are of responding to other sensory stimuli.

Now, in spite of such expert testimony, some will protest that we cannot really know what an unborn child experiences pain while being aborted. Well, we cannot absolutely know that animals or newborn infants experience pain either—but nevertheless we have laws against cruelty to animals and child abuse.

In the case of unborn children, I think that the difficulty is not lack of evidence, but rather, an unwillingness to confront the reality.

The unborn child is not a mere abstraction. Once one squarely faces the fact that the unborn child is a unique, living, growing individual, who can experience physical agony when brutally dismembered or poisoned in the womb, then it is much more difficult to consider the abortion issue only in terms of the hardships to women connected with unwanted pregnancies. For one realizes that there is more than one person's suffering to consider.

Mr. President, I believe that as more and more Americans become aware of the realities of human life within the womb, and the capacities and sensitivities of that life, there will be increasing opposition to abortion as a supposed solution to various social problems. I believe there will be a turning to genuine solutions which are more in keeping with the humane principles which we apply in other areas of life.

Mr. President, when we vote on this amendment, we vote on the question of whether unlimited abortion is to remain the law of the land. Those who favor permitting essentially unrestricted abortion, at any stage of development, should vote against this amendment. But those who believe that unborn children should be protected from the brutalities which I have described, should vote for this amendment.

Mr. President, I ask unanimous consent to enter certain printed materials into the RECORD, as follows:

"Abortion Does Cause Pain to Its Victims," by George F. Will, the Washington Post, Nov. 5, 1981;

"What I Saw at the Abortion," by Richard Selzer, M.D., Esquire, January 1976; and

"Emotional Impact of D&E vs. Instillation," by Judith Bourne Rooks and Willard Cates Jr., Family Planning Perspectives, November-December 1977.

A poem entitled "Abortion Hearings."

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Nov. 5, 1981]

ABORTION DOES CAUSE PAIN TO ITS VICTIMS

(By George F. Will)

In the eight years since the Supreme Court nationalized the abortion controversy, one facet of that subject has been neglected: pain. Abortion is painful for the aborted.

The neglect is explainable. To opponents of abortion, death, not pain, is the paramount issue. And proponents of abortion need (emotionally or logically, or both) to deny the possibility of fetal pain.

In its 1973 decision legislating abortion on demand, the Supreme Court announced that fetal life is not alive. At least that is what the court seems to have meant (if it can be said to have meant anything) when it described the fetus as "potential life." Those who support the 1973 decision are committed to the idea that a fetus, being only "potential" life, cannot feel pain, pain being an attribute of actual life.

Thus does a legal absurdity breed a biological falsehood. This intellectual train wreck is the subject of an essay in The Human Life Review by Prof. John Noonan of the University of California (Berkeley) Law School. There are, he notes, four principal means of abortion.

Sharp curettage involves a knife killing the fetus (if the amateur embryologists on the court will allow us to speak of "killing" life that is merely "potential"). In suction curettage, a vacuum pump sucks out the fetus in bits (and a knife cleans out any remnants). In second trimester and later abortions, a saline solution is injected into the amniotic fluid. The salt seems to act as a poison; the skin of the fetus, when delivered, resembles skin soaked in acid. If by accident the solution leaks into the body of the mother, she experiences pain that is described as "severe." The fetus can be in this solution for two hours before its heart (a stubborn bit of "potential" life) stops beating. Alternatively, the mother can be given a dosage of a chemical sufficient to impair the circulation and cardiac functioning of the fetus, which will be delivered dead or dying.

A fetus, like an infant or an animal, has no language in which to express pain. But we infer, and empathize with, the pain of creatures, such as baby seals, which lack language to express pain.

There are uncertainties about the precise points in fetal development at which particular kinds of sensations are experienced. But observations of development and behavior indicate that by the 56th day, a fetus can move. Discomfort may occasion the movement. Tactile stimulation of the mouth produces reflex action about day 59 or 60. By day 77 the fetus develops sensitivity to touch on hands, feet, genital and anal areas, and begin to swallow. Noonan believes that the physiological literature teaches that "beginning with the presence of sense receptors and spinal responses, there is as much reason to believe that the unborn are capable of pain as that they are capable of sensation."

Americans are proud of their humane feelings and are moved by empathy. Thus, we regulate the ways animals can be killed. Certain kinds of traps are banned. Cattle cannot be slaughtered in ways deemed careless about pain. Stray dogs and cats must be killed in certain humane ways.

But no laws regulate the suffering of the aborted. Indeed, Planned Parenthood, the most extreme pro-abortion lobby, won a Supreme Court ruling that it is unconsitutional to ban the saline abortion technique. That's right: the court discovered that the "privacy" right to abortion, which right the framers of the Constitution neglected to mention, even confers a right to particular abortion techniques.

Most pro-abortion persons have a deeply felt and understandable need to keep the discussion of abortion as abstract as possible. They become bitter when opponents use photographs to document early fetal development. The sight of something that looks so much like a child complicates the task of trying to believe that there is nothing there but "potential" life. And if fetal pain is acknowledged, America has a problem: its easy conscience about 1.6 million abortions a year depends on the supposition that such pain is impossible.

Magda Denes, in her book, "In Necessity and Sorrow: Life and Death in an Abortion Hospital," brought to her subject not anti-abortion convictions but a reporter's eye for concrete detail. Examining the body of an aborted child, she described the face as showing "the agonized tautness of one forced to die too soon." That is a description to bear in mind this day, as many thousands of abortions occur.

[From Esquire Magazine, January 1976]

WHAT I SAW AT THE ABORTION

(By Richard Selzer)

I am a surgeon. Particularities of sick flesh is everday news. Escaping blood, all the outpourings of disease—phlegm, pus, vomitus, even those occult meaty tumors that terrify—I see as blood, disease, phlegm, and so on. I touch them to destroy them. But I do not make symbols of them.

What I am saying is that I have seen and I am used to seeing. We are talking about a man who has a trade, who has practiced it long enough to see no news in any of it. Picture this man, then. A professional. In his forties. Three children. Lives in a university town—so, necessarily, well—enlightened? Enough, anyhow. Successful in his work, yes. No overriding religious posture. Nothing special, then, your routine fellow, trying to do his work and doing it well enough. Picture him, this professional, a sort of scientist, if you please, in possession of the standard admirable opinions, positions, convictions, and so on—on this and that matter—on abortion, for example.

All right.

Now listen.

It is the western wing of the fourth floor of a great university hospital. I am present because I asked to be present. I wanted to see what I had never seen. An abortion.

The patient is Jamaican. She lies on the table in that state of notable submissiveness I have always seen in patients. Now and then she smiles at one of the nurses as though acknowledging a secret.

A nurse draws down the sheet, lays bare the abdomen. The belly mounds gently in the twenty-fourth week of pregnancy. The chief surgeon paints it with a sponge soaked in red antiseptic. He does this three times, each time a fresh sponge. He covers the area with a sterile sheet, an aperture in its center. He is a kindly man who teaches as he works, who pauses to reassure the woman.

He begins.

A little pinprick, he says to the woman.

He inserts the point of a tiny needle at the midline of the lower portion of her abdomen, on the downslope. He infiltrates local anesthestic into the skin, where it forms a small white bubble.

The woman grimaces.

That is all you feel, the doctor says. Except for a little pressure. But no more pain.

She smiles again. She seems to relax. She settles comfortably on the table. The worst is over.

The doctor selects a three-and-one-half-inch needle bearing a central stylet. He places the point at the site of the previous injection. He aims it straight up and down, perpendicular. Next he takes hold of her abdomen with this left hand, palming the womb, steadying it. He thrusts with his right hand. The needle sinks into the abdominal wall.

Oh, says the woman quietly.

But I guess it is not pain that she feels. It is more a recognition that the deed is being done.

Another thrust and he has speared the uterus.

We are in, he says.

He has felt the muscular wall of the organ gripping the shaft of his needle. A further slight pressure on the needle advances it a bit more. He takes his left hand from the woman's abdomen. He retracts the filament of the stylet from the barrel of the needle. A small geyser of pale yellow fluid erupts.

We are in the right place, says the doctor. Are you feeling any pain? he says.

She smiles, shakes her head. She gazes at the ceiling.

In the room we are six: two physicians, two nurses, the patient, and me.

The participants are busy, very attentive. I am not at all busy—but I am no less attentive. I want to see.

I see something!

It is unexpected, utterly unexpected, like a disturbance in the earth, a tumultuous jarring. I see something other than what I expected here. I see a movement—a small one. But I have seen it.

And then I see it again. And now I see that it is the hub of the needle in the woman's belly that has jerked. First to one side. Then to the other side. Once more it wobbles, is *tugged*, like a fishing line nibbled by a sunfish.

Again! And I *know!*

It is the *fetus* that worries thus. It is the fetus struggling against the needle. Struggling? How can that be? I think: *that cannot be.* I think: the fetus feels no pain, cannot feel fear, has no *motivation. It is merely reflex.*

I point to the needle.

It is a reflex, says the doctor.

By the end of the fifth month, the fetus weighs about one pound, is about twelve inches long. Hair is on the head. There are eyebrows, eyelashes. Pale pink nipples show

on the chest. Nails are present, at the fingertips, at the toes.

At the beginning of the sixth month, the fetus can cry, can suck, can make a fist. He kicks, he punches. The mother can feel this, can *see* this. His eyelids, until now closed, can open. He may look up, down, sideways. His grip is very strong. He could support his weight by holding with one hand.

A reflex, the doctor says.

I hear him. But I saw something. I saw *something* in that mass of cells *understand* that it must bob and butt. And I see it again! I have an impulse to shove to the table—it is just a step—seize that needle, pull it out.

We are not six, I think. I think we are *seven.*

Something strangles *there.* An effort, its effort, binds me to it.

I do not shove to the table. I take no little step. It would be . . . well, madness. Everyone here wants the needle where it is. Six do. No, *five* do.

I close my eyes. I see the inside of the uterus. It is bathed in ruby gloom. I see the creature curled upon itself. Its knees are flexed. Its head is bent upon its chest. It is in fluid and gently rocks to the rhythm of the distant heartbeat.

It resembles . . . a sleeping infant.

Its place is entered by something. It is sudden. A point coming. A needle!

A spike of daylight pierces the chamber. Now the light is extinguished. The needle comes closer in the pool. The point grazes the thigh, and I stir. Perhaps I wake from dozing. The light is there again. I twist and straighten. My arms and legs push. My hand finds the shaft—grabs! I grab. I bend the needle this way and that. The point probles, touches on my belly. My mouth opens. Could I cry out? All is a commotion and a churning. There is a presence in the pool. An activity! The pool colors, reddens, darkens.

I open my eyes to see the doctor feeding a small plastic tube through the barrel of the needle into the uterus. Drops of pink fluid overrun the rim and spill onto the sheet. He withdraws the needle from around the plastic tubing. Now only the little tube protrudes from the woman's body. A nurse hands the physician a syringe loaded with a colorless liquid. He attaches it to the end of the tubing and injects it.

Prostaglandin, he says.

Ah, well. prostaglandin—a substance found normally in the body. When given in concentrated dosage, it throws the uterus into vigorous contraction. In eight to twelve hours, the woman will expel the fetus.

The doctor detaches the syringe but does not remove the tubing.

In case we must do it over, he says.

He takes away the sheet. He places gauze pads over the tubing. Over all this he applies adhesive tape.

I know. We cannot feed the great numbers. There is no more room. I know, I know. It is woman's right to refuse the risk, to decline the pain of childbirth. And an unwanted child is a very great burden. An unwanted child is a burden to himself. I know.

And yet . . . there is the flick of that needle. I saw it. I saw . . . I felt—in that room, a pace away, life prodded, life fending off. I saw life avulsed—swept by flood, blackening—then out.

There, says the doctor. It's all over. It wasn't too bad, was it? He says to the woman.

She smiles. It is all over. Oh, yes.

And who would care to imagine that from a moist and dark commencement six months before there would ripen the cluster and globule, the sprout and pouch of man?

And who would care to imagine that trapped within the laked pearl and a dowry of yolk would lie the earliest stuff of dream and memory?

It is a persona carried here as well as person, I think. I think it is a signed piece, engraved with a hieroglyph of human genes.

I did not think this until I saw. The flick. The fending off.

We leave the room, the three of us, the doctors.

"Routine procedure," the chief surgeon says.

"All right," I say.

"Scrub nurse says first time you've seen one, Dick. First look at a purge," the surgeon says.

"That's right," I say. "First look."

"Oh, well," he says, "I guess you've seen everything else."

"Pretty much," I say.

"I'm not prying, Doctor," he says, "but was there something on your mind? I'd be delighted to field any questions . . ."

"No," I say. "No, thanks. Just simple curiosity."

"Okay," he says, and we all shake hands, scrub, change, and go to our calls.

I know, I know. The thing is normally done at sixteen weeks. Well, I've since seen it performed at that stage, too. And seen . . . the flick. But I also know that in the sovereign state of my residence it is hospital policy to warrant the procedure at twenty-four weeks. And that in the great state that is adjacent, policy is enlarged to twenty-eight weeks.

Does this sound like argument? I hope not. I am not trying to argue. I am only saying I've *seen.* The flick. Whatever else may be said in abortion's defense, the vision of that other defense will not vanish from my eyes.

What I saw I saw as that: a *defense,* a motion *from,* an effort *away.* And it has happened that you cannot reason with me now. For what can language do against the truth of what I saw?

Emotional Impact of D&E Versus Instillation

(By Judith Bourne Rooks and Willard Cates, Jr. (CDC)

Morbidity and cost are but two of the factors to be considered when decisions are being made about which technique to use to terminate a pregnancy. Abortions, especially those performed at more than 12 weeks' gestation, also have an emotional impact on the women who undergo them and on the professionals who are involved in their performance.[1] Although the emotional benefits of abortion generally outweigh the emotional risks,[2] the risks should not be ignored. This article considers the emotional impact on both the patient and the physician of D&E compared with instillation.

IMPACT ON THE PATIENT

D&E usually takes about 20 minutes longer than suction in the first trimester. It often causes harder cramps than a first-trimester procedure. the patient is brought to the operating room draped and washed, and is given local or general anesthesia. If she is awake, she may feel a tugging sensation when the fetal parts are being extracted; women appear to feel more pain if awake than during an early suction abortion. After the procedure is completed, the patient is taken from the operating room and recuperates, under observation, for two to four hours; she is then sent home if all is well.

In contrast, a woman having an abortion induced by instillation of saline or prostaglandins (PG) faces a one-to-three-day experience. After undergoing the amniocentesis and instillation procedures, she returns to a hospital bed to wait from 12 hours to two days for the onset of labor.[3] If her abortion is induced by PG, she is probably nauseated and may vomit and/or have diarrhea during much of this time.[4]

Under the best of circumstances, the patient will spend her 4–12 hours of active labor away from the sights and sounds of normal obstetrics. She will receive care from nurses who are not already busy with term obstetric patients; she will be given enough anesthesia or analgesia to diminish her pain; she will have someone with her when she expels her fetus, and it will be removed from her bed quickly.

Under the less ideal but not uncommon circumstances, instillation patients experience labor in environments in which they are confronted with such sounds as newborns' crying and, sometimes, the sights associated with childbirth. They may have to compete with women delivering term babies for the time and attention of labor and delivery room nurses, on whom they are dependent for pain medication, physical care and emotional support. Since abortion patients frequently cannot compete successfully for professionals' attention in these circumstances,[5] they may not always receive pain medication when it is needed, and they may not receive the close observation necessary for a nurse to predict accurately when the fetus will be expelled. If the expulsion occurs when the woman is unattended, she will have to spend some time with her fetus between her legs before a nurse removes it. What seems like a minute to a busy obstetric nurse could be a long time for any woman—and especially for a very young girl in this situation. There is also a small but real risk that the fetus will show some fleeting signs of life, a risk which is increased in abortions induced with prostaglandins.[6]

THE PHYSICIAN'S VIEWPOINT

A physician who induces an abortion by instillation needs only to perform the instillation—a 15-minute procedure which involves placing a needle into the woman's uterus through her abdomen, withdrawing amniotic fluid, and injecting a solution of saline or prostaglandins. Usually, he then signs a sheet of standard 'orders' prescribing the care that nurses are to give the patient until the abortion occurs. If the placenta is not expelled completely, the physician may also perform a curettage after the fetus has been removed. He may never see the fetus at all.

In contrast, a physician performing a D&E must deal with the second-trimester fetus in an intimate, physical way, using methods of evacuation that often take longer than amniocentesis and that may be distasteful to the medical staff.[7] Ossified parts, such as the skull, must often be crushed. The bone fragments must be extracted carefully to avoid tearing the cervix. Reconstruction of the fetal sections after removal from the uterus is necessary to ensure completeness of the abortion procedure. Clearly, D&E transfers much of the possible psychological trauma of the abortion from the patient to the professional.

During the brief history of legal abortion in the United States, abortion practitioners have been quick to adopt a wide variety of technical innovations. The initial clinical recommendations were that abortions be

performed as inpatient hospital procedures using general anesthesia, cervial dilation and sharp curettage.[8] The majority of abortions induced in the United States today are performed without general anesthesia, on an outpatient basis in freestanding clinics.

Acceptance of D&E by American clinicians has been limited by their fear that the risks of second-trimester uterine instrumentation are too hazardous. However, the JPSA/CDC study (see p. 266) found that D&E procedures are not only as safe as, but are even safer than, instillation procedures. Even if the two procedures were only equally safe, S&E must be judged the better procedure because it takes much less time to be completed, is less expensive, is less painful and is less emotionally traumatic for the patient. Health professionals must be guided by what is in the best interests of the patient.

ABORTION HEARINGS

Bizarre, revealing, difficult to hold,
Wide-ranging feelings, opposite indeed,
Vitriolic prose, out of the mold
Of non-involvement, while fetuses bleed,
With blood everywhere, incredible gore,
You'd think not a soul would fail to deplore
The wanton killings, now more and more.

How excited pro-abortionists become,
Especially, for whales and sweet harp seals,
Homeless dogs, cats, almost any scum,
But a careful analysis clearly reveals
A callous neglect of societal ills,
The wholesale slaying they carefully conceal
Until life itself becomes more unreal.

Mr. HATCH. Mr. President, I understand the distinguished Senator from South Carolina would like to take the floor next. I suggest the absence of a quorum until he arrives.

The PRESIDING OFFICER. On whose time?

Mr. HATCH. To be charged equally to both sides.

Mr. PACKWOOD. I object to charging a quorum call to our time.

Mr. HATCH. I will charge it to my time.

The PRESIDING OFFICER. The time will be charged to the time of the Senator from Utah. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senator from New Hampshire.

Mr. HUMPHREY. Mr. President, I yield such time to myself as I might require.

Mr. President, the object of an abortion is a living human being not yet born.

The purpose of an abortion is to kill that living human being.

Before an abortion, there is a living human being. After an abortion, that human being is dead.

The question at the heart of the abortion debate, is whether the unborn human being, like other human beings, can look to the State to protect his life.

The answer should be, "yes." The Declaration of Independence set out as a fundamental purpose of government the protection of human life. In Jefferson's words:

> We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights governments are instituted among men . . .

Who endows us with the right to life? Executive bodies? No. Legislative bodies? No. Judicial bodies? No. We are endowed by our Creator with the inalienable right to life. To secure that right, is the fundamental purpose of government.

There are those who deny the humanity of the unborn. they use words like fetus and product of conception to avoid the humanity of the unborn. Is an unborn baby a human being? Of course. The offspring of human beings are human beings. To state otherwise is illogical.

Human life is a continuum from generation to generation to generation. And, if it is wrong to take the life of an individual human being at the midpoint, it is wrong to take it at the end or the beginning. It is wrong to take life at any point on the continuum.

Since the unborn are human beings and since it is the fundamental purpose of government to protect the right to life, how did the Supreme Court justify its 1973 decision invalidating State laws which protected the lives of unborn human beings? The Court decided it had no way of determining when a human being became a person. By default the Court decided that the unborn are not persons. Therefore, the unborn were not entitled to the protection of the 5th and 14th amendments to the Constitution, which protect a person from deprivation of "life, liberty and property, except by due process of law."

The Supreme Court decision has been ranked by many as no less outrageous and fundamentally flawed as the 1857, Dred Scott decision, in which the Court found that black human beings, even free blacks, were not citizens of the United States. It was necessary to amend the Constitution to overcome that Court decision. In a like manner, those who believe the Court's 1973 decision in Roe against Wade was fundamentally flawed seek, to amend the Constitution to correct the grievous injustice inflicted on unborn human beings.

The Hatch-Eagleton amendment is far from what is needed to restore for all unborn human beings in our country the right to life which they effectively enjoyed prior to 1973. Far preferable, would be an amendment to the Constitution that explicitly made clear that the unborn are entitled to the protection of their lives. But something is better than nothing, when nearly 2 million unborn human beings each year are being killed.

I believe we can win the battle for the right to life for the unborn in the legislatures of the States. Presently, we cannot win it conclusively in the Congress. Nor can we hope for a Supreme Court decision soon which would overturn Roe against Wade. Therefore, I urge my colleagues to support the Hatch-Eagleton amendments as the best that can be had under the circumstances.

Apart from all the sophistry, the hair-splitting, apart from all the euphemisms, the harsh truth is that abortion kills. Abortion kills human

beings. The destruction of helpless human beings violates the right to life with which each is endowed by his Creator.

Failure of the State to protect the life of each individual unborn human being is destroying our heritage and will destroy our country. So let us begin to repair the calamitous damage done by the Roe against Wade decision to that fundamental right with which each human being is endowed by his Creator, the right to life.

I thank the Chair.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HATCH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATCH. Mr. President, while we are awaiting the arrival of the Senator from South Carolina, I would like to point out that this amendment does not explicitly deal with what are concededly the "hard cases" of abortion. It would permit States to enact statutes banning abortions even to protect mother or in case of rape and incest.

First. The question of rape, incest, mother's life, and eugenic abortions are really beyond the scope of this debate. It is true that this amendment will restore to the State authority to legislate with respect to abortion. It will restore to the States the same authority they exercised wisely for nearly 200 years before the Roe interruption. In that time, no single person, according to exhaustive studies in search of such cases, was ever prosecuted for performing an abortion in one of these hard cases. We simply must not assume that the States will be so callous. In fact, their record is precisely the opposite.

Second. With authority to legislate respecting abortion, States could, of course, make foolish policies. States now have the authority of regulate marriage, divorce, adoption, and the like. A State could conceivably pass a law abolishing adoption or outlawing divorce. The same applies to Congress. It possesses the authority to declare war, but that does not make it likely that we will initiate a nuclear conflict tomorrow.

Third. Finally, even after this amendment is ratified, a State will still have to show a rational basis for their enactments relative to abortion, just as they must for marriage, divorce, adoption, and other laws of this kind. We are not giving the States authority to run wild, but merely restoring to them the authority they had prior to 1973 and the authority they possess now with respect to marriage, divorce, and adoption. In the absence of a rational basis for a statute, it would still be subject to a ruling of invalidity in the courts.

I notice the distinguished Senator from South Carolina is here, so I yield such time as he may need.

The PRESIDING OFFICER. The Senator from South Carolina.

Mr. THURMOND. Mr. President, today, we begin the debate on Senate Joint Resolution 3, a proposal that the U.S. Constitution be amended to declare that a right to abortion is not secured by this Constitution. The debate which we begin today represents the first time that the issue of a right to an abortion has been presented for public discussion on this floor.

Perhaps even more important than the matter of the abortion procedure itself, however, is the landmark decision in the case of Roe against Wade, handed down by the U.S. Supreme Court in February 1973. I refer to that case as landmark decision for two reasons: First, that opinion represents the first time in the history of this great Republic that the Supreme Court found for women a constitutional right to decide whether or not to terminate a pregnancy. Second, the Roe decision represents a striking example of judicial activism at its worst. There is no specific right to an abortion mentioned in any portion of the Constitution proper or in any amendment adopted thereto. Rather, the abortional right is the product of judicial development by the U.S. Supreme Court.

The word "abortion" is not to be found in the Constitution and it is, therefore, to be concluded that the Court did not even make a pretext of basing its decision in Roe upon textual considerations. In fact, the Court chose to anchor the right to an abortion in the elusive right to privacy which constitutional scholars have yet to pin down.

Moreover, there is no evidence that the authors of the Constitution ever intended for the freedoms protected by it to include the freedom to decide to have an abortion. In failing to draw upon the "intent of the legislature," the Court failed to utilize one of the strongest bases for judicial interpretation.

Only 2 weeks ago, the Supreme Court decided two cases which explicitly reaffirm the Roe decision. Although the Court admits that the Constitution does not specifically identify a right to abortion, a majority of the Court persists in expanding the parameters of the 14th amendment's due process clause to include a right to an abortion. Ostensibly, it is upon the cornerstone of "freedom of personal choice" that the Court bases the right to an abortion.

Frankly, as a long-time defender of States rights, this train of judicial reasoning frightens me. It does so because such legal thought is tantamount to ignoring the 10th amendment which clearly states that "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." If the hand of the Federal Government is allowed to reach down into the realm of decisionmaking on matters of procreation and childbearing, there will be no end to the incursion of the Federal Government into our personal lives—those incursions coming through the activist decisions of the Federal judiciary. It should be realized that up until the Roe decision in 1973, the power to legislate on the subject of abortion lay entirely with the States.

Our Founding Fathers very wisely left many fields of action with the States. Tremendous diversity exists between the States and public opinion differs from one area of this country to another. The people of South Carolina, for example, often think differently from the people of New York or California on social matters. For this reason, it is wise that social issues, especially great ones like abortion, be left with the States and not decided at the national level.

It is, therefore, imperative that we grasp this opportunity to send a message to the Supreme Court that it is the people of this country, acting through their elected assemblies, who will set policy in the areas of our lives that were not granted to the National Government. The only sure tool available to us with which to adhere to the mandates of the 10th amendment now appears to be a constitutional amendment clearly stating that the right to an abortion is not guaranteed by the Constitution.

Mr. President, the decision that this body will make by voting on this proposed amendment is a difficult one. It is difficult because it deals with a matter of life and death, and such decisions are always infused with emotion. I encourage you to consider our great charter, the U.S. Constitution, and the erosion that has been wrought upon it by the Roe decision. With Senate Joint Resolution 3, we have an opportunity to partially repair the damage caused by a continually rising tide of activist court decisions.

As I stated earlier, this is the first opportunity that this body has had to speak to the issue of abortion and to the concomitant problem of the constitutional erosion which was most recently evidenced by the decisions of the Supreme Court handed down just 2 weeks ago. As public officials sworn to protect and defend the Constitution, we cannot allow this erosion to continue. We must not let this opportunity elude us. I strongly urge you to vote in favor of Senate Joint Resolution 3.

Mr. President, while I am talking, it is not this question alone; it is a question in other fields, too. Congress has gone into many fields of activity where it had no authority to do so, and the Supreme Court has gone into fields of activity where it had no authority to do so. For instance, some years ago, the Supreme Court handed down a decision on the question of insurance. The word "insurance," is not even found in the U.S. Constitution. Therefore, this field has never been delegated to the Union. Congress passed an act that immediately took them out of it. Now, the subject of insurance is a matter for the different States of the Nation.

Unless a field has been delegated to the Union, it rests with the States.

This happens to be a field that has never been delegated to the Union, and therefore the people of each State ought to make the decision on it. They will do this through the legislatures of the States representing the people.

Conditions are different. On the matter of gun control, for instance, New York City has a law against having a gun that would not work in Wyoming. There are various other subjects. Some things are practical in one place that are not practical in another. That is the reason we have a Union. We have States with all the powers except those that have been delegated to the Union in the Constitution or in some amendment to the Constitution.

Mr. President, for that reason I feel there is a great principle involved. Let us turn back to the States' areas of jurisdiction that have not been properly delegated to the Union. That is the question we have to decide.

I thank the Senator from Utah.

Mr. HATCH. I thank the distinguished Senator from South Carolina.

Mr. President, I yield such time as the distinguished Senator from Missouri needs.

The PRESIDING OFFICER (Mr. RUDMAN). The Senator from Missouri is recognized.

THE CONSTITUTIONAL IMPERFECTIONS OF ROE AGAINST WADE

Mr. EAGLETON. Mr. President, our Constitution has been amended only 26 times in the 195 years since its adoption. This is fitting for, in my view, we should not casually or capriciously tinker with the Constitution. Rather, we should amend it only where there is a clear need either to provide an essential governmental procedure or to protect a vital substantive right. By definition, the protection of human life is a vital matter. Therefore, I strongly believe that the Supreme Court created one of those rare cases in which a constitutional amendment is absolutely proper and essential when, on January 22, 1973, the Court handed down its decision in the case of Roe against Wade.

In the majority opinion for the Court, Justice Blackmun wrote that the State did not have a compelling right to intervene on behalf of an unborn child until it reached "viability," the point at which it could sustain "meaningful life" outside the mother's womb—at about the beginning of the seventh month of pregnancy. Then, in a sweeping order, the Court struck down various antiabortion laws adopted by the States.

It is my profound moral conviction, Mr. President, that life is a continuum, from first beginnings in the womb to the final gasp of the dying, and that the first function of society, the primary responsibility of government, is to protect life and to create conditions which permit each person to flourish and to reach his or her fullest potential. I cannot comprehend how our Nation's highest court could find that it was unnecessary to consider the humanity of the unborn. Their humanity, from my point of view, is the entire question.

Given my position on this subject, and my evaluation of the interests at stake, I cannot simply say that I disagree with the decision of the Supreme Court in Roe against Wade and let the matter rest there, as I might do in another case where my opinion and that of a majority of the Court do not coincide. The result reached by the majority's opinion is so inimical to my view of the nature of life and of the fundamental role of government that I am compelled by logic—not theology—to speak out in favor of an amendment to the Constitution.

THE NEED FOR THE AMENDMENT WE ARE CONSIDERING TODAY

Mr. President, this is not the first time I have supported an amendment to the Constitution to deal with the tragic results of Roe against Wade. Before lending my name to this amendment, I have supported and spoken out for adoption of other proposed amendments to eliminate the legal basis for abortion under both Federal and State law and drastically curtail its availability. I am a supporter of the Garn amendment, which would ban abortions except in an exceptional situation: to save the life of the mother. I supported the Hatch amendment considered in the last Congress. That amendment would have reversed the ruling in Roe that the Constitution guarantees the right to an abortion, given States and the Federal Government concurrent jurisdiction over abortion, and provided that, in case of conflict, the more restrictive of the two laws would govern. Frankly, if I were free to choose among the variety of options for setting forth binding law on the availability of abortions in this country, I would choose the most restrictive formulation.

Obviously, however, we are not writing on a clean slate with this matter. In the more than ten years that the Roe against Wade decision has been controlling law, a variety of proposals have been advanced for overturning its holding and restricting abortion. For many reasons, it has been very difficult to get a serious hearing in the Congress for these proposals. They have been subjected to numerous criticisms, including the argument that they are overinclusive in their prohibitions or strike an erroneous balance between the role of the Federal Government and the States in the regulation of abortion matters. Other proposals have been hobbled by dubious theories about the ability of Congress to overturn Supreme Court opinions through means short of constitutional amendment.

Meanwhile, as the arguments have swirled around various remedial proposals, the Supreme Court has decided a series of cases on Roe's periphery which extend and enshrine the "abortion right" originally found in 1973. Perhaps some of the most distressing of these are the cases the Supreme Court just handed down 2 weeks ago. I say these are particularly distressing because the cases dashed the hopes of many that the Supreme Court would reexamine and perhaps adjust some of the underlying theories of the Roe case.

Instead, in the case of Akron v. Akron Center for Reproductive Health, and companion cases, a substantial margin of the Court extended the Roe decision's stricture on State regulation of aspects of the abortion procedure to new heights—or perhaps I should say new depths. In seeking, as Justice Powell put it in the Akron case, "to define the limits of a State's authority to regulate the performance of abortions," the majority of the Court not only struck down some seemingly reasonable exercises of traditional State power, but also reaffirmed in no uncertain terms that it would not deflect from the basic holding of Roe.

As Justice Powell characterized the Akron case and its companions:

> These cases come to us a decade after we held in Roe against Wade . . . that the right of privacy, grounded in the concept of personal liberty guaranteed by the Constitution, encompasses a woman's right to terminate her pregnancy . . . [A]rguments continue to be made, in these cases as well, that we erred in interpreting the Constitution. Nonetheless, the doctrine [that past decisions should be followed], while perhaps never entirely persuasive on a constitutional question, is a doctrine that demands respect . . . We respect it today, and reaffirm Roe against Wade."

Even before the Supreme Court made it clear that Roe against Wade's reversal would have to come from sources outside the Supreme Court

Chamber, I had begun to reflect on the distressing state of the law on abortion and the equally distressing situation facing those, such as myself, who believe it must be changed to promote respect for life. I began to wonder whether a constitutional amendment could be crafted which would not be susceptible to some of the arguments that had been made, whether in good faith or not, against previous proposals, but would nevertheless make an important contribution to stopping the de facto access to abortion on demand which Roe and subsequent cases have produced. I am a principal sponsor of Senate Joint Resolution 3 in the hope that it will be such an amendment, one which will command assent because it responds with appropriate and precise reach to the core of the problem now facing efforts to protect the life of the unborn: the holding of Roe against Wade that the U.S. Constitution provides a federally protected right to abortion. I support the amendment because, by wiping out the legal status afforded to the "abortion right" in Roe, and returning us to the status quo ante, when abortion was a matter for each of the States to decide, the amendment will effectively eliminate a legal decision that is a moral abomination as well as a legal embarrassment.

THE SERIOUS LEGAL AND JURISPRUDENTIAL FLAWS OF ROE

I want to spend the bulk of my statement on the legal flaws of Roe against Wade because I believe it is a dimension that can easily get lost in a debate often carried out on other levels. I also believe that a full and careful analysis of the legal basis of the Roe decision is directly related to an evaluation of the merits of reversing it by Constitutional amendment. Thus, while I stated at the outset that the moral and ethical dimension of an erroneous Court ruling can alone justify its reversal by amendment—as I believe is the case here—I view the case for reversal as even stronger when, as here, the underlying case is found to be fundamentally flawed by errors of legal reasoning, jurisprudential theory, and the Court's conception about its role in deciding the controversy.

Today, I want to examine the reasons I believe the Roe against Wade case to be fatally flawed on all these dimensions. And I want to explore that assessment from three basic perspectives. First, I want to put the Roe case in the context of the time in which it was decided in order to illustrate how surprising and truly radical its pronouncement was. Second, I want to canvass the major legal scholarship on and criticism of the case. Third, I want to turn to the very telling statements and comments of two of the learned Justices who dissented from Roe or criticized it in the subsequent cases.

ROE AGAINST WADE AS A LEGAL "BOLT OUT OF THE BLUE"

One important indication of the illegitimacy of a Supreme Court case—and, therefore, inversely, of the validity of efforts to overturn it by constitutional amendment—is when it comes as a complete and total surprise in the legal and social context in which it is rendered. In saying this, I am not equating "controversial" with "surprising." Landmark decisions about matters stirring passions on all sides may shock and scandalize some of the partisans and yet still be viewed appropriately as flowing logically and naturally in terms of how the law and the society are progressing.

Roe against Wade does not appear to me to be such a decision. In the bulk of my statement today, dealing with the legal underpinnings of the Roe case, one major theme I will sound will be the extent to which the "abortion right" and the Court's balancing of it against the other rights at stake can draw no logical justification from predecessor cases. I would like to make the point now, however, that Roe against Wade was in another important sense a "bolt out of the blue" when it was handed down. I refer to the great extent to which the Roe Court appeared to reach out, with no prior warning, into an ongoing public policy debate, interject Federal constitutional considerations previously unanticipated, and completely foreclose further consideration of this sensitive issue in other forums across the land.

State law with respect to abortion was undergoing serious reconsideration and ferment in the several years before the Court decided the Roe case. As indicated in the Judiciary Committee report on the amendment now before the Senate, most States considered law changes in the 5-year period from 1967 to 1972, and nineteen States made changes, some minor and some major. Obviously, this reconsideration and change was accompanied by widespread discussion and debate in the medical and legal professions and the public at large. I think it is safe to say that this debate and discussion, though marked by controversy, was carried out under certain common and implicit assumptions, including that abortion policy was a subject within the province of the legislative branch, that it was largely a matter for state law (although there were some proposals that the Federal Government enact a law preempting State laws) and that the Federal Constitution (and, particularly, the due process clause) had little to say about State legislation in this area, as in other areas of State health regulation.

This means it is also safe to say that Roe against Wade came as a shock, even to those who supported the result of an unfettered right to abortion. For, in one swift edict, the Supreme Court federalized a largely State law issue, judicialized a matter previously thought to be within the domain of legislative discretion and took the extraordinary step of finding that a provision of the Federal Constitution, one little discussed as applicable to the context of the controversy, required the invalidation of every State's abortion law. (The invalidated laws included, I might add, some of the very-recently changed laws resulting from the process of public debate and discussion I have described.)

But perhaps the best indication of how Roe was a legal "bolt out of the blue" comes from the total lack of any indication from the Supreme Court itself that a broad federalization of abortion was forthcoming. Indeed, only a year and half before handing down Roe against Wade, the Supreme Court upheld a District of Columbia law punishing as a criminal act performance of an abortion except where necessary to save the mother's life or preserve the mother's health. In U.S. against Vuitch, the Court split both on the question of whether the appeal should have been heard and whether the statute's term "health" was unconstitutionally void for vagueness. However, there is not even a hint in the case that a statute prohibiting many abortions would meet with general court displeasure or a broad ruling that the due process clause foreclosed State preclusion or regulation of so-called nontherapeutic abortions. One is struck in reading the various opinions by the extent to which the Justices realized, assumed, and were not moved to comment upon the reach of the statute, even though, as Justice White put it, "It is absolutely clear that [under the statute] a doctor is not free to perform an abortion on request without considering whether the patient's health requires it. No one of average intelligence could believe that under this statute abortions not dictated by health considerations are legal."

In short, far from stemming from a logical progression of forces in the law and society, Roe against Wade constituted a breathtaking departure. I believe it is useful to keep this in mind as we proceed to consider the legal and jurisprudential merits of the case, to which I will now turn.

SERIOUS DEFICIENCIES IN THE REASONING AND LEGAL LEGITIMACY OF ROE AGAINST WADE

Mr. President, some of the most respected constitutional scholars—including several who state specifically that they favor the outcome of the Roe case—express serious concern about the logical and jurisprudential flaws in the case.

One of the earliest and most influential of these critics is the distinguished Dean of Stanford University School of Law, Prof. John Hart Ely, who wrote a

Yale Law Journal article on Roe shortly after it was decided. I believe that Professor Ely's treatment is entitled to great deference for a number of reasons, not the least of which is the fact that he critiques Roe despite his clear statement that, were he a legislator, he would support a scheme for handling abortion rights very much like the one the Court developed. Professor Ely's critique also reflects a sophisticated appreciation of the difficulties the Court faces in interpreting the Constitution. It is clear that Ely thinks little of the automatic cries of "judicial activism" that greet any new Supreme Court decision tackling "difficult questions" and yielding "controversial answers." Professor Ely recognizes that legitimate application of an almost 200-year-old Constitution to modern problems requires some reasonable inferences beyond the Constitution's actual wording.

THE ELY CRITIQUE

Given his general approach, Professor Ely's conclusion about the Roe against Wade case is particularly disturbing. After a sober and measured analysis of Roe's intricacies, the Professor found the case susceptible to "a charge that can responsibly be leveled at no other [Supreme Court] decision of the past 20 years"—namely, that the right to abortion enunciated in it is "not inferable from the language of the Constitution, the Framers' thinking respecting the specific problem in issue, any general value derivable from the provisions they included, or the nation's governmental structure." To Professor Ely, the Roe case is, in the final analysis, "a very bad decision," because "it is bad constitutional law, or rather because it is not constitutional law, and gives almost no sense of an obligation to try to be."

I recognize that my colleagues may not be familiar with the analytical steps that led Professor Ely to the conclusion that Roe against Wade represents a low watermark in constitutional jurisprudence. Therefore, I think it is useful to set out in some detail the Professor's multipronged critique of Roe's flaws. (Again, I do not concentrate on Professor Ely's views because he alone holds them; rather, I find his work in this area to be a cogent and methodical statement of objections that have been stated as well by other respected legal scholars.)

AN UNCONVINCING ASSERTION THAT PRIVACY RIGHTS EQUATE TO ABORTION RIGHTS

Professor Ely clearly believes that the Supreme Court got off to a bad jurisprudential start in Roe by fundamentally mishandling its definition of the constitutional rights asserted by women seeking abortion. As Ely explains it, the Court held

that there is a general right of privacy granted special protection . . . by the Fourteenth Amendment, and that this right "is broad enough to encompass" the right to an abortion. The general right of privacy is inferred . . . from various provisions of the Bill of Rights manifesting a concern with privacy, notably the Fourth Amendment's guarantee against unreasonable searches, the Fifth Amendment's privilege against self-incrimination, and the right, inferred from the First Amendment, to keep one's political associations secret.

Professor Ely does not dispute the constitutional basis for a right to privacy in appropriate cases. He notes that in a variety of right to privacy cases, the courts have had to go beyond the original, literal meaning of the constitutional guarantees to ensure that they have continued vitality in a changing world. For example, Professor Ely notes that in Katz against United States, the Supreme Court used good commonsense in striking down unauthorized wiretaps, even though they did not technically constitute a "search" or "seizure" under the terms the Founders used. The Professor believes that in other cases, as well, the Court must look to the underlying purpose of the constitutional provisions—and not just to the words—to achieve a result in concert with the Founders' intent. As Ely put it, "it seems to me entirely proper to infer a general right of privacy, as long as some care is taken in defining the sort of right the inference will support."

It is measured against this standard that the Roe Court's definition of its "abortion right" seemed as lacking to Professor Ely as it does to me. For, the "right to privacy," as enunciated in previous cases, is not easily accommodated to the fact situation or right in Roe. The Court fell woefully below the Ely standard of applying "some care" in defining how the "abortion right" was derived from the right to privacy.

Professor Ely notes that prior cases gave no readily available analog for the "abortion right" found to exist in Roe. To begin with, the Court could point to no previously announced general "right to contraception." Let me quote from the professor's discussion of Griswold against Connecticut, a "right to privacy" case upon which Roe relied:

Griswold is a long step, even a leap, beyond [previous right to privacy cases more directly related to the First, Fourth and Fifth Amendments], but at least the connection is discernible. Had it been a case that purported to discover in the Constitution a "right to contraception," it would have been Roe's strongest precedent. But the Court in Roe gives no evidence of so regarding it, and rightly not. [T]he Court in *Griswold* stressed that it was invalidating only that portion of the Connecticut law that proscribed the *use*, as opposed to the manufacture, sale, or other distribution of contraceptives. That distinction (which would be silly were the right to contraception being constitutionally enshrined) makes sense if the case is rationalized on the ground that the section of the law whose constitutionality was in issue was such that *its enforcement would have been virtually impossible* without the most outrageous sort of governmental prying into the privacy of the home. No such rationalization is attempted by the Court in Roe—and understandably not, for whatever else may be involved, it is not a case about governmental snooping.

Further, Professor Ely notes that, just as the Court was unable to point to any general right to contraception, it could not in good faith accept the theory of some of Roe's litigants that the right to choose an abortion was part of a moral general "right to do as one wishes with one's body." As the professor states: "it is difficult to find a basis for thinking that [this] theory was meant to be given constitutional sanction; surely, it is no part of the 'privacy' interest the Bill of Rights suggests." And, as Ely further elucidates, if one phrases the alleged "right to do as one wishes with one's body" as part of a general "freedom to live one's life without governmental interference," as some defenders of Roe have done, the assertion is even more far afield from "privacy in the Bill of Rights sense or any other the Constitution suggests." Ely points out that the Court has never used privacy in this broad sense, because:

Our life styles are constantly limited, often seriously, by governmental regulation; and while many of us would prefer less direction, granting that desire the status of a preferred constitutional right would yield a system of "government" virtually unrecognizable to us and only slightly more recognizable to our forefathers.

Given the lack of an appropriate analogy for an "abortion right," it is not surprising—although it is very, very distressing—that the Court was not explicit in how the supposed "abortion right" related to the right to privacy. Professor Ely describes the Court's failing in this way:

Unfortunately, having thus rejected [the *Roe* litigants'] attempt to define the bounds of the general constitutional right of which the right to an abortion is a part . . . the Court provides neither an alternative definition nor an account of why *it* thinks privacy is involved. It simply asserts that the right to privacy "is broad enough to encompass a woman's decision whether or not to terminate her pregnancy."

Clearly, Professor Ely believes—and I agree—that before taking the extreme step of striking down State enactments as violative of the Federal Constitution, the Court owes a better effort to articulate the constitutional provision affronted. The Court's utter failure to make an adequate identification of the source of the "abortion right"—indeed, its utter failure to even try such an identification—is what leads Professor Ely to observe that, "At times the inferences the Court has drawn from the values the Constitution marks for special protection have been controversial, even shaky, but never before has its sense of an obliga-

tion to draw one been so obviously lacking." It is this failure that buttresses Ely's conclusion, quoted earlier in my statement, that Roe is susceptible to charges "that can responsibly be leveled at no other decision" of the two decades before Ely wrote in 1973.

AN ERRONEOUS LEVEL OF CONSTITUTIONAL PROTECTION AFFORDED TO AN ALREADY DUBIOUS "RIGHT"

Professor Ely's critique that the "abortion right" asserted in Roe has no tenable basis in any of the legitimate sources of constitutional interpretation is damaging enough. But it is by no means the only sobering criticism he levels against the Roe case. Even if one assumes for purposes of discussion that there is a constitutionally derivable "abortion right," the question remains how the right is to be implemented and balanced against other competing rights. On this dimension, as well, the Roe case comes in for some very incisive criticism from Professor Ely.

Of particular significance to me, given my view about the humanity of the unborn, are Professor Ely's objections to the manner in which the Court treats—or, more accurately, denigrates—the interest of the State in protecting unborn life. This is an interest that the Roe Court purports to recognize and accommodate, by developing a sliding scale of values attached to the interest involved in State regulation of abortion. In the Court's sliding scale, the interest in protecting the unborn only becomes theoretically "compelling" enough to countervail the exercise of the "abortion right" after the point of fetal "viability."

Professor Ely finds three basic faults with the way the Roe Court defined the legal significance of the "abortion right" it purported to find in the right to privacy. First, Ely believes that the point of "viability" was an arbitrary and unconvincing one at which to begin to give the interests in protecting the unborn status as a "compelling" interest. Second, the professor believes that the Court's reconciliation of the competing rights before the point of "viability" was erroneous and afforded too little importance to the interests of the State in protecting the unborn. Third, Professor Ely finds much to criticize in the Court's division of pregnancy into three neat trimesters, each with its own rules and regulations about what, if any, State regulation is appropriate.

To begin with the first Ely criticism of the way the Court balances competing rights in the abortion context, there is the question of how the Court determines when the State's interest in protecting unborn life can become sufficient—at least theoretically—to justify restrictions on the newly asserted "abortion right." As Professor Ely sees this matter:

> The Court's response here is simply not adequate. It agrees, indeed it holds, that after the point of viability (a concept it fails to note will become even less clear than it is now as the technology of birth continues to develop) the interest in protecting the fetus is compelling. Exactly why that is the magic moment is not made clear; viability, as the Court defines it, is achieved some six to twelve weeks after quickening. (Quickening is the point at which the fetus begins discernibly to move independently of the mother and the point that has historically been deemed crucial—to the extent *any* point between conception and birth has been focused on.) But no, it is *viability* that is constitutionally critical: the Court's defense seems to mistake a definition for a syllogism.

Obviously, to the extent one believes, as I do, that line-drawing in this area involves decisionmaking directly inimicable to the life of the unborn, the criticism that an illogical, indefensible point was chosen by the Roe Court is a damning criticism indeed.

But this is not the only criticism Professor Ely directs against the Court's balancing of competing interests in Roe. He notes that the Court's answer that State interests are only "compelling" at "viability" leads to another question: why cannot the State interest in promoting "potential life" prior to viability, an interest the Court itself called "important and legitimate," justify some State curtailments on the abortion right enunciated in Roe? Professor Ely's judgment on how the Court dealt with this difficulty is that "the opinion is even less satisfactory" than on the question of why "viability" was chosen as the point at which the balance of interests is fundamentally altered.

As Professor Ely notes, the Court's basic argument is that before viability the unborn have no constitutionally-recognized rights under general legal doctrine, or, specifically, under the 14th amendment. I will not repeat Professor Ely's cogent criticisms of the Court's reasoning on the nonexistence of a legal basis for the rights of the unborn. Rather, I will move on to the heart of Professor Ely's criticism on this score, that "the argument that fetuses lack constitutional rights is simply irrelevant." Professor Ely explains his point as follows:

> It has never been held or even asserted that the state interest needed to justify forcing a person to refrain from an activity, *whether or not that activity is constitutionally protected,* must implicate either the life or the constitutional rights of another person. Dogs are not "persons in the whole sense" nor have they constitutional rights, but that does not mean the state cannot prohibit killing them: It does not even mean the state cannot prohibit killing them in the exercise of the First Amendment right of political protest.

In conjunction with Professor Ely's criticism about the Court's failure to recognize the right to protect the life of the unborn until the point of viability, the criticism just quoted adds up to the inescapable conclusion that the "abortion right" in *Roe* was treated as, to quote the professor, a "super-protected right" afforded a "frightening" degree of protection. As Ely sums it up: "What is unusual about *Roe* is that the liberty involved is accorded a far more stringent protection [than that normally afforded Fourteenth Amendment rights]." It is a protection "so stringent that a desire to preserve a fetus' existence is unable to overcome it—a protection more stringent, I think it is fair to say, than the present Court accords the freedom of the press explicitly guaranteed by the Constitution."

Professor Ely's third major set of objections to the Court's balancing of interests is that the results drawn are illogical and that the entire process of line-drawing is questionable from the standpoint of constitutional jurisprudence. Ely found the scheme of three neat trimesters, each with its own sliding scale of rights, full of distinctions that were "largely illusory." He stated specific objections to the balancing of rights in the first trimester of pregnancy, noting that "The Court seems * * * to get carried away on the subject of remedies: Even assuming the case can be made for an unusually protected constitutional right to an abortion, it hardly seems necessary to have banned during the first trimester all State regulation of the conditions under which abortions can be performed." Professor Ely also found the Court's statements about "the permissible scope of health regulations" during the second trimester full of "confusing signals." From hindsight, we know that these "confusions" were addressed in scores of subsequent litigation, most of it affording little leeway for State regulation during this time period.

Still, the most disturbing objection to the trimester scheme—particularly given that Professor Ely is not quick to make standard objections about Supreme Court "judicial activism"—is that the Roe Court produced a sort of "guidebook, addressing questions not before the Court and drawing lines with an apparent precision one generally associates with a commissioner's regulations." Professor Ely clearly feels that significant jurisprudential questions are raised when, in seeking to "second-guess legislative balances" during constitutional adjudication, the Court substitutes its own apparently precise scheme in an area where such precision is fraught with difficulty.

OTHER SCHOLARS CRITICIZE ROE ON SIMILAR GROUNDS

Mr. President, while I have devoted substantial attention to Professor Ely's criticisms of Roe against Wade, they are, as indicated earlier, far from idiosyncratic. Rather, they are shared by other legal scholars of national

repute. Writing about the same time as Professor Ely, Yale Law School Dean Harry H. Wellington agreed that the Roe Court's assertion of the right of privacy "obfuscates, rather than elucidates the concept of liberty" at issue in the abortion setting; Wellington found "no explanation" for the "Pickwickian usage" of the Court in this regard. Stating that "the Court has failed to make its case," Dean Wellington also disputed its insistence that the abortion right could not be limited by States in any meaningful way during the first trimester of pregnancy.

The constitutional source of the Court's division of pregnancy into three neat trimesters, with a sliding scale of values assigned to the interest of the mother and of the State, similarly eluded the highly respected Yale Law School professor, the late Alexander Bickel. Bickel believed that the Roe against Wade Court never gave an adequate justification for its intricate scheme: "it simply asserted the result it reached." Writing in his book, "The Morality of Consent," Bickel found it "astonishing that only two Justices dissented from the Court's decision" in Roe.

Further, a variety of well-known scholars have offered more succinct, but no less telling characterizations of Roe against Wade. For example, University of Texas Law School Professor, Charles Allan Wright called the Roe decision fundamentally unpersuasive. Harvard professor, Arthur B. Miller wrote that, in Roe against Wade, "the Supreme Court found a right to abortion without pointing to any specific words in the text of the Constitution." Former Solicitor General, now U.S. circuit judge, Robert Bork, in testimony on the Helms human life bill, called the Roe against Wade decision "unconstitutional action by the Court" involving "the deformation of the Constitution."

Finally, no discussion of the legal reasoning and jurisprudence of the Roe case would be complete without a reference to another former Solicitor General and noted Harvard law professor, Archibald Cox. In a 1976 work on the "Role of the Supreme Court in American Government," Professor Cox stated that, in Roe, "the Justices read into the generality of the due process clause of the 14th amendment a new 'fundamental right' not remotely suggested by the words." He further criticized Roe as employing the wrong standard of scrutiny to the newly derived right to abortion. Professor Cox added that "neither historian, layman, nor lawyer will be persuaded" that Roe's scheme of rights according to trimester is "part of either natural law or the Constitution." And Professor Cox criticized Roe for a failure that goes to its basic legitimacy in our constitutional system—the failure to "articulat[e] a precept of sufficient abstractness to lift the ruling above the level of a political judgement based upon the evidence currently available from the medical, physical and social sciences." This failure is particularly damning, in Professor Cox's view, because such "political judgments" are the province of the democratically elected legislatures of this country.

COGENT CRITICISMS OF ROE FROM DISSENTING SUPREME COURT JUSTICES

It would be amiss, Mr. President, to conclude a discussion of the legal and jurisprudential failings of Roe against Wade without devoting some attention to the cogent criticisms made by those very members of the Supreme Court who dissented from Roe or from subsequent cases expanding upon its holding. These dissenting views are far from being merely the rejected views of "the losing side" in a court case. They are the well-considered and well-formulated views of some members of the Court who heard all the arguments, read all the pleadings and considered all the jurisprudential dimensions of Roe and/or its subsequent applications. Indeed, we have a tradition in constitutional adjudication whereby today's minority may become, by the force of their arguments and the new thoughts which calmer reconsideration often brings to cases of first impression, tomorrow's majority. In that light, I think it is particularly important to consider the failures of Roe as they have been expressed by dissenters on the Court.

Partly in response to Roe's ambiguities, partly due to the continued volatility of the abortion question, there have been scores of subsequent Supreme Court cases on the permissible scope of State and Federal regulation of the abortion decision. The arguments by Justices who have been less kindly disposed to Roe and its embrace of a broad "abortion right" constitute an impressive body of legal commentary and criticism. In the context of this statement, however, I do not propose to canvass it in great detail. Rather, I want to illustrate the extent to which Roe has come in for sustained, methodical criticism on the Court by concentrating first on the views expressed in the most recent City of Akron case and companion cases, and then by returning to the dissenting views expressed so well in the original dissent of Justice White in Roe against Wade.

Given the tendency of some to assume that no self-respecting woman could speak disparagingly of Roe against Wade and the abortion right it enshrined in the Federal Constitution, Justice Sandra Day O'Connor's dissent in the Akron case caused quite a stir. Yet, a look beyond the political symbolism, if any, of her dissenting words into their legal merits reveals the dissent to be very much in the mainstream of academic criticism of Roe, as I explored in detail a little earlier. Like Professor Ely and his colleagues, Justice O'Conner's reexamination of Roe from the fresh perspective of a newcomer to the Court leads her to conclude as follows:

> Even assuming that there is a fundamental right to terminate pregnancy in some situations, there is no justice in law or logic for the trimester framework adopted in Roe and employed by the Court today on the basis of stare decisis. That framework is clearly an unworkable means of balancing the fundamental right and the compelling state interests that are indisputably implicated.

Perhaps the most interesting element of Justice O'Connor's critique of the trimester system and its sliding scale of rights is that, given that the competing values are defined with respect to the current state of medical technology, the sliding scale is a constantly varying slippery slope. To quote Justice O'Connor:

> The Roe framework is clearly on a collision course with itself. As the medical risks of various abortion procedures decrease, the point at which the State may regulate for reasons of maternal health is moved further forward to actual childbirth. As medical science becomes better able to provide for the separate existence of the fetus, the point of viability is moved further back toward conception.

Justice O'Connor notes that the inherent link between the Roe Court's decision and the medical art of the possible creates problems for both the legislatures and the courts.

Particularly in light of the Akron Court's holding that the appropriateness of State regulation may vary even within one trimester period, the Roe scheme requires, says Justice O'Connor, that "the State continuously and conscientiously study contemporary medical and scientific literature in order to determine whether the effect of a particular regulation is 'to depart from accepted medical practice' insofar as particular procedures and particular periods within the trimester are concerned." Justice O'Connor sees this constant monitoring responsibility as beyond the normal bounds required in constitutional jurisprudence. She says: "Assuming that legislative bodies are able to engage in this exacting task, it is difficult to believe that our Constitution requires that they do it as a prelude to protecting the health of their citizens."

The need to refer to the state of medical technology in applying the Roe balance of interests also presents some troublesome problems for the Federal courts. As Justice O'Connor said in her dissent:

> It is even more difficult to believe that this Court, without the resources available to those bodies entrusted with making legislative choices, believes itself competent to make these inquiries and to revise these standards every time the American College

of Obstetricians and Gynecologists (ACOG) or similar group revises its views about what is and what is not appropriate medical procedure in this area. As today's decision indicates, medical technology is changing, and this change will necessitate our continued functioning as the nation's ex officio medical board with powers to approve or disapprove medical and operative practices and standards throughout the United States.

This demand on the Supreme Court—and the lower Federal courts as an initial matter—concerns Justice O'Connor not only from the standpoint of the institutional capabilities of the courts, but also from the standpoint of the interests of our democracy. As Justice O'Connor writes, quoting the words of Archibald Cox I quoted earlier, "it is clear that the trimester approach violates the fundamental aspiration of judicial decisionmaking through the application of neutral principles 'sufficiently absolute to give them roots throughout the community and continuity over significant periods of time' * * *"

Further, given my views on the sanctity of human life, it is just as important for me, if not more so, that Justice O'Connor echoes the criticism of Professor Ely and others that the Roe balancing act accords insufficient importance to the interest of the State in protecting the life of the unborn. Again, let me quote from the O'Connor dissent:

In Roe, the Court held that although the State had an important and legitimate interest in protecting potential life, that interest could not become compelling until the point at which the fetus was viable. The difficulty with this analysis is clear: potential life is no less potential in the first weeks of pregnancy than it is at viability or afterward. At any state in pregnancy, there is the potential for human life. Although the Court refused to resolve the difficult question of when life begins, the Court chose the point of viability—when the fetus is capable of life independent of its mother—to permit the complete proscription of abortion. The choice of viability as the point at which the state interest in potential life becomes compelling is no less arbitrary than choosing any point before viability or any point afterward.

The consistent denigration of the interest in protecting unborn life, along with a similar consistent denigration of the State's interest in promoting maternal health by reasonable regulation of the abortion procedure, adds up to the following assessment by Justice O'Connor: "Neither sound constitutional theory nor our need to decide cases based on the application of neutral principles" justifies the scheme of abortion rights begun by Roe and continued through the Akron case.

Although separated from it by more than 10 years in time, Justice O'Connor's dissent sounds many of the themes contained in Justice White's original dissent in the case of Roe against Wade. Justice White's opinion uses relatively few words to set out the major flaws in the reasoning of the Roe opinion, but his conclusion is no less telling for its brevity. Justice White clearly placed himself with those who have seen Roe as possessing two main legal flaws: the identification of a constitutionally based abortion right nowhere tied to the Constitution itself and an unjustified balancing of that right against the other important rights at stake. Justice White put it this way:

I find nothing in the language or history of the Constitution to support the Court's judgment. The Court simply fashions and announces a new constitutional right for pregnant mothers and, with scarcely any reason or authority for its action, invests that right with sufficient substance to override most existing state abortion statutes. The upshot is that the people and the legislatures of the 50 States are constitutionally disentitled to weigh the relative importance of the continued existence and development of the fetus on the one hand against a spectrum of possible impacts on the mother on the other hand. As an exercise of raw judicial power, the Court perhaps has authority to do what it does today; but in my view, its judgment is an improvident and extravagant exercise of the power of judicial review which the Constitution extends to this Court.

The Court apparently values the convenience of the pregnant mother more than the continued existence and development of the life or potential life which she carries. Whether or not I might agree with that marshalling of values, I can in no event join the Court's judgment because I find no constitutional warrant for imposing such an order of priorities on the people and legislatures of the States. In a sensitive area such as this, involving as it does issues over which reasonable men may easily and heatedly differ, I cannot accept the Court's exercise of its clear power of choice by interposing a constitutional barrier to state efforts to protect human life and by investing mothers and doctors with the constitutionally protected right to exterminate it. This issue, for the most part, should be left with the people and to the political processes the people have devised to govern their affairs.

CONCLUSION

In another context, Professor Cox included the Roe against Wade case in the category of "wrongheaded decisions [that] can be changed by time and debate, or by constitutional amendment." Now that Roe against Wade has been with us for more than a decade, I believe it is obvious that "time and debate" have afforded little relief from this most wrongheaded of decisions. The Supreme Court has decided a number of cases on Roe's periphery—some of which favor abortion, some of which are mildly restrictive—but the basic holding of Roe that the Constitution establishes an abortion right remains solidly intact. And, as I stated before, Akron and its companion cases involved a very recent reendorsement of Roe against Wade's continued vitality. This distressing fact makes all the more important our vigorous pursuit of the other avenue Professor Cox identified for the curing of this defective decision: a constitutional amendment.

I stated at the outset of my speech that we should be very hesitant in amending the U.S. Constitution. I also pointed out why I believe that general hesitancy should be overcome in the case of an amendment to overturn Roe against Wade.

I do want to point out, however, that use of an amendment to the Constitution to overturn an erroneous Supreme Court opinion is by no means unprecedented. Four of our constitutional amendments were specifically crafted to reverse Supreme Court decisions. The 11th amendment to the Constitution, prohibiting the Federal judicial power from being exercised in suits by citizens of one State against another State, came in response to an action of one Supreme Court in accepting jurisdiction over such a case. The 14th amendment was proposed to the Constitution in response to the infamous Dred Scott decision, which found that black individuals were noncitizens under the Constitution. The 16th amendment, permitting the imposition of a Federal income tax, was a response to a Supreme Court decision that a tax unapportioned by State violated article I of the Constitution. Finally, the 26th amendment, which accorded 18-year-olds the right to vote in Federal and State elections, was proposed as a reaction to the Court's decision that Congress lacked authority to impose such an obligation by statute on States.

Therefore, Mr. President, I urge my colleagues to follow this precedent in approving the amendment now before the Senate.

Mr. METZENBAUM. Madam President.

The PRESIDING OFFICER (Mrs. KASSEBAUM). Who yields time?

Mr. METZENBAUM. Madam President, on behalf of Senator PACKWOOD, I yield to the Senator from Ohio such time as he needs.

The PRESIDING OFFICER. Without objection, the Senator from Ohio is recognized.

Mr. METZENBAUM. Madam President, the fundamental right to an abortion is well established and should not be tampered with.

Yet, the facts are that, today, we again return to the subject of abortion. This country presently has 13 million people unemployed, but we will spend a number of hours debating the issue of abortion. My guess is that before the session is concluded, we will spend many more hours debating the issue of abortion.

I do not mean in any manner to denigrate the issue of abortion as it relates to the concerns of millions of Americans and the rights of those who believe in free choice as well as those who oppose it and who are for so-

called right to life. The facts are that this issue has been debated and redebated and litigated and relitigated. Ten years ago, in the case of Roe against Wade, the Supreme Court held that there was fundamental constitutional right of privacy, which included the right to have an abortion. Just 2 weeks ago, the Court reaffirmed that principle in no uncertain terms.

(Mr. GORTON assumed the chair.)

Mr. METZENBAUM. The question is, How often are we going to come back to the same issue and debate it, argue about it, attempt to legislate with respect to it? Now we are asked to consider more legislation, this time a constitutional amendment to strip women of this fundamental right.

As a matter of fact, I would say that this proposal sets an extremely dangerous precedent. Never before in the history of this country have we amended the Constitution to deprive individual citizens of a fundamental right. It is a fact that we have amended the Constitution time and time again to grant individuals fundamental rights, constitutional rights. But it is unprecedented to move in the direction of denying a right presently enjoyed under the Constitution.

Very frankly, it is even more dangerous for us to contemplate or consider taking such a step where there is no national consensus in support of it.

Traditionally, constitutional amendments have reflected the consensus reached by the American people on a specific issue, but no such consensus exists regarding abortion.

Polls show that since 1973, the year Roe against Wade was decided, a majority of Americans have consistently opposed a constitutional amendment to prohibit abortion.

This is not the first time in our Nation's history that a constitutional amendment has not only been proposed but enacted into law without a consensus. I specifically refer to the ill-fated 18th amendment.

Prohibition did not work. It bred disrespect for the law and it was repealed a decade and a half later.

Query: Does anybody seriously believe that if we enacted a constitutional amendment that was ratified by the States, that would bring to a halt all the abortions in this country? Or would we just drive those who need and seek an abortion into a kind of subterranean culture?

Furthermore, the process which this amendment would use to change the law is constitutionally offensive. It uses a back door approach in an effort to throw decisionmaking about a fundamental constitutional right into the hands of State and Federal legislative majorities.

Senate Joint Resolution 3 states what? It says that the right to abortion is not secured by this Constitution. Let us stop to think about that for a moment. Is that not unusual, to put into the Constitution of this country or any other nation a provision saying that a right is not secured by that Constitution? It is almost unbelievable that we are debating the possibility of putting such language into the Constitution of the United States.

This is not an outright prohibition of abortion. Frankly, I doubt that two-thirds of either House of Congress or three-fourths of the States would adopt such a blanket prohibition. But that is not what we have here. We have an effort to do indirectly that which, in all probability, could not be done directly.

What this amendment would do if enacted into law as a part of the Constitution is invite State legislatures to pass laws that would infringe on this fundamental right recognized by the Supreme Court and to do so with simple legislative majorities.

Let us not kid ourselves. Let us not be fooled by that which might be described as some kind of legerdemain, some kind of sleight of hand.

What kind of precedent are we setting here? What if the term "free speech" were substituted for the word "abortion" in the amendment?

The amendment would then read, "Free speech is not secured by the Constitution." Would we want a simple majority in any legislative body to have the power to negate such a fundamental right? Or freedom of religion? Or any of the other freedoms that are spelled out in the Constitution? Would we really want to start a precedent and say that the right of peaceable assembly shall not be protected by this Constitution? Or the right of the people to be secure in their persons against unreasonable searches and seizures shall not be a right protected by the Constitution?

Mr. President, we are proud of the Constitution. We are proud of the Bill of Rights. We are looked upon by peoples throughout the world for the freedoms we have enunciated in the Constitution, for the constitutional rights that the people of this Nation share and that we are so proud of. Now we are talking about a constitutional amendment that specifically denies that such a fundamental right is protected by the Constitution.

Would we then become the laughing stock of the peoples of the world for having put into the Constitution the fact that there is a denial of a particular fundamental right that had heretofore been recognized by the courts? And what are we going to do in denying those rights?

We would turn such questions over to 50 State legislatures and the U.S. Congress to resolve and in the process make a mockery of our constitutional system of government.

What a picnic that would be—50 States, each on their own, trying to legislate on this subject. And what politics would come into play.

No, we are talking about a fundamental constitutional right and neither today nor tomorrow nor 1 month from now nor 1 year from now should the Constitution of our United States ever be amended to spell out particularly that a certain right is not protected by the Constitution.

Turning it over to the various State legislatures would only be ducking the issue.

The courts have spoken to the issue. Congress has spoken to the issue time and time and time and time again. Frankly, I see little difference between this approach, turning it back to the legislatures, and all of the so-called court stripping bills that we saw in the last Congress where the attempt was made to rob the courts of their power to decide significant constitutional questions.

As I get older, I keep hearing, year after year, one assault after the other upon the Constitution of the United States—one effort after another to deny the courts the right to act with respect to those rights, and now we have a new approach which says that the right to abortion is not secured by the Constitution.

I sort of wonder what our Founding Fathers would have said if somebody had proposed such an amendment at the time the Bill of Rights became a part of the Constitution. I think they showed great wisdom when they structured our constitutional system of government, and we should not lightly cast that system aside.

Moreover, if what the proponents of this amendment want to do is settle the abortion question once and for all, this is not the way to do it. As a matter of fact, I do not know how often we have to settle the abortion question. I do not know how many times the Supreme Court has to speak to the issue before we have settled it once and for all, but I will say without any reservation that Senate Joint Resolution 3 settles nothing. It really adds nothing to the issue. If anything, it makes the issue a national cause celebre in 50 State legislatures, each one of which can deal with the matter in their own way, if that be their inclination. There would be endless legislation, there would be endless litigation over what is and is not permissible.

All the amendment tells legislators is what right is not guaranteed by the Constitution. It says nothing about what laws would or would not be constitutional. It would result in an abundance of untested State and Federal legislation and years of litigation.

Mr. President, this is no way to resolve this issue. It is once again calling upon the Members of this body to be counted in connection with that oft-repeated issue of abortion. I have heard

of a lot of different proposals, a lot of different legislation, and the ingenuity of those who support the denial of the right to abortion to women is beyond compare, because about every year or two we get a whole new thrust of how we shall deny the right of abortion to a woman. This is explicit. This is very explicit—a right to abortion is not secured by this Constitution. What a magnificient way to attack the problem. To this Senator it is far less than magnificient. I think it is rather sad that we are called upon today to indicate by our votes that a particular fundamental right now available to all in this Nation is to be denied as a specific part of the Constitution. I cannot believe that this body will indicate its approval. I hope that it will not. If we did, it would be a sad commentary for all of us.

Mr. DECONCINI addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. HATCH. I yield such time as the distinguished Senator from Arizona needs.

The PRESIDING OFFICER. The Senator from Arizona is recognized.

Mr. DECONCINI. I thank the Senator from Utah.

Mr. President, abortion is an issue about which I have deep moral convictions. I have always spoken forthrightly about this matter, and I feel quite simply, that the needless taking of human life is wrong. Both philosophically and morally, I am opposed to abortion on demand. The ultimate question is whether we believe that a fetus has life and an immortal soul. After deep reflection, I must concur with those who conclude that life begins at the moment of conception. Therefore, I will support any measure that will enable us to restrict abortion. I support the Hatch-Eagleton amendment which declares that no right to abortion is secured by the Constitution.

Abortion is an extremely volatile, devisive, and emotional issue. Feelings run deeply on both sides. I have struggled long and hard with moral dilemmas that abortion presents. The most obvious conflict is between the right of a woman over her own body and the rights of an unborn fetus. One's position on this issue depends upon whether one believes that the unborn fetus is a live human being. I have concluded that once conception occurs, life with all its implications exists. The fetus is truly a physical and spiritual being. The unborn child is incapable of making decisions regarding its destiny. Thus, society must protect the unborn child as we protect all other human life.

The abortion controversy erupted just over 10 years ago. On January 22, 1973, the Supreme Court handed down a decision which has generated social divisions only rivaled in our Nation's history by the violent reaction to the infamous Dred Scott case of 1857. In the case of Roe against Wade, a majority of seven members of the Court found for the first time in the 14th amendment to the Constitution, a unqualified right to abortion. Despite the absence of any clearcut constitutional basis for the right to abortion, Roe declared that the due process clause of the 14th amendment of the Constitution includes the right of woman to abort her offspring if she so chooses. This new right, defined by the majority opinion of Justice Blackmun was expansive enough to overrule the Texas abortion statute in question, as well as related laws in all 50 States.

The effect of the Roe decision is as pervasive as it is saddening. In 1972, the year before the Roe against Wade decision, there were 600,000 legal and an estimated 200,000 plus illegal abortions. In 1980, the most recent year for which figures are available, there were 1,553,900 legal abortions. This represents an increase of almost 100 percent.

In Roe, the Supreme Court made four important points. First, the Supreme Court announced a new constitutional right: the right of abortion. Second, the Court held that generally the States have no compelling interest to prohibit abortion. Third, the Court concluded that States must permit abortion on demand, at least until viability. Finally, the Supreme Court effectively declared that all laws limiting abortion are unconstitutional.

In place of the State regulations which Roe pronounced unconstitutional, the Court supplied standards for abortion regulation that divided pregnancy into trimesters.

In the first trimester of pregnancy, the right of abortion is plenary. As the Court stated:

> For the stage prior to approximately the end of the first trimester of pregnancy, the abortion decision and is effectuation must be left to the medical judgment of the pregnant woman's attending physician.

In the second trimester, a State's authority to regulate abortion is limited to insuring the safety of the abortion procedures. Again, in the words of the Court:

> For the State subsequent to approximately the end of the first trimester, the State, in promoting its interest in the health of the mother, may, if it chooses, regulate the abortion procedure in ways that are reasonable related to maternal health.

In the final trimester, the State acquires an interest in protecting unborn life. That protective role, however, is subject to a significant exception. The Court states that a State "may, if it chooses, regulate, and even proscribe abortion except where it is necessary, in appropriate medical judgment for the preservation of the life or health of the mother." This "health of the mother exception" has effectively consumed the rule because maternal health interests were defined by Roe's companion case, Doe against Bolton, to include "all factors—physical, emotional, psychological, and the woman's age—relevant to the well-being of the patient." In the words of Prof. John Noonan, the woman's absolute right to an abortion is curbed in the third trimester only by the "necessity of a physician's finding that she needed an abortion." It would be a rare physician who would be incapable of defending an abortion on the grounds that in his best medical judgment the "well-being" of his patient demanded it.

In Roe and Doe the Supreme Court established a national policy allowing abortion without legal restrictions of any significant kind. This act of "raw judicial power," as Justice White called it in his vigorous dissent, prevents the States from balancing concern for the mother and concern for the unborn in the many ways that are clearly possible and which the citizens of the various States clearly prefer. Our nationwide policy of abortion on demand through all 9 months of pregnancy, recently upheld in the Akron case, was neither voted for by the people nor enacted by legislators. It is significant that not a single State had such unrestricted abortion laws before the Supreme Court decreed abortion on demand to be national policy in 1973.

In Roe, the especially sensitive abortion issue, which had been addressed by the people of the United States through the process of representative democracy, was removed from the parameters of legislative decisionmaking and usurped by the judicial branch. By this action, the Supreme Court upset the constitutional balance that had existed for nearly 200 years and had allowed State legislatures to carry out the will of the people with respect to this sensitive social policy. Without sound constitutional basis, Roe upset the federalistic balance between State and national institutions. As Prof. John Hart Ely notes, the Constitution "simply says nothing, clear or fuzzy, about abortion." Nor is there any support whatever in the legislative history of the Constitution to warrant the conclusion that it was intended to secure a right to abortion.

Roe disturbed the constitutional separation of powers between legislative and judicial functions. Prof. Lynn Wardle states this point very eloquently:

> By giving the right to choose abortion the status of a fundamental right, the Supreme Court substantially restricted the authority of the legislative branch to legislate concerning the subject, and substantially increased the responsibility of the judiciary for defining and monitoring the regulation of that fundamental right.

For the past 2 years, the Judiciary Committee has undertaken a particularly exhaustive examination of the subject of abortion. Hearings have been held which considered the legal ramifications of constitutional amendment proposals with the specific goal of reversing Roe against Wade and restoring the status quo. Nearly 80 expert witnesses from a broad cross section of academic and professional disciplines have testified.

As a result of this study and work, this Congress has for its consideration a constitutional amendment to nullify the Roe decision and explicitly restore to the States and Congress the authority to legislate with respect to abortion.

This amendment reverses Roe cleanly, completely and in a manner that conforms with the basic constitutional tenets adopted by the framers. While fully respecting the authority of the Supreme Court to interpret the provisions of the Constitution, I recognize also the authority reposed in Congress under article V of the Constitution to recommend amendments in response to what it views as wrongful or inappropriate decisions. Indeed, there is ample precedent for such a response to a Supreme Court interpretation.

The 11th amendment to the Constitution, prohibiting the Federal judicial power from being exercised in suits by citizens of a State against another State, came in response to an action of the Supreme Court in accepting jurisdiction over such a case.

The 14th amendment to our Constitution was enacted in response to the decision of the Supreme Court in the Dred Scott case, finding that black individuals were noncitizens under the Constitution and, as such, not fully entitled to the protection of the Constitution.

The 16th amendment to the Constitution, permitting the imposition of a Federal income tax, was a response to a Supreme Court decision finding that an unapportioned—by State—tax was in violation of article 1 of the Constitution.

Finally, the 26th amendment, according 18-year-olds the right to vote in Federal and State elections, was added following the Court's decision that the Congress lacked the authority to impose such an obligation statutorily upon the States.

An appropriate respect for the complex nature of our constitutional system does not require that Congress shrink from every confrontation with the other coequal branches of the Federal Government. Rather, a proper regard for our constitutional system of checks and balances will compel Congress to respond when the Supreme Court unilaterally and repeatedly acts in such a manner that the constitutional balance is threatened. Such a threat exists in the present circumstances.

Senate Joint Resolution 3 states simply that "a right to abortion is not secured by this Constitution." The purpose of this sentence is to preclude reliance upon any provision of the Constitution as authority for recognition of any right to abortion.

Expert witnesses on both sides of the abortion controversy who testified before the Constitution Subcommittee, were in agreement that these 10 words would overturn the abortion right created in Roe. The abortion controversy centers around the right of the pregnant woman to control her own body, and the right of the unborn to life itself. The Hatch-Eagleton amendment does not purport to resolve the persistent issue of "which of these conflicting 'rights' is paramount." But rather it establishes a balancing process for determining how this conflict will be resolved, a process to take place in the legislature—as it should be—and not solely in the courts.

Under this amendment, the decision in Roe would be deprived of legal significance. The pre-1973 constitutional balance of powers would be restored. People in the States would be reenfranchised to shape abortion policy through their legislators. Policymaking would be taken from the nonrepresentative judicial branch and returned to the elected legislative branch. In short, Roe and Doe would be reversed insofar as these cases hold that the Constitution protects an abortion liberty.

Under the proposed amendment, the States would have the power to legislate with respect to abortion. States would be free to deal with abortion policy as they see fit. Congress would possess a limited residuum of authority to act within constitutional bounds. Congress could indirectly regulate abortion as it had done before Roe. Federal courts would no longer be able to expound a constitutionally protected right to abortion, the proposed amendment would confer no legal status upon the unborn but would permit legislators to protect their lives.

While I would personally favor an amendment that would impose a duty upon the States to prohibit most abortions, I must stress that this is not the objective of the present amendment.

This Senator is well aware that there are a variety of views on the issue of abortion. Many people, including friends of mine in Arizona, sincerely hold positions on this issue different from my own. I fully recognize these differences and I do not doubt for a moment that those who differ with me hold their views in complete good faith. This amendment allows both sides of this troubling issue to debate their views in the proper pubic forums. This amendment will allow the citizenry of this country to democratically resolve the abortion crisis and develop a solution.

It is my profound moral conviction that life is a continuum from the first beginnings in the womb to the final breath of the dying, and that the first function of society, the primary responsibility of government, is to protect life, and to create conditions which permit each person to flourish and to reach his or her fullest potential.

I support this amendment because I believe it offers a reasonable solution to this critical problem.

I commend both Senator HATCH of Utah and Senator EAGLETON for their dedication and their effort in putting together the amendment before us today.

Mr. HATCH. Mr. President, I thank my dear colleague from Arizona for the excellent remarks made here today. They have been enlightening to all concerned.

I yield such time as he may need to the distinguished Senator from Iowa.

The PRESIDING OFFICER. The Senator from Iowa is recognized.

Mr. GRASSELY. Mr. President, I thank Senator HATCH for yielding to me and appreciate this issue being brought to the floor.

I appreciate it being scheduled as was promised 1 year ago so we can move forward with this very important issue.

Mr. President, we have finally come to the bottom line: The outcome of this debate will tell the American people what the U.S. Senate currently thinks about one of the most important issues of our time. So in my judgment, this is truly a historic moment.

Since the abortion issue first came to public consciousness and forced its way into the legislative arena, I have always felt that the unborn needed some kind of constitutional protection. While my stated preference has been for an absolute assurance for the safety of all human life, I am content at this time to support a simple reversal of Roe against Wade. As a vital first step on the road to complete protection, the institution of abortion must itself be destroyed. Senate Joint Resolution 3 will allow the elected representatives of the people to do exactly that.

In the discussion of competing rights, it is obvious that Roe against Wade gives all the preference to the woman and none to her unborn child. For any reason or no reason at all, a women, with the convenience of an abortion, can destroy a human life. This is known as abortion on demand. As you will know, in our form of government, the exercise of an inherent right can be demanded by the citizen. And this is as it should be.

What is perhaps most ominous is that this unfettered right was promulgated not by elected representatives of the people, but by seven elderly men who sit on our highest Court. To continue Roe against Wade is to perpetuate all its abuses and provide no governmental remedy. This, Mr. President, is an intolerable situation. Whoever votes against this amendment has voted to continue an institution that is as wrong as slavery's protection in the Dred Scott case, and what is more important, abortion cannot even be regulated. To date, all attempts at simple regulation have met with complete failure. Our court system has closed the door to any effective control, helping to perpetuate a wide-open system. The abortion industry in this country, Mr. President, is ungovernable.

The first right secured by any government ought to be the right to life. Our representative democracy is built upon a hierarchy of values. It was no accident that our Declaration of Independence speaks of life, liberty, and the pursuit of happiness. This progression makes complete sense to me. Without life there can be no liberty, and without both life and liberty, there can be no true happiness. The unfettered abortion freedom turns this logical hierarchy on its head and says that happiness comes first and that any other right must be a subsidiary. I reject this thinking as inimical to the health of our society.

Mr. President, instead of denying unborn human life a constitutional protection, our system of government ought to be expanding the whole area of human rights. Ever wider circles of humanity must be incorporated within a system which guarantees their existence. This has been our Nation's major thrust and ought to be perpetuated and increased.

Mr. President, I have no sophisticated statistical analysis to support my beliefs. What I can do, however, is to speak from deep conviction. This I have done and will continue to do.

Mr. President, I come from the heartland of this great Nation and from a proud and honorable occupation. Most of my life has been spent in rural America as a working farmer. I supported my growing family from what the rich soil of which Iowa has an abundant amount and all that that soil could produce. As a young boy I came to know and appreciate the mysterious workings of nature. I was taught to believe that nature was good—that Mother Earth, if properly attended and if we were good stewards of it, would yield an increase. I still believe this simple truth and I believe it for all the Earth. I believe not only that nature is good but also in the seamless web of life which dictates that to intercept nature's normal activity with violence will one day bear bitter fruit. No one can ever convince me otherwise. No one will ever convince me to accept the abortionists' philosophy that death is better than life or that we can assault nature with impunity.

Those who live close to the land know these things. The generation of new life is the privilege of all those who till the soil.

I have carried those teachings of rural life with me through a quarter of a century of public life and I feel that I would be derelict in my duty as a Senator if I did not speak out on this great issue. I would be turning my back on all I have been taught and hold dear were I to remain silent. I believe that all human life is sacred and I believe the Biblical injunction to choose life that we and our descendants may live. I would be unfaithful to myself and God if I did not say these things.

Mr. President, the abortion question is one of those great universal issues concerning our deepest values. It is first and foremost a human issue. As a legislator, I feel that human life even in its earliest forms cannot be denied constitutional protection. But even more importantly, the Constitution must not be used as the instrumentality to deny that life its right to exist. Thus, I strongly support the Hatch-Eagleton proposal which would reverse Roe against Wade.

Before concluding, I would like to thank all who have participated in this debate on both sides of the question. I was impressed with the agreement to forgo any amendments and attempts to filibuster. This, I think, speaks highly of us as a legislative body and is a distinct achievement on such a volatile issue.

I also extend my gratitude to Senator THURMOND as chairman of the Judiciary Committee and Senator HATCH as the chairman of the Constitution Subcommittee for their diligence in bringing an amendment on this subject before the Senate.

To all those of good will I would like to say that the vote we take on Senate Joint Resolution 3 will not be the end of our public dialog. Until our next major legislative encounter much can be done on a short-term basis to protect unborn human life, and I hope to remain in the forefront of such an important effort.

Mr. HATCH. Mr. President, I would like to thank the distinguished Senator from Iowa. I appreciate his remarks and I appreciate the sincerity and deep-felt convictions he has expressed here on the floor.

Mr. President, there were a couple of issues raised by, I think, the distinguished Senator from Ohio. I think one of them was basically would we be comfortable in allowing the States to regulate other fundamental liberties such as freedom of speech.

I think that question presupposes that abortion is a fundamental right. This amendment is based on the principle that abortion should never have been elevated to the status of a fundamental liberty such as freedom of speech.

The framers of the Constitution and its amendments had no intention whatsoever to raise abortion to the status of free speech. In fact, several of these same State legislatures that ratified the 14th amendment enacted during the same session strict prohibitions on abortion. It can hardly be maintained that the drafters of the 14th amendment intended the question to become equal with free speech.

This amendment, therefore, reverses Roe and returns abortion to the place it occupied in American jurisprudence for nearly 200 years before Roe, namely in the discretion of the State legislatures, subject to the ordinary standards of constitutional review.

This amendment does not assert that States should be able to regulate free speech, but only that abortion is not deserving of treatment as a fundamental liberty.

Free speech was approved by two-thirds of both Houses of Congress and three-quarters of the States. Can the same be said of the abortion right which was created by seven out of nine judges?

Another issue that was raised by the distinguished Senator from Ohio I believe was, is it really appropriate to subject fundamental rights to democratic processes, and really fundamental rights of individuals should not be determined by referendum?

The problem, of course, is that few can agree on what precisely are these "individual rights" that are involved with the abortion issue. Critics in the prochoice movement see these as being the right of the pregnant woman to determine how her body is used, while critics in the prolife movement see this as an even more fundamental right of the unborn to life itself. In other words, there is just as much disagreement on the issue of what constitutional rights are involved here as there is on the issue of the morality of abortion itself.

It thus begs the question to attack the immediate amendment as one restricting rather than expanding rights.

The purpose of the Hatch-Eagleton amendment then is not to resolve the persistent issue of which of these conflicting rights is paramount, but rather to establish a balancing process for determining how this conflict will be resolved in the context of individual circumstances.

In short, this balancing process will take place in the same forum in which it takes place in the context of most other controversial public policy issues, within the legislative process.

Essentially, this question presupposes that the abortion right is a fundamental liberty, but that the right to life of the fetus is not. In other words, you are saying you agree with the Supreme Court, not that this is necessarily the way that the framers of the Constitution meant this question to be resolved. When substantial numbers of our citizenry hold irreconcilable positions on what constitutes a right, then how are we going to resolve the conflict? This amendment solves the problem the way it was solved for nearly 200 years before the Supreme Court intervened.

Mr. President, I reserve the remainder of my time.

Mr. PACKWOOD. Mr. President, will the Senator yield for a question?

Mr. HATCH. I would be glad to yield.

Mr. PACKWOOD. Twice in the comments of my good friend from Utah just recently he mentioned the law 200 years ago and at the time of the founding of this country.

Let me read you a statement and ask for your comments on it. This is from the issue brief, abortion legal control issue brief, No. 1B74019, Arthur Morton Rosenberg, American Law Division, and James Hall, American Law Division, Library of Congress:

> It is generally acknowledged that at common law abortion performed before quickening (the first recognizable movement of the fetus in utero) was not an indictable offense. Whether abortion of a quick fetus was a felony at common law is still disputed. The later and more predominant view is that the quick fetus is at most a minor offense.
>
> In this country, the law in all but a few states until the mid-19th century was the preexisting English common law. It was not until after the Civil War that legislation began to replace the common law.

Does my colleague agree with the statement of the Library of Congress as to what the status was?

Mr. HATCH. While the vast majority of the States retained the common law distinction that abortion before quickening was not a crime, no State held that there was no crime of abortion after quickening.

Mr. PACKWOOD. Pardon, say that again.

Mr. HATCH. Certainly, no State held anything other than that there was a crime of abortion after quickening. Later in the 19th century, several States interpreted the common law to mean that abortion was a crime at any time during pregnancy.

Almost all of the States enacted abortion statutes during the 19th century. Connecticut adopted the first State abortion statute in 1821. The Connecticut statute retained the quickening distinction for the abortion crime. Quickening, however, soon began to disappear as the practical distinction to determine criminality. The intention behind enactment of those statutes is illustrated by the Maine Supreme Court which, in interpreting the Maine statute, abrogated the quickening requirement in the abortion crime; the court pointed out that if the pleading did not allege the destruction of the child, it would be fatally defective for not charging the essential element of the crime.

In 1859, the American Medical Association Committee on Criminal Abortion criticized the quickening distinction in criminal abortion laws for the "grave defects of our laws, both common and statute, as regards the independent and actual existence of the child before birth, as a living being," and called upon State legislatures to revise their abortion laws. This position of AMA seems to have had its impact because during this period many States abolished the requirement that an abortion had to follow quickening to be a crime. At the time of the ratification of the 14th amendment, in 1868, at least 28 of the 37 States had made abortions before quickening a crime. In the next 15 years, seven more of these States incriminated prequickening abortional acts. By 1871, the AMA could quote with approval from Archbold's Criminal Practice and Pleadings with regard to the new consensus:

> It was generally supposed that the foetus becomes animated at the period of quickening; but this idea is exploded. Physiology considers the foetus as much a living being immediately after conception as at any other time before delivery, and its future progress as the development and increase of these constituent principles which it then received. It considers quickening as a mere adventitious event . . . Indeed, no other doctrine appears to be consonant with reason or physiology but that which admits the embryo to possess vitality from the very moment of conception.

Further evidence that at least one motivation behind these laws was the protection of the life of the fetus, is seen in several court decisions interpreting these statutes.

For instance, in Bowlan against Lunsford, an Oklahoma decision, the Court held:

> We hold that the antiabortion statutes in Oklahoma were enacted and designed for the protection of the unborn child and through it society.

So my contention is that the Court's decision in Roe, resulting in a practical situation of abortion on demand, was clearly contrary to the whole of American law on the subject of abortion, and that the common law was contrary to what the Court interpreted it to be in the Roe against Wade decision.

Mr. PACKWOOD. Mr. President, let me go back again. My distinguished colleague made reference to Blackstone, and I am familiar with that 13th century acknowledgment. Although that was not, as I recall it, a court case. Judge Coke, the great English jurist, referred to abortion, although it is unclear whether he meant before or after quickening, as a great misprison.

Mr. HATCH. That was Blackstone who did that. I think Coke did it, too.

Mr. PACKWOOD. But the term was not known to common law, this great misprison. But it is almost a moot point.

I would very specifically ask this question. In 1787, at the time of the founding of the Constitution in this country, or in 1791, the adoption of the Bill of Rights, was there a single State that had on its statute books laws punishing abortion prior to what they called quickening?

Mr. HATCH. Before when?

Mr. PACKWOOD. Quickening. You are right, medical science was not very advanced. Normally quickening was roughly defined as when a woman could feel a fetus move. How they ever came to an initial distinction of 40 days for women and 80 days for men is beyond me. It is unusual distinction science no longer bears out.

What I am saying is there was a distinction in their minds that did not vary too much from the trimester concept that the Supreme Court uses now or the four States that we had prior to Roe against Wade that legalized abortion.

So I will ask my question again. The common law concept was quickening and prior to quickening there was no crime. Was there any State that had any statute that punished abortion as a crime if the abortion was done prior to quickening in either 1787 or 1791?

Mr. HATCH. There were a number of States, as I understand it, that had laws regulating midwifery including abortion prior to quickening.

Mr. PACKWOOD. Before quickening?

Mr. HATCH. Yes.

Mr. PACKWOOD. I do not think so.

Mr. HATCH. I will attempt to confirm that.

Mr. PACKWOOD. I think our founders never really turned their attention to the subject because they never thought they would need to. Abortion was common in the Colonies. It was common at common law and it simply was not punished.

Mr. HATCH. The common law inherited by our Republic was the common law of Blackstone and Bracton and Coke and Fleta, all of whom looked askance at abortion. I believe that their legacy was reflected in the laws of the new Republic.

Mr. PACKWOOD. If that is the case, then why was there the passage of all of the statutes during the 1900's? We did not need to pass them if it was illegal in common law.

Mr. HATCH. Let me quote from Prof. Cyril H. Means, on whom the Supreme Court relied in the decision of Roe against Wade. He was, of course,

an advocate of legalized abortion. Based upon his analysis, the majority in Roe concluded:

It is thus apparent that at common law, at the time of the adoption of our Constitution, and throughout the major portion of the 19th century, abortion was viewed with less disfavor than under most American statutes currently in effect. Phrasing it another way, a woman enjoyed a substantially broader right to terminate a pregnancy than she does in most States today.

Mr. PACKWOOD. Will the Senator read that again?

Mr. HATCH. Yes.

In trying to justify its position, the Court in Roe, concluded, based upon Prof. Cyril H. Means' analysis:

It is thus apparent that at common law, at the time of the adoption of our Constitution, and throughout the major portion of the 19th century, abortion was viewed with less disfavor than under most American statutes currently in effect. Phrasing it another way, a woman enjoyed a substantially broader right to terminate a pregnancy than she does in most States today.

Mr. PACKWOOD. I think that is the point I am making, unless I misunderstood what the Senator has read.

Mr. HATCH. That is the point Roe made, but I am saying that point is much criticized. This is discussed in the committee report, for example, at page 22.

The court's treatment of the development of abortion as a crime at common law and its uncritical acceptance of the work of Prof. Cyril Means has been severely and repeatedly criticized.

I cite, for example, Bryn's work in "An American Tragedy: The Supreme Court on Abortion," and Destro in "Abortion and the Constitution: The Need for a Life-Protective Amendment."

I do not know that it is necessary to go into an exhaustive analysis of the treatment of abortion as a crime at common law. I think that it is simply enough to point out that the majority's sweeping decision in Roe was clearly contrary to the way abortion was viewed at common law with respect not only to maternal health but also to the protection of the life of the fetus.

In his signal work, "A Private Choice," John Noonan, who has to be recognized as one of the leading authorities on this issue in this country, says:

The makers of the Constitution of the United States do not appear to have contemplated the subject of abortion. There is no mention of it by name or by circumlocution in the original articles or in the Bill of Rights or in any of the later amendments. If a Martian were told to examine the document carefully for a clue to the framers' intention regarding abortion, he would have to admit himself baffled. The Constitution within its four corners, says, nothing.

A Martian with a sense of history might say. "Tell me what the laws and practices and beliefs were when the Constitution was made. From them I shall infer what was intended by the framers". He would find.

1, that in 1789 whem the original articles were adopted, Blackstone was the bible of American lawyers, and Blackstone taught that a "person" was one "like us" who had been "formed by God" in the womb.

2, that abortion, although not widely practiced because of medical difficulties in doing it safely, was a crime at common law if the pregnancy had reached the stage where movements by the child were perceptible; and if the child in the womb was injured by an abortifacient, was born alive and died from his injury, the crime was murder.

Mr. PACKWOOD. What did the Senator say before that?

Mr. HATCH [reading]:

Abortion, although not widely practiced because of medical difficulties in doing it safely * * * and if the pregnancy had reached the stage where movements were perceptible.

Mr. PACKWOOD. And it was not a crime?

Mr. HATCH. Let me go on:

3, that the articles gave the new government no power to disturb the administration of the common law by the states.

4, that in 1790, when the first 10 amendments or Bill of Rights were adopted, the common law and the beliefs expressed by Blackstone were unchanged.

5, that fifth amendment declared the life, liberty, and property of no person should be taken by the national Government except by due process of law.

6, that the 9th amendment declared that all powers not expressly conferred upon the national Government belonged to the people, thereby leaving to the people the protection of life, liberty, and property through the legislatures and courts of each State.

7, that "the most important burst of antiabortion nation's history" occurred between 1860 and 1880, and that the 14th amendment, adopted in 1868, belongs to that era of American politics.

8, that in 1868, when the 14th amendment was adopted, the common law made abortion a crime after quickening and a number of States, including such leading Northern States as Connecticut and Pennsylvania, made abortion a crime from conception.

9, that in the 1860s the federal territories of Arizona, Colorado, Idaho, Montana, and Nevada had all made it a crime to abort "a woman then big with child," [5] and such territorial legislation was subject to the approval of the same congressmen who adopted the Fourteenth Amendment.

10, that the Fourteenth Amendment imposed upon each state the obligation already imposed upon the national government not to take life, liberty, or property without due process of law.

I think the Senator's point in some respects is well taken.

Finally, let us not only focus upon the state of the law in 1789, but in 1973 as well. That is a lot more certain today, I believe.

The Supreme Court's decision in Roe held every State's criminal abortion statute unconstitutional. Between 1967 and 1972, most of the State legislatures had considered changing their abortion laws. Nineteen States did make changes in their abortion laws. All of these 19 States changed their law to permit abortion to prevent grave health damage to the mother. In addition, some of the States permitted abortions when the unborn child was conceived in rape or incest or where the child would be born with substantial deformity. Four States required no grounds at all. But all States limited abortions in terms of age of the fetus.

For example, the State of Washington had a limit of 4 lunar months. The other 31 States did not change their abortion laws despite the fact that abortion legislation was introduced in most all of them.

In two States, Michigan and North Dakota, proposed liberalized abortion statutes were rejected by referendums by majorities of 61 and 77 percent. In 21 States the abortion statutes in effect in 1868, the year the 14th amendment was ratified, were still in effect at the time of the Roe decision.

In sum, no State, including the four States which allowed abortion on demand, made abortion legal for the entire 9 months. None of the States had abortion laws as expansive as that created by the Court in Roe against Wade.

ABORTION AS MURDER

Mr. President, on another point, those who favor the continuation of unrestricted abortion have often engaged in extravagant hyperbole regarding the legal effects of various prolife proposals. Too often, the press has been willing to uncritically adopt these polemical claims and to accept them as matters of fact.

Here is one good example of such a widely circulated red herring: The claim that if abortion is again made illegal, as it was in most States prior to 1973, then women will be imprisoned for procuring abortions.

Some time ago a full page ad appeared in the Washington Post [Apr. 27, 1981], paid for by the Planned Parenthood Federation. The ad depicted a well-dressed woman behind bars, under a headline which shouted, "If You Have a Miscarriage You Could Be Prosecuted for Murder." Well, that was so ludicrous that even some proabortionists must have objected, because when the ad appeared later in the New York Times [Oct. 11, 1981], the headline was changed to, "In 1983, If You Have an Abortion You Could Be Prosecuted for Murder."

However, that claim is also without foundation. Leaders of the major prolife organizations have often explained that they have no desire to seek criminal sanctions against women seeking abortions—who, they say, should often be regarded as victims of the abortion industry. They say that they seek restoration of the types of antiabortion laws which existed prior to Roe against Wade. They note, correctly, that under these laws women were not imprisoned, or even prosecuted, for

procuring abortions. Abortionists were prosecuted—but even they were not prosecuted for murder.

Under most antiabortion laws in effect prior to Roe, it was a felony to perform an abortion, but it was not "murder." John S. Baker, professor of law at Louisiana State University Law Center at Baton Rouge, testified on this subject during the hearings conducted by the distinguished Senator from North Carolina, Senator EAST, in 1981. Professor Baker said:

Prior to 1973 and Roe v. Wade, every state provided some protection to an unborn child in the form of either their abortion statutes or a manslaughter statute (usually entitled "willful killing of an unborn quick child"). The abortion statutes usually carried a penalty of less than five years imprisonment and fines no greater than $2,000. The vast majority were felony statutes falling under the Title of Offenses to the Family. A very few were listed under Offenses to Persons, but even here the penalty being no more than manslaughter (see, for example, Connecticut and Kansas). [J-97-16, Vol. I, p. 754]

One may ask, if indeed the States were intent on protecting the lives of unborn children, as claimed, why was the offense not deemed to be "murder"? Well, States have always recognized in their statutes that human beings are killed by other human beings in a wide variety of circumstances, some of which are considered criminal, some not criminal, and some more criminal than others. States have always been free to establish different penalties for different types of homicide. Professor Baker explained in his testimony:

Murder is only one form of homicide, indeed only one form of *criminal* homicide. Note that thus far, I have generally referred to "homicide," which simply means the killing of a human being. An accidental, noncriminal killing of a human being, for instance in an automobile accident, is a homicide." Further, among criminal homicides, there are various types, depending on each state's scheme of criminal law. Within the category of criminal homicide, the seriousness (e.g., whether murder or manslaughter) and, therefore, the punishment will depend on the defendant's "mens rea" or guilty mind. In order to prove any of the forms of criminal homicide, the state must prove a harm (the death of a human being) caused by the defendant, while acting with a certain criminal state of mind. [J-97-16, Vol. I, p. 752]

Prior to Roe, the State legislatures chose to designate performance of an illegal abortion as a serious offense, but less serious than murder. But what, then, about the women who procured abortions?

Last year the American Center for Bioethics published an excellent study by Paul D. Wohlers, J.D., titled "Women and Abortion: Prospects of Criminal Charges." Mr. Wohlers studied the abortion statutes which existed in every State, from their inception through subsequent revision, up to Roe against Wade in 1973. He also reviewed every State and Federal court decision bearing on those statutes. His findings were as follows:

(1) No woman has ever been prosecuted for murder for procuring an abortion.

(2) Prior to 1973, 17 states had laws which theoretically permitted a woman to be prosecuted for the lesser crime of soliciting or submitting to an abortion, but no case can be found in which a woman was actually brought to trial under any of those laws. Again, the prosections were brought against abortionists, not the women who aborted.

(3) In 40 states, courts considered the question of whether a woman who obtains an abortion was an accomplice to the abortionist. This issue would arise when an abortionist would seek to have a woman declared an accomplice so that she could not testify against him. In 39 of those 40 states, the courts decided that the woman was not an accomplice. Only in Alabama did the courts rule otherwise, and even there, the woman's criminal guilt was not the issue. Mr. Wohlers writes, "Most courts in fact regarded the woman as the victim in abortion cases, as the object of protection and not the object of prosecution."

(4) Some state courts did hold that a woman could be considered a "co-conspirator" with an abortionist. Again, the issue was the admissability of her evidence against the abortionist. No woman implicated as a co-conspirator was ever prosecuted.

Mr. Wohler summarized his exhaustive survey as follows:

No evidence was found to support the proposition that women were prosecuted for undergoing or soliciting abortions . . . There are no documented instances of prosecution of such women for murder or any other species of homicide; nor is there evidence that states that had provisions enabling them to prosecute women for procuring abortions ever applied those laws. The vast majority of courts were reluctant to implicate women even in a secondary fashion, through complicity and conspiracy charges. Even in those rare instances where an abortionist persuaded the court to recognize the woman as his accomplice, charges were not filed against her. In short, women were not prosecuted for abortion. Abortionists were.

Given the American legal system's reliance on precedent, it is unlikely that enforcement of future criminal sanctions on abortion would deviate substantially from past enforcement patterns.

Now, the question may arise, well, if in fact every abortion kills a living human being, then why should women not be prosecuted? Again, it is a case of the law recognizing extenuating circumstances. A woman with a problem pregnancy is often under many emotional pressures. Abortion may seem like the easiest way to solve her problems. Generally speaking, the legislatures prior to Roe appear to have made the judgment that most women in such circumstances did not have the "mens rea," or "guilty mind," of which Professor Baker spoke. Failure to prosecute women for abortion did not and would not imply a devaluation of the victim of abortion—the unborn child—but rather a recognition of the mitigating circumstances.

In the future, as in the past, the most effective way to diminish the number of abortions would be to threaten the livelihood of abortionists through criminal prosecution. Even with respect to abortionists, of course, Senate Joint Resolution 3 would permit States total discretion to determine what penalties to impose. For example, doctors convicted of performing illegal abortions might have their licenses suspended, or be assigned to perform community service, rather than being incarcerated.

Mr. President, women with problem pregnancies do not need legal abortion, and they do not need the threat of criminal prosecution, either. They need help. They need alternatives to abortion. A network of more than 1,000 alternatives-to-abortion centers has grown up since Roe v. Wade to assist women with problem pregnancies. These agencies are nearly all privately funded and staffed by volunteers—unlike the clinics of Planned Parenthood. This is an arm of the prolife movement which has received insufficent recognition.

The PRESIDING OFFICER. The Senator from Oregon.

Mr. PACKWOOD. Mr. President, I think it is obvious that the Senator from Utah and I basically agree as to what the common law is.

I will not dwell on it at length because I do not think it is overwhelmingly relevant to the debate today or to the Roe against Wade decision of 10 years ago. I mention it because of those who want to go back to the time of the founding of this country, saying that we should have the morality and the family we had at that time.

At that time, abortion was not a crime if done before quickening. If you translate that into months of pregnancy, that would be somewhere between 3½ and 5 months. It was not punished as common law. It was not punished in this country. That is part of the reason that many of our States adopted statutes in the 1800's, because they found in common law it did not prohibit abortion.

All that the Supreme Court did, and it was a very cautious Supreme Court, in the Roe against Wade decision was reach a decision in a case of first instance. I emphasize that. The only other case they ever had in the history of the Court was the decision out of a Washington, D.C., case in which the statute of Washington was challenged as unconstitutionally vague.

That is a common attack on criminal statutes by constitutional lawyers, and it is an attack that is frequently upheld.

The court in the Vuitch case, which was decided about 18 months prior to Roe against Wade, found that the Washington, D.C., statute was not constitutionally vague, and that is all they decided. But they very specifically said in that case that they were re-

serving for further judgment a decision about privacy and abortion.

Mr. HATCH. Will the Senator yield at that point?

Mr. PACKWOOD. Yes.

Mr. HATCH. I am not saying that I want to go back to the common law or the medical science of 1789.

The Senator is correct. The States have gradually changed their position from time to time on the issue of abortion.

What I am saying is that I would like to go back to the constitutional structure that existed in 1789 and 1973. I believe that if we did, we could achieve a national consensus on this issue. Otherwise, will continue in the present polarized situation.

Mr. PACKWOOD. I do not think it is advantageous to take us back to the situation prior to Roe against Wade. It adds a new element to the Constitution that was not there.

Mr. HATCH. Only to the extent that all of the laws that existed in 1972 would not just automatically be reenveloped in the law in 1983 or 1985. But we would go back to the point of constitutional law where the States would have the right to act firmly and responsibly in this area, with the Federal Government only having the residual right and not a plenary right. The States would have the plenary right, not the Federal Government.

Mr. PACKWOOD. That right is a broad term.

Mr. HATCH. But it applies in every case of constitutional law.

Mr. PACKWOOD. And where there is a conflict, the residual Federal right is paramount, whether we operate under section 5 of the 14th amendment or the commerce clause. If we chose to act, we would be paramount. That is where I quarrel with the Senator's amendment.

Mr. HATCH. I would point out to the distinguished Senator that the Federal Government would not, should we go back to the status quo ante, be able to directly regulate abortions. They would only be able to reguate collateral matters pertaining to abortion that are within the Federal ambit. They would not be able to outlaw abortion.

Mr. PACKWOOD. Let me read again a memorandum from Karen Lewis, of the Library of Congress, dated May 13, 1983. This is on Senate Joint Resolution 3.

Questions arise as to what would remain for the Federal Government to do regarding abortion as well as what States could actually do.

Specifically, what types of abortion legislation could Congress enact in the face of S.J. Res. 3? What would be the nature of the shift in the balance of power between the federal government and the states?

For example, some of the traditional "states rights" constitutional amendment resolutions that have been introduced in earlier Congresses would effectively free abortions from federal constitutional constraints by explicitly lodging exclusive legislative power over abortion in the states.

Then she said assuming Senate Joint Resolution 3 passed, and asks about three issues. We will address the following: Funding, substantive laws, then the authority of State legislatures to regulate abortion.

I would concede, at least as to the last, that this amendment would give the States concurrent power.

On funding, she very clearly concludes that there is nothing in the Senator's amendment that would impede Congress from passing amendments saying no abortions shall be funded by Congress.

The very interesting one is the one on substantive law.

Mr. HATCH. I do not necessarily differ with the Senator. Issues such as domestic relations—marriage, divorce, and child support—may also be subject to Federal regulation through the commerce clause.

Mr. PACKWOOD. This is her position on substantive legislation:

S.J. Res. 3 would make the regulation of abortion a state matter essentially; however, in instances where interstate commerce is involved, under Article I, Section 8 of the U.S. Constitution, Congress would have authority to legislate.

Such a practice based on this constitutional authority could similarly be extended to legislatively regulate or even prohibit other abortion-related activities affecting commerce, e.g. the operation of abortion clinics which we mentioned earlier.

Another potential source of congressional power to legislate with respect to abortion may be found in Congress' Article III authority over federal court jurisdiction.

Since S.J. Res. 3 would eliminate the constitutional protection for the woman's right to terminate her pregnancy, Congress would arguably be free to pass "pro-life" legislation pursuant to Section 5 of the Fourteenth Amendment.

It is very clear that there is a fair body of authority—good authority—that think this lays down a great deal of power for Congress to act.

Most importantly, in 1975, 1976, and 1977, we had straightout States rights amendments, drafted very specifically. This is not one. I think what has happened and only what has happened here is that the Supreme Court has made a decision in an area that they have not previously made a decision in that offends the sensibilities of some of the Members of Congress and some people in the country. It is not the first time the Court has done it. I pointed out other instances in my statement—Miranda, Gideon, and apportionment.

Apportionment would be the best analogy where the Court, which had a history of saying we will not act in this matter, it is a political decision, we will not get into that thicket, suddenly turned and said our past decisions are no longer relevant; even though we have considered them before, we are now reversing and saying that henceforth, legislative bodies other than the Congress must be apportioned on the basis of population. That was the Supreme Court reversing itself completely from past decisions.

In Roe, they never reversed themselves. In the entire history of the Supreme Court, they had never had a constitutional question posed involving abortion and privacy. It was not posed in Vuitch, and they did not go beyond the Vuitch case which was on the issue of whether or not the District of Columbia statute was unconstitutionally vague. But when finally faced with the constitutional issue of privacy and abortion, they, for the first time, made a decision. They did not reverse themselves, they did not suddenly step into a thicket they had not been in before. They had never been there. They never reversed themselves.

The reason that this country and some Members of this Congress get so "het up" on this particular action of the Supreme Court is not that it is unique. It is not unique. It is that they do not like the decision. And they are attempting to reverse it by citing legal precedents when, in fairness, the argument ought to be, "We don't like the moral conclusion they have come to."

That is a fair argument. I support the conclusion they have come to; the Senator from Utah does not. But to say that the Supreme Court did something that was unheard of, to say that the Supreme Court took an act that they have never taken in any other area—

Mr. HATCH. Will the Senator yield?

Mr. PACKWOOD. Yes.

Mr. HATCH. The Supreme Court overturned 50 State laws in the 1973 decision.

Mr. PACKWOOD. Did they overturn any decision they made before?

Mr. HATCH. No, but they did overturn the laws of 50 States.

Mr. PACKWOOD. What did they do in Miranda?

Mr. HATCH. If I may just add, citing the commerce power is a very apt illustration. The Federal Government, including the Supreme Court, especially the Supreme Court, has utilized the commerce power to justify any Federal law it wants to create. That was so before Roe against Wade; that will be so after Roe against Wade; and it will be so assuming this amendment passes on the floor.

There is no doubt in my mind that under the commerce power, Congress could hypothetically preempt almost all regulatory powers left to the States. Congress could find that babysitting affects interstate commerce and set national standards governing babysitting. In other words, any problem with Congress broad exercise of its commerce power is not a problem

with this constitutional amendment. This amendment simply allows the Constitution to operate as it did prior to 1973.

Mr. PACKWOOD. But does the Senator agree that we could craft an amendment very specifically that could prohibit this Congress from—an amendment——

Mr. HATCH. No, I do not agree. I think we could craft an amendment that would be more stringent, but calling that more States rights than this is not constitutionally sound. The Constitution defines the rights of the States. This amendment is based fully upon letting those rights of the States operate with respect to abortion.

Mr. PACKWOOD. We could craft an amendment that would be specifically States rights and not prohibit abortion at all.

Mr. DANFORTH. Mr. President, I wonder if the Senator from Oregon would mind my asking him a question.

Mr. PACKWOOD. Certainly.

Mr. DANFORTH. Mr. President, I did not enter this colloquy earlier. I know Senator SYMMS is waiting to make a speech, as am I. But I do have a question.

I was struck by one comment Senator PACKWOOD made, which was that one thing Congress did not like was the particular moral conclusion reached by the Supreme Court. I am curious to know when the Supreme Court got into the business of making moral conclusions?

Mr. PACKWOOD. There are those who disagree with their decisions who say they make moral conclusions all the time. There are those who agree with them who call them legal decisions.

Mr. DANFORTH. I hope we can all agree that, insofar as the Supreme Court purports to decide constitutional issues, those decisions are based on a reading of the Constitution and they should not reflect a moral conclusion on the part of the Court.

Mr. PACKWOOD. I was reflecting, when I used the word "moral," the argument of the critics that they made a moral rather than a legal decision. I find the decision legal.

The main point I was making is that the objection to this decision is not that, for the first time in 160 years, they entered into this area. They did that in Miranda, they did in Gideon, they did in apportionment.

Mr. DANFORTH. It is clear that there are many, many people in the United States who are against abortion and many people in the United States who, as reflected by their elected representatives in State legislatures, would pass laws against abortion. I take it the argument before us right now is not an argument on whether or not we are for or against abortion; rather, it is a question as to what is encompassed within the Constitution and what should be encompassed within the Constitution, insofar as there is an alleged right to an abortion created by the Constitution, the establishment of such a right moving the matter outside of the realm of the State legislatures and outside of the realm of whatever the people or their elected representatives happen to think about the matter.

Mr. PACKWOOD. That is correct. All I am saying is that for those who want to overturn the decision, they should not use the argument that the Supreme Court has done something unique in its history. It has not. They have reversed themselves in other cases. They have found new law that they did not find before. I think it is an unwise precedent to say that this is the only time the Court has ever done it and therefore, and only for that reason, it should be reversed.

Mr. HATCH. If the Senator will yield, that is not what we are saying.

Maybe we can allow these two Senators to express themselves, but I would like to ask the Senator this question in advance, then we shall chat about it later.

He has suggested that the amendment is a non-States-rights amendment. I would like to ask him to share with me an area of law that he does believe to be the subject of the concept of States rights. We can discuss this further later.

I yield at this time to the distinguished Senator from Idaho and then after the distinguished Senator from Idaho I yield to the distinguished Senator from Missouri.

Mr. SYMMS. I thank the distiguished Senator from Utah. I rise in support of his amendment, would like to address a few elements of this important issue.

Mr. President, I ask unanimous consent to revise and extend my remarks and to insert at the end of my remarks a page of footnotes to material that I will mention.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. SYMMS. Mr. President, the recent Supreme Court decisions on abortion have demonstrated once again just how extreme the Court's position on abortion really is. We should all by now be aware of the facts that the Federal judiciary has imposed a policy of abortion-on-demand for the entire 9 months of pregnancy. The only other country with such a permissive national policy is Communist China.

The courts have prohibited any legislative response to some things that I really think we can all agree need to be addressed.

Late-term abortions result in hundreds, perhaps thousands, of children who are born alive but dying from the trauma of the abortion. Girls as young as 14 or 15 are required to have access to abortion even when their parents are convinced that abortion is not in their daughter's best interests. Courts have ordered nonvoluntary abortion for mentally retarded women. Some of these women have died as the result of their abortions. And now we are told, in the latest Court decree, that States cannot even require that women be informed of the medical risks of abortion, or of the stage of development of the fetus they wish to abort.

In effect, the courts have substituted their judgment for the judgment of legislatures, of parents and now even of the women who seek abortion without sufficient information to make an informed choice.

One of the most troublesome, and indeed horrifying, consequences of the judicially imposed abortion "right" is the growing practice of sex-selective abortion. More and more parents are utilizing prenatal tests to discover the sex of their unborn child, and aborting that child when it is found to be the "wrong" sex.

If this seems rather farfetched to my fellow Senators, I would ask them to consider this: Prenatal testing is readily becoming standard medical practice—not only for women thought to be at increased risk of bearing a handicapped child, but for any woman who seems concerned about her pregnancy. More alarming is the fact that many physicians and geneticists are perfectly willing to assist patients in their efforts to identify and abort children of the unwanted sex. The prevailing policy is to give the parents this information if they wish to have it. At New York Hospital, for example, requests for amniocentesis solely for sex determination are fairly frequent. And at least one specialist in amniocentesis there admits that there is no way to prevent patients from using such information to abort the "wrong" sex. Nor can any legislature fashion a law to prevent this practice so long as the Supreme Court's right to abortion is allowed to stand.

In a special report on the ethical, social, and legal issues surrounding prenatal diagnosis, the Genetics Research Group of the Hastings Center argued that there should be no legal interference with parental choice in the area of sex-selective abortion. The report stated that abortion performed because the child is the wrong sex can appear justifiable to some parents and should be respected.

The head of the genetics unit at George Washington University Hospital has said that he has no hestitation about helping parents choose the sex of their children via abortion—he says that he just does not recognize any absoluted here.

Perhaps Tabitha Powledge of the Hastings Center summed it up best:

"* * * does it make sense at all to talk about limits of any sort of prenatal diagnosis followed by abortion in cultures where abortion-on-demand, for any reason whatever, is both legal and widely acceptable?"

Earlier I alluded to Communist China's permissive policy on abortion. The Chinese have developed a new test which can determine the sex of the fetus as early as the 7th week. This has greatly facilitated sex-selective abortion in that country, and interestingly, out of every 30 children aborted, 29 are female. For a variety of reasons, in China the wrong sex is the female sex. The same is unfortunately true in our own country. According to studies at Princeton and Cleveland State Universities, such a preference for male children also exists in the United States, though to a somewhat lesser extent. It is sadly ironic that abortion—which is so often mistaken for a women's rights issue—poses a disproportionately large threat to female children.

Perhaps no two Senators share exactly the same position on abortion. But I think that nearly all of us can agree that we ought not to have a policy which allows late-term abortion for no other reason than that the child is of the wrong or unwanted sex. How can we make any pretense of supporting equal rights for women if we allow sex-selective abortion to continue? The issue of abortion is inarguably a difficult one for this Senate to deal with, but we have a responsibility to deal with it. The necessary first step to any legislative involvement in the abortion issue is an amendment overruling Roe against Wade. The Hatch-Eagleton amendment does just that—and nothing more. There is no neutral position on this issue; to do nothing is to allow the Court-imposed abortion policy, including sex-selective abortion, to continue unabated.

I urge all Senators who recognize that there are some abortions which should be restricted or regulated to vote for the Hatch-Eagleton amendment.

A DECISION FOR "A WOMAN AND HER DOCTOR"?

Mr. LAXALT. Mr. President, groups which advocate legal abortion quite often invoke a slogan to the effect that abortion should be "A decision made between a woman and her doctor." Even some professional pollsters have used this phrase in seeking to measure public opinion on whether or not abortion should be legal.

I submit that it is a very misleading slogan. It is misleading because it conjures up the image of a caring physician, advising a woman who has some sort of medical problem as to whether it might be advisable to have an abortion.

This image has almost nothing to do with the reality of abortion in America.

Dr. Bernard Nathanson, now a professor of obstetrics at Cornell University, was a founding director of the organization which is now known as the National Abortion Rights Action League (NARAL). Dr. Nathanson was for a time the director of the world's busiest abortion clinic, in New York City. After that Dr. Nathanson became very involved in fetology, the medical study of the unborn child, and this led him to rethink his position on abortion. In 1979 he wrote a book, "Aborting America." describing his change of mind.

Nathanson has pointed out that the doctor who performs an abortion is almost never involved in the decision to perform the abortion. Dr. Nathanson states:

> A doctor does not participate in the making of the decision except in very restricted circumstances—perhaps 1 percent of all abortions, or less.

Doctors are seldom involved in the abortion decisions because abortion decisions seldom involve any genuine medical reasons. When the Hyde amendment first went into effect in 1977, it permitted continued medicaid funding of abortion for rape, incest, to save the mother's life, or to prevent severe and long lasting physical health damage. Under this language, the number of abortions funded under medicaid immediately dropped by over 99 percent.

The more candid abortion advocates admit that a genuine risk to the mother's health is involved in very few abortion decisions.

For example, a leading prochoice spokesman, Dr. Irvin M. Cushner of the University of California Medical School, a former deputy assistant secretary for population affairs in the Department of Health and Human Services, testified before the Subcommittee on the Constitution on October 14, 1981. Senator HATCH asked a question regarding reasons for abortions. Dr. Cushner responded:

> The data with which I am familiar would indicate that something on the order of 2 percent of all abortions in this country are done for some clinically identifiable entity—physical health problem, amniocentesis, and the indentified genetic disease or something of that kind.
>
> The overwhelming majority of abortions in this country are performed on women who for various reasons do not wish to be pregnant at this time. Some of them do not wish to have children ever, but the overwhelming majority do not wish to be pregnant at this particular time. Their reasons are a mixture of social, economic, educational, or whatever (Hearing record, vol. 1, p. 158).

Senator HATCH then asked, "How often, in your experience, are abortions truly necessary to save the life of the mother or to insure her physical health?" Dr. Cushner responded, "In this country, it is about 1 percent." And he said, "My reasons for supporting the other 99 percent have nothing to do with physical health" (hearing record, vol. 1, pp. 158-159).

Testifying on the same day was Dr. Jasper Williams, chairman of the Department of Obstetrics and Gynecology at Barnard Hospital in Chicago and one who has practiced in low-income areas of Chicago since 1953. In that time, Dr. Williams testified, "I have never seen a case that required therapeutic abortion."

To return to my original point, Mr. President: The rulings handed down by the U.S. Supreme Court on the 15th of this month demonstrate very clearly that this slogan about abortion being "A decision between a woman and her doctor" is a canard.

The city of Akron, Ohio, had enacted an ordinance which required that, prior to an abortion, the abortionist must provide the woman or the minor girl seeking the abortion, with certain information, including the information that the unborn child is a human life from the moment of conception. The Court struck down this requirement, ruling that it was unconstitutional to seek in this way to influence the woman's decision.

I wish to focus at the moment, however, on another section of the ordinance, which was examined separately by the Court. Under section 1870(C) of the Akron ordinance, the attending physician was required to inform the woman seeking an abortion

> . . . of the particular risks associated with her own pregnancy and the abortion technique to be employed including providing her with at least a general description of the medical instructions to be followed subsequent to the abortion in order to insure her safe recovery, and shall in addition provide her with such other information which in his own medical judgment is relevant to her decision as to whether to have an abortion or carry her pregnancy to term.

The Supreme Court noted that "the information required clearly is related to maternal health and to the State's legitimate purpose in requiring informed consent." The Court further noted that the section "merely describes in general terms the information to be disclosed. It properly leaves the precise nature and amount of this

disclosure to the physician's discretion and 'medical judgment.' "

Nevertheless, the Supreme Court declared this section of the Akron ordinance to be unconstitutional. Why? Because the ordinance required that the information—which the Court acknowledged was important information—be given to the woman by the doctor. The Court said that there was no need for the State to require that "the physician performing the abortion, or for that matter any physician, personally counsel the patient in the absence of a request." Yet this is precisely the kind of information one would expect the doctor to supply if the decision to abort the baby is indeed made by the mother and the doctor.

So, Mr. President, I suggest that it is time to retire the slogan that abortion should be "A decision between a woman and her doctor." For it is nothing more than an attempt to cloak with the prestige of the healing profession a practice which has nothing to do with healing. And it is a device for concealing the manner in which the assembly-line abortion industry actually functions.

The PRESIDING OFFICER. Who yields time?

Mr. HATCH. Mr. President, I yield such time as the Senator from Missouri needs.

I thank the Senator from Idaho for his comments.

Mr. DANFORTH. Mr. President, I rise today in support of Senate Joint Resolution 3, the human life federalism amendment, which would amend the Constitution to establish legislative authority in Congress and the States with respect to abortion.

At the outset, let me state that I personally oppose abortion. However, the issue in Senate Joint Resolution 3 does not depend on one's personal view of the question of abortion itself. It is perfectly consistent for one to advocate legalized abortion and yet to support this resolution. This is so because the issue before us is not whether abortion should be legal, but rather whether the decision itself is properly legislative or judicial.

This proposed amendment to the Constitution would restore the status quo ante that existed prior to Roe against Wade with respect to the power and responsibility to resolve abortion issues. This amendment would restore the constitutional balance of power between the States and the Federal Government, and between the legislative and judicial branches of Government.

Even many who support legalized abortion are critical of the Supreme Court's decision in Roe against Wade. They challenge the decision because in creating a new constitutional right to abortion it greatly reduced powers traditionally held by State legislatures.

As the political commentator George Will has noted, the Supreme Court's Roe against Wade decision forged from a "privacy right" a "scythe" to mow down State laws of 50 States that expressed community judgments about the issue of abortion. Those who opposed these judgments had them overturned by judicial fiat—not by democratic persuasion.

The result has been a substantial disenfranchisement of the people and a significant shift of power from State legislatures to the Federal courts. The licensing and practice of medicine, matters of public health and morals, the terms and conditions of marriage, and the special protection granted minors have all been historically within the province of State legislatures. So has the regulation of abortion itself. Indeed, community standards for health, safety, and morals have always been within the power of State governments and have been determined by the legislative branch—the elected representatives of the people.

The process of transferring this power from State legislatures to the Federal courts was accomplished by the Supreme Court in but a short period of time. The right to abortion, nowhere found in the Constitution was based on the right to privacy, itself nowhere found in the Constitution.

Senate Joint Resolution 3 would restore authority to the State legislatures with respect to abortion. It would restore the constitutional balance upset by Roe against Wade, and reenfranchise the people to fashion a solution to the abortion problem—returning the issue to the representative branches of government and the democratic process.

Mr. President, in the framework of our Constitution, such issues as abortion—so fundamentally linked to health, medical concerns, and family relations—have traditionally been matters to be addressed by State legislatures. Indeed, the whole subject of domestic relations, husband and wife, parent and child, belongs within the scope of the laws of the States, which have had broad authority to protect minors and to regulate the status and obligations of marriage.

Like general police powers, regulation of medicine, domestic relations law, property law, as well as trusts and estates, authority over abortion is outside the specific enumerated powers of the Federal Government set forth in the Constitution and, prior to Roe against Wade, was within the purview of primary State authority.

This State authority would be restored by Senate Joint Resolution 3, but this amendment would not create any new constitutional rights or prohibitions. It would not require legislative action, and it would not compel or prohibit the State legislatures or Congress from adopting a prohibition on abortion. The States would be allowed a wide variety of options with respect to this matter. The people would be reenfranchised to shape, through their elected representatives, an abortion policy that is reflective of their community judgments and values.

These policies may vary from State to State. That is as it should be. Respect for such local community consensus and the virtues of diversity are fundamental to the vitality and strength of our Federal system. The values of a country develop from the consensus of its people, evolving in the legislative process. Values are not served by stripping legislatures of their power and by informing the people that there are no valid community standards.

Mr. President, I urge all my colleagues to support this amendment—even those who do not share my view of abortion. I call upon them to join in this effort to restore the constitutional balance between State and Federal government—between the legislative and judicial branches. This amendment returns authority with respect to abortion to the democratic legislative process and it respects the principles of federalism upon which our Nation was founded.

Mr. HATCH. Mr. President, I thank my distinguished colleague from Missouri for the excellent statement he has presented and for the point of view he has eloquently expressed.

I yield at this time to the distinguished Senator from Oklahoma.

Mr. NICKLES. Mr. President, first, I thank Senator HATCH for the outstanding leadership he has given on this matter, together with Senator EAGLETON and others.

Also, I compliment the leadership of the Senate for their efforts in working with those who are in favor of this measure and those opposed, particularly Senator PACKWOOD, and for their cooperation in allowing this issue to be brought before the Senate and to be voted on by the Senate.

Mr. President, today I join a number of my colleagues in support of Senate Joint Resolution 3, the Hatch-Eagleton amendment to the Constitution. The amendment says simply this: "A right to abortion is not secured by this Constitution." The fundmental purpose and effect of the amendment is to return the sensitive and controversial issue of abortion back to the people of this country, through their elected representatives.

Ten years ago, the Supreme Court was asked to rule on the issue of abortion in the decision of Roe against Wade. A pregnant single woman, under the pseudonym of Jane Roe, challenged the State of Texas' prohibition against abortion, except when it

was necessary to save the life of the mother. At the time that this case was being considered by the Court, there were 31 States of the Union with statutes that protected unborn human life. In 19 other States, abortion was legal under very limited circumstances, such as rape, incest, or when there was a likelihood that the child was going to be handicapped. Even the State with the most liberal laws on abortion—New York—abortion on demand existed only through the first 6 months of pregnancy. In no State of the Union had a majority of the populace recognized an unlimited right to abortion.

Undaunted by this consensus of the country, in one fell swoop the Supreme Court established abortion-on-demand as the law of the land. Many people do not understand that the Court did, indeed, legalize the taking of unborn life, right up to the last month—even the last week—of pregnancy. But that is, in fact, what the Roe against Wade decision did. Finding some medical significance in dividing up the development of the child into three stages, the Court established legal policy at each stage of pregnancy. According to seven Justices, during the first 3 months of pregnancy, the Constitution gives the right to a woman and her physician to make a decision about abortion without any legal hindrance. During the second trimester of pregnancy, the Court acknowledged a public interest in protecting and preserving the life of the mother, certain licensing requirements for abortion facilities could be required by the States. During the last 3 months of the pregnancy, the Court noted the "potentiality of human life" and said that the State may regulate abortion with one exception. If a physician agrees with a woman that her life or health is endangered by the pending birth of this very viable infant, then abortion is, again, a private choice. The Court later defined the term, "health of the mother" to include emotional or psychological well-being. The bottom line of this interpretation was and is that a woman can attain an abortion at any time during the baby's life within the womb as long as she and her physician agree that there might be physical or emotional stress or hardship caused by the birth of the child.

In addition to pointing out the very radical change of policy that this decision represented for our country in 1973, I should also like to point out the absurdity of the ruling from a medical and scientific viewpoint. It is very difficult to understand the Court's rationale for even attempting to address the viability question. At the time that Roe against Wade was decided, infants were surviving birth at 28 weeks or 7 months, today infants can survive premature birth at 22 weeks or 5½ months. Tomorrow viability will be even earlier. In this context, it becomes clear that "viability" is only a measurement of the life support systems around the baby. It is not a measurement of the humanness or aliveness of the baby, as the Court seemed to indicate.

Indeed, this question leads to the very basic flaw in the Court's Roe against Wade decision. To rule on the legality of abortion, one has to decide two things: First, what right the woman has to make a decision about having an abortion; and, second, what rights are to be accorded to the developing child that the woman carries. On the first question, the Court decided that the woman has a "right to privacy." On this point, we all would agree. None of us wants any part of the Government to regulate our personal choices like marriage, procreation, or family relationships. For any right to supersede such basic liberties would have to be most compelling.

In addressing the second question, however, the Court avoided the most fundamental issue. Two arguments were made in support of the developing child's right to legal protection. First, that the "fetus" is a person, as protected under the 14th amendment, which states that, "Nor shall any state deprive any person of life, liberty, or property without due process of law . . ." In response to this argument, the Court acknowledged that if personhood were established, then the fetus' right to life would then be guaranteed. However, based on a reading of history and their understanding of the word "person," the Court found that unborn children do not qualify as "persons."

The second argument given to support the right of the developing child to be protected was simply this: that life begins at conception and the state has a compelling interest in protecting life from and after conception. Now, it does not take a scholar to discern that this is the fundamental question in the debate on abortion. There is no doubt about a woman's right to privacy, we all agree on and cherish that right and privilege. However, if and when the right to privacy is placed in competition with the right to life, them we must affirm the higher and more fundamental right of an unborn child to live. Freedom has been and should be granted to all of us, as long as our practices do not infringe upon or abridge the rights of others. And so, what did the Court do with the key question of whether the "fetus" is life, with its tremendous implications on the outcome of the ruling? They did nothing.

They did not address the issue. Instead, they pointed to the divergence of views as to when life begins and thus declined to resolve the question. To me, this is astonishing. It is incomprehensive that the Court, when left with apparent uncertainty about whether a developing child is a life or not, would go ahead and OK the aborting of some 1.5 million children a year. If we are to err in this most crucial issue, should we not err with the possibility of protecting life?

And so, 10 years later, here we stand. The issue has not gone away. And unlike some others, I think that even regardless of the outcome of tomorrow's vote, I do not think it will go away with this debate.

Despite the powerful teaching effect of the law, that generations of Americans are now being raised to not bat an eye about abortion, there are still those who will not, indeed cannot, rest while the taking of innocent life is sanctioned in this land. The ramifications of the abortion decision in America are serious and far-reaching. Certainly, it is inevitable that once we allow the rights of one class of citizens to be eroded, then all of our rights are endangered.

For this reason, I implore my colleagues to support Senate Joint Resolution 3. The Hatch-Eagleton amendment simply brings the issue of abortion back to the people, by allowing elected representatives to respect and respond to the public's views on abortion. The amendment would allow Americans the opportunity to develop a consensus on the issue of abortion, something that Roe against Wade suppressed wholly and completely. This amendment represents a far more moderate measure than the Court's action which, as I mentioned earlier, usurped all existing State law in the Nation. It has become clear that the Court is not yet ready to reconsider the Roe against Wade decision from their most recent affirmation of that ruling. Therefore, it is my hope that Congress will take this issue out of the arena of the Court and place it before the people, so that the many divergent views alluded to by the Court can have their expression on this issue.

I also add to my colleagues that it is my desire that we would not even need the amendment that we have before us today. Certainly, the first preference of this Senator and probably many who desire to protect the life of the unborn children would be for the Court to reverse its ruling. Then we would not be wrestling with the various constitutional amendments or bills of those who have been working for this. But right now this is the best opportunity I think that we have to allow States the opportunity to protect the lives of unborn children.

So I urge my colleagues to join me in supporting Senate Joint Resolution 3.

Mr. HATCH. Mr. President, I thank the great Senator from Oklahoma for his excellent remarks and tell him I personally appreciate it.

I now yield to the distinguished Senator from Utah, Senator GARN.

Mr. GARN. I thank my colleague from Utah.

Mr. President, of all the slogans that dominate the national debate on abortion, the most commonly used are the words "prochoice" and "freedom of choice." The very fact that the "abortion rights" lobby insists on calling itself prochoice instead of proabortion is of some interest. The National Rifle Association, which favors the choice to carry firearms without legal restrictions, is universally called the gun lobby or gun-owners lobby; those who favor the choice of voluntary school prayer are referred to simply as advocates of school prayer; and so on. Only in this one area do the advocates of a particular practice and institution shy away even from naming the substantive issue involved, instead hiding behind the euphemism that they favor "choice." But of course, what is really being defended is a particular set of unpopular and widely disputed Supreme Court decisions determining the legal status of abortion. In fact, if one investigates the consequences and apparent direction of those decisions, "free choice" is the last thing one could come up with as a description of what they promote.

Certainly they do not promote the choice of the American people to rule themselves through their elected representatives. The Supreme Court has invalidated virtually all substantial restrictions on abortion, establishing a permanent policy of abortion on demand which extends in practice up to the point of birth. This is clearly a policy which was not chosen by the American people in 1973—for not a single State had an abortion law this radical—and it is one which would not be chosen by them now.

Nor do these decisions promote the free choice not to support practices one finds abhorrent. In 1980, the Supreme Court narrowly avoided imposing a nationwide policy of court-ordered abortion funding by a 5-to-4 decision, after years of court battles and the filing of an amicus curiae brief by hundreds of Members of Congress. Yet several State supreme courts, most notably in Massachusetts, California, and New Jersey, have applied the "right" of abortion to the appropriations process with greater zeal, invoking various provisions in State constitutions to force taxpayers and legislators to fund elective abortions. In Illinois, a Federal court has invalidated a law subsidizing charitable groups which offer alternatives to abortion, because that law did not also provide funds to promote abortion. Public hospitals have been told by some courts that they do not have the choice of promoting the Hippocratic Oath—that is, they cannot refuse to open their facilities to the practice of elective abortion. So even in States where public funding of abortion is prohibited, the taxpayers are still forced by Federal courts to subsidize nontherapeutic late-term abortions through the taxes which support public hospitals. Last week the U.S. Supreme Court refused to hear an appeal from a ruling of this sort involving the city of Virginia in Minnesota.

Some of my colleagues may wish to point out that people often have to pay taxes for things they do not like. I would like to ask them if there is any other situation in which taxpayers are forced to pay for a practice which was a felony only a few years ago throughout the Nation. I would like to ask them if public hospitals are now forced to perform any procedures that doctors have been solemnly vowing never to perform for the last 2,500 years.

Even religious groups which condemn abortion as an unspeakable attack on human life are forced to involve themselves in the abortion industry. Some religious employers have had to file suit in Federal court to defend their own first amendment rights, because a Pregnancy Discrimination Act enacted in 1978 would force them to pay for abortions and for sick leave to obtain an abortion in violation of their consciences.

This year we find ourselves debating a Fair Insurance Practices Act (H.R. 100) which would go even further—if passed without amendment, it would force all men and women in the United States to buy insurance coverage for elective abortion whenever they purchase a health insurance plan of any kind. This is a logical, if absurd, extension of the principle that abortion is just an ordinary medical procedure like any other—the road from abortion as "right" to abortion as legal obligation seems very short. Interestingly, proabortion groups—they surely do not deserve the title prochoice in this context—have unanimously denounced any effort to amend this bill to allow women to choose whether they want abortion coverage or not. These groups claim that such a respect for the woman's freedom of choice would be an insult to her and a violation of civil rights. In other words, "choice" is OK, as long as it's a choice to subsidize abortion; no other choice is morally or legally acceptable.

This trend toward coercion of conscience can be traced back to the legal rationale of the 1973 abortion rulings themselves. In 1975, an article in the Columbia Journal of Law and Social Problems observed that conscience clauses allowing a refusal to perform abortions on "free exercise of religion" grounds are "not without difficulties" since 1973. This is partly because "many denominational hospitals are recipients of governmental aid, and arguably are State institutions for fourteenth amendment purposes"—an argument now strengthened by court rulings in Bob Jones and other cases. Attorney Harriet Pilpel, general counsel to the Planned Parenthood Federation of America, has argued that Roe against Wade means that abortion is "sound medical practice" as a matter of law, and therefore that doctors who refuse to perform abortions violate the American Medical Association's Code of Ethics because they practice medicine in accordance with sectarian "dogma." I would like again to add that the "dogma" in question is one shared by the Hippocratic Oath which every physician was required to swear to until recently. It seems obvious that if the current judicial trend continues, Federal courts will soon be deciding whether the fundamental "right" of abortion makes this procedure into a fundamental matter of "public policy" which overrides claims based on the first amendment. Private church hospitals could then be forced to open their facilities to abortion services under pain of losing their tax-exempt status, their medicare and medicaid reimbursements, and so on. It is clear that the self-styled prochoice movement considers this as part of its agenda.

Even as currently enforced, Federal laws protecting the consciences of health care personnel are clearly inadequate; 7 years ago an obstetrical nurse in Florida was dismissed from her job because of her refusal to participate in abortions. She was reinstated when an appeals court invoked the State's "conscience" law; but even this court noted that the dismissal would have been justified if retaining this nurse created any undue hardship in providing elective abortion services. Similarly, the aforementioned law review article observed:

> Since public hospitals are under a constitutional duty to provide physicians willing to preform abortions, State laws prohibiting discrimination in employment cannot be invoked as an excuse for failing to comply with affirmative efforts necessary to provide abortion services.

But how does a hospital fulfill this affirmative duty to hire abortionists without discriminating in its hiring practices against people unwilling to perform abortions? Apparently this part of the prochoice agenda has begun to be accepted by our Highest Court; for in refusing to grant certiorari in city of Virginia against Nyberg last week, it seemed to affirm that some public hospitals do have a constitutional duty to provide facilities for abortions.

Yet another coercive edge to the prochoice agenda can be found in the growing tendency to recognize claims for wrongful life and wrongful birth. In many of these cases, physicians have been penalized with enormous monetary damages for failing to per-

form or counsel abortion when there is a chance that a child may be born with a mental or physical disability. In one case, a physician was penalized for failing to advise abortion although abortion was illegal in that State at the time the woman in question was pregnant—the court observed that the physician should have facilitated the woman's journey to another State so she could exercise her right to an abortion. A California State appeals court has suggested that a handicapped child should be able to sue her own parents for wrongful life, because they failed to destroy her before birth. Is there any doubt that both the physician's free choice and the dignity of so-called imperfect life are being denied here?

The idea that abortion is now a matter for free decision arrived at by "a woman and her physician" therefore ignores the fact that the physician himself—or herself—is being pressured into a proabortion stance by the law in various ways.

But leaving aside the last-mentioned court ruling—which fortunately has not yet been followed by other courts—some of my colleagues will say they are standing up for the "free choice" of the individual woman faced with an unwanted pregnancy. After all, they will say, our law does not force a woman to have an abortion against her will. Each woman is free to make her own choice. This was clearly part of the Supreme Court's own rationale in deciding Roe against Wade. Yet I fear it is not so simple. Current abortion policies actually provide little or no protection for the freedom of the woman's choice.

This is at least partly because of the absolute character of the Supreme Court abortion decisions themselves. During the first trimester they allow legislatures to do very little more than assure that the abortionist has a license to practice medicine. Again and again, the States' efforts to protect the health and the free decisionmaking of the woman involved have been crippled by judges following the Supreme Court's lead. The States cannot prohibit abortion—but they also cannot step in effectively to regulate or license abortion counselors, to prevent quiet coercion of boyfriends and relatives, or to limit exploitation by unscrupulous abortionists. The "informed consent" provisions enacted by the city of Akron, and now invalidated by the Supreme Court, are a case in point. The Court has rejected every one of these provisions as unconstitutional, even where they provide simple medical information about the size and physical characteristics of the fetus. This providing of information from a medical textbook has been denounced by some in the prochoice movement as an imposition of religious dogma and an attack on constitutional liberties. The Supreme Court's majority opinion in the Akron case has even rejected as unconstitutional a text informing women about possible complications of abortion and about the availability of alternatives to abortion, because such provisions are "designed to influence the woman's informed choice between abortion or childbirth." The principle at work here seems to be that a woman is more free the more ignorant she is. In other words she has the right to decide on an abortion, but no right to the information necessary to make that decision. This is an attack on informed consent which would not be tolerated with regard to any other potentially hazardous medical procedure—and where there is no informed consent, there is no real deliberation or choice. Even the idea of a "waiting period," to allow the woman time for a considered decision, is under attack by the Court: it claims that the attending physician—that is, the abortionist himself—must have full discretion as to whether a waiting period would be beneficial to his patient.

An even more ominous judicial trend involves court orders for abortion in the case of children and mentally incompetent adults. The Supreme Court has told us that parents cannot veto their minor daughter's abortion decision. Even under the age of 15, a judge must be available who can order the abortion if it seems to be in her best interests. But some of those involved in this area of law apparently want judges to mandate abortions even when it is not at all certain that the woman involved wants that abortion. When a probate judge in Michigan refused 2 years ago to rule that a late-term abortion was in the best interests of a pregnant 11-year-old girl, even the ACLU admitted that there was no clear-cut evidence that the girl involved even wanted an abortion; yet the NOW and other local prochoice groups publicly denounced the judge and circulated a petition to have him removed from office.

Last year, a Pennsylvania judge invalidated the informed consent section of that State's abortion law as unconstitutional, so that abortion could be performed on a comatose woman who had never expressed any desire whatsoever to have one. This judge decided that even if only the woman's social or emotional well-being were at risk, a physician could unilaterally decide the abortion is necessary when the woman's own consent cannot be obtained.

In a similar case, Chief Justice Warren Burger has refused to block an abortion ordered by the court-appointed guardian of a woman in a semicatatonic state, although no evidence was presented to show a medical need for the abortion. This woman had been fully competent earlier in her pregnancy and had not sought an abortion.

A 38-year-old woman named Mary Doolittle, not comatose but under treatment for schizophrenia in a State facility, narrowly averted being forced to undergo an abortion she definitely did not want in 1981, but only after her Catholic family went to court to fight the State of California for 3 weeks and offered to adopt the child when born. A mandatory abortion was avoided because the State hospital's physicians had not provided solid evidence that the abortion would be beneficial. Ms. Doolittle's family later told reporters that the State's aggressive struggle in the courts to require her to undergo an abortion had frightened her greatly and added to her mental stress.

Are cases like these the beginning of a new stage in the development of the abortion right? The pro-choice activists themselves seem to think so. The fourth annual meeting of the National Abortion Federation in 1980 featured not one, but two key addresses advocating mandatory abortion for teenagers under a certain age. Abortionist Jane Hodgson asked rhetorically, "Does freedom of choice really apply to the very young? * * * Shouldn't we * * * mandate against continuing pregnancy in the very young, say, those less than 14 years?" Another speaker, Lonnie Myers, endorsed this suggestion and remarked that "it's time we had the guts to say that 14 is too young to have a baby." These two are among the people who pushed for exclusion of parents from teenagers' abortion decisions a few years ago; now it seems that this is a way of making room for State coercion, not for the teenager's own decision.

The judicial framework for such coercion is already in place, for it has already been developed in the context of medical treatment decisions for mentally incompetent adults. The courts can affirm that teenagers have a constitutional right of privacy, including a right to choose abortion, but that they are too immature to exercise it on their own behalf. The courts must exercise it for them, using a doctrine of substituted judgment.

These trends are not part of a progressive trend toward greater personal liberty. They are part of an increasingly coercive use of badly thought-out court rulings to impose the acceptance of abortion on a reluctant society.

About a century ago, this country went through a conflict over the moral and legal status of black Americans that has some instructive parallels to our current crisis. Then, as now, an unjust practice was defended under the banner of free choice, for people opposed to slavery were told that they need not own slaves themselves if they did not choose to do so. Then, as now,

it was not so simple: People who abhorred slavery were coerced into tolerating it as a public institution, and into cooperating with it through laws for the return of runaway slaves to their owners. Then, as now, the unjust institution had its own internal dynamic; it insisted upon public acceptance from all Americans until the basic moral issue could no longer be ignored. When Abraham Lincoln was asked what would convince the slaveholders of the good will of his party, he replied:

> This, and this only: cease to call slavery wrong, and join them in calling it right. And this must be done thoroughly—done in acts as well as in words. Silence will not be tolerated—we must place ourselves avowedly with them. . . . All they ask we could readily grant if we thought slavery right; all we ask they could as readily grant, if they think it wrong. Their thinking it right and our thinking it wrong is the precise fact upon which depends the whole controversy.

This is no less true of abortion than it is of slavery. The principles of Roe have taken on a life of their own, involving a dynamic which pushes toward universal acceptance of abortion as a positive value, as a required component in good medical practice, and as a preferred—even obligatory—solution to an ever-expanding list of personal and social problems. The self-proclaimed advocates of abortion choice will not rest until we are all forced, by word and deed, to treat abortion as an ordinary and morally unimpeachable aspect of American life.

The insane logic of the Supreme Court's abortion decisions should not be allowed to extend further into the coercion of American consciences. If we must continue to disagree on abortion, let us at least agree that its promotion is not a suitable area for constitutional mandate. Let us restore some balance and some sanity to our legal system. I urge my colleagues who value civil liberties to support Senate Joint Resolution 3.

Mr. HATCH. Mr. President, I thank the distinguished Senator from Utah for his remarks and I appreciate having my colleague who has been at the forefront of this battle for so many years with us, and I appreciate what he said in the Chamber today.

I now yield such time as she may need to the distinguished Senator from Florida.

Mrs. HAWKINS. Mr. President, I rise in support of the Hatch-Eagleton constitutional amendment regarding abortion.

I am deeply disturbed over the tragic results of botched legal abortions in this country. I am doubly disturbed when these problems involve the people of Florida. Each horror story is a human tragedy caused by our Government's failure to protect the health of its citizens. Abortion has become an essentially unregulated business. The right to an abortion today does not mean the right to a safe abortion.

Recently this tragedy was brought home to me with a kind of grisly impact. In my home State of Florida, a doctor in an abortion clinic lost his license to practice medicine by endangering the life of a 12-year-old girl. The abortionist in question, who was described in the press as having performed thousands of abortions did such a hatchet job that a hysterectomy and colostomy were required to save the girl's life. In a 3½-year period, four women died at his hands.

Examples like these have plagued legal abortion since Roe against Wade. Good investigative reporting always seems to uncover clinic corruption. This happened in Dallas and El Paso and most recently in the city of Chicago. A 5-month investigation of Chicago abortion clinics by the Chicago Sun-Times in 1978 led to a lengthy series of exposés.

The Chicago Sun-Times investigation uncovered 12 maternal deaths in four Chicago abortion clinics, none of which had shown up in the official compilations of abortion-related deaths.

And in its report on the original form of the Hatch amendment, published last June the Judiciary Committee noted:

> The Chicago experience is also instructive in shedding light on the implications of the Supreme Court's rulings on first-trimester abortion: Public health officials in the city were aware of numerous abuses at these clinics, but their attempts at licensing and regulating them had been ruled unconstitutional by the United States Court of Appeals for the Seventh Circuit, which pointed to Roe and Doe's ruling that regulations designed to protect the pregnant woman during an abortion are invalid until after the first trimester of pregnancy. The Supreme Court refused to review this decision.

Dr. Bernard Nathanson was a founding director of the National Abortion Rights Action League (NARAL). At one time he directed the Nation's busiest abortion clinic, in New York City. After that he became heavily involved in neonatology, and this led him to reevaluate his position on abortion. In his 1979 book, "Aborting America," Dr. Nathanson writes of the shoddy workmanship of many a clinic doctor. His exposé is corroborated by such organizations as Women Exploited by Abortion (WEBA), each of whose members has been victimized by abortionists. These women are living proof of abortion's hazards and its demeaning assembly line atmosphere.

Inevitably, these tragedies will continue because Roe against Wade effectively prevents abortion clinic regulation. My own State of Florida is a case in point. In 1978, the Florida Legislature adopted our abortion clinic licensing statute. The Florida Department of Health and Rehabilitative Services also adopted rules and regulations, which were minimal. Both legislative and departmental actions were in reponse to a series of scandals in Miami and were designed to protect the health and safety of women who were clinic patients. A Federal district court, however, was not favorably disposed. The regulations were enjoined in early 1979 and have never been in effect. Thus, in Florida a woman's fundamental right to an abortion prevents the enforcement of standards that can protect her health.

This is not only true of Florida, it is true whenever and wherever the State has tried to protect the health of its citizens from the hazards of abortion clinics. In Illinois, the Chicago Board of Health was prevented from regulating any abortion clinics within its jurisdiction. When a lower district court decided in favor of regulation, however, its decision went unimplemented through a successful appeal to a higher court, the U.S. Court of Appeals, Seventh Circuit.

As a legislator I resent the Court's intrusion into a legitimate exercise of the power of the State. Our State governments must retain the right to protect the health of their citizens. If the people deem that abortions should be legal, we must at the very least, assure that the abortions performed are safe. And if under the Hatch-Eagleton amendment to the Constitution, my State of Florida decides to allow abortions, its citizens will finally enjoy the privilege of State regulations of an extremely delicate and sensitive operation. The people of this country—and the women of Florida—surely deserve that.

Mr. President, I urge my Senate colleagues to join me in supporting this amendment. I ask unanimous consent that a series of articles from the Miami Herald on this subject be included in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Miami Herald, Jan. 7, 1983]

ABORTION CLINIC'S FILES SEIZED

FOUR HAVE DIED AFTER OPERATIONS AT MIAMI CENTER

(By Steve Sternberg and Bob Lowe)

Soon after the controversial Women's Care Center opened in 1978, a patient died of post-abortion complications.

Over the next three years, another woman died and several others nearly bled to death. Though the signs were clear that there were problems at the abortion clinic, state and local regulations left the clinic open.

Thursday, 48 hours after the fourth abortion death and 19 days after the third, a team of investigators from the Miami Police Department and the State Attorney's Office seized evidence for a possible manslaughter case.

Police had spent the day staked out at the clinic, which was closed for the day. Young women continued showing up trying to keep

their appointments at the center at 5601 Biscayne Blvd.

Records in Dade Circuit Court and state regulators' files disclose botched abortions and accusations that clinic personnel practiced medicine without a license.

One of the targets of the continuing allegations has been Hipolito Barreiro, the 52-year-old owner of the firm. At least two former patients have accused him of practicing medicine without a license.

"It's very unfortunate," said Barreiro before he accompanied investigators to the State Attorney's Office for questioning Thursday night.

"We are very, very, sorry. It's circumstances beyond our control."

Barreiro labeled as "propaganda" accusations that he participated in abortions and that the clinic provides substandard care.

"Four thousand operations in two years and only two complications," said Barreiro, referring to the record complied by Dr. Orland Zaldivar, his clinic's physician. "That is [better than] the statistics."

Medical experts disagreed.

"Abortion is one of the safest operations in medical practice," said Dr. David Grimes, an abortion expert at the federal Centers for Disease Control in Atlanta.

Between 1972 and 1978, abortion mortality in the United States was 2.2 deaths per 100,000 operations, he said.

"Three deaths in three years is certainly an epidemic," said Grimes, interviewed before the death of Shirley Payne Tuesday. "It's more than you would expect even at a large facility."

Indications that something was wrong at the clinic date back to Ruth Montero's death three and a half years ago.

One former clinic doctor lost his license after the Florida Department of Professional Regulation [DPR] alleged that he was legally blind in one eye, high on Quaaludes and had helped clinic personnel practice medicine without a license.

Through it all, the clinic stayed in business—helped by a high turnover of physicians and Florida's weak regulation of abortion clinics.

Then Myrta Baptiste, 26, died Dec. 19. Shirley Payne, 33, died after an abortion Tuesday.

Miami police, the State Attorney's Office and representatives from various other agencies met Thursday to coordinate a criminal investigation into the deaths. Officials indicated that the probe into the two recent fatal abortions is focusing on Barreiro.

"Our principal target in this case is Hipolito," said Ray Havens, an investigator for the State Attorney's Office during the meeting.

In addition to the four abortion-related deaths since August 1979. Dade County court records show six medical malpractice lawsuits have been filed against the clinic, its doctors and Barreiro since 1980, three of them in 1982.

Three have been settled out of court for various sums. Three others are pending.

In addition to those lawsuits, claims by two other patients have resulted in payments to them by the clinic's insurer, say state officials.

The center and its doctors deny the malpractice allegations, often pointing to the fact that patients have signed forms indicating that they understand the risks of surgery.

They also contend in most of the lawsuits that the women failed to return for required post operative examinations after the abortions and have failed to inform clinic doctors of complications.

Jane Carroll, 22, was paid $50,000 by the clinic's insurer without any court action after an abortion a year ago resulted in an emergency hysterectomy at Hialeah Hospital.

"I'm lucky to be here," said Carroll, who nearly bled to death because of a perforated uterus. Surgeons also had to remove fetal parts left inside Carroll, medical records show.

"I can't have kids ever, ever!" Carroll said.

Carmen Neumann alleged in her lawsuit that the clinic took her to a hospital three days after an abortion resulted in a perforated uterus and bowel. She arrived too weak to sign an admission form and required immediate surgery to stop internal bleeding, the suit alleged.

"It was a nightmare," said Neumann. "I think it [the clinic] should be closed."

Her case was settled for $3,000 after she left the state and her lawyer concluded the then-uninsured Barreiro had few assets at the time that could be recovered.

Other plaintiffs' lawyers say they have opted for quick, modest settlements because the clinic's insurance coverage is minimal—$25,000 per claim for the center and a like amount for each of its doctors.

"It's the minimum we write," said Alan Shiver, director of the Florida Medical Malpratice Joint Underwriters Association, which provides the insurance.

A COMMON THEME

Joel Kaplan, who represented two clients who have sued the clinic, said he considers Barreiro "bulletproof," meaning that corporate laws and other methods of protecting assets would make it difficult to collect on a large jury award.

Allegations in the lawsuits have this theme in common: Abortions botched or incomplete, leaving the patient with a perforated uterus that isn't detected or treated properly.

Since the clinic opened about four years ago, the center has performed 7,000 abortions, said Barreiro. He said the deaths and cases of perforated uteruses are unremarkable.

National statistics show "roughly one out of every 100 operations results in perforation," he said Thursday.

Physician Grimes, however, said recent reports indicate that perforation of the uterus occurs in about one out of 500 cases. Sometimes the perforations are minimal, resulting in minimal bleeding, and heal by themselves, he added.

He said cases where the perforation damage is so great that it requires a hysterectomy are "very, very rare," and happen about once in every 10,000 abortions.

NEVER PARTICIPATED

Although some of the suing patients indicate in the lawsuits they believe Barreiro participated in their surgery, they also admit that they were unconscious during the procedure. Barreiro admits being present during abortions, but said he never participated in them.

Former patient Carroll said Barreiro gave her an injection to put her to sleep before her operation.

"He gave me the injection and I went out," she said.

Neumann alleged in her suit that Barreiro gave her several injections without supervision after her surgery. That would violate state law prohibiting unlicensed persons from practicing medicine.

Barreiro contended in the suit that he limits his involvement with patients to "counseling" them. Only licensed personnel practice medicine at his clinic, he said.

Some of the allegations of malpractice were passed on to the state Department of Professional Regulation [DPR] and the State Attorney's Office, say plaintiffs and their lawyers.

"I can say the DPR was . . . fairly interested and the assessment was they couldn't do anything about it." said Miami lawyer Howard Kay, who represented Neumann. "The same for the State Attorney's Office."

"It's kind of sad because maybe if they had, two people would be alive today."

The DPR did take action against clinic doctor Alfred C. Pin, however.

Pin was named as a defendant in one suit settled for an unknown sum and his insurance paid for half of an out of court settlement for in a second case.

Pin voluntarily relinquished his license last June after the DPR alleged a wide range of misconduct, including exposing himself to female patients at another job, prescribing 38,690 Quaalude tablets improperly during a four-month period and being under the influence of Quaaludes during a physical examination.

One finding was that when Pin was told a patient in a dermatology clinic was experiencing a rapid heart beat, he disconnected an electrocardiogram monitor and asked everyone to pray.

The DPR also accused Pin of helping clinic personnel practice medicine without a license.

During that investigation, complainant Brenda F. Maultsby alleged that clinic owner Barreiro prescribed her drugs. Barreiro, Pin and another clinic employe denied the allegation.

After Pin relinquished his license and returned to Argentina where he received his medical training, the case was turned over to the State Attorney's Office, said DPR officials.

State Attorney Janet Reno said the file was returned because the allegations could not be proven.

DPR officials said they could take no action concerning Barreiro because he is unlicensed and the department has jurisdiction only over licensed physicians. Barreiro, trained in medicine in Argentina, is not licensed to practice in Florida.

Regulation of abortion clinics in Florida is slight. The only licenses required to open one are routine business and occupation licenses obtained from the city and county, the same ones needed for a laundry or shoe store.

Nursing homes are tightly regulated in comparison. Restaurants are inspected regularly for sanitation. Abortion clinics are not. Outpatient surgical clinics must have proper life-saving equipment and quick access to a nearby hospital for emergencies. Abortion clinics have no such requirements.

Abortion clinics are only required to employ licensed physicians to perform abortions, keep adequate records and properly dispose of fetal matter, say state officials.

State standards for abortion clinics governing cleanliness, patient care and hospital backup were struck by a 1980 court order.

CHRONOLOGY OF CLAIMS AGAINST WOMEN'S CARE CENTER

This chronology details lawsuits and other claims filed against the Women's Care Center in the past 3½ years:

Carmen Neumann underwent an abortion at the clinic on Aug. 4, 1979. Over the next three days, clinic doctors repeatedly visited her at her hotel because she was experiencing increasing pain.

Finally, on Aug. 7, clinic owner Hipolito Barreiro and an employe rushed her to International Hospital, where surgeons found she was bleeding internally, her uterus and bowel perforated, Neumann's suit alleged.

Her recovery took months, including 15 days in the hospital.

The suit, which named the clinic and Barreiro as defendants, was eventually settled out of court for an undisclosed sum.

Ruth Montero, a 23-year-old Davie resident, died on Aug. 7, 1979, after an abortion at the clinic.

Digna Harris nearly died after having an abortion on May 21, 1980, according to her lawyer, Joel Kaplan.

She and her husband sued the center and Barreiro four months later, alleging that the defendants operated in an "unskilled manner," perforating her uterus and bowel, and that they failed to realize she had been injured. The suit was settled for $39,000.

Avis Quarrel, a nurse, sued the center and Dr. Alfed Pin, a doctor at the center, alleging that the abortion in October 1980 failed to terminate her pregnancy and caused other injuries.

The defendants argued that Quarrel never reported any problems after the operation and that she failed to appear for a post-operative examination. The case was settled for an unknown sum.

Moura Morales, 25, died after an abortion on May 8, 1981, at the clinic. Her husband and son sued a year and a half later, blaming the center for her death, and naming the center, Barreiro, Pin and Dr. Elisa Nieto-Avila as defendants. The case is pending.

Linda McKinnon nearly died after having an abortion on July 10, 1981, according to her lawyer.

She and her husband filed suit a year and a half later, against the center and Barreiro. The court action alleges that the defendants failed to diagnose her post-operative problems and failed to consult with other physicians.

Lawyer Kaplan said he has discussed a settlement in the pending case of about $50,000.

Jane Carroll, 21, had an abortion on Dec. 29, 1981, and was then rushed to the Hialeah Hospital.

Surgeons found that her uterus was ruptured and that parts of the fetus remained inside of her, according to medical records. They performed a hysterectomy to stem the profuse bleeding and save her life.

Carroll never sued, but her lawyer negotiated a settlement of $50,000 with the clinic's insurer. Records indicate that Dr. Orlando Zaldivar performed the abortion.

Ivonne Bruno, 25, arrived at American Hospital on May 9, 1982, suffering from abdominal pain and chills after an abortion at the clinic the previous day.

At American Hospital, surgeon Pedro Ramos performed a total hysterectomy after finding a "large" slit in the uterus, according to medical records. Ramos said parts of the fetus were still in Bruno's body.

She sued the clinic, Barreiro and clinic physician Zaldivar, who allegedly performed the abortion. The lawsuit contends that Zaldivar is incompetent to perform abortions and that the clinic failed to monitor Bruno for a long enough time after the operation. The pending suit asks for $5 million.

Myrta Baptiste, 26, died on Dec. 18, 1982, following an abortion at the clinic. Police launched a criminal investigation into the case.

Shirley Payne, 33, died on Jan. 4, 1983.

[From the Miami Herald, Thursday, Jan. 6, 1983]

ABORTION CLINIC SHUT FOR DAY AS HRS OK'S PROBE OF DEATHS

(By Bob Lowe and Steve Sternberg)

The white stucco building that houses the Woman's Care Center bore a scrawled note Wednesday, taped to the front door.

"Sorry, the clinic is closed today. All previous appointments will be rescheduled for tomorrow."

The abortion clinic at 5601 Biscayne Blvd. was closed after the death of 33-year-old Shirley Payne Tuesday. She was the second woman to die following an abortion at the clinic in 17 days, the fourth since August 1979.

Police on Wednesday would not disclose the identity of the Doctor who had performed Payne's abortion.

Outside the clinic, feminist activist Roxcy Bolton greeted more than a dozen would-be patients in little more than an hour. None was aware of the controversy surrounding the clinic.

"I'm not saying that you should not come here," she said, "I'm saying that it is not safe. It's a butcher shop."

Several of the women were Haitian and unable to read the newspaper article she handed. Bolton told them not to come back and to relay the message to their friends.

The unusually high number of deaths at the clinic prompted state legislator and physician Rep. David J. Lehman (D., Hollywood) to call Wednesday for an investigation into the center and state regulation of other abortion clinics not affiliated with hospitals.

"It's shocking to me," said Lehman. "I think it's incumbent on the department [Florida Department of Health and Rehabilitative Services] . . . to make an investigation."

Robert Daniti, HRS general counsel, said, "We are authorizing an inspection."

Meanwhile, the Miami homicide detectives probing the two most recent deaths were scheduled to meet with State Attorney Janet Reno and officials of the Florida Department of Professional Regulation, which monitors licensed physicians.

Clinic owner Hipolito Barreiro, 52, was unavailable for comment Wednesday. Phone calls to the clinic and his home went unanswered.

On a state application for a Florida medical license examination, Barreiro stated he was born in Havana, had trained in medicine in Argentina for nine years and practiced medicine in West Africa for seven years.

Barreiro never took the exam, state officals say, because he was lacking an educational requirement. Barreiro has told police that only licensed physicians operate in his clinic.

Mr. HATCH. Mr. President, the distinguished Senator from Oregon earlier asked if any early abortion statutes extended to abortions performed before quickening.

I have to admit there are allusions in the common law, and writers on the common law say that it did. But I personally agree with the Senator that there is a real question of whether before quickening there were criminal statutes applicable.

I think the reason for that is that the States in the 18th century and before did not have, as we all know, the sophisticated medical knowledge we have today and, therefore, they had a problem of proof in abortion cases in showing that a living being had been killed. So I do not think anybody can take any comfort in the fact that the common law is unclear in that area.

The only time in the pregnancy that clearly indicated life was present to them was at the time of quickening and, therefore, the States set their prohibitions to operate beginning at that point.

I might add, if the States at that time had possessed sonograms, amniocentesis, or a number of other items of medical technology, the problem of proof would have been obviated, and the statute probably would have been extended to all stages of pregnancy, and I think even in the medieval times that would have happened. Indeed, in the mid-1800's, science began to advance to show the existence of human life, and at that time the statutes were expended to cover the entire term of pregnancy, and that is the point I was trying to make before.

I make these points realizing that I have interrupted the question that I did ask the distinguished Senator from Oregon. Let me repeat it. The distinguished Senator from Oregon has suggested that the present amendment is not a States' rights amendment.

I would like to ask him if he would be kind enough to share with this body an area of law that he believes to be subject to the concept of States' rights.

Mr. PACKWOOD. I am not sure I understand the question. What I said about this amendment is, it is not a pure States' rights amendment, and if you wanted to draft one that would be a pure States' rights amendment, it can be drafted.

Mr. HATCH. I think the Senator is correct. We can draft an alternative amendment that would seem to some more pure from a "States' right" perspective, but I would reject the Senator's contention that it would or could operate any differently than the present amendment.

Mr. PACKWOOD. There is a misunderstanding among a number of people involving this amendment as to whether this is a States' rights amendment, and I do not want anyone to think if this amendment passes, Congress is precluded from acting. Congress will indeed have power to act under what you call residual powers. But, indeed, we will have the same power to act we had prior to Roe against Wade. We just chose not to

act, and I think Congress—many Members of the Senate—think if we pass this, we are not going to have any more fundamental debates and anymore abortion debaters, and I fear we are.

Mr. HATCH. I also hasten to point out that if we drafted an alternative "States' right" amendment, as the Senator has suggested, we would still be in the same position where residual powers would be left in the Federal Government, with far-reaching interpretations of the commerce clause, the spending clause, and the taxing clause.

It seems to me that such a reservoir of power would necessarily exist under virtually any legislative formulation. In reality the present amendment is as thoroughly consistent with the traditional notion of "States' rights" as any amendment could be on this subject. Further, it conforms precisely to the constitutional concept of "States' rights" that characterizes so many other areas of our legal system. To go beyond this—and eliminate even a residuum of Federal power—is to do something unprecedented within our constitutional structure.

I might add that if you look at some of the areas that have been expressly said to be "States' rights" areas, such as domestic relations, there would be at least a residuum of Federal authority. The FBI, for example, is now involved in searching for children who have been taken from one parent by another. Domestic violence between spouses is now the subject of Federal legislation. There are Federal statutes relating to bigamy and adultery. There are Federal income tax laws that relate to alimony and child support.

There is no question in my mind that Congress has residual powers over virtually anything under the commerce and the taxing and spending clauses of the Constitution.

Mr. PACKWOOD. Let me say this so that whoever is listening understands: If this amendment passes, Congress will not be precluded from passing a human life bill, and we will be right back with that jackpot with or without this amendment, and I do not want Senators to think they are going to avoid that problem by our passing this amendment.

Mr. HATCH. I understand the Senator's point.

Mr. President, I now yield such time as he may need—Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum and I ask unanimous consent that the time be charged to neither side.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll. The legislative clerk proceeded to call the roll.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, I ask unanimous consent to have printed in the RECORD a list of organizations that are in opposition to Senate Resolution 3. I do this because they are a broad cross-section of religious, medical, civil libertarian, and other kinds of organizations. In addition, there is a great deal of material, both statistical and narrative, involving issues relating to abortion and choice, and much of the information coming both before and after some of the Supreme Court decisions that are relative. I ask unanimous consent that the material be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ORGANIZATIONS OPPOSED TO S.J. RES. 3

Abortion Rights Mobilization.
The Alan Guttmacher Institute.
American Academy of Child Psychiatry.
American Association of University Women.

THE PROPOSED CONSTITUTIONAL AMENDMENT ON ABORTION—WHAT IT WOULD DO AND WHAT IT WOULD NOT DO

INTRODUCTION

Congress has been presented once again with a proposed constitutional amendment that in design and effect would abolish the constitutional right to abortion. The proposed amendment, however, contrary to what many assume, would not vest control of abortion in the states; federal power in the field still would be supreme. Neither would the proposed amendment conclude the national controversy surrounding abortion; rather it would set off a new round of political and legal battles. And where this might lead—the ultimate effect of the proposed abortion amendment—cannot be predicted.

BACKGROUND

Since the Supreme Court's landmark decision in *Roe* v. *Wade* [1] in 1973, women in the United States have had a constitutionally protected right to abortion. In *Roe*, the Court held that the "right of privacy . . . founded in the Fourteenth Amendment's concept of personal liberty and restrictions upon state action, . . . is broad enough to encompass a woman's decision whether or not to terminate her pregnancy." [2] Simply stated, *Roe* proscribed practically all government regulation of abortion during the first trimester of pregnancy; allowed government regulation of abortion procedure during the second trimester only as reasonably related to the health of the pregnant woman; and during the third trimester, permitted government regulation or even prohibition of abortion (except where necessary to preserve the life or health of the pregnant woman) for the purpose of promoting potential human life.

The following constitutional amendment has been voted out of the Senate Judiciary Committee, without recommendation: "A right to abortion is not secured by this Constitution." The stated purpose of the proposed amendment is to nullify *Roe;* there is also an implicit assumption that the state—and only the states—then would be free to legislate on the subject of abortion.

THE PROPOSED AMENDMENT IS NOT A STATES RIGHTS MEASURE

There can be little doubt that the proposed amendment would eradicate the federal constitutional right to abortion recognized in *Roe.* But the proposed amendment is no mere states' rights measure—it opens the field of abortion to regulation by the federal as well as the state governments.

In other words, if the proposed abortion amendment were duly ratified and became part of the United States Constitution, the federal government—not the states—still would have supreme power to permit or forbid abortion. The states would have authority to allow, restrict, regulate or prohibit abortion only to the extent not inconsistent with federal law. The Supreme Court continues to make this point crystal clear:

"Notwithstanding the limited application of federal law is the field of domestic relations generally, . . . this Court, even in that area, has not hesitated to protect, under the Supremacy Clause, rights and expectancies established by federal law against the operation of state law, or to prevent the frustration and erosion of the congressional policy embodied in the federal rights. . . . While "[s]tate family and family-property law must do 'major damage' to 'clear and substantial' federal interests before the Supremacy Clause will demand that state law be overridden," . . . "[t]he relative importance to the State of its own law is not material when there is a conflict with a valid federal law, for the Framers of our Constitution provided that the federal law must prevail." [3]

If the proposed abortion amendment were enacted, Congress would be free, for example, to enact laws declaring that life begins at conception, thereby pitting the rights of the unborn against the rights of women. Another possibility might be congressional invocation of the commerce power to prohibit all interstate shipments of any medications or instruments used to cause or induce abortions. Such federal legislation effectively would preclude states that wanted to allow abortion from doing so, since no means for performing abortions would be legally available. Or, the federal government, again pursuant to the commerce power, might require all hospitals "in or affecting commerce" to provide abortion services.[4] Such federal legislation, by virtue of the supremacy clause, would preclude states that wished to ban or more strictly limit or regulate abortions from doing so.

Similarly, pursuant to the spending power, the federal government might condition all hospital funds provided to a state on that state's providing—or prohibiting—abortion services in its hospitals.[5]

The states too, in the exercise of their police powers, pursuant to their own constitutions, legislation, regulations, and court and agency adjudications, might act to permit, restrict, regulate or prohibit abortions. Again, of course, to the extent that state and federal regulation were inconsistent, federal power would prevail by force of the Constitution's supremacy clause.

In short, the proposed constitutional amendment virtually would guarantee that the debate over abortion would become more rather than less intense at all levels of government.

THE PROPOSED AMENDMENT WOULD LEAD TO LITIGATION

Moreover, although the proposed abortion amendment would eliminate the constitutional right to abortion, it would leave the Constitution otherwise intact. Any state or federal attempt to regulate the field could be challenged as violative, for example, of substantive due process or equal protection. Thus, for example, a state's permitting abortions only in hospitals, but not in less expensive clinics, might be challenged on the equal protection ground that once a state has determined to permit abortions under certain circumstances, there is no rational basis for permitting them in hospitals only. Or a state's conditioning the right to abortion on parental or spousal approval could be attacked on the First and Fourth Amendments grounds that once a state has decided to allow abortions in certain situations, it cannot condition that right on coerced communication with a parent or spouse, particularly given the highly private nature of the communication. Or a state's making the performance of an abortion criminal except to preserve the life of the pregnant woman might be challenged on vagueness grounds. Would such a statute include a woman's threat to commit suicide if not given an abortion? Would it include a situation where the statute include a woman's threat to commit suicide if not given an abortion? Would it include a situation where the woman's life expectancy would be two years shorter if she had a child than if she had an abortion?

Could a state that did not allow abortion also forbid within its borders advertisements of the availability of abortions in another state—or would this violate the First Amendment's freedom of speech clause? [6] Could the federal or a state government require even hospitals with religious affiliation to provide abortions—or would this violate the free exercise clause of the First Amendment? Could a state condition the right to abortion on a residency requirement? [7]

CONCLUSION

Such questions, and litigation, would proliferate if the proposed abortion amendment became the law of the land. In short, the proposed amendment would create more problems than it would solve; it would not put to rest the national controversy surrounding abortion. Inevitably, it would prompt all manner of federal and state legislation and regulation, which in turn certainly would lead to an endless series of confrontations in the courts.[8]

SOME REPLIES TO "SOME QUESTIONS AND ANSWERS ON THE HATCH-EAGLETON AMENDMENT TO THE HUMAN LIFE FEDERALISM AMENDMENT" BY SENATORS HATCH AND EAGLETON, DATED MAY 3, 1983

1. How does the Hatch-Eagleton Amendment alter S.J. Res. 3?

The Hatch-Eagleton Amendment deletes the second sentence of S.J. Res. 3. The second sentence would have granted Congress and the States concurrent authority to restrict and prohibit abortion and stipulated that a state law more restrictive of abortion would govern over a conflicting law of Congress. Without this second sentence, the proposed amendment is comprised of ten words: "A right to abortion is not secured by this Constitution."

Proponents would argue: Silence on this question. They tell us only that the second sentence of S.J. Res. 3 will be deleted, leaving 10 words negating, rather than affirming, a basic right: "A right to abortion is not secured by this Constitution." That second sentence of the originally-proposed amendment would have made clear that Congress and the states possess concurrent authority

---

[1] 410 U.S. (1973).

[2] 410 U.S. at 153.

[3] *Ridgway* v. *Ridgway,* 454 U.S. 46, 54-55 (1981) (citations omitted).

[4] *See, e.g., Katzenbach* v. *McClung,* 379 U.S. 294 (1964), upholding Congress' power pursuant to the commerce clause, in enacting Title II of the Civil Rights Act of 1964, to require all public accommodations to make goods and services available to all persons regardless of race, color, religion or national origin. Arguably, Congress could not, pursuant to the commerce power, require state owned and operated hospitals to provide abortions. *See National League of Cities* v. *Usery,* 426 U.S. 833 (1976), holding that pursuant to the commerce power, Congress could not amend The Fair Labor Standards Act so as to prescribe a minimum wage a state must pay its employees; in our federal system, the commerce power does not empower Congress to force decisions on states affecting integral government functions. *But see E.E.O.C.* v. *Wyoming,* 51 U.S.L.W. 4219 (March 2, 1983), holding that pursuant to the commerce power, Congress could amend The Age Discrimination in Employment Act so as to proscribe states from discriminating against their employees or potential employees on the basis of age.

[5] Such legislation pursuant to the spending power should be applicable to private and state hospitals alike. *National League of Cities, supra,* 426 U.S. at 852 n. 17, itself acknowledged that Congress' power to regulate under the spending power is broader than under the commerce power.

[6] *See Bigelow* v. *Virginia,* 421 U.S. 809 (1975), holding that a state cannot proscribe advertising within its borders of the availability of abortions in another state.

[7] *See Doe* v. *Bolton,* 410 U.S. 179 (1973), striking down a state's residency requirement for abortion as violative of the right to travel inherent in the privileges and immunities clause of the Constitution.

[8] Contrary to its sponsor' contentions, the proposed abortion amendment would not merely return the law to the *status quo* before the *Roe* decision. Before *Roe,* the Constitution had not authoritatively been held to either affirm or deny a right to abortion. If the proposed amendment were adopted, a right to abortion would be expressly written out of the Constitution, although as this memorandum indicates, passage of the proposed amendment would lead to great confusion about the Constitutional validity of any future federal and state efforts to regulate abortion.

to restrict and/or permit abortions but that in the case of conflict, the more restrictive state law would govern.

Reply to Q & A No. 1: The deletion of the second sentence of S.J. Res. 3 means that the Congress would not have the same power to legislate with respect to abortion as the states, acting under their traditional police powers. But since Hatch-Eagleton is the first proposed amendment to the Constitution negating aright and the scope of that negation is very unclear, it is difficult to predict what powers would reside in Congress to regulate abortion. Proponents of the Amendment would be sure to claim after ratification that if a woman argued that a federal statute was invalid, her argument would amount to one for "[a] right to abortion," because it would be based on the Constitution. While women seeking abortion would vigorously dispute such a broad reading, the outcome is far from clear.

2. What is the purpose of the ten-word Hatch-Eagleton proposal?

This proposed amendment would preclude reliance upon any provision of the Constitution as authority for recognition of any right to abortion. In particular, this amendment would nullify Roe v. Wade and its companion Doe v. Bolton insofar as these cases hold that the Constitution protects an abortion liberty. Thus, the Hatch-Eagleton proposal would restore the status quo ante Roe.

Proponents would argue: That the proposed amendment would merely restore the status quo ante the Supreme Court decisions, holding that the Constitution embraces a right to an abortion.

Reply to Q & A #2: S.J. Res. 3 does not restore the status quo ante Roe v. Wade. Though abortion cases would be back before state courts, the 1973 version of the Constitution would not be. Clearly some constitutional theories and arguments open to litigants in 1973 are meant to be eliminated by S.J. Res. 3. But which ones? It is not certain what the deleted right—the right to abortion—connotes. A woman could no longer argue her right to privacy as a rationale for abortion, but it is unclear whether other claims by a woman to life and health would be excluded, where these asserted rights, and not the right to abortion, are the basis for the woman's attempt to obtain an abortion.

One argument certain to be made is that whatever the basis for a woman's claim—a due process right to health or an equal protection argument against an interspousal consent statute or other claims—they all amount to a "right to abortion." If this version of the amendment were accepted by the courts, the effect on women's rights would be very considerable.

3. What is the holding of Roe v. Wade, Does it only protect first trimester abortions?

In the case of Roe v. Wade, the Supreme Court identified for the first time a right to abortion within the terms of the Fourteenth Amendment to the Constitution. This right was defined with sufficient breadth to result in the overturning of the laws on abortion in each of the fifty states of the Union. In place of these state restrictions, the Court supplied standards for abortion regulation that divided the pregnancy into trimesters.

In the first trimester of pregnancy, the right to abortion is plenary. As the Court stated,

For the stage prior to approximately the end of the first trimester of pregnancy, the abortion decision and its effectuation must be left to the medical judgment of the pregnant woman's attending physican.

In the second trimester, a state's authority to regulate abortion is limited to ensuring the safety of abortion procedures. Again, in the words of the Court,

For the stage subsequent to approximately the end of the first trimester, the State, in promoting its interest in the health of the mother may, if it chooses, regulate the abortion procedure in ways that are reasonably related to maternal health.

In the final trimester, the state at length acquires an interest in protecting unborn life. That protective capacity, however, is subject to significant exception. The Court states that a State "may, if it chooses, regulate, and even proscribe, abortion, except where it is necessary, in appropriate medical judgment, for the preservation of the life or health of the mother." This "health of the mother" exception has effectively consumed the rule because maternal health interests were defined by Roe's companion case, Doe v. Bolton, to include "all factors—physical, emotional, psychological, and the woman's age—relevant to the well-being of the patient." In the words of Professor John Noonan, the absolute entitlement to an abortion is curbed in the third trimester only by the "necessity of a physician's finding that she needed an abortion." In practice, this is not much of a barrier.

In sum, the standards of the Supreme Court have established a national policy on abortion without legal restrictions of any significant kind.

Proponents would argue: The right to an abortion is merely one of public policy and that that right is virtually unrestricted.

Reply to Q & A No. 3: The essence of this Q & A is that Roe v. Wade provides for abortion on demand during nine months of pregnancy. Neither abortion statistics nor the post-Roe caselaw confirms the right to abortion on demand for nine months of pregnancy.

4. Is the Hatch Eagleton amendment sufficient to completely reverse Roe's finding of an abortion right derived from the Constitution?

Yes. On this point, expert witnesses on both sides of the abortion controversy who testified before the Constitution Subcommittee, were in agreement. The ten words, if ratified as part of the Constitution, would overturn the abortion right created in Roe and subsequent cases based upon Roe.

Proponents would argue: Yes, absolutely, without anything more.

Reply to Q & A No. 4: The Eagleton-Hatch answer to this question—and indeed the question itself—postulates a "right to abortion" grounded in the Constitution. No Roe, no right, so gross this answer. But Roe v. Wade does not declare a single right. It weighs the rights of the woman and the fetus and the duty of the state during the three trimesters of pregnancy. If the Hatch-Eagleton answer to this question is that after Roe no provision of the Constitution can be cited in support of a woman's right to obtain an abortion, the amendment does much more than reverse Roe. If a woman may still rely on rights asserted under the Constitution, it will be necessary to sort out what those rights would be after S.J. Res. 3. It makes no sense to bypass these unknowns—and the litigation that will be required to make them knowns—with the catchall phrase "to completely reverse Roe's finding of an abortion right derived from the Constitution."

5. What would the amendment do?

It would restore that status quo ante *Roe* when the states possessed authority to legislate with respect to abortion. The people in the states would be reenfranchised to shape abortion policy through their elected representatives. Policy-making which for a decade has been centralized in the nonrepresentative judicial branch would be subject again to democratic processes. Only by restoring this direct citizen participation in the formulation of abortion policy can the nation expect to achieve a consensus on this sensitive social question.

Proponents would argue: That this policy matter would be returned to the electorate for decision, rather than remaining in the "non-representative judicial branch".

Reply to Q & A #5. (1) See Reply to Q & A #2.

(2) It is inappropriate to suggest that the problem with the abortion issue is the "nonrepresentative judicial branch" or that the problem ought to be assigned to the keepers of the "democratic process." This kind of answer confirms that the approach of the Hatch-Eagleton Amendment, where there is insufficient consensus to amend the Constitution, is to make the abortion issue statutory, changeable by this or that legislative majority. The argument is an echo of the court-stripping bills on abortion, school prayer, and busing offered in the past to reverse Supreme Court decisions. It seeks to resolve an intense division in the country by berating the judiciary and extolling the legislative branch. Both are equally necessary in the democratic process.

6. Is it appropriate to subject the fundamental rights at issue in Roe to democratic decision-making?

In general, fundamental rights of individuals should not be determined by referendum. the problem in the Roe case is that the Supreme Court placed severely restrictive limits on State authority without giving any satisfactory explanation of what percisely are these "individual rights" that are involved with the abortion issue. Critics in the "pro-choice" movement see these as being the right of the pregnant woman to determine how her body is used, while critics in the "pro-life" movement see this as the even more fundamental right of the unborn to life itself. In other words, there is just as much disagreement on the issue of what constitutional "rights" are involved here as there is on the issue of what constitutional of abortion itself. It thus begs the question to attack the immediate amendment as one "restricting rather than expanding" rights.

The purpose of the Hatch-Eagleton Amendment then is not to resolve the persistent issue of which of these conflicting "rights" is paramount, but rather to remove the legal basis for the Supreme Court's dubious resolution of competing interests and allow the States to resolve this controversy in the legislative forum.

Proponents would argue: Yes. And, for the first time, they recognize that there are many and possibly competing "rights" at issue.

Reply to Q & A #6: The logic of the 6th Q & A by Hatch/Eagleton is as follows:

(a) In general, fundamental rights of individuals should not be determined by referendum. (Query: Are the Senators sanctioning the determination of personal rights by the nonrepresentative judicial branch?)

(b) But Roe v. Wade, though dealing with rights, does not explain what those rights are. It's resolution of the conflict between a

woman's rights and those of the fetus is dubious.

(c) Therefore the Court's jurisdiction over the matter should be removed and be replaced by state legislative power.

Boiled down even further, the argument of Hatch/Eagleton is that an unsatisfactory Supreme Court decision justifies removal of the subject matter of the decision and the reassignment of decision-making authority to another branch of government. If you are unhappy with a case and you can't change it through amendment, dismantle the constitutional mechanism that permitted the decision.

7. What could states do under the proposed amendment?

The states would have plenary power to legislate with respect to abortion. In their best judgment, the states might choose to have no policy restricting abortion or might substantially restrict abortions. They could enact civil, regulatory, or criminal sanctions. They might elect, for example, to limit late-term (post viability) abortions, require parental notification or consent for abortions performed on minors, restrict experimental research involving the use of fetuses, regulate abortion procedures for safety, specify that women be apprised of alternatives to abortion, establish a waiting period for abortions, and so forth.

Proponents would argue: The states could do anything or nothing with respect to abortion.

Reply to Q & A #7: It is far from clear that the states would have the powers enumerated in this answer, though it is clear that the co-sponsors think so. The answer is purely result-oriented: Any reliance on a provision of the U.S. Constitution in support of a woman's claim to elect abortion is to seek "(a) right to abortion" and is therefore barred. Under this broad theory—which would be vigorously contested in the courts—the "negative right" declared in S.J. Res. 3 would override any possible use of the Constitution that would result in a judgment permitting abortion. If this is an overstatement of the Hatch/Eagleton position (which hardly seems possible in light of the first two sentences in their Q & A #10), and the Court would be able to consider claims under other provisions of the Constitution, the negative right at the heart of S.J. Res. 3 offers no guidelines whatsoever for the courts and guarantees endless and excruciating litigation.

It is interesting to note that the principal criticism of Roe is that it lacks any clear basis in law and is made up from whole cloth. S.J. Res. 3 guarantees that future case law will do no better.

8. Would this allow states to adopt differing policies?

Yes. Since the Supreme Court's interpretation of the Constitution would no longer mandate a single national policy, states would be free to deal with abortion policy as they see fit. Abortion would be among the many subjects not specifically delegated to the federal government by the Constitution and thus left to the states and the people themselves. Abortion would be restored to its proper place with other subjects regulated by the powers reserved to the states. General police powers, domestic relations laws, insurance laws, corporation and business association laws, property laws, trust and estates laws and any other potential topic of legal concern outside of the specific federal powers enumerated by Article I, Section 8, are all within the purview of primary state authority, as indeed abortion policy was until 1973. All of these policies may and do vary from state to state.

These variances are often beneficial because it allows the states to experiment with different approaches to a legal problem. Thus, as the state legislatures deliberate, a consensus will form around the best solution to the problem. Indeed, this hypothesis was evidenced with abortion policy prior to the interruption by the Supreme Court. In the 5 years preceding Roe, 18 states had changed their abortion laws—all in the direction of more liberal allowance of abortion.

Respect for community consensus and the virtues of diversity have been a vital aspect of the vitality and strength of our federal system.

Proponents would argue: Yes, and that this diversity, even with respect to a fundamental right, is beneficial.

Reply to Q & A #8: There is a deep irony in this paean to diversity and experimentation. One point that both sides in the abortion controversy agree on is that the rights involved are fundamental. Would the proponents of S.J. Res. 3 feel comfortable letting the states experiment with freedom of speech, the right to travel, due process, the free exercise of religious belief, or equal protection of the laws? If abortion is morally repugnant in all circumstances, then is it not so in every state in the union? If the right to choose abortion is a matter for a woman and her doctor in early pregnancy, then is that right properly negotiable from state to state?

On issues of constitutional dimension, diversity cannot take the place of consensus.

9. What authority, if any, would the Federal Government retain with respect to abortion?

Congress would possess a limited residuum of authority to act within constitutional bounds. The Constitution grants the federal government no specific authority to regulate abortion. In all the years prior to Roe, virtually the only direct federal legislation related to abortion was 14 U.S.C. 1461 and 1462 which restricted the interstate transport of abortifacient drugs and devices.

Proponents would argue: "A limited residuum, of authority to act within constitutional bounds". What this means is exceedingly unclear—which is one of the problems with S.J. Res. 3.

Reply to Q & A #9: The answer suggests a limited power in Congress to act on abortion, based on the pre-Roe years. But the pre-Roe years never presented the question of the limits of federal power, and after S.J. Res. 3, those limits might be very different. Would a woman arguing that the Congress had exceeded its authority in an anti-abortion statute be claiming a "right to abortion" by making that argument? Though it would be vigorously contested, the argument would surely be made that any use of the Constitution in support of a claim of right to abortion would be barred because "(a) right to abortion is not secured by this Constitution."

Writing in the National Right to Life News on April 28, 1983, James Bopp, Jr. said that after S.J. Res. 3 Congress could pass a bill "to restrict or prohibit private abortions in addition to limiting state involvement in abortion." While Prof. Lynn Wardle appeared to disagree with Bopp in the same paper and on the same date, at the very least it is fair to say that no one can fairly predict the scope of federal authority over abortion after S.J. Res. 3.

10. What would be the role of the Federal courts under the proposed amendment?

Federal courts would no longer be able to expound a constitutionally protected right to abortion, because the amendment would remove the asserted Constitutional basis for such a right. The Federal judiciary would continue to have responsibility for determining the meaning of the amendment. Other general provisions of the Constitution, e.g., the First Amendment, would continue to limit legislative enactments, as on other matters. State courts would continue to have authority to interpret the provisions of State laws and Constitutions.

Proponents would argue: The federal courts, although no longer able to rely upon a constitutional right to abortion, would still have the responsibility for interpreting S.J. Res. 3. This would clearly be necessary if S.J. Res. 3 were enacted, since litigation would abound.

Reply to Q & A #10: This reply seems to confirm that the proponents of S.J. Res. 3 see the Constitution as providing no basis to assert a right to obtain an abortion. The answer does state that "legislative enactments" would still be subject to [o]ther general provisions of the Constitution, e.g., the First Amendment * * * " But whether the "other" provisions of the Constitution could still be urged in support of a woman's right to have an abortion in given circumstances, as asserted by Rhonda Copelon before the Constitution Subcommittee on March 7, 1983, would be a matter endlessly litigated should S.J. Res. 3 be adopted and ratified.

11. Does the proposed amendment seek to answer the question of when life begins?

No. The proposed amendment would confer no legal status upon the unborn except to the extent of permitting their lives to be protected through state legislation.

Proponents would argue: No, that no legal status is confirmed upon the unborn by S.J. Res. 3.

Reply to Q & A #11: We agree. But if Mr. Bopp is correct (See Reply to Q & A #9) that Congress can enact legislation pursuant to Section 5 of the Fourteenth Amendment, then S.J. Res. 3 confers authority on the Congress to treat life as beginning at conception, even though the Amendment itself does not so declare.

12. How would the amendment treat such matters as rape or incest or abortions related to the health of the mother?

The amendment does not speak to these issues. These would be issues within the competence of the representative branches of the various states.

Proponents would argue: Not at all, that these are matters left to state competence.

Reply to Q & A #12: Again, the proponents assume that no provisions of the Constitution, even a provision not relied upon by the majority in Roe, can be cited in support of a woman's claim to an abortion after S.J. Res. 3. If a woman cites a danger to her health, but not her life, the proponents assume that her due process rights under the Fourteenth Amendment will be subordinate to a State statute that limits abortions to life-threatening situations. An excellent argument to the contrary was made by Rhonda Copelon in her March 7, 1983, testimony before the Constitution Subcommittee.

13. Is this a states right amendment?

Yes. Abortion would be primarily regulated under the reserved powers of the states, as it was for nearly two centuries prior to Roe. The federal government would possess some limited residual powers specified by the strict parameters of Article I, Section 8,

of the Constitution. This is a classic example of the constitutional scheme of federalism.

Proponents would argue: Yes, this is a "classic example of the constitutional scheme of federalism."

Reply to Q & A #13: We have dealt earlier with the state/federal issue. See replies 7-9.

What should be added is the point that S.J. Res. 3 is not a "classic example of the constitutional scheme of federalism." Federalism protects state powers and interests, duties, rights, and remedies from federal encroachment. It does not protect the states from federal laws adopted under Congress' enumerated powers (Art. I, Sec. 8), nor does it permit the states to encroach on personal rights enjoyed by all persons under the Constitution. Federalism talks about basic needs of states and the federal government under a single constitutional instrument. It talks of shared powers and accommodation. S.J. Res. 3 has nothing to do with federalism.

14. How would the amendment become part of the Constitution?

Before becoming a permanent part of the Constitution, the proposed amendment would get to earn the support of two-thirds of the Members of each House of Congress and the approval of three fourths (38) of the State Legislatures.

Proponents would argue: The constitutional amendment reprocess would govern.

Reply to Q & A #14: Agreed.

TESTIMONY OF RHONDA COPELON—CENTER FOR CONSTITUTIONAL RIGHTS ON CONSTITUTIONAL AMENDMENTS TO NEGATE ROE V. WADE

Mr. Chairman and members of the subcommittee: I appreciate the Subcommitte's invitation to appear and discuss the implications of the proposed amendments to overturn the Supreme Court's recognition of the right to abortion in Roe against Wade,[1] by restoring state power or creating federal power to restrict abortion legislatively.

I will address my remarks to the constitutional foundations and significance of the *Roe* v. *Wade* decision and the inefficacy as well as the dangers of the proposed effort to repeal it. I have been asked to focus on Senator Eagleton's proposal to re-empower the states to restrict abortion. Much of what I will say, however, applies as well to Senator Hatfield's so-called "federalism" amendment.

No decision of the Supreme Court has meant more to the lives, the health, the well-being, the freedom and the dignity of women than the decision in *Roe* v. *Wade*. While this decision alone can hardly remedy the historic inequality of women, recognition of the right to make childbearing decisions is fundamental to the attainment of equality and the realization of women's full capacities as human beings.

Roe v. *Wade* ranks with other great decisions that have moved this nation forward on the path toward liberty and equality. Like Brown against Board of Education,[2] it has drawn much criticism and wrought great, but long overdue change.

Roe v. Wade is not, as some of its critics like to contend, a departure from constitutional tradition. It applied to women some of the basic concepts upon which this nation was founded, repudiating the historic disregard for the dignity and personhood of women and the relegation of women to a separate sphere and second-class citizenship. It brought legal theory, developed by and for men, closer to encompassing the existence of women.

Consider for a moment, the relation of some of our most fundamental constitutional principles to the issue of compulsory pregnancy and childrearing:

We all hold as sacred the physical privacy of the home. If we guard so jealously our physical environment and possessions from intrusion by the state, how can we accord lesser status to the dominion and control over our physical self. Indeed, the right of bodily integrity is one of the foundations of the right to privacy.[3] We insist on the right to informed consent to medical treatment; we recognize each individual's right to refuse to donate their organs to save the life of another whole person;[4] we consider the forcible extraction of the contents of a suspect's stomach to be conduct that "shocks the conscience." [5] And yet, those who criticize Roe v. Wade show little concern for massive invasion of physical integrity and privacy that forced pregnancy entails.

The constitutional right of association embraces the right to form a family, to choose our most intimate associates and guide the raising of children. This is an aspect of privacy protected by both due process and the first amendment. The state cannot force or fix marriages nor can we force an unwilling parent to care for a child. It is not for the state to mandate intimate association; and yet the power to block abortion denies to women this right accorded to others.

The first amendment protects thoughts, beliefs, and verbal as well as symbolic expression; we can neither be restrained from speech nor forced to break silence. The Constitution protects these rights not only because of a utilitarian view that a marketplace of ideas serves the public good, but also because of the place of expression in the development of individual identity and the fulfillment of human aspirations. Is not the commitment to bring a child into the world and to raise it through daily love, nurture and teaching an awesome form of expression, a reflection of one's beliefs, thoughts, identity and notion of what is meaningful? Men and women speak with their bodies on the picket line and in demonstrations; women likewise "speak" in childbearing.

The first amendment also protects the right to follow religious and conscientious convictions. It demands that we respect diverse beliefs and practices that involve worship, ritual and decisions about everyday life.[6] We recognize as religious, matters of life and death and of ultimate dimension. We therefore respect conscientious objection to military service. Likewise, the decision whether to bear a child is one of consicentious dimension. The religions of this country are deeply divided over the propriety and, indeed, necessity of abortion. While for some any consideration of abortion is grave evil, others hold that a pregnant woman has a religious and moral obligation to make a decision and to consider abortion where the alternative is to sacrifice her well-being or her family's or that of the incipient life.[7] The right to abortion is rooted in the recognition that women make conscientious decisions too.

Few would dispute that the constitution recognizes the right to work as part of fundamental liberty. And although we have failed to properly implement that right by providing jobs for millions of unemployed people, we deem fundamental the principle, enshrined in the thirteenth amendment, that no person should be forced into involuntary servitude as a result either of private conspiracy or public law. Does this right not extend to woman, entitling her to say no to the unparalleled labor demanded by pregnancy, childbirth and childrearing and to the expropriation of her body and service for the sake of another? If we strip away the sentimentalism that has rendered invisible the work of childbearing and rearing,[8] forced pregnancy must surely be recognized as a form of involuntary servitude.[9]

And what of the equality of women? Not to apply the foregoing constitutional principles to the question of the liberty to choose abortion is to deny to women equal respect and dignity in the most fundamental sense. At the same time, to deny the right to abortion ensures that women will be excluded from full participation in society. Without the ability to decide whether and when to bear children, women lack essential control over their lives. Unexpected pregnancy and involuntary motherhood can preclude education, shatter work patterns and aspirations, and make organizational and political involvement impossible. A woman is no more biologically required to remain pregnant than a cardiac patient is to die of a treatable heart condition. Forced pregnancy is legally imposed by denying access to safe technology which, in myriad other spheres, we applaud as enhancing the possibility for human freedom and endeavor.

In sum, the criticism of Roe v. Wade has less to do with judicial excess than with a view of woman as less than a whole person under the constitution; as someone whose self and aspirations can and should be subordinated to the service of others. It has to do with a failure to understand the gravity with which women view the responsibility of childbearing and the violence of forced pregnancy to human dignity.

To the extent that the effort to overturn Roe v. Wade stems from religious convictions about the personhood and supremacy of the fetus, it imperils a pluralistic society which demands of us all respect for differing and often mutually abhorrent views. One of the nation's great jurists, Judge

[7] For a description of different religious positions, see *McRae v. Califano*, 491 F.Supp. 630, 690-702, 741-42.

[8] As the Court said in *Frontiero v. Richardson*: "There can be no doubt that our Nation has had a long and unfortunate history of sex discrimination. Traditionally, such discrimination was rationalized by an attitude of "romantic paternalism" which, in practical effect, put women, not on a pedestal, but in a cage." 411 U.S. 677, 685 (1973).

[9] In *Bailey v. Alabama* Justice Hughes summarized the purpose of the Thirteenth Amendment: "The plain intention [of the thirteenth amendment] was to abolish slavery of whatever name and form. . . .'; to make labor free, by prohibiting the control by which the personal service of one man is disposed of or coerced for another's benefit which is the essence of involuntary servitude." 219 U.S. 219, 241 (1911).

John F. Dooling, Jr., was right when he said "[t]he irreconcilable conflict of deeply and widely held views on this issue of individual conscience excludes any legislative intervention except that which protects each individual's freedom of conscientious decision and conscientious non-participation."[10]

Thus to give to Congress or the states the power to dictate what shall be orthodox on a matter of this dimension is anathema to our constitutional tradition. Fundamental liberty and respect for individual conscience transcend geographical and political boundaries. That is the meaning of being one nation.

Nor could it satisfy opponents of the right to abortion to have their claims on behalf of the fertilized egg or the fetus determined on a state-by-state basis or subject to political compromise in Congress. It is totally inconsistent with the claim that the fetus is a person to allow what they see as murder in some places and under some conditions. The testimony previously given before this committee demonstrates that Senator Eagleton's proposal lacks principle and is acceptable to no one. It should also be clear that just as it will satisfy no one, it will not put to rest or remove from Congress the abortion issue.

Moreover, it is not at all clear that the proposed amendment can accomplish even the checkered goal it sets for itself. The declaration that "[a] right to abortion is not secured by this Constitution" can not undo the entire foundation of the right to abortion. Privacy, bodily integrity, the rights of conscience, the rights of women to life, liberty and equal treatment under law, and the right to due process, if only in the procedural sense—these rights should not be disturbed by an amendment negating the right to abortion itself.

For example, assuming there is no right to abortion secured by the Constitution, can a state pass a law wholly outlawing abortion? I doubt it. Even Justice Rehnquist, dissenting in Roe v. Wade considers it irrational to prefer the life of the fetus over that of the pregnant woman.[11]

Or to ask the next question: Can a state pass a law which permits abortion only to save the life of a woman? I think there would be great doubt on that score as well. The other dissenter in Roe v. Wade, Justice White, indicated that where abortion is needed to preserve health the rationality of outlawing abortion is in question.[12] For the Court to require that abortion be available where a woman's life and health is at stake is not grounded on the right to abortion; it has rather to do with the right of self-preservation, and, even more fundamentally, with the right to be treated within the bounds of reason.

To limit abortion to life-saving circumstances would also raise other questions under the due process clause. The abortion law at issue in Roe v. Wade, which allowed abortion only where a woman's life was at stake, was invalidated by the district court on vagueness grounds.[13] Can a meaningful distinction be made between life and health or between physical and mental health?[14] I think not.

Last week, Mr. Chairman, you asked Senator Eagleton a series of questions about the impact of his amendment. He answered these in the affirmative. Today I suggest, precisely because Roe v. Wade is so deeply grounded in our fundamental constitutional traditions, that Senator Eagleton's confidence about the restrictive impact of his amendment is misplaced.

For example, you asked, Mr. Chairman, whether the amendment would permit a state to condition abortion on the consent of a woman's husband. The answer is far from clear. A woman's right, married or single, to determine what medical care is necessary and what shall be done to her body, is not grounded on the right to abortion, but on the right of bodily integrity and on the principle that law cannot enforce personal service. A husband has no right to compel the birth of a child, just as he has no right to the law's assistance in compelling his wife's sexual submission to satisfy this or any other desire. And unless the hypothetical consent law were to give the wife a concomitant right to insist on insemination or veto her husband's vasectomy, sexual affairs or financial decisions, all of which equally affect the marriage, spousal consent to abortion would present equal protection problems wholly apart from whether a right to abortion is secured by the Constitution.

You also asked whether this amendment would permit states to pass the so-called "informed consent" statutes. This issue, which is presently before the Supreme Court,[15] would also raise serious constitutional questions apart from the right to abortion. For a state, in the guise of informed consent, to require as the Akron ordinance does, that doctors tell women that the fetus is "human life" raises issues about forced speech and propagation of belief under the first amendment that are not likely to be affected by the proposed amendment. Moreover, the absence of a right to abortion cannot empower a state to require that women be given false, misleading and on-sided information about the risks and benefits of abortion and childbirth. If in the abortion context, a state could compel the telling and hearing of lies, what dangerous power would we have ceded to the state in other areas?

You asked further whether a state would be able to protect the life of a viable fetus or shield doctors and nurses from compelled participation in abortion. No amendment is necessary to accomplish these purposes. The federal goevernment and at least 42 states protect the right of individual conscience to refuse participation in abortion, and the Court has made clear that under a properly drawn statute (and not one that is vague or overbroad) a viable fetus, born as a consequence of an abortion procedure, can be protected.[16]

All this is not to say that I think that your amendment or that of Senator Eagleton will have no effect. To take away the right to abortion, to permit a patchwork quilt of abortion laws, to empower medical committees or courts to second-guess the decisions of a woman and her doctor—any or all of these would deny the fundamental humanity and equal personhood of women.

The practical effect will be devastating although it will not stop abortions. The wealthly will find legal abortions, at added risk to their health, by travelling to states or countries that recognize the right to abortion or by paying the layers of doctors that restictive law would resurrect. The tragic impact of the amendment would fall on the poor, who are disproportionately black and third world, on the working class, and on the young, because they would not have the wherewithal to obtain a safe, legal abortion. The amendment and the legislation it would spawn would consign hundreds of thousands of women each year to the life-threatening risks of illegal abortion, to desperate measures of self-abortion, to life-and-death struggles against complications, and to the health damage, emotional scars and sterility created by criminalization; or, in the alternative, it would relegate them to the life-shattering, and life- and health-threatening prospect of forced pregnancy and involuntary motherhood.

It is also possible that the proposed amendment will undo more of our constitutional tradition than many of its sponsors and supporters might wish. If the amendment revokes the right to privacy insofar as it involves abortion, then what of the right to obtain contraceptives to prevent pregnancy? The most common forms of contraceptive—the low-estrogen birth control pill, the IUD and morning after pills—might be outlawed. Could privacy be further invaded by compulsory pregnancy surveillance and reporting requirements for physicians? Will basic concepts like due process, notice, equal protection and the like be swept aside wherever abortion is at issue?

Never before has this nation—despite great outcry against certain decisions of the Supreme Court—passed a constitutional amendment that took away a fundamental constitutional right. Once before, with the Eighteenth Amendment, we approved an amendment that invaded the private sphere. Prohibition was a disaster: it bred violence, death and disrespect for law; it created huge profits that built a criminal trade; it made criminals of decent people, and it caused the watering down of other constitutional safeguards. To amend the constitution to augment rather than limit the power of government over the personal aspects of people's lives invites these dire consequences. And to do so in an area which is not simply a matter of lifestyle, but affects the right which is a cornerstone of liberty and equality for women, can only produce

Franklin*, 439 U.S. 379 (1979) where a standard for fetal protection was struck down on the grounds of vagueness and overbreadth, not because protection of a viable fetus is impermissible.

massive resistance and unforgiveable carnage.

In sum the effort to recriminalize and thereby stop abortion must ultimately fail because it can alter neither the conviction of women that abortion is our inalienable right, nor the fact that it is a necessity in our lives. I urge, Mr. Chairman and members of the subcommittee, that you recognize that any amendment which seeks to deny the right to abortion will consign women to enormous suffering and threaten the foundations of our pluralistic society. No amendment will put the issue to rest or take it out of the halls of Congress. It can only assure its supporters a place of ignominy in the annals of history.

EXECUTIVE SUMMARY

The Senate Judiciary Committee on April 19, 1983 reported S.J. Res. 3 proposing an amendment to the U.S. Constitution to provide "A right to an abortion is not secured by this Constitution." While this amendment may be designed to restore the power formerly exercised by the states prior to *Roe* v. *Wade* to prohibit or regulate abortion, ambiguities in the wording of the proposal, particularly the "is not secured" language, make any assessment of its impact uncertain at best. Thus, depending on how the courts read its legislative history, the amendment could be read to imply a prohibition on abortion, or alternatively, to accord fetal rights a heightened level of constitutional recognition in competition with the rights of the mother. In either case, however, the proposal might impose limits on the legislative discretion of the states and/or federal government not operative prior to *Roe*. Also possible, and perhaps somewhat more likely, is a judicial construction of the amendment that would preclude the federal government, though not necessarily the states, from recognizing a right to abortion based on legislative or judicial action under the U.S. Constitution. Under this interpretation, because of the explicit reference to "this Constitution," the states would remain free under their state constitutions to legislate in the area of abortion. However, in those states, including Massachusetts, California, and New Jersey, where the highest state courts have found the "right to abortion" affirmatively protected by state constitutional provisions, the legislatures may remain subject to the same legal constraints that presently limit their power to restrict abortion.

LEGAL ANALYSIS OF SENATE JOINT RESOLUTION 3, PROPOSING AN AMENDMENT TO THE U.S. CONSTITUTION RELATIVE TO ABORTION, AS REPORTED BY THE SENATE JUDICIARY COMMITTEE

(By Charles V. Dale, legislative attorney, American Law Division)

On April 19, 1983, the Senate Judiciary Committee on a divided 9 to 9 vote, reported without recommendation a proposal to amend the U.S. Constitution with respect to abortions. That measure, S.J. Res. 3, as sponsored by Senator Hatch et al. and reported from committee provides simply that "A right to an abortion is not secured by this Constitution." The amendment is actually the first sentence of the Hatch proposal as introduced which also included language granting the states and Congress concurrent power to restrict abortion, with the more restrictive regulation governing. The latter language, however, was stricken by the committee.

The apparent objective and one possible effect of the amendment proposed by S.J. Res. 3 would be to essentially restore the *status quo* that prevailed prior to the Supreme Court's 1973 abortion decisions.[1] That is, a woman would have no individual right, protected by the Due Process Clause or other federal constitutional guarantee, to choose to terminate her pregnancy free of the restraints imposed by state law.[2] In addition, the courts would be precluded by the proposed amendment from predicting such a right at some future date upon any provision of the U.S. Constitution. As discussed at length *infra*, however, the effect of the amendment may be limited to federal constitutional interpretation and thus not directly bind the state courts or legislatures in the construction of state constitutional protections. Accordingly, the states may remain free to legislatively restrict or expand the right to an abortion, subject only to state constitutional limitations, without regard to the wording of the proposed amendment.

While this describes one possible set of outcomes, however, they are not the only ones, given the ambiguity of the amendment's language. For example, the phrase "is not secured" could conceivably be read to imply a prohibition on abortion and to accord some heightened degree of protection to fetal interests. Depending on the courts' perception of the level of recognition thus conferred, they could read the amendment as erecting an absolute ban on all abortions or, in the alternative, to require simply that fetal interests be reckoned in the balance with those of the mother and the state in determining the legality of abortion under any given circumstances. If the former, both the states and the federal government would effectively be denied any legislative discretion in the abortion controversy since all abortions would be forbidden and the amendment would represent far more than a simple return of the *status quo* prior to *Roe*.

If, on the other hand, the amendment is read only to require that fetal interests somehow be factored into the abortion decision, the outcome becomes far less certain since the standards to be applied by the courts in striking a balance are nowhere apparent from the fact of the amendment. Must the justification for abortion in any given set of circumstances be "compelling" or merely "rational" or does some altogether different standard apply? Could the courts find that state interference with abortion where necessary to safeguard the physical or emotional health of the mother violates due process (under either the state or federal constitution or both) notwithstanding the amendment? Without a fully developed legislative history, which must necessarily include ratification history before the states, it is virtually impossible to predict the ultimate outcome of these and numerous related issues, and they are related here only to underscore the necessarily tentative nature of the discussion that follows.

Because neither Congress nor the states would be granted express authority to legislatively enforce the reported amendment, it may effect a less drastic shift in the balance of power between the federal government and the states than some alternative formulations. For example, some of the traditional "states rights" amendment proposals that have come before the Congress would largely free abortions from federal constitutional constraints by lodging exclusive legislative power over abortion in the states.[3] Proposals like S.J. Res. 3, as originally introduced, on the other hand, would effect a contrary result by augmenting the power of Congress *vis-a-vis* the states to enact laws for the protection of the fetus.[4] By contrast, the reported version is silent on the question of legislative enforcement and might thus reinstate the police powers traditionally exercised by the states with respect to abortion prior to *Doe*.

However, congressional authority to protect fetal existence pursuant to other specific grants of consitutional authority may be enhanced by the proposed amendment because of its denial of a right to procreative choice. For example, under section 5 of the Fourteenth Amendment, Congress has the power to enforce the equal protection and due process guarantees by appropriate legislation.[5] Congress' section 5 enforcement authority has been held by the Supreme Court to encompass the legislative definition of remedies for constitutional violations, and possibly even the definition of protected rights in at least some circumstances.[6] Weighing against congressional reliance on section 5 to support enactment of "pro-life" legislation, however, has been the argument that because these measures "abrogate" or "dilute" rather than implement the women's right to procreative choice recognized in *Roe*, they are not valid enforcement of section 5.[7] Since the reported amendment would effectively extinguish the right to procreative choice in *Roe*, the argument favoring Congress' power to regulate or prohibit abortion under section 5 may be correspondingly strengthened.[8]

Other potential sources of congressional power to legislate in regard to abortion may be found in the commerce clause of Article I, Section 8 of the Constitution, the spending clause, and Congress' Article III authority over federal court jurisdiction. Congressional exercise of the commerce power is akin to the police power of the states, and has been sustained as the basis for legislation unrelated to the purely commercial aspects of commerce, such as the prohibition of discrimination[9] and criminal law.[10] Indeed, the commerce power was invoked by Congress along with the postal power prior to *Roe* to outlaw the mailing of abortifacients[11] and could likewise be extended to legislatively regulate or prohibit other abortion-related activities that affect commerce, for example, the operation of abortion clinics. The spending clause in Article I, Section 8 has repeatedly been employed since 1975 to enact so-called "Hyde amendment" restrictions on the use of federal funds to perform abortions except to save the life of the mother. Finally, Congress' Article III power to "ordain" the lower federal courts and "regulate" the appellate jurisdiction of the Supreme Court has been relied upon as support for bills to eliminate federal court jurisdiction to review state anti-abortion legislation. If anything, reliance on any of these sources of congressional power would be buttressed by the reported amendment's elimination of constitutional protection for a right to abortion.

The implications of the reported amendment for state legislative authority is complicated, however, by the fact that the courts of various states have interpreted state constitutional protections of the right to privacy more expansively than the corollary protection afforded by federal court decisions based on the federal constitution. For example, the U.S. Supreme Court has upheld, as an indirect burden on the exercise of the fundamental right to obtain an

abortion, restrictions on governmental funding for abortions under the Medicaid program. In upholding both federal and state legislative restrictions on Medicaid allocations for nontherapeutic and therapeutic abortions, the Court rejected substantive due process and equal protection challenges to the statutes, even while acknowledging that the funding restrictions would probably preclude most indigent women from exercising their right to obtain an abortion.[12] Nonetheless, Massachusetts, Connecticut, and New Jersey courts have held that the due process provisions of their respective state constitutions require those states' Medicaid programs to fund therapeutic abortions, despite the lack of federal reimbursement.[13] The California Supreme Court has ruled that the State may not condition the receipt of a governmental benefit on the abdication of the state constitutional right to an abortion.[14]

In *Moe* v. *Secretary of Administration & Finance*[15] the Supreme Court of Massachusetts examined the legality under the state constitution of statutory funding restrictions that limited state Medicaid funding to cases in which an abortion was necessary to prevent the woman's death. It found that the restrictions constituted an impermissible burden on the right to abortion in violation of the state's constitutional guarantee of due process. Once the state elects to fund a benefit, the court reasoned, it may not allocate funds in a manner that directly or indirectly discriminates against an individual's exercise of a fundamental right. The discriminatory funding of the expenses incurred in the medical treatment of pregnancy constituted just such an unwarranted intrusion into the constitutionally protected zone of privacy encompassing the abortion decisions. Furthermore, the court concluded, the state's primary interest in protecting potential human life does not justify so severe an intrusion into a woman's privacy as compelling her to bear an unwanted child. The Massachusetts constitution thus affords indigent women greater constitutional protection of the right to privacy than judicial interpretation of similar federal constitutional provisions.

In California, the state's constitutional protection of the right to privacy has been held to prohibit state imposition of Medicaid funding restrictions on nontherapeutic as well as therapeutic abortions. In *Committee to Defend Reproductive Rights* v. *Myers*[16] the California Supreme Court invalidated state budget acts excluding funds for elective abortions as an unconstitutional intrusion into protected areas of private choice. The *Myers* court characterized the constitutional issue as the protection of procreative choice from discriminatory governmental treatment. It refused to extend to the California constitution the *Maher* and *McRae* majorities' reasoning that the refusal to fund abortions is not a state imposed obstacle to an indigent woman seeking to exercise her constitutional right to an abortion. The court acknowledged that the state has no constitutional obligation to fund medical care for the poor, but placed a heavy burden on the state to justify a discriminatory or restrictive government benefit program.

Similarly, in *Right to Choose* v. *Byrne*[17] the Supreme Court of New Jersey struck down on state equal protection grounds a statute that prohibited Medicaid funding for abortions except to save the mother's life. The court there agreed with its Massachusetts and California counterparts that a woman's right to protect her health by terminating a pregnancy, even though non-life threatening, outweighed the state's asserted interest in preserving potential life. In so doing, however, it distinguished elective nontherapeutic abortions which do not involve the life or health of the mother, and held that the state may exclude those abortions from the Medicaid program.

"Our holding is not that the state is under a constitutional obligation to fund all abortions. Rather, we hold that the state may not jeopardize the health and privacy of poor women by excluding medically necessary abortions from a system providing all other medically necessary care for the indigent. A woman's right to choose to protect her health by terminating her pregnancy outweighs the state's asserted interest in protecting a potential life at the expense of her health. Therefore, we hold that the restriction of funding to abortions necessary to save the life of the mother violates the New Jersey Constitution."[18]

These rulings are significant because, as noted earlier, the reported amendment may be limited in its effect to interpretation of the federal constitution and would not alter the effect of these or other state consititutional adjudications. Moreover, the United States Supreme Court has itself long recognized that state constitutions may provide more expansive protection of individual liberties than the United States Constitution.[19] Accordingly, while in terms of the relative balance of federal and state authority in the abortion area, the amendment may restore the *status quo ante* in *Roe*, this does not necessarily mean that the state legislatures will be writing on a clean slate" in those states where a "right to abortion" has been judicially found to inhere in the state constitution. Rather, those legislatures may remain subject to the same state constitutional constraints that presently limit their powers to restrict abortion, or those that emerge in the future as the result of the continued evolution of judicial doctrine.

However, while the reported amendment might not of its own force compel the courts in these or any other state to alter the course of state constitutional jurisprudence, it may indirectly lead to this result. For, if following ratification, the U.S. Supreme Court were to reverse itself by finding affirmative protection for the fetus in the due process clause or other federal constitutional guarantee, or Congress were to enact such protection pursuant to any of its enumerated powers,[20] state decisional law in conflict would be superceded under general constitutional principles. In other words, state judicial authority to ground a right to abortion in state constitutional law could be effectively voided by federal judicial or legislative action following ratification that affirmatively establishes a right to fetal existence. The state ruling would presumably then be preempted or superceded by the contrary federal law under the Supremacy Clause of the U.S. Constitution.[21]

FOOTNOTES

[1] *Roe* v. *Wade*, 410 U.S. 113 (1973); *Doe* v. *Bolton*, 410 U.S. 179 (1973). In *Roe* and *Doe* the Court first analyzed the constitutional rights and restraints relevant to the abortion decision. This analysis required the Court to balance three fundamental interests which it had identified—the woman's constitutionally protected right to privacy, the state's interest in protecting maternal health, and the state's interest in protecting potential human life. Accordingly, during the first trimester of pregnancy, the Court held, the state's interests are minimal, and it cannot intervene in the decision about terminating pregnancy. The decision is one to be made by the woman and her doctor. During the second trimester of pregnancy, the state, in promoting its interest in the health of the mother, may if it chooses regulate the abortion procedure in ways reasonably related to protecting maternal health, so that safety standards may be prescribed on abortions limited to licensed facilities. After viability of the fetus, in the third trimester, the state, in promoting its interest in protecting the potentiality of human life, may if it chooses regulate or even prohibit abortion except when it is necessary to preserve the life or health of the mother.

[2] For a description of the status of state abortion laws in effect on the date of the Supreme Court's abortion rulings, see *Roe* v. *Wade*, 410 U.S. at 118–19.

[5] This authority has been asserted to support fetal protective measures like S. 158, the "Human Life Statute" of last Congress, which sought to define "person" for due process purposes as originating with conception.

[6] See, e.g., *Katzenbach* v. *Morgan*, 384 U.S. 641 (1966); *Oregon* v. *Mitchell*, 400 U.S. 112 (1970). But cf., *Mississippi University for Women* v. *Hogan*, 102 S. Ct. 3331 (1982).

[7] See, Estreicher, Samuel, "Congressional Power and Constitutional Rights: Reflections on Proposed 'Human Life' Legislation," 68 Va. L. Rev. 337, 453 (1982).

[8] It should be noted, however, that S.J. Res. 3, as reported, might effectively override only the Supreme Court's holding in *Roe* that a woman's right to privacy comprehends the decision to terminate a first trimester pregnancy. It does not explicitly reverse the Court's subsidiary finding that the fetus is not a "person" protected by the Fourteenth Amendment. See, 410 U.S. at 41–47. Accordingly, while the reported amendment might eliminate one obstacle to congressional exercise of its Fourteenth Amendment enforcement authority to prohibit abortions, it might not resolve the equally serious issue of Congress' power to legislatively confer personhood on the fetus in the face of the Court's contrary determination in *Roe*.

From: Rachel.
Subject: Possible Implications of a States' Rights Amendment.

Recently, opponents of abortion have expressed renewed interest in a "states' rights" type of constitutional amendment. Rather than prohibiting abortions nationwide, such an amendment would allow each state to enact its own laws concerning the legal status of abortion within its boundaries. This was essentially the situation that

existed prior to the 1973 Supreme Court decisions in *Roe* v. *Wade* and *Doe* v. *Bolton*. An examination of the conditions facing a woman needing an abortion prior to 1973 might therefore be useful in predicting the types of things that could be expected if a states' rights amendment were to be adopted.

As a result of the varying state laws during the years immediately preceding 1973, legal abortions were widely available only in the four states (Alaska, Hawaii, New York and Washington) that had repealed their stringent anti-abortion laws and in jurisdictions like the District of Columbia whose restrictive laws had been declared unconstitutional. Some abortions were also available in 13 other states that had adopted laws generally permitting abortions if the woman's life would be endangered if the pregnancy were carried to term, if her physical or mental health was jeopardized, if the fetus was at risk of being born with significant defect or if the pregnancy had resulted from rape or incest. In only one of these states, California, were abortions available except to a very limited number of women.

Prior to 1973, a woman needing an abortion who did not live in one of the few jurisdictions where legal abortions were available faced four options:

1. She could attempt to obtain a "therapeutic" abortion in her own state by meeting one of the exceptions to her state's law.
2. She could travel to one of the states or jurisdictions that placed fewer restrictions on legal abortions; she could also travel to places like Japan or Great Britain where legal abortions were available.
3. She could attempt to obtain an illegal or self-induced abortion.
4. She could carry her unwanted pregnancy to term.

While accurate documentation is available only for the women who chose the first two of these options, the evidence indicates that all four were utilized widely. The price tag for each was high, both to the woman and her existing family.

1. OBTAINING A "THERAPEUTIC" ABORTION

The Center for Disease Control (CDC) began its surveillance of legal abortions in the United States in 1969, CDC's Abortion Surveillance Report for 1972 shows that 586,760 women obtained legal abortions in the United States in 1972. As Table One shows, almost 323,400 or 55 percent of the procedures were performed in the four "repeal" states. An additional approximately 200,000 (34 percent) were performed in the 13 states that had adopted laws, similar to the American Law Institute's (ALI) Model Penal Code, that permitted an abortion if the life or physical or mental health of the woman would be endangered if the pregnancy were carried to term, if there was substantial risk that the child would be born with a severe defect or if the pregnancy resulted from rape or incest. Nearly 139,000 or 70 percent of these procedures were obtained in California, one of the "ALI" states. While the remaining 63,000 abortions were performed in states and jurisdictions that had prohibited almost all abortions, nearly 40,000 of them were performed in the District of Columbia where the restrictive law had been invalidated in 1969. Fully 23 of the 33 "restrictive" states did not report any legal abortions at all during 1972.

In many of the states that either adopted "ALI-type" laws or laws that prohibited abortion unless necessary to preserve the life of the woman, a woman needing an abortion usually was required to obtain the advance consent of a hospital abortion committee. These committees were charged with reviewing requests submitted by women's personal physicians. They frequently, either as a matter of state law or hospital policy, required that other physicians, in addition to the woman's own doctor, examine the woman and corroborate the finding that an abortion was necessary. Several committees, if not most, required a licensed psychiatrist to certify that an abortion was necessary on mental health grounds or a law enforcement officer to certify that the woman had in fact been the victim of rape or incest.

These hospital panels exercised wide latitude over the number of abortions that would be performed and the conditions under which approval given. Several studies indicate that some committees established quotas that made approval conditional not only on the vagaries of the individual committee and its members but also on the number of previous abortions that had been approved.[1] A woman seeking an abortion was dependent, therefore, not only on the state law, but also on the individual hospital committee.

A 1959 analysis dramatically shows the variation among hospital committees and the latitidue taken by these committees to approve some abortions that fell outside the strict legal parameters.[2] The authors surveyed the chief of the obstetrics and gynecology departments at 29 hospitals in the San Francisco and Los Angeles areas. At that point, California law permitted an abortion only to preserve the woman's life. The number of abortions permitted at the 26 responding hospitals between 1952 and 1956 varied widely. These differences can be seen in the differing birth to abortion rates:

Number of hospitals	Birth-to-abortion rate
8	Less than 300:1.
9	300:1 to 600:1.
2	600:1 to 1,000:1.
3	1,000:1 to 2,000:1.
3	More than 2,000:1

The average rate for the hospitals was 418 births to one abortion. The survey then asked the abortion committees to examine 11 hypothetical cases and determine whether an abortion would be approved in each situation. The authors, both faculty members at Stanford University Law School, indicated in their analysis (but not on the survey itself) their own interpretation of whether each case met the rigid requirements of California's "life only" law. The variation among committee responses is striking:

	Legal status	Abortion would be denied	Abortion would be permitted	Affirmative response
(a) Abortions for "medical indications":				
1. Rheumatic fever and heart murmur	Yes	1	21	95
2. Diabetes	Yes	4	17	81
3. Hodgkin's disease	(1)	11	10	48
(b) Abortions for "psychiatric indications":				
1. Severe depression	No	12	10	45
2. 15-year-old rape victim	No	7	15	68
3. Severe psychotic depression	No	13	8	38
4. Suicide attempt	(1)	4	17	81
5. "Can't afford"	No	20	1	5
(c) Abortions for "fetal indications":				
1. Rubella while pregnant	No	16	6	27
2. 2 previous Tay-Sachs children	No	14	8	36
3. Rh incompatibility	No	17	5	23

[1] Questionable.

None of the hypothetical requests received approval by all of the committees that responded to this section of the survey. The case that received the closest to unanimous approval was the woman with rheumatic fever and heart murmur. In all cases, even those where the abortion did not meet a strict reading of the state law, at least one hospital was willing to approve an abortion. Of the cases that the authors said did not meet the law's requirements, that of the rape victim received the greatest approval. Requests for abortions based on substantial risk to the fetus received generally lower levels of approval than did abortions for psychiatric reasons.

The authors also asked the committees to indicate, for those abortions that they did not approve, if they felt that approval could be obtained at another reputable hospital in the state.

Cases by legal status	Percent approved by committees	Percent approved plus percent could be approved elsewhere
Legal (2 cases)	88	93
Questionable (2 cases)	64	83
Illegal (7 cases)	35	59

While those cases considered by the authors to be within the requirements of the law met the highest number of affirmative responses, 59 percent of the hospitals either approved themselves, or said another hospital would approve, abortions in those cases considered outside the state's "life only" law.

Obtaining a "therapeutic" abortion in either the "ALI" or the "restrictive" states was costly, both financially and potentially in terms of the woman's health. This burden was created in large part by the process that needed to be followed to obtain approval for a "therapeutic" abortion. As descriptions of hospital abortion committees show, several medical personnel including the woman's own physician, independent physicians and often licensed psychiatrists as well as committee members, participated in the decision. In addition, the procedures that were approved were performed on an inpatient basis, requiring the woman to pay for inpatient hospital care as well. No studies exist of the socio-economic background of women who did obtain "therapeutic" abortions, but it is probable that only affluent women would have had sufficient resources.

What is known is that a disproportionate number of white women obtained "therapeutic" abortions. A review of "therapeutic" abortions performed in New York City between 1951 and 1962, before the liberalization of the state law, found that 93 percent of the 4,703 abortions were obtained by white women. The abortion to live birth ratio for white women was five times that of non-whites and 26 times that of Puerto Rican women.[3] A study of abortions per-

formed in general hospitals from 1963 to 1965 found that 94 percent of the abortions were to white women and that the abortion to live birth ratio for whites was double that of non-white. [4]

Along with inflating the monetary costs of the abortion, the detailed procedures necessary to obtain the assent of the hospital abortion committee can inflate the potential health costs by delaying the abortion procedure. One study of abortions at a municipal hospital in Georgia found that the introduction of a Therapeutic Abortion Committee by the hospital was associated with a delay by almost 30 percent of the women for whom abortions were approved. [5]

According to the CDC data, while nearly 80 percent of all abortions performed in the four "repeal" states were performed at less than 13 weeks gestation, only 73 percent of the abortions performed in the "ALI" states were done at less than 13 weeks. Since the risk of both morbidity and mortality increase with length of gestation, delays that result from cumbersome administrative procedures unnecessarily inflated the health risks to the women.

2. TRAVEL

The second option available to women needing abortions was to travel to a country, state or jurisdiction where the procedures were available. In 1967, England liberalized its abortion law to permit any woman to have an abortion with the written consent of two physicians. During the last three months of 1969 alone, 615 women made the trip from the United States to Great Britain to obtain abortions.[6] By 1970, package deals that were advertised in the United States offered round-trip air fare, passports and vaccination, limousine service to and from the airport, hotel and meals for four days and the procedure itself.[7] Since the cost of making an international trip was high, many more women chose the option of going to one of the few places in the United States where abortion services were accessible once New York liberalized its law in 1970. Of the four "repeal" states, only New York had no residency requirement. Abortions could also be obtained by non-residents in the District of Columbia and California.

The 1972 CDC data indicate residence for 503,000 of the approximately 587,000 women who obtained legal abortions. As Table One shows, of those 503,000 women, approximately 200,000 or nearly 40 percent, received abortions outside their own states. More New Jersey residents traveled out of state (presumably to New York) than did those of any other state.

Number of women traveling out of State

	State of residence
Over 20,000	New Jersey.
15 to 20,000	Ohio, Texas.
10 to 15,000	Missouri, Michigan, Massachusetts, Illinois.
5 to 10,000	Florida, Maryland, Virginia, Connecticut, Indiana.

The CDC data also show that all of the women from 23 states (Idaho, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Michigan, Minnesota, Missouri, Montana, Nevada, New Hampshire, New Jersey, North Dakota, Ohio, Oklahoma, Rhode Island, South Dakota, Texas, Utah, West Virginia and Wyoming) who received legal abortions in 1972 had to travel out of state to do so.

The CDC data do not show where these women went to obtain their abortions. However, data collected by the New York City Department of Health shows that of the over 203,000 women who obtained abortions in New York City in 1972, over 116,000 or almost 60 percent, were residents of other states. As Table Two shows, over 22,000 women came from New Jersey alone. Between 10 and 20,000 women came from Pennsylvania, Illinois, Michigan and Ohio; five to 10,000 women came from Connecticut, Massachusetts and Florida; and 10 to 15,000 women traveled from as far as Maine, New Hampshire, Rhode Island, Indiana, Wisconsin, Iowa, Minnesota, Georgia, South Carolina, Kentucky, Tennessee and Louisiana. A breakdown by census regions gives an indication of the distance traveled:

Number of nonresident women who received abortions in New York City, 1972

Census region of residence:	
New England	16,080
Mid-Atlantic	33,287
East North Central	39,765
West North Central	4,446
South Atlantic	14,659
East South Central	4,860
West South Central	2,644
Mountain	491
Pacific	164

Women who were able to arrange for abortions in New York paid a significant price. The woman was required to pay not only for the abortion procedure itself but also for the travel costs and a minimum of one night in a hotel (unless she came from a near-by state such as New Jersey or Connecticut). For women receiving abortions after the first trimester, the costs would be even greater, both for the procedure and the additional nights in a hotel. These costs could easily have been prohibitive to all but the affluent. Student groups at two large universities, the University of Illinois (Chicago Circle) and the University of Maine, established loan funds to assist students needing abortions.[8]

Public funding generally was not available for indigent women needing non-resident abortions. New York and California did include coverage of abortions in their state medical assistance programs, Medicaid in New York and Medi-Cal in California. However, this coverage was available only to indigent state residents who were eligible for assistance. Indigent residents of other states, regardless of whether they were eligible for Medicaid in their home states, were required to obtain the necessary funds individually.

The only data that confirm the hypothesis that only the affluent could afford the long-distance travel are scarce and indirect. Although large numbers of Georgia residents received legal abortions in New York between 1970 and 1972, the number of complications resulting from admitted illegal abortions at Grady Memorial Hospital in Atlanta, a large public facility serving the medically indigent, remained relatively constant from 1969 until the second quarter of 1972.[9] Thus, although safe, legal abortions were being obtained in New York by Georgia residents, this option apparently was not widely utilized by the indigent clientele of Grady Memorial but by other, more affluent residents of the state. More direct data do exist to show the racially discriminatory effect of requiring women to travel long distances: of the women who obtained abortions in New York City between July 1971 and July 1972, 24 percent of the residents were white while 85 percent of the non-residents were white.[10]

The legitimate costs of obtaining a non-resident abortion in New York were frequently supplemented by any of a number of illegitimate costs. The New York City Taxi Commission received numerous reports of taxi drivers charging excessive rates to women seeking rides to abortion clinics from airports and bus terminals.[11] The State Attorney General also prosecuted several referral agencies for charging exhorbitant fees for referring out-of-state women to abortion providers and for illegally engaging in fee-splitting with the abortion providers.[12] As a result, at least two for-profit abortion referral agencies were closed down.[13] Eventually, the state prohibited all for-profit abortion referral agencies in July of 1971.[14]

Assembling the funds and making the long-distance arrangements to obtain a New York abortion could delay a woman's obtaining the procedure. A conservative estimate of this delay can be seen in data compiled by the New York City Department of Health on the gestational ages of women who obtained abortions in New York City in 1972.[15] For residents of New York, the mean gestational age was 10.14 weeks, with approximately 82.5 percent of all women who obtained abortions obtaining them at less than 13 weeks gestation. As shown below, the mean gestational age increased as the travel distance increased, while the percentage of abortions performed under 13 weeks gestation decreased.

	Mean gestational age	Percent of abortions under 13 weeks
Census division of residence:		
New England	9.7	86.2
Mid-Atlantic	9.9	84.1
East North Central	10.5	78.3
West North Central	10.7	71.1
South Atlantic	10.9	75.5
East North Central	10.5	78.5
West South Central	11.3	71.5
Mountain	11.9	63.2
Pacific	12.2	66.3

Nearly 83 percent of all New York State residents and 85 percent of all women from states contiguous to New York who obtained abortions in New York City in 1972 did so before the 13th week of gestation; only 77 percent of the women from non-contiguous states obtained abortions before the 13th week.

Travel to a distant state can increase the health risks to the woman directly by rendering impossible any continuity in her medical care. Most complications that arise from early abortions do not become evident for 2 to 30 days following the procedure.[16] Dr. Jane Hodgson's experiences at Washington D.C.'s Preterm Clinic confirm this fact. According to Dr. Hodgson, of the 20,000 women who received abortions between May 1972 and September 1973, 10 required blood transfusions. Of these 10, none were required during the first week.[17] By the time that complications arise, an out-of-state woman will be home and unable to receive care from the doctor who performed the procedure. As Dr. Hodgson notes,

"All patients who received more than two units of blood lived in distant states and received the transfusions from eight to 30 days following the abortion. A direct relationship apparently existed between the distance traveled by the patient, delay in medical care and the seriousness of the complication. Fragmented care was probably a factor in these later transfusions. No transfusions were required by any patient from the Dis-

trict of Columbia, where help was immediately available."[18]

Dr. Hodgson cites one case of an unmarried 20 year old who refused to inform her own physician that she had had an abortion, even when she began to experience abdominal pain. Her pain was diagnosed as appendicitis and an unnecessary appendectomy was performed.[19] Studies conducted by the Joint Program for the Study of Abortion (JPSA) confirms Dr. Hodgson's concerns about the relationship between the necessity of travel and fragmented medical care. According to the JPSA, while 62.5 percent of the local patients who obtained abortions in hospitals between July 1970 and July 1971 had some kind of medical follow-up, only 43.7 percent of the non-residents had some medical follow-up. Only "relatively minor" differences in follow-up were found for clinic patients: 46.4 percent for residents and 49.5 percent for non-residents.[20]

3. ILLEGAL AND SELF-INDUCED ABORTION

The third option available to women in need of abortions was to obtain illegal or self-induced abortions. Although precise data on the number of illegal procedures do not exist, estimates can be made. Based on his examination of the change, or lack of significant change, in the birth rate in New York City following the legalization of abortion, Dr. Tietze has estimated that 70 percent of the abortions performed subsequent to legalization replaced procedures that previously had been performed illegally. Multiplying this out yields an estimate of 50,000 illegal abortions per year in New York City alone.[21] Using a different method based on the death-to-case ratio for deaths resulting from known illegal abortions, CDC estimates that 130,000 illegal abortions occurred in 1972 when nearly 600,000 women received legal procedures.[22]

In a study based on a series of interviews conducted in 1965 and 1967, Steven Polgar and Ellen Fried examined the conditions under which illegal procedures were performed. Of the nearly 900 women studied, 8.3 percent said that they had attempted to terminate at least one pregnancy by abortion; 38 percent said that one of their friends, relatives, or acquaintances had attempted to procure an abortion.[23] Of the women who said that they themselves had had an abortion, 80 percent said they attempted a self-induced procedure.

"Only two percent of the respondents who attempted an abortion said that a doctor had been involved in any way. Regarding the attempted abortions reported for the respondents' friends, relatives and acquaintances, 6 percent were said to have been performed by doctors; 18 percent by "just ordinary women"; and 33 percent were said to have been self-induced."[24]

It is therefore unsurprising that CDC estimated that the death-to-case rate for illegal abortions in 1972 was 30 per 100,000 compared with 3.2 per 100,000 for legal procedures.[25]

Little is known about the women who obtained illegal abortions. From its surveillance of abortion-related deaths, CDC found that of the 39 deaths resulting from illegal procedures in 1972, 25 or 64.1 percent were to non-white women. For the years 1972 to 1974, the rate of illegal abortion deaths per million women aged 15 to 44 was 0.2 for white women and 2.4 for nonwhite women.[26]

Large numbers of illegal abortions are known to have been obtained by poor women prior to legalization. At Harlem Hospital Center in New York City, for example, nearly 1,600 women were admitted for incomplete abortions in 1962 alone.[27] In 1968, the University of Southern California-Los Angeles County Medical Center admitted 701 patients with septic abortions.[28] As the experiences of both of these hospitals, which serve primarily indigent populations, show, indigent women were willing to resort in large numbers of illegal abortions. Since "therapeutic" abortions or legal "non-resident" abortions essentially were available only to more affluent women in 1972, the logical conclusion is that most of the less affluent and minority women who terminated their pregnancies in 1972 did so illegally.

4. CARRYING UNWANTED PREGNANCIES TO TERM

Even less is known about the women who were unable to obtain any abortion and carried unwanted pregnancies to term. Out-of-wedlock births to both teenagers and women of all ages has generally decreased in New York since the legalization of abortion in 1970.[29] So have the number of out-of-wedlock babies and teenagers entering foster care and the rate of deaths associated with pregnancy and childbirth.[30]

If a state's rights amendment were to be adopted, the situation would be similar to that which existed prior to 1973. It is probably reasonable to assume that, at a bare minimum, abortion would remain legal in most of the nine states (Alaska, Colorado, Hawaii, Maryland, Michigan, New York, North Carolina, Oregon and Washington) and the District of Columbia that voluntarily are continuing to fund medically necessary abortions for women on welfare. Abortions would most likely be severely restricted in most other states and even virtually prohibited in some.

Abortions would once again be widely available only to those women who lived in states that did not enact restrictive laws. The total number of legal abortions performed would, of necessity, fall from the estimated 1.5 million performed in 1979. However, as was the case prior to 1973, and almost independent of the number of states in which abortion remained legal and available, large numbers of abortions, both legal and illegal, would continue to be obtained by women confronting unwanted pregnancies.

A woman needing an abortion who did not live in one of the states where abortion was legal would face the same array of choices as prior to the Supreme Court decisions. She could obtain a legal "therapeutic" abortion in her home state or travel out of state to do so. In reality, however, those options would be open only to the more affluent. Obtaining a legal "therapeutic" abortion was an expensive proposition, once the procedural costs of the hospital abortion committee are added to the cost of the operation itself. That this took place is indicated by the disparity between the abortion to live birth rates for white women and nonwhite women in the years prior to 1973.

The second option, traveling to a state where legal abortions are available, would likewise be within the reach only of the more affluent. While the problem of locating reputable abortion providers could be mitigated to some extent by the establishment of a good national referral network, only the more affluent could afford the transportation and hotel costs as well as the costs of the procedure. Table Three lists the current roundtrip train, bus and air fares between 31 cities and New York City. (The cities selected were the largest cities in the states from which more than 500 women obtained abortion in New York in 1972.) As Table Three shows, when the transportation and hotel costs are added to the cost of the abortion, the total cost easily would be beyond the reach of all but a small percentage of the women in need. For only eight of the 31 cities listed, would the total cost, even if the woman were to take the train rather than fly, be under $400.

Even those women who could afford either to obtain "therapeutic" abortions or the travel to one of the "non-restrictive" states potentially could have to pay a far greater price than the financial one. Here again the pre-1973 experience is instructive. Prior to 1973, women who obtained either "therapeutic" or non-resident abortions were found to have obtained the procedures later in gestation. The delay was closely related to the distance the woman was required to travel. Even minimal delays beyond the eighth week, inflate the risk of either complications or death. Even further, the fragmented care received by women who had to travel long distances to obtain abortions was seen, prior to 1973, to have been associated with subsequent medical difficulties and, in a few cases, even death.

As was the case prior to 1973, the only real option open to the less affluent and to many teenagers, would be illegal or self-induced abortions or carrying unwanted pregnancies to term. As many as 70 percent of the abortions performed after legalization have been shown to have replaced clandestine procedures. Although the health risks of these procedures have been well-documented, as many women could be expected to resort to them if abortions were criminalized. Numerous other women would not obtain either legal or illegal procedures and would be forced to carry their unwanted pregnancies to term.

Thus, a states' rights amendment would not be successful in preventing abortions from occurring. Many affluent women would be able, as they were prior to 1973, to either obtain a "therapeutic" abortion or to travel to one of the states, in which abortion remained legal. Less affluent women would be driven, as they also were prior to 1973, to obtain illegal and self-induced abortions. Regardless of which of these options is exercised, the health risk to thousands of American women would be increased far above those that exist at present.

[15] The estimate of the difference in gestational age between residents and non-residents is conservative because of differences in the populations being compared. The non-residents who obtained abortions in New York were all private patients but are being compared with private and non-private resident patients. Non-private patients comprised nearly 47 percent of all women who obtained abortions in New York City between July 1971 and July 1972. Non-private patients had a lower percentage of abortions performed before the twelfth week of gestation (89.3 percent of private patients and 74.4 percent of non-private patients received abortions before the twelfth week).

[9] No direct train route. Cost shown is for train from Milwaukee to Chicago and then from Chicago to New York.

[Memorandum]

To: Jeannie Rosoff, Cory Richards, Jo Blum.
From: Rachel Gold.
Subject: Abortion after viability.
Date: February 26, 1982.

The Supreme Court gave the states great latitude in enacting legislation restricting the performance of late abortions: "For the stage subsequent to viability, the state . . . may, if it chooses, regulate, and even proscribe, abortion except where it is necessary, in appropriate medical judgment, for the preservation of the life or health of the mother." The attached table shows that nearly half of the states have chosen to restrict late abortions according to the Court's guidelines.

1. DEFINITION OF "THIRD TRIMESTER"

States have adopted varying definitions of when the third trimester of pregnancy begins. Three states have adopted laws concerning abortions performed "during the third trimester;" the laws in two states concern abortions performed after the second trimester of pregnancy. Twelve states define third trimester in terms of viability and their laws concern abortions performed after a medical determination that the fetus may be viable. The remaining seven states with laws define this period in terms of weeks: five states restrict abortions performed after 24 weeks and two states restrict procedures after 20 weeks.

2. CONDITIONS UNDER WHICH ABORTIONS MAY BE PERFORMED

The laws in 23 states restrict the conditions under which third trimester abortions may be performed. Fifteen states permit abortions if the life or health of the pregnant woman would be endangered if the pregnancy were carried to term. Two states (Indiana and Utah) restrict abortions to those procedures necessary to preserve the woman's life or physical health and two states' laws (Massachusetts and North Dakota) permit abortions if her physical or mental health is in jeopardy. New York and Washington permit third trimester abortions only if the woman's life is endangered and Idaho permits abortions when the women's life is endangered or if "the fetus is incapable of survival." North Carolina's laws permit abortions after 20 weeks of pregnancy only if the woman's health is endangered. Four states (Florida, Georgia, North Dakota and South Carolina) require that a physician, aside from the one who performs the procedure, certify that the woman's life or health is endangered.

3. NUMBER OF POST-VIABILITY ABORTIONS PERFORMED

Columns five and six of the attached table give the number of abortions performed at 21 weeks and over in 1978 and the percentage of all reported abortions that were performed at or beyond 21 weeks.[1] Even though they contain some pre-viability abortions, the data indicate that the number of abortions performed during the third trimester is extremely small. Nationally, according to the Centers for Disease Control, 0.8 percent of all abortions were performed after 20 weeks. In only three of the states that reported to the CDC were more than 2 percent of all abortions performed after the 20th week; in two additional states, the number of procedures after 20 weeks was more than 1 percent. There appears to be no relationship between the percent performed after 20 weeks and whether the state has any explicit statutory language or, if the state has a law, the specific restriction contained in the statute.

4. OTHER LEGAL REQUIREMENTS

Fourteen states require that a live-born infant resulting from an abortion is entitled to all medical care that would be given an infant born prematurely. Three of these states (Maine, Ohio and Texas) require this standard of care although their laws do not specify the conditions under which post-viability abortions may be performed. Indiana requires that all post-viability abortions be performed in hospitals with special intensive care units for newborns. Four states (Minnesota, New York, North Dakota and Oklahoma) require that a second physician be in attendance to provide care for a newborn infant. In other states, similar requirements may exist as a result of regulations promulgated by state health agencies in the absence of specific statutory language.

ABORTIONS AFTER VIABILITY: STATE LAWS AND NUMBER PERFORMED, 1978

	Time period	Permissible conditions	Second physician in attendance	Live-born fetus entitles to full care	Number performed, 1978	Percent of all abortions, 1978
1. Alabama						
2. Alaska					2	0.3
3. Arizona					5	.1
4. Arkansas					28	.6
5. California						
6. Colorado					377	2.4

[1] The number and percent of abortions are from the Centers for Disease Control 1978 Abortion Surveillance Report. Data do not exist for all states. Neither the AGI not CDC data give a more explicit breakdown of abortions performed after 21 weeks. The AGI data do not give a state-level breakdown of gestational age.

ABORTIONS AFTER VIABILITY: STATE LAWS AND NUMBER PERFORMED, 1978—Continued

	Time period	Permissible conditions	Second physician in attendance	Live-born fetus entitles to full care	Number performed, 1978	Percent of all abortions, 1978

Total					6,401	.8

[1] Idaho—life or "if baby could not survive."
[2] Iowa—every effort must be made to save the life of a fetus showing sustainable life after 20 weeks.
[3] New York—second physician is required after 20 weeks.
[4] Utah—reasonable possibility of survival.

Methods of Abortion

VACUUM ASPIRATION (SUCTION)

First trimester procedure involving local anaesthesia, dilation of the cervix, insertion of a small hollow tube attached to a vacuum machine which empties the uterus by gentle suction; normally takes a few minutes and patient recovers within a few hours.

DILATION AND CURETTAGE (D&C)

First trimester procedure with local or general anaesthesia, dilation of the cervix, removal of fetal material from the uterine wall using a small, spoon-shaped curette; may take a few minutes and patient recovers the same day.

[Due to increased danger of uterine perforation, there is no adequate abortion procedure between the 13th and 16th weeks of pregnancy (15–18 weeks from last menstrual period).]

AMNIOTIC FLUID REPLACEMENT

Second trimester procedure usually performed between the 16th and 20th weeks of pregnancy (18–22 weeks from last menstrual period) in which a small amount of amniotic fluid is withdrawn from the uterus and replaced with a concentrated saline solution which causes contractions within 12 to 24 hours and eventual miscarriage; may require a hospital stay. Another method of inducing miscarriage is the injection of a hormone (prostaglandin) into the uterus.

HYSTEROTOMY

Second trimester procedure considered major surgery, involves Caesarian removal of the fetus through the abdominal wall under general anaesthesia; may require a hospital stay of 4 to 7 days and recovery of several weeks; future deliveries must be by Caesarian.

METHOD OF ABORTION BY FREQUENCY

Center for Disease Control: 1974 Yearly Report Out of 160,809 abortions (the total number for which CDC has adequate data, and presumably representative of the whole)

Method	*Percentage rate*
Suction/curettage	85.1
Sharp/curettage	4.7
Saline	6.4
Prostaglandin instillation	0.5
Hysterotomy	.4
Hysterectomy	.4

Other	1	20,477	4.9	2.4
All methods	73	1,966,067	3.7	1.8

[1] Based on distribution of 1,531,984 abortions (77.9 percent of total) in which gestational age was known.
[2] Deaths per 100,000 abortions.
[3] Relative risk based on index rate for curettage of 2.0 per 100,000 abortions.

Stages of Gestation

Development during the roughly 40 weeks prior to normal human birth is divisible into three phases. The first, which may be called the period of the ovum, lasts from fertilization until the time the fertilized egg is implanted in the wall of the uterus, a process that typically takes 10 to 14 days. A second

phase, lasting from the second to the eighth week after conception, is called the period of the embryo, and is characterized by differentiation of the major organs that normally are present in the newborn. The last phase, from the eighth week to delivery, called the period of the fetus, is characterized by dramatic growth in the size of the organism.

Prenatal development is extremely rapid. By the 18th day the embryo already has taken some shape and has established a longitudinal axis.

By the 8th week facial features are well-defined; arms, legs, hands and feet have appeared, and rudimentary toes and fingers can be distinguished. The sex organs, alongwith bone cartilage have begun to form. Size: ⅞ inches; 1/30 ounce or 1 gram (less than an aspirin tablet).

By 13½ weeks nails form, ears are completely formed and there are sex organ differences. The brain signals, the muscles respond, and the fetus kicks. The brain is not sufficiently organized, however, to control movement reflexes and won't be till after birth. Size: 3 inches; 1 ounce or 30 grams.

By 18 weeks fetal movements can be felt by the pregnant woman; the heart can be heard with a stethoscope; fine down hair covers the body; the skin is pinker; eye lashes have grown. Size 8½ inches; 6 ounces or 180 grams.

By 22½ weeks there is hair on the head, fat has deposited under the skin though the fetus is very lean. Size: 12 inches; 1 pound or 453 grams.

By 27 weeks the fetus is covered with a cheese-like secretion. The skin is wrinkled. Hair on the head is fairly well-developed. Eyes are open. If born at this stage, most fetuses only live a few hours. Size: 14 inches; 2 pounds or 906 grams.

ABORTION AND PUBLIC HEALTH: THE FACTS

In 1978, 3.1 million American women found themselves facing pregnancies they had not intended. Of these women, 1.3 million chose to carry their pregnancies to term and give birth, 400,000 had miscarriages and 1.4 million, or about half, chose to exercise their constitutionally protected option to terminate their pregnancies through safe and legal abortions.[1] For more than seven in 10 of these women, these were their first abortions. More than 90 percent of the abortions were performed during the first trimester of pregnancy, very soon after the women realized they were pregnant.

WOMEN WHO OBTAIN ABORTIONS

About three percent of all American women aged 15 to 44, and 25 percent of those who became pregnant, had abortions in 1978. Although most women who chose to terminate their unintended pregnancies were young, white and childless, more than 200,000 were over age 30 and nearly 350,000 had had at least two children. Nearly four out of every 10 abortions were to the women for whom the health and social consequences of unintended childbearing are the greatest—women over 35 and teenagers.

The parents of over half the teenagers obtaining abortions knew of their daughters' abortions. In the majority of cases in which the parents knew, their daughters told them voluntarily; in many instances, an abortion was obtained at the parents' suggestion.

The number of teenagers terminating unintended pregnancies by abortion has been increasing since 1973 at a rate similar to that for women of all ages. But the increase in abortions to teenagers has been in part responsible for a noticeable decline in the teenage birth rate. In 1973, nearly 60 of every 1,000 women aged 15 to 19 gave birth; by 1978, that number had fallen to 52.

Each year since 1973, women have been obtaining abortions earlier in pregnancy when the health risks to the woman and the costs of the procedure are at their lowest. In 1973, less than 40 percent of all women obtaining abortions did so before nine weeks of pregnancy. By 1978, over half of all abortions were performed before nine weeks; and more than nine in 10 abortions were performed during the first 12 weeks, or during the first trimester.

At the far end of the spectrum, less than one percent of all abortions in 1978 were performed after 20 weeks and fewer than four percent were performed between 16 and 20 weeks. As a result, only a small proportion of abortions were performed by saline injection. Although already small, the number of abortions between 16 and 20 weeks may be reduced even further when abortion services become better distributed geographically.

However, there are several serious medical conditions that pose significant risks to the life and health of the pregnant woman that either do not arise or cannot be diagnosed until after the first 15 weeks of pregnancy. For example, many women who have normal blood pressure before pregnancy develop hypertension of pregnancy, or preeclampsia, after the 20th week of gestation. For many who do not respond to other treatment, a late abortion may be a necessity. Renal or kidney failure may also be experienced late in pregnancy. In some cases, if an abortion is not performed, the woman will suffer permanent kidney damage. In addition, amniocentesis to determine if a woman is carrying a fetus afflicted with a severe genetic disorder cannot be performed until the middle of the second trimester of pregnancy.

In 1978, 30 percent of the women obtaining abortions were having a second or subsequent procedure. An increase in both the number and percent of women having repeat abortions is almost totally due to the fact that as the number of women who have ever had a first abortion increases each year, so does the pool of women who are at risk of having another abortion.

The increasing number of repeat abortions does not indicate widespread carelessness about contraceptive use. Neither contraceptives nor the human beings who use them are perfect. For example, four of every hundred women who start to use the IUD to prevent pregnancy become pregnant in a single year. As Table 2 shows, for women using other methods of contraception, the rates of unintended pregnancies are higher.

After 10 years of experience with legal abortion, 52–61 percent of all abortions will be repeat procedures even among a population using contraceptive methods with a high level of effectiveness. Even if all women used the pill fairly consistently, 31–40 percent of abortions could be expected to be repeat procedures after a decade.[2] When these figures are used for comparison, the nation's repeat abortion rate suggests a high level of effective contraceptive use.

Thus, there is no evidence that the increased availability of legal abortion has led to any decrease in contraceptive use. National surveys of ever-married women show steady increases in the number using contraception (and using the most effective methods) both before and after abortion legalization. Indeed, contraceptive use among these women is now virtually universal. Among sexually active unmarried U.S. teenagers, too, the use of contraception increased sharply throughout the 1970s.

THE RISKS OF ABORTION

Like all surgical procedures, abortions carry a risk of medical complications, or morbidity. The risk of abortion-related complications is influenced by the abortion method, the woman's age and the number of children she has borne. The main risk from abortion, however, result from delay. In the first trimester of pregnancy, when 90 percent of all abortions in 1978 were performed, less than half of one percent of all abortion patients experienced complications of any kind. Between the eighth and 12th weeks, the risk of major complications doubles from two per 1000 to four per 1000.[3]

Although the number of abortions performed annually has increased steadily, the number of deaths attributable to legal abortions has declined. Eleven deaths from legally induced abortions were reported to the federal Center for Disease Control (CDC) in 1978 (as compared to 26 in 1973), a rate of 0.6 deaths per 100,000 abortions.[4] To put abortion mortality into perspective, according to the most recent published data, the risk associated with other common surgical procedures was nine deaths per 100,000 tonsillectomies and 225 deaths per 100,000 appendectomies in 1974 and 1975.[5] The risk of dying from induced abortion during the first 15 weeks of pregnancy is one-seventh the risk of dying from pregnancy and childbirth.[6]

However, deaths from abortion do increase with the length of gestation. In the first eight weeks of pregnancy, when half of all legal abortions are performed, the mortality rate is only 0.5 deaths per 100,000 abortions. Between the ninth and the 13th weeks of pregnancy, when an additional 41 percent of abortions are performed, the rate rises to 1.9 deaths per 100,000 procedures.[7]

Much concern has been expressed about the effect of abortions on a woman's future childbearing capability. According to a five-year study conducted at the Boston Hospital for Women, a single induced abortion did not result in a decreased ability to carry subsequent pregnancies to term. The study did find, however, that women who had had two or more abortions had an increased risk of miscarriage in subsequent pregnancies. However, characteristics of the women obtaining repeat abortions (such as time between pregnancies and smoking), as well as the type of abortion procedures used in previous abortions, are probably more important factors than the number of abortion procedures, as shown by other conflicting American studies.

Table 2.—Percent of women who experience unintended pregnancies within one year of contraceptive use

Contraceptive method:	*Percent*
Oral contraceptives	2.3
Intrauterine devices	3.8
Condoms	8.5
Foams, creams, jellies	15.7
Diaphragms	16.1
Rhythm method	21.2

THE EFFECTS OF LEGAL ABORTION

A large majority of the legal abortions obtained in the United States after the 1973 Supreme Court decisions on abortion replaced procedures that had been performed illegally prior to 1973. American women and their families paid a steep price for those illegal procedures, many of which were carried out by nonmedical personnel or the woman herself in unsanitary surroundings with no facilities for dealing with emergencies. In the 1960s, complications from abortions accounted for almost 20 percent of all pregnancy-related admissions to municipal hospitals in New York and California.[8] In 1965, 235 deaths, or 20 percent of all deaths related to pregnancy and childbirth, were attributed to abortion.[9]

This toll dropped steadily during the 1960s as a result of advances in contraception and medical care and the increased availability of legal abortion after 1967 when states began to relax their stringent antiabortion laws. By 1972, when 587,000 legal abortions were reported nationally, only 39 women died from illegal or self-induced procedures. In 1973, the year of the Supreme Court decisions, illegal abortion deaths fell to 19; in 1977 to four.[10] In 1978, the number of deaths from illegal abortions rose slightly to seven, partially because restrictions on the use of public funds for abortions for indigent women on welfare forced some women who would have obtained publicly funded abortions to resort to self-administered or illegal procedures instead.[11]

The widespread availability of legal abortion has had a profound impact on the lives and health of millions of American women and their families. Thousands of American couples at high risk of bearing children afflicted with severe and often fatal genetic disorders have been willing to conceive and have families only because of the availability of safe and accurate prenatal diagnosis and legal abortion. Almost all amniocentesis procedures are reassuring to parents; only about three percent result in abortion.

Thousands of teenagers have been able to prevent the frequently adverse health, social and economic consequences of teenage births because of legal abortion.

Babies born to teenage mothers are more likely to die in the first year of life than those born to mothers over age 20. The risks of medical complications and of having a low-birth-weight infant, are also considerably greater among teenage mothers.

The most far-reaching consequence of teenage childbearing is the truncation of education among the young parents, and the resulting limitation of opportunities to gain skills necessary to compete effectively in a modern, highly technical society. Largely because of educational deficits, teenage parents are frequently unable to get decent jobs, and their family incomes tend to be much lower than those earned by other families. Whether or not the young parents marry, most of the youngsters born to teenage mothers tend to end up in single female-headed households. And when they grow up, they are more likely than others to become teenage parents themselves.

Many of the women who, since 1973, have chosen to terminate their unintended pregnancies by legal abortion were women who would have been at high risk of health damage to themselves or of bearing unhealthy children. The widespread use of legal abortion was therefore accompanied by a dramatic reduction in neonatal, or newborn, mortality. Legal abortion is associated with a reduction of 1.5 neonatal deaths per 1000 live births among whites and 2.5 among blacks.[12] Legalization of abortion, according to data collected by the New York City Department of Health, was also accompanied by a 50 percent decline in the maternal mortality rate.[13] In addition, the availability of legal abortion has been associated with a dramatic reduction in the number of children and teenage mothers being placed in foster homes and institutions.[14]

It is impossible to measure what society or individuals must pay in terms of the lost potential of young women who suffer educational, economic, social and health deprivation because they must carry unwanted pregnancies to term at a time when they are unprepared physically, socially or financially to take care of the child. What can be measured are some of the medical and social welfare costs that must be borne by government to pay for those unwanted births that women would otherwise have averted through abortion.

A minimum of about 300,000 of the women who received legal abortions in 1978 were women eligible to receive subsidized medical care and other public benefits. If legal abortions were unavailable and if only one-third of these women carried their unintended pregnancies to term rather than obtaining illegal abortions, the cost to the government and the American people would be $386 million in the first year alone. If abortion opponents were successful in preventing all women from obtaining any abortions at all, the public cost would be $1.3 billion. And, these are only the costs to the public in the first year alone. Economists have calculated that the public sector cost of raising a child on welfare is $75,000.[15] If one-third of the women eligible for public assistance carried their unintended pregnancies to term, the American public would incur a future obligation of $6.8 billion each year.

CONCLUSION

In the years before the 1973 Supreme Court decisions, thousands of American women were willing to risk the sometimes staggering health and economic costs of obtaining illegal abortions. Since 1973, many more women have been able to terminate their unintended pregnancies safely and legally. For some of these women, the costs have remained high. A large number of women needing abortions, unable to obtain them locally, have been willing to travel often great distances. Poor women on welfare, unable to obtain publicly funded abortions, have been willing to undergo severe hardship for themselves and their families to finance needed abortions. Of those women surveyed who said that they themselves had had an abortion, 80 percent felt they were better off today than they would have been if they had chosen to carry their pregnancies to term.[16] As all the numbers and sacrifices endured by women obtaining abortions show, safe and legal abortions are wanted and needed in the United States.

ABORTION IN THE U.S.: TWO CENTURIES OF EXPERIENCE

The human life federalism amendment, S.J. Res. 110, seeks to overturn the 1973 Supreme Court decisions on abortion by giving the states and the federal government concurrent power to restrict or entirely prohibit this medical service.

Supporters of the measure contend that the U.S. Supreme Court, by finding that a woman's right to choose an abortion is part of the fundamental and constitutionally protected right of privacy, usurped the rightful prerogative of the legislative branch of government. According to Sen. Orrin G. Hatch (R-Utah), chairman of the Senate Judiciary Subcommittee on the Constitution and the sponsor of the measure, "Quite apart from the merits or demerits of this abortion right, much of the controversy that has been generated about it has stemmed from the manner in which it has been achieved. It has emerged, not through the representative legislative processes, not through the newly developing social consensus, not through an amendment to the Constitution and not in response to any revolution in moral and ethical principles that might have been reflected through evolving federal and state policies."

Such an interpretation of the Court's action is a gross misreading of the history of abortion in the United States.

Abortion has had a long social and legislative history in this country; it was not "created" by fiat by the Supreme Court in 1973. Abortion early in pregnancy were permitted by traditional common law and were not prohibited in the United States until the middle of the 29th century. By the time the Court issued its decisions, 17 states had reformed or repealed their antiabortion laws, and similar legislation had been initiated in almost every other state in the nation. Even before 1973, several national medical, legal, religious and social welfare organizations issued calls for abortion law reform, and public opinion polls showed that the majority of Americans opposed making abortion illegal. In 1972, the year before the court's action, nearly 600,000 women received legal abortions in the United States. Rather than "creating" abortion in its 1973 decisions in *Roe v. Wade* and *Doe v. Bolton*, the Court appropriately ratified an emerging national consensus on the issue.

WHAT WAS THE LEGAL STATUS OF ABORTION UNDER ENGLISH COMMON LAW?

English common law, the cornerstone of American jurisprudence, did not recognize the legal existance of a fetus in criminal cases until "quickening," the first perceptible fetal movement which usually occurred after the fourth month of pregnancy. As a result, abortions performed prior to "quickening" were not criminal offenses. Since no state enacted conflicting legislation during nearly the first third of our nation's history, this traditional common law principle prevailed. The medical literature of the day, both popular and professional, included frequent references to methods of abortion.

WHEN AND WHY DID THE LEGAL STATUS OF ABORTION CHANGE

An 1821 Connecticut statute making abortions illegal after "quickening," and similar ones enacted in 10 states during the following 20 years, did not change the legal status of abortion, they merely codified the common law tradition. The first state law to deal separately and explicitly with abortion was not passed until 1845, when Massachusetts made abortion, or attempted abortion, a criminal offense at any point in pregnancy.

A nationwide campaign to restrict abortion was led by medical professionals out of a dual concern for public health and for establishing medicine as a profession peopled by formally trained "regular" physicians rather than the untrained "irregulars" and lay-healers who frequently performed abortions. According to James Mohr, author of Abortion in America, "By raising the abortion question and by highlighting the abuses and dangers associated with it, regular physicians could encourage the state to deploy its sections against their competition."

WHAT RESTRICTIVE LAWS WERE ENACTED

By the turn of the century, almost all states had followed the example set by the 1845 Massachusetts law. In the early 1960s, although only Pennsylvania prohibited all abortions, 44 states allowed abortions only if the life of the pregnant woman would be endangered if the pregnancy were carried to term. Alabama, Colorado, New Mexico, Massachusetts and the District of Columbia permitted abortions if the life or physical health of the pregnant woman was in jeopardy; Mississippi allowed abortions in cases of life endangerment or rape. In nine states, the laws included criminal penalities for aiding, assisting, abetting or counseling a woman in obtaining a criminal abortion. Fourteen states explicitly made obtaining

an abortion, as well as performing one, a crime.

DID LEGAL RESTRICTIONS PREVENT ABORTIONS?

The exact number of illegal abortions cannot be determined. Nevertheless, several studies indicate that abortion was widespread despite the legal restrictions. In a nationwide study conducted in the 1940s, Dr. Alfred Kinsey found that 22 percent of the married women interviewed had had one or more abortions in marriage by age 45. Further, 88-95 percent of the premarital pregnancies in his study were terminated by abortion.

Experts convening at the 1955 Arden House Conference on Abortion in the United States concluded that a reasonable estimate of the annual number of abortions could be as low as 200,000 or as high as 1.2 million. Another analysis, extrapolating from data obtained in North Carolina, estimated that 699,000 illegal or self-induced abortions occurred nationwide in 1955 and 829,000 in 1967. Based on his examination of the change, or lack of significant change, in the birthrates in New York City following the legalization of abortion, Dr. Christopher Tietze of the Population Council has estimated that 50,000 illegal abortions, 70 percent of the procedures performed subsequent to legalization, had been performed annually in New York City.

One indicator of the extent to which abortions were performed is the death toll. In 1930, abortion was reported as the cause of death for 2,700 women in the United States, 18 percent of all maternal deaths. By 1940, the number decreased to just under 1,700 and further to 316 in 1950. Mostly because of advances in the technology of providing abortions, the number of deaths due to abortions in 1965 fell to 235, but still comprised 20 percent of all deaths related to pregnancy and childbirth in that year.

Along with the number of women who died, the number of women who suffered severe complications from illegal abortion shows the prevalence of the illegal procedures. At Harlem Hospital Center, only one of many New York City hospitals, nearly 1,600 women were admitted for incomplete abortions in 1962, a rate of one abortion-related admission for every 42 deliveries at the hospital. In 1968, the University of Southern California-Los Angeles County Medical Center, another large public facility serving primarly indigent patients, admitted 701 women with septic abortions.

DID ANY NATIONAL ORGANIZATIONS SUPPORT REFORM OF ANTIABORTION LAWS BEFORE 1973?

Well in advance of the 1973 Supreme Court decisons, many national health, legal, religious and social welfare organizations issued either calls for reform or repeal of state antiabortion laws or declarations that abortion was a matter to be decided by an individual woman and her physician. One of the first national calls for a change in abortion laws came in 1962 from the American Law Institute (ALI) with the publication of its "Model Penal Code on Abortion," which called for abortion to be legal when the pregnant woman's life or health would be endangered if the pregnancy were carried to term, if the pregnancy was the result of rape or incest and when the fetus had been diagnosed as afflicted with a severe defect. This recommendation, a model for abortion reform legislation in several states, was accepted by the American Bar Association in a 1972 resolution.

By the time the Supreme Court issued its decisions, numerous other organizations had joined the call for reform. Among the health and social welfare organizations to support reform were the American Association of University Women, American College of Obstetricians and Gynecologists, American Home Economics Association, American Public Health Association, National Association of Social Workers and the Young Women's Christian Association. In June 1970, the American Medical Association passed a resolution stating that abortion is a medical procedure to be performed by duly licensed physicians in conformance with the standards of good medical practice and the laws of their states. At least 19 state medical societies also voted to recommend that the antiabortion laws of their states be reformed or repealed.

Many national religious organizations called for reform or repeal laws before 1973. A 1965 resolution passed by the American Ethical Union urging reform of abortion laws was followed by similar action by the American Baptist Churches (USA), Church of the Brethren, Lutheran Church in America, National Council of Jewish Women, Presbyterian Church in the United States, Unitarian Universalist Associaton, Methodist Church, United Presbyterian Church (USA) and the United Synagogue of America.

DID THE AMERICAN PUBLIC SUPPORT ABORTION LAW REFORM BEFORE THE SUPREME COURT DECISIONS?

Even before the Supreme Court's 1973 abortion decisions, a majority of Americans supported legal abortion under at least some circumstances. In 1972, the National Opinion Research Center found that 87 percent of the public felt that a woman should be able to obtain a legal abortion if her health was endangered while a Gallup poll the same year found that 64 percent of all Americans felt that the decision to have an abortion should be solely by a woman and her physician. Since the 1973 decisions, despite years of antiabortion activity, attitudes toward abortion have remained remarkably constant. While support for abortion among Protestants and Jews has remained consistently high since 1973, approval among Catholics has been growing. By 1979, according to a New York Times-CBS poll, 64 percent of all Catholics felt that "the right of a woman to have an abortion should be left entirely to the woman and her doctor."

WERE ANY STATE ABORTION LAWS REFORMED OR REPEALED PRIOR TO 1973?

In 1967, Colorado reformed its antiabortion law to permit abortions in cases of life endangerment, if the pregnant woman's physical or mental health would be imperiled if the pregnancy were carried to term, if the fetus would be born with a severe physical or mental defect or if the pregnancy had resulted from rape or incest. By 1972, the year before the U.S. Surpreme Court abortion decisions, Arkansas, California, Delaware, Florida, Georgia, Kansas, Maryland, New Mexico, North Carolina, Oregon, Sourth Carolina and Virginia had adopted similar laws. In nine of these states, the new law did not specify a point of gestation until which abortions could be performed.

Beginning in 1970, four states (Alaska, Hawaii, New York and Washington) repealed their antiabortion laws, substituting statutes permitting an abortion if the woman and her physician felt the procedure was necessary. All of these states essentially permitted abortions only if performed prior to viability, the point in pregnancy at which a fetus can survive outside of the womb, unless the woman's life were in jeopardy. Washington's antiabortion law was repealed following passage of a statewide referendum on the question.

WERE THESE 17 STATES THE ONLY ONES TO TAKE LEGISLATIVE ACTION TO REFORM ANTIABORTION LAWS?

Although the remaining 33 states enacted no legislation on abortion between 1967 and 1973, at least 124 bills to reform or repeal abortion laws were introduced in at least 28 of these states. Only in Alabama, Lousiana, South Dakota, West Virginia and Wyoming were no bills introduced. Eleven of these bills did pass at least one house of the state legislature. Of the 11 that passed at least one house, three would have permitted abortions by licensed physicians in Arizona, Michigan and Nevada and two were abortion law repeal measures in Arizona and Kansas. Two bills to reform abortion laws even further in states that had already enacted limited reforms in the 1960s also came close to being approved. In North Carolina, a bill to permit abortions performed by licensed physicians passed the House but was defeated by the Senate. A similar reform of Maryland's law passed both houses of the legislature but was vetoed by the governor.

WERE LEGAL ABORTIONS PERFORMED IN THE U.S. AS A RESULT OF THE LAWS ENACTED BETWEEN 1967 AND 1973?

According to the federal Center for Disease Control, 586,760 women received legal abortions in the United States in 1972, the year before the U.S. Supreme Court decisions. While nearly 55 percent of these abortions (323,400) were performed in the four states that had repealed their antiabortion laws, 34 percent of the procedures were performed in the 13 states that had enacted more limited reforms of their antiabortion laws. Although nearly 600,000 women obtained legal abortions in 1972, the Center for Disease Control estimates that 130,000 women were unable to obtain legal abortions and resorted to illegal or self-induced procedures during that year.

DID WOMEN WHO LIVED IN STATES WHERE ABORTION WAS ILLEGAL TRAVEL TO OBTAIN LEGAL ABORTIONS IN 1972?

Approximately 200,000 women who could afford transportation costs traveled outside their home states to obtain abortions in 1972. Twenty-two thousand women from New Jersey obtained abortions in a different state, presumably New York. Over 10,000 women left Illinois in order to terminate their pregnancies legally in other states, as did equal numbers of women from Massachusetts, Michigan, Missouri, Ohio and Texas. More than 5,000 women traveled out of state from Connecticut, Florida, Indiana, Maryland and Virginia. In 23 of the states where the abortion laws remained unchanged, all of the women who obtained legal abortions in 1972 had to cross state lines to do so.

Many women traveled great distances to obtain legal abortions. Nearly 40,000 women from the East North Central states (Illinois, Indiana, Michigan, Ohio and Wisconsin) traveled to New York City to obtain legal abortions in 1972. More then 7,000 Floridians also made the trip, as did 2,200 from Tennessee and Georgia, nearly 1,800 from Minnesota, 1,600 from South Carolina, 1,500 from Iowa, 1,300 from Kentucky and 1,100 from Louisiana. Altogether, over 116,000 women crossed state lines in 1972 to obtain abortions in New York City.

DID THIS LONG-DISTANCE TRAVEL HAVE ANY EFFECTS ASIDE FROM INCONVENIENCE AND COST?

Many women in need of abortions and who lived in states where antiabortion laws had not been reformed sought the assistance of referral agencies to arrange for abortions in other states. While many were assisted by reputable agencies, thousands fell prey to unscrupulous profiteers. Several of these agencies ultimately were prosecuted and closed down by the attorney general of New York for charging excessive prices and illegally engaging in fee-splitting.

For women who did not go through referral agencies, making the long-distance arrangements often resulted in a delay. As seen in data compiled by the New York City Department of Health on women who obtained abortions as private patients in New York City in 1972, the farther a woman had to travel, the greater the delay. For New York City residents, the average gestational age was 9.4 weeks of pregnancy. Women who lived in states that were not contiguous to New York obtained abortions, on the average, over a week later, at 10.6 weeks. Nearly 90 percent of all New York City residents who obtained abortions in New York City in 1972 did so before the 13th week of gestation; only 77 percent of the women from states that are not contiguous to New York were able to have abortions before the 13th week.

Travel to a distant state can increase the health risks to the woman by rendering impossible any continuity in her medical care. Most complications that arise from early abortions do not become evident for 2-30 days following the procedure. By the time complications arise, an out-of-state woman would be home and unable to receive care from the physican who performed the abortion. As a result of this fragmented medical care, Dr. Jane Hodgson, former executive director of Washington, D.C.'s Preterm Clinic, found that "a direct relationship apparently existed between the distance traveled by the patient, delay in medical care and the seriousness of the complication."

S.J. RES. 110: A GIANT STEP BACKWARD

Supporters of S.J. Res. 110 contend that this proposed amendment to the Constitution simply would return the legal status of abortion to that which existed prior to the 1973 Supreme Court decisions and once again allow each state independently to determine its policy on abortion. In fact, S.J. Res. 110 would do much more. It would give Congress a power to restrict abortion that it never had. States would be free to enact only legislation more restrictive than federal law, thereby losing a power that they had had—and exercised—to make abortion legal and available before the 1973 Supreme Court decisions. Rather than freeing federal and state legislatures from the long divisive battles over the abortion issue, S.J. Res. 110 would guarantee at least an annual battle in every legislative body in the nation.

While the specific results of passage of S.J. Res. 110 are uncertain, the general parameters can be predicted. Congress would likely pass legislation severely restricting abortion. Although some states would adopt this federal policy, others undoubtedly would enact laws even more restrictive. Women from these states would once again be forced to travel, often at great risk and expense, to obtain needed abortions. Others, unable to arrange or afford travel, would resort, as they did prior to 1973, to dangerous clandestine procedures. Whether legal or illegal, abortions would continue to occur.

[From Issues in Brief, Vol. 3, No. 1, February 1983]

TEN YEARS AFTER ROE V. WADE—RESPONSES TO CONCERNS RAISED ABOUT ABORTIONS

Abortion has been legal throughout the United States for a decade. In that time, an estimated 9.4 million American women have chosen to terminate 13 million unintended pregnancies by abortion. Legal abortion is supported by an overwhelming majority of Americans, regardless of age, race, sex, political affiliation or religion. Despite this clear support for legal abortion and the fact that millions of women have been able to avoid the physical, emotional and financial scars of unintended childbearing, abortion continues to raise troubling questions in the minds of many. Some of these concerns can be dispelled by an examination of the realities of a decade's experience with legal abortion. Others await the development of policies that, by improving access to early abortions, can reduce the number of abortions performed late in pregnancy. Yet, it is also clear that many of these concerns will not be alleviated entirely until unintended pregnancies are eliminated and the need for abortion obviated.

Did the Supreme Court legalize unrestricted "abortion on demand" for all nine months of pregnancy?

The Supreme Court's rejection of "abortion on demand" was explicit: "Some . . . argue that the woman's right is absolute and that she is entitled to terminate her pregnancy at whatever time, in whatever way, and for whatever reason she alone chooses. With this we do not agree." Even during the first few months of pregnancy, when almost all abortions occur, the abortion decision does not rest solely with the woman. Instead, according to the Court, the decision to terminate a pregnancy is "primarily, a medical decision, and basic responsibility for it must rest with the physician."

Furthermore, the Court did not render the state powerless to enact restrictions concering abortions. States may regulate the conditions under which abortions are performed during the first trimester of pregnancy (approximately the first three months) provided that they treat those procedures as they treat all other medical procedures. For example, a state may require that abortions be performed only by licensed physicians and only in licensed facilities. In addition, the state board of medical examiners has the power to issue licenses to practice medicine as well as to revoke them if any irregularities or breach of ethics occur, among abortion providers as well as other medical practitioners. State medical societies work closely with the boards of examiners to assure that appropriate standards are met by licensed physicians.

According to the Court, states have the power to regulate abortions performed once pregnancy has progressed to a point that abortion is more dangerous to the woman than childbirth. States may adopt regulations concerning abortions after this point—which, in 1973, was reached at approximately the end of the first trimester—that serve to protect the health of the pregnant woman. Based on this principle, 20 states require, for example, that all abortions performed after the first trimester be performed in hospitals.[1] However, medical advances and accumlating evidence that inpatient procedures are no safer than outpatient procedures during the early weeks of the second trimester have led to a reexamination of these laws, and the Supreme Court is considering whether, given current technology, these laws continue to serve the states' interest in the protection of the health of the woman.[2]

Once a pregnancy reaches a point that, in the appropriate medical judgment of the physician, the fetus may be viable, or capable of sustained independent existence, states have wide latitude to restrict abortion in furtherance of their interest in potential human life. In fact, 22 states have chosen to prohibit all abortions after this point unless the procedure is necessary to protect the life or health of the pregnant woman.[3] Two additional states have gone further than the Court specified and prohibit all abortions after this point unless continuing the pregnancy would threaten the life of the pregnant women.[4] Except in severe medical emergencies, abortions are rarely performed near the point of viability; deviation from this standard is subject to close scrutiny not only by the medical profession but also potenially by state authorities who have the power to revoke medical licenses. As a result, the number of abortions performed when viability is even a remote possibility is small, even in those states that have not legislated a specific prohibition.

Unfortunately, the techniques for estimating the gestational age of a fetus are imprecise. In very rare cases a physician may miscalculate gestational age and perform an abortion on a fetus that may be viable; in a minuscule fraction of these cases, a live-born infant may result. Again, however, professional and legal controls govern these few but undeniably traumatic occurrences. Basic principles of medical ethics require that if a fetus capable of sustained independent life is born alive in the course of an abortion, if is to be treated identically to all other permature infants and given all care necessary to sustain its life. Twenty-six states have restated this professional tenet in legislation; in these states, the internal sanctions of the medical profession may be supplemented by either criminal or civil penalties.[5]

Are American women careless about contraception and using abortion as birth control?

Studies have shown that American women are vigilant in their use of contraception. According to a 1978 study, an estimated 75 percent of all sexually active, fertile women used a method of contraception, with nearly half using sterilization, oral contraceptives or IUDs. Of the 25 percent—9.4 million women—who were not using a method of contraception, more than half were already pregnant or had just given birth, while many others were trying to become pregnant.[6] Even with this continued high level of contraceptive use, some unintended pregnancies are inevitable. For example, nearly five of every 100 women who use the IUD will become pregnant in a single year. Even with careful use, more than two of every 100 women using the pill will become pregnant within a year. For other prescription methods, such as the diaphragm, and nonprescription methods, such as condoms, creams and jellies, the failure rates are much higher.[7]

Unintended pregnancies as a result of contraceptive failure account for a significant percentage of the abortions that are performed annually. Almost half of the women over 20 who obtained abortions in 1978 were

Footnotes at end of article.

using some method of contraception at the time they conceived; 16 percent were using the most effective reversible methods, the pill and IUD.

Many other unintended pregnancies that result in abortions occur, however, to women who are not using contraception at the time they conceive. A disproportionate share of these pregnancies occur to young women, often during the first year of sexual activity, when, statistics indicate, many teenagers have not yet begun to use effective methods of contraception.[8]

Almost all women who were not using a method of contraception before an abortion use one after an abortion. A study of abortion clinic patients in Illinois found that 97 percent of the postabortion patients were prescribed some method of family planning; nearly three-fourths planned to use either oral contraceptives or IUDs.[9] This same study found that only a small fraction, 8 percent, of abortion patients had had at least two abortions and routinely used no method of contraception at all.

If contraception is used, why are there so many abortions and why are repeat abortions increasing?

Each year since 1973, both the total number of abortions and the abortion rate (the number of abortions per 1,000 women of childbearing age) have increased. However, while the abortion rate increased rapidly in the years immediately following legalization, the rate of increase has stabilized; the abortion rate increased 18 percent from 1973 to 1974, but only 2 percent from 1979 to 1980. Much of the rise in the number of abortions and the abortion rate in the first years after legalization was likely due to the rapid diffusion of abortion services to most large metropolitan areas during that period. Since 1975, the most important factor in the abortion rate rise has probably been an increased rate of unintended pregnancy due largely to a sizable shift in the methods of contraception being chosen by women. A significant proportion of women who had been using the most effective methods, either oral contraceptives or IUDs, have changed from these methods to other less effective methods that, although perceived to have a lower risk of method-related complications, have significantly higher failure rates. In addition, the number of sexually active teenagers and unmarried women, the populations most likely to terminate unintended pregnancies by abortion, has increased.

Since 1973, the number of repeat abortions also has risen. In 1974, 15 percent of all abortions were obtained by women who already had had at least one previous abortion; in 1980, repeat abortions accounted for one-third of the total. The principal reason for the growth in the number and percentage of repeat abortions is the increase in the number of women already having had abortions. In 1974, 2.2 million American women had had legal abortions; by 1982, 9.4 million women had had abortions. As the number of women who have had an abortion rises, the number of women at risk of having a subsequent abortion also increases. As a result, the number of repeat procedures can be expected to rise and become an even more substantial percentage of all abortions performed. In addition, a woman who has already had at least one abortion is more likely to have a subsequent abortion than a woman who has never had an abortion is to have a first abortion. In contrast to women who have never had abortions, women with abortion experience are all sexually active, able to conceive and, by definition, have already accepted terminating a pregnancy by abortion.[10]

Does having an abortion adversely affect a woman's ability to have children in the future?

Many of the one and a half million American women who obtain abortions each year are young and/or unmarried; most intend to have children in the future. As a result, concern has been expressed, by both supporters and opponents of legal abortion, about the possible effects of abortion on the ability of a woman to bear healthy children in future. Recently, researchers from the Population Council and the federal Centers for Disease Control (CDC) reviewed extensive literature from 21 countries, including the United States, on the effect of abortions on future childbearing ability, focusing on whether abortion increases a woman's risk of future infertility, ectopic pregnancy, miscarriage, premature delivery, low birth weight infants and complications of pregnancy or delivery.[11] The researchers found no significant increase in the risk of infertility, ectopic pregnancy or premature delivery resulting from abortion. A single induced abortion performed using the methods most frequently employed in the United States today does not increase the risk of either suffering a future miscarriage or bearing a low birth weight infant. The study did find a possible increased risk of miscarriage and low birth weight infants following an abortion performed by the dilation and curettage (D&C) method using a general anesthetic. While potentially a problem abroad, the risk, if it does exist, is minimal in the United States because the D&C method has almost completely been replaced by vacuum aspiration. As a result, the study concluded that a single abortion performed using the modern surgical techniques almost always used in the United States today will not adversely affect a woman's capacity to bear children in the future.

The researchers also felt the studies "of the effects of multiple abortions do not support a firm conclusion about whether the number of induced abortions per se produces any increased risk of adverse outcomes in subsequent . . . pregnancies." While some studies have linked multiple abortions with future difficulty in bearing children, the abortions most frequently implicated were also performed using the D&C method. Thus, while a single abortion does not appear to have adverse health consequences, additional research is necessary to determine whether multiple abortions performed using modern surgical procedures have an impact on subsequent childbearing.

Why are there so many "late" abortions and what can be done to reduce their occurrence?

Almost all abortions performed in the United States take place during the first 12 weeks of pregnancy. Although the total number of abortions performed annually has increased since 1973, the number of procedures occurring after the 15th week of pregnancy has actually decreased. By 1980, only 4 percent of all abortions occurred at or beyond 16 weeks, compared with 8.6 percent in 1973. Nonetheless, 49,600 abortions were performed between the 16th and 20th weeks in 1980 and 12,900 were performed at or beyond the 21st week. These procedures are troubling to the women, their families, their physicians and to society as well. Unfortunately, current research indicates neither precisely who is obtaining these procedures nor the reasons for their occurrence. We do know, however, the general characteristics of women who obtain abortions after the first trimester of pregnancy. Data from England indicate that women receiving second-trimester abortions tend to be of low socioeconomic status. Data from the United States indicate that the women obtaining second-trimester abortions are disproportionately young, black and unmarried.[12]

While not shown conclusively by the data, abortions likely occur after the 15th week of pregnancy for five major reasons:

Many of the abortions performed after the 15th week take place to prevent severe impairment to the pregnant woman's health. Several serious medical conditions that pose significant risks to the life and health of the pregnant woman either do not arise or cannot be diagnosed earlier. For example, many women who have normal blood pressure before pregnancy develop hypertension of pregnancy, or preeclampsia, after the 20th week of gestation. For many who do not respond to other treatment, a late abortion can be a necessity. Renal, or kidney, failure may also be experienced late in pregnancy. In some cases, if an abortion is not performed, the women will suffer permanent kidney damage.

Many of the late abortions that occur to young women take place because of the special problems facing these women in obtaining abortions. Some very young women do not recognize, or acknowledge, their pregnancies. Others are young women who live in the 16 states where parental consent or notification is required before a minor can obtain an abortion.[13] This may cause a significant delay by further complicating an already-complex decision and, in some cases, by leading a teenager to seek an out-of-state facility willing to perform the procedure in the absence of mandatory parental involvement.

Some abortions may be delayed because a woman is unable to locate a facility willing to perform an abortion. Seventy-eight percent of all U.S. counties, where 28 percent of all women of childbearing age live, had no identified abortion provider at all in 1980; nearly 90 percent of all nonmetropolitan counties had no abortion services. As length of gestation increases, the problem of availability of services becomes greater. Only one-third of all abortion providers will perform an abortion after 12 weeks and only 20 percent will perform the procedure after 14 weeks. Thus, a significant percentage of women live in areas where no facilities exist to perform abortions after the very early weeks of the second trimester.

Some late abortions may occur because a poor woman has to delay the procedure while she tries to assemble sufficient funds for the procedure or locate a provider willing to perform an abortion for a reduced fee. Public funds are available for abortions for indigent women on welfare only in 15 states and the District of Columbia.[14] Even in those jurisdictions, not all abortion providers will serve Medicaid recipients.

One of the most significant reasons for abortions after the 15th week of pregnancy is the diagnosis of a fetus afflicted with a severe genetic defect. As a result of astonishing medical progress in recent years, scientists are now able to detect nearly 200 metabolic defects and congenital disorders as well as most of the hundreds of chromosomal aberrations that result in a range of physical and mental impairments. Some of the disorders that are now diagnosable prenatally—including anencephaly, Potter syndrome, Tay-Sachs disease and hypophota-

sia—either result in stillborn infants or kill their victims within the first few years of childhood. Amniocentesis, the most conclusive diagnostic procedure currently available, cannot be performed until the 14th week of pregnancy, and a diagnosis of a severe defect usually cannot be made until the 19th week. Since only a minuscule percent of all abortion providers offer procedures that late, an abortion frequently is then further delayed because of difficulty in finding a facility. Thus, an abortion performed as a result of a diagnosis of a severe fetal defect could easily be delayed until the 21st or 22nd week of pregnancy, or even later.

Abortions performed after the 15th week of pregnancy are both more dangerous to the woman and more emotionally disturbing than earlier procedures. The dilemma posed by these procedures will not fade with time, but only with the elimination of the need for late abortions. First, greater priority can be placed on developing techniques for earlier diagnosis of genetic abnormalities and for reducing the amount of time needed to arrive at a diagnosis. Second, medical research, now only in its infancy, to provide treatment alternatives for fetuses diagnosed as afflicted with severe disorders can be continued and expanded. Third, the number of facilities that perform abortions during the first half of the second trimester can be expanded to reduce delays in obtaining abortions that result from an inability to locate abortion providers. Last, conclusive research on the reasons for late abortions is essential; only once the causes for these procedures are known can they be eliminated.

Do nonhospital abortion facilities provide high-quality, comprehensive medical care?

Since the legalization of abortion, both the number and percent of abortions performed in nonhospital facilities have been increasing; in 1980, the network of 531 freestanding abortion clinics performed 1.1 million abortions, 74 percent of all abortions performed in that year. In the years since legalization, concern has been expressed that these freestanding clinics might provide less than adequate care. These concerns are substantiated neither by the data on the safety record of freestanding clinics nor by studies of the comprehensiveness of the care they provide.

Abortions performed in clinics do not pose any greater risk than those performed in hospitals. A study conducted by researchers from the CDC of first-trimester abortions performed from 1974 through 1977 found clinic abortions to be at least as safe as hospital abortions.[15] A more recent CDC study found no difference in the safety of early second-trimester procedures between those performed in clinics and those performed in hospitals.[16]

A 1981 study of 240 abortion clinics nationwide found that clinics provide the services necessary to assure not only that the procedures performed are safe and necessary but also that they are performed only with the voluntary and informed consent of the patient. As a matter of policy, 68 percent of clinics provide a pregnancy test before performing an abortion. The other clinics said they accept the results of outside pregnancy tests; in some instances they require that the tests be performed by certain approved sources. In addition, pelvic exams are routinely performed before the abortion procedure. The abortion counseling that is provided by all clinics, at a minimum, consists of describing the abortion procedure and explaining its risks, obtaining informed consent, providing birth control information and confirming that it was the patient's own decision to have an abortion. Nearly nine in 10 clinics reported that they include "decision counseling," helping a woman explore the various factors that are involved in making an informed decision whether to terminate the pregnancy or carr it to term, in the counseling session. A separate study of abortion facilities that are affiliated with the National Abortion Federatin (NAF), a nationwide organization of abortion providers, found that counseling usually is provided by specially trained professionals and that 87 percent of the facilities offer counseling to both the woman and her partner.[17] Abortion clinics are also well prepared to handle the infrequent medical problems that arise. In 97 percent of the clinics, at least one physician has hospital admitting privileges; in 92 percent, the medical director has admitting privileges.

A postabortion clinic visit is routinely offered by 93 percent of the facilities. At the remaining facilities, most of the patients either are from out of town or receive follow-up care from their own physicians. Ninety-eight percent of clinics reported providing contraceptive services, either on the day the abortion is performed or at the followup visit.

In addition to standards developed by the individual facilities to assure that high-quality medical care is provided, many clinics are also subject to external standards. Over two-thirds of the abortion facilities are licensed by state, county or local governments. Licensing procedures typically require that both the staff and physical facilities of the clinic are adequate to provide quality care. In most cases, the licensing procedure entails on-site inspections of the clinic; in all cases, licenses may be revoked if any indications of inadequate medical care are found.

In addition to adhering to these licensing requirements, many clinics are also subject to the standards established by national organizations with which they are affiliated. The 230 members of NAF, who provide almost half of all abortions performed in the United States annually, are required to adhere to a rigorous set of national standards governing counseling, nursing care, pre-and post-operative care, surgical procedures, drugs and medication, equipment and physical plant and the qualifications of counseling and medical personnel.[18] These standards and voluntary compliance by abortion facilities assure that NAF affiliates safely and adequately provide all necessary medical and support services.

An affiliate of Planned Parenthood Federation of America (PPFA) may offer abortion services only after the abortion facility is inspected and approved by the organization's National Medical Division.[19] In order to provide abortions, an affiliate must have appropriate and adequately trained staff and its physical facilities must meet strict national standards.

While PPFA affiliates perform only a small percent—approximately five percent in 1981—of all abortions performed in the United States each year, they do play a much larger role in referring women for abortions. A PPFA affiliate is required periodically to review all facilities to which it makes abortion referrals to assure conformance with national standards. When possible, this review is done in conjunction with the appropriate local health agency.

Since nearly seven in 10 abortion clinics in the United States are profitmaking facilities, much concern has been expressed over whether the desire to make a profit interferes with the obligation of the facility to provide quality comprehensive medical care. In abortion, as in the provision of all medical services, there have been cases of practitioners failing to adhere to appropriate medical standards. These cases, although well-publicized, are extremely rare. The 1981 survey of abortion clinics found fears of abuse by profit-making abortion providers to be largely unsubstantiated. Profit-making facilities are as likely as nonprofit agencies to counsel all first abortion patients, offer "decision counseling," provide birth control counseling and supplies and have a staff physician who has hospital admitting privileges. While for-profit facilities are slightly less likely to require in-house pregnancy tests (and therefore more likely to accept test results from referring physicians, for example), they are more likely than "not-for-profits" to offer routine followup care. The survey found no difference in the fees charged by profit-making and nonprofit abortion facilities. While all of PPFA's affiliates are "nonprofits," approximately one-half of NAF's members are "for-profits." These agencies are required to adhere to the strict national standards established by that organization.

Does the United States have the "most liberal" abortion law in the world?

Almost every nation has adopted a policy concerning abortion. By 1981, 38 percent of the world's population lived in countries that had laws that, at least during the early weeks of pregnancy when almost all abortions are performed, permitted abortions without requiring that the reasons for the procedure be specified.[20] These countries include the United States as well as several Western European nations, such as Denmark, Finland, France, Norway and Sweden. Another 24 percent of the world's population lived, in 1981, in countries in which the laws were only slightly more restrictive. In these nations, which include the United Kingdom, the Federal Republic of Germany and Japan, "social factors, such as inadequate income, substandard housing, unmarried status, and the like could be taken into consideration [by physicians] in the evaluation of the threat to the woman's health or where adverse social conditions alone, without reference to health, could justify termination of pregnancy."[21]

Despite the similarities in abortion laws, the United States has an abortion rate (the number of abortions performed per 1,000 women of childbearing age) significantly higher than most of these other nations. Research has yet to provide us with a conclusive explanation for the difference in abortion rates. Most likely, the explanation lies in the interaction of a complex set of factors and is largely due to the reasons why women face unintended pregnancies rather than why they choose abortion once they become pregnant:

Many European nations have established national health services that provide comprehensive medical care to all citizens, regardless of income. Most of these systems include contraception as one of the services provided and, together with other factors in European society, foster a milieu in which the use of birth control by all sexually active women is widely accepted. In contrast, the United States has no comparable arrangements for the provision of comprehensive health care to the entire population.

While most American teenagers do receive some form of sex education, most of the classes currently being taught focus on anatomy and physiology and place little emphasis on contraception and responsible decision-making. As a result, most of the instruction leaves teenagers unprepared to deal responsibly with sexual activity.

When unmarried teenagers in the United States become sexually active, they usually delay using effective contraceptive methods for approximately one year.[22] It is during this period that most unintended pregnancies to teenagers occur. When they do start using contraception, however, teenagers ultimately choose the most effective methods.

While most adult women in Europe and in the United States are consistent users of contraception, a significant difference exists in the methods of contraception that are chosen. In recent years, a significant drop in the number of American women using the most effective reversible methods, the pill and IUD, has occurred, largely due to widely publicized reports of potential adverse effects of these methods. No comparable shift in the contraceptive methods used by European women has been observed.

As a result of these factors, a high percentage of American women and especially teenagers confront unintended pregnancies. In order to reduce the abortion rate in the United States, the frequency of unintended pregnancy must first be decreased.

CONCLUSION

While policies to reduce the number of late abortions as well as continued improvement in the safety of the procedure itself will alleviate some fo the serious concerns about abortion, only the elimination of the need for abortion would dispel all concerns. Unintended pregnancies can be prevented through the development of better contraceptives, unimpeded access to contraceptive services to all women in need regardless of age or income and sex education to increase the awareness of teenagers of the responsibilities that accompany sexual activity.

FOOTNOTES

[1] Seventeen states (Georgia, Hawaii, Idaho, Illinois, Indiana, Massachusetts, Michigan, Missouri, Montana, Nevada, New York, North Dakota, Oklahoma, Pennsylvania, Tennessee, Utah and Virginia) have passed laws requiring all abortions after the first trimester to be performed in hospitals; enforcement of these laws has been enjoined temporarily in Illinois, Missouri, Pennsylvania and Nevada. In addition, three states (Connecticut, New Jersey and Wisconsin) have promulgated regulations limiting these procedures to hospitals.

[From Issues in Brief, Vol. 3, No. 2, February 1983]

10 Years After Roe v. Wade—Myths and Realities About Attitudes Toward Abortion

Almost since the inception of modern techniques to measure public opinion, pollsters have attempted to assess attitudes toward abortion. Yet, despite frequent and continued scrutiny, numerous myths about the public's view of abortion—namely, that blacks, women, Catholics and so-called "single-issue voters" oppose abortion—remain. These myths are not substantiated by the extensive public opinion data that have been collected.

Considerable confusion also exists about Americans' views of abortion as a moral issue compared to their views about abortion as a matter of legality. While many Americans have moral questions about abortion, an overwhelming majority—regardless of race, sex, religion or political affiliation—believe that abortion should remain legal. Moreover, while many believe that abortion is morally wrong in some circumstances, for no specific circumstance does a majority believe that abortion is morally impermissible.

A LONG TRADITION OF SUPPORT

Many opponents of legal abortion believe that the 1973 Supreme Court decisions upholding the constitutional right of a woman to terminate her pregnancy served to generate public support for legal abortion. Hence, their reasoning goes, if those decisions can be eliminated or sidestepped through a constitutional amendment, such as that proposed by Sen. Orrin G. Hatch (R-Utah) to give Congress and the states authority to enact legislation prohibiting abortion, public support for legal abortion will in time evaporate. However, as the Supreme Court did not "create" legal abortion (almost 600,000 women obtained legal abortions in 1972 before the Court's rulings) neither did it "create" public support for legal abortion. This is validated by major studies of public opinion predating the Court decisions. Data collected by Princeton University in the National Fertility Survey (NFS) and by the National Opinion Research Center (NORC) from as far back as 1965 indicate that "[w]hile the 1973 Supreme Court decisions appear to have boosted levels of approval further, the sharpest changes had by then already taken place."[1] In fact, both the NFS and NORC data show that the greatest increase in support for legal abortion occurred before 1970.

Almost immediately after the Supreme Court decisions in 1973, antiabortion advocates began pressing for a constitutional amendment to make abortion illegal. While the numerous proposals that have been put forth differ slightly—some would permit abortions if the life of the pregnant woman were endangered while others would not—they all seek to make abortion illegal. None of these proposals has ever enjoyed the support of more than a small minority of the American public. According to a poll taken by Cambridge Survey Research in 1975, only 27 percent favored a constitutional amendment to make abortions illegal. By 1977, that number had risen to 34 percent but, according to a study conducted by Harris, support for a constitutional amendment fell to 31 percent in 1982. A similar poll taken by the New York Times/CBS News in 1982 found only 28 percent of all Americans favor a constitutional amendment making abortion illegal.

MYTHS AND REALITIES

While these polls might differ slightly on the exact number of Americans who approve of outlawing abortion, they agree that support for legal abortion is widespread among all Americans, regardless of race, sex, religion or political affiliation. Yet, despite this unusual consensus among professional analysts of American public opinion, several myths remain about support for legal abortion.

DO CATHOLICS OPPOSE ABORTION?

Historically, the Catholic Church has been adamant in its opposition to abortion. This position, however, fails to reflect the views of most Catholics in this country, whose attitudes are similar to those held by most non-Catholic Americans. In the November 1979 New York Times/CBS News poll, 64 percent of Catholics agreed that the right of a woman to have an abortion should be left entirely to the woman and her doctor. The more recent 1982 New York Times/CBS News poll found that 63 percent of all Catholics oppose a constitutional amendment banning abortion. A 1982 Associated Press/NBC News poll found that more than seven in 10 Catholics oppose the Hatch amendment which was endorsed by the National Conference of Catholic Bishops in 1981.

Studies of public opinion trends suggest that there is "more systematic variance among Protestant subgroups than between Protestants in the aggregate [70 percent of whom oppose outlawing abortion according to the New York Times/CBS News poll] and Catholics." [2] While members of some Protestant denominations historically have tended to be more supportive of legal abortion than members of others, the polls have found only one subgroup, the so-called evangelicals, in which opposition to legal abortion is frequent. Even among the evangelicals, however, opposition to legal abortion is a minority view. According to a 1980 Gallup poll, 57 percent of the evangelicals opposed a ban on all abortions, compared with 67 percent of the total U.S. population. (Evangelicals are those who indicated they were "born again" or had had a "born again" experience and they have "tried to encourage someone to believe in Jesus Christ or to accept Jesus Christ as his or her saviour" and believe "the Bible is the actual word of God and is to be taken literally word for word.") Rather than religious affiliation, public opinion studies suggest that intensity of religious beliefs is related to a person's view on abortion. For both Protestants and Catholics, approval of abortion decreases as "religiousness" increases. The 1982 New York Times/CBS News poll found that 80 percent of those who, in terms of religion, classified themselves as "not observant" opposed a constitutional amendment, compared with 56 percent of those who consider themselves as "observant." While this relationship is also present among Jews, 90 percent of whom oppose banning abortion according to the 1982 Harris survey, it is much weaker.

Do blacks oppose legal abortion?

Antiabortion literature frequently seeks to portray "Whites [as] more permissive about abortion than Blacks/Nonwhites." [3] Opposition to abortion by blacks and other minorities is linked, according to antiabortion publications, to the "not-so-subtle possibility that abortion is being used as an instrument of genocide." [4] According to the 1982 Harris and New York Times/CBS News surveys, however, no differences exist in the attitudes of blacks and whites, with clear majorities of both opposing a constitutional amendment to ban abortion. The Harris survey found that 62 percent of the whites and 61 percent of the blacks oppose outlawing abortions. (The poll also found that 62 percent of the Hispanics oppose an amendment.) The New York Times/CBS News poll, however, found even less support for banning abortion; according to this study, 68 percent of the whites and 71 percent of the blacks oppose a constitutional amendment.

Do women oppose abortion?

Similarly, the polls found little difference in the attitudes of men and women. The 1982 Harris survey found that 63 percent of the men and 61 percent of the women oppose an amendment prohibiting abortion. Although women are slightly more supportive than men of a constitutional amendment, according to the 1982 New York Times/CBS News study, the poll still found that almost two-thirds of all women oppose banning abortion. A 1981 study of women's attitudes conducted by Yankelovich, Skelly and White found that two-thirds of all women agreed that any woman who wants an abortion should be legally permitted to obtain one and that almost all women believed that abortion should be legal under certain circumstances. The Yankelovich poll found that a larger proportion of black women than white women supported legal abortion. The same study found little connection between women who identified themselves as either Republicans or Democrats and only a small difference between Catholics and Protestants. The Yankelovich study also found that over 90 percent of the women who themselves had had abortions felt the procedure should remain legal. Similarly, a 1981 Washington Post/ABC News poll found that 80 percent of the respondents who had had abortions felt that they were better off today than they would have been if they had chosen to carry the pregnancies to term.

Do Republicans oppose abortion?

At the 1980 Republican National Convention, the platform committee voted to endorse an antiabortion constitutional amendment; Ronald Reagan, both as a candidate and as president, repeatedly has reaffirmed his opposition to abortion. Statistics show, however, that both the party's 1980 position and President Reagan's advocacy of a constitutional amendment do not reflect the views of the rank-and-file membership of the Republican party. A survey of delegates to the 1980 convention conducted by the Washington Post found that only 28 percent supported a constitutional amendment banning abortion. Recent polls have obtained similar results. Both the 1982 Harris and New York Times/CBS News surveys found that the position of the party leadership continues to be at odds with the rank-and-file memberships; both studies found that less than one-third of all Republicans favor a constitutional amendment. In contrast, the Democratic 1980 platform, which firmly "supports the Supreme Court decisions on abortion rights as the law of the land and opposes any constitutional amendment to restrict or overturn these decision," does reflect the views of the party's membership. In 1982, Harris found that 62 percent of the Democrats oppose a constitutional amendment and the New York Times/CBS News poll found that 74 percent of the Democrats would oppose such a provision.

Harris' 1982 poll also found that substantial majorities oppose a constitutional amendment regardless of political outlook. While the poll shows that three-fourths of all liberals oppose such legislation, a constitutional amendment to outlaw abortion is opposed by six in 10 people who describe themselves as either conservative or "middle-of-the-road," Thus, support for banning abortion is clearly a minority view, regardless of either political affiliation or outlook.

TABLE 1.—ATTITUDES TOWARD A CONSTITUTIONAL AMENDMENT BANNING ABORTION, 1982

[In percent]

	Harris [1]			New York Times/CBS [2]		
	Favor	Oppose	Not sure	Favor	Oppose	Not sure
U.S. total	31	62	7	28	68	4

[1] August 1982 Harris poll. Question asked: Do you favor or oppose a constitutional amendment to ban legalized abortion? (May not add to 100 percent due to rounding.)

[2] September 1982 New York Times/CBS News Poll. Question asked: There is another proposal for a constitutional amendment which would make all abortions illegal. Do you favor such an amendment? (May not add to 100 percent due to rounding.)

[3] Data not available.

[4] Data from the Harris poll are white Protestants and white Catholics only.

Are opponents of abortion more likely to be single-issue voters?

Until recently, abortion opponents have been more likely than abortion supporters to cast a vote solely on the basis of a candidate's position on abortion. The 1981 Washington Post/ABC News poll found that three-fourths of those who opposed abortion felt the issue was an important consideration in their voting decisions, compared with just under half of those who supported legal abortion. This distinction, however, now appears to have faded, and possibly has been reversed. The 1982 Harris poll found that 71 percent of those who support a constitutional amendment to outlaw abortion and 63 percent of those who oppose such an amendment would oppose a candidate because of his or her position on abortion. Because a much greater percentage of the electorate, 62 percent according to the study, oppose the amendment (compared with only 31 percent who favor it), the numbers work decisively against those who believe abortion should be outlawed. According to Harris, "The pro-abortion forces are able to count on 39 percent of the total electorate taking their side, while the anti-abortion cause can muster no more than 22 percent." [5] The New York Times/CBS News poll taken two months later, however, shows even greater support for legal abortion. According to that study, 7 percent of the electorate feels that the abortion issue is important enough for them to change their vote, but by a three-to-two margin, these "single-

[5] L. Harris, "Conservatives Get 'No Confidence' Vote on Social Issues," Aug. 12, 1982.

issue voters" support legal abortion. (In 1978, the New York Times/CBS News poll found that an identical 7 percent would vote according to the abortion issue, but that at least 80 percent of them opposed legal abortion.) Thus, the results of these studies clearly show that a candidate's support of legal abortion will increase, rather than diminish, electoral support, and will do so in increasing numbers.

Recent studies of public opinion show that a significant majority of all Americans, regardless of sex, race, religion, political affiliation or political out-look, support legal abortion. In no category, except perhaps Protestant "evangelicals," does significantly more than one-third of the population support a constitutional amendment to outlaw abortion. In addition, Americans oppose other "back-door" approaches to achieve that end. The Associated Press/NBC News poll found that only 19 percent of the respondents support the Hatch amendment and, according to the 1981 Washington Post/ABC News poll, only 29 percent would favor a law, such as the so-called "Human Life Statute," that would "make all abortions murder."

Results obtained by public opinion polls are widely acknowledged to be affected by the nuances of the questions asked. Thus, while the polls show that Americans overwhelmingly oppose attempts to make abortion illegal, they also show that not all Americans support unlimited access to abortion. The 1981 Harris poll found that while 56 percent supported legal abortion up to three months of pregnancy, 41 percent were opposed. The comprehensive analysis of women's opinions toward abortion conducted by Yankelovich found that 67 percent of all women felt abortion should be legal and only 29 percent felt that abortion, in general, should be illegal. However, more than 8 in 10 of the women who felt that abortion, in general, should be outlawed also felt that abortion should be permitted in at least some situations. Further, women did not agree on the situations in which abortion should be prohibited. As a result, despite feelings about abortion in general, only 21 percent of all women felt abortion should be illegal in cases of a married woman using a contraceptive that did not work, a welfare mother who cannot work and an unwed teenager.

ABORTION AND MORALITY

The 1981 Yankelovich study found that while two-thirds of all women believed abortion should be legal, many had moral qualms about the procedure. Only a small minority (5 percent), however, considered abortion to be morally wrong under all circumstances. Approximately 6 in 10 women took the middle position that abortion is sometimes justified. However, while most women agreed that abortion sometimes is morally wrong, they did not agree on the circumstances in which it is wrong. Under none of the circumstances did a majority consider abortion morally wrong.[6] Thus, while most women believe abortion is morally wrong in "some" of these circumstances, and might therefore favor legislation making it illegal under "some" circumstances, it would be impossible to devise legislation that would prohibit abortion only in those circumstances in which a majority consider it to be morally wrong. Any attempt to prohibit abortion, for any reason, would always be seeking to prohibit abortion in circumstances in which a majority of American women consider the procedure morally acceptable. Any attempt to restrict abortion would thus conflict, rather than coincide, with the moral beliefs of the majority of Americans.

Despite marginal differences among them, a wide variety of opinion polls taken over the years shows that an overwhelming majority of Americans believe abortion should remain legal. Opposition to outlawing abortion is widespread and cuts across racial, sexual, religious and political lines. In fact, in increasing numbers, those who favor the continued legality of abortion are willing to make that issue central to their voting decisions.

While only a small minority of Americans believe that abortion should be illegal, many have moral questions about abortion. However, for no specific circumstance does a majority of Americans believe that abortion is morally wrong. Nonetheless, the small yet vocal and well-organized minority that opposes legal abortion has been able to make abortion a political issue and poses a real threat to the continued legality and availability of this procedure that is supported by a clear majority of all Americans.

FEDERAL FINANCING OF ABORTIONS

Although the overwhelming majority of Americans oppose a law or constitutional amendment to make abortion illegal, until recently a small majority opposed federal financing of abortions for poor women. This attitude has changed. Apparently, however, this change in attitudes has not yet penetrated the halls of Congress, which continues to ban virtually all federal funding of abortions for indigent women eligible for Medicaid, members of the armed forces, Peace Corps volunteers and patients served by the Indian Health Service. A September 1982 Public Opinion Referendum by the Gallup Poll found that 56 percent of Americans oppose a ban on federal financing of abortions. Among some subgroups, opposition to such a ban is much more substantial: 70 percent of nonwhites, 63 percent of the college-educated, 61 percent of those under 30, 62-63 percent of those with incomes of $5,000 a year and under and 61-62 percent of those living in cities with populations of one-half million or more oppose a federal funding ban.

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum and ask unanimous consent that the time not be charged to either side.

The PRESIDING OFFICER (Mr. KASTEN). Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HATCH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE FALLACIES OF ROE

Mr. HATCH. Mr. President, at issue today is the Supreme Court decision of Roe against Wade. In effect, the Senate of the United States is asked by this proposed constitutional amendment to sit as justices of the Supreme Court and decide whether, given all the legal, constitutional, philosophical, social, moral, ethical, and jurisprudential facts available to this body after 10 years of elective abortion resulting from the Court's rulings, to reverse or retain Roe against Wade. The vote of this body will be its judgment of the Roe decision.

If we are to judge the judgment of the judges in Roe, I propose now to examine their reading of history, law, the Constitution, and all other elements that influenced that decision. Based on an disinterested view of these factors, I can recommend without reservation that the Senate reject the abortion right created in Row.

Before undertaking a more rigorous legal analysis of Roe we might profit by measuring it against the basic tenets that animated the creation of our Republic. Those principles were articulated by Thomas Jefferson in the Declaration of Independence:

> We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are Life, Liberty, and the pursuit of happiness. That to secure these rights, Governments are instituted among men, deriving their just powers from the consent of the governed.

Thus, our infant Nation established the protection of human life as the foremost duty of Government. Roe's blatant conflict with this fundamental national value is apparent. In the words of President Reagan:

> We cannot diminish the value of one category of human life—the unborn—without diminishing the value of all human life (Human Life Review, vol. IX, No. 2, p. 8, 1983).

Perhaps no act of Government has conflicted more with the founding tenets of our Republic since the last infamous Supreme Court case that denied the value of certain human lives, the Dred Scott case. In both Dred Scott and Roe, one class of less-privileged human beings were denied the full protections of the Constitution. At length, the Dred Scott case was corrected by constitutional amendment. The correction of this Supreme Court error serves as an excellent analog for our consideration of the modern Dred Scott case, Roe against Wade.

In the case of Roe against Wade, a majority of seven on the Court identified for the first time in the Constitution's history a right to abortion within the terms of the 14th amendment. This right was sufficiently pow-

[6] Respondents were asked their opinion on the morality and legality of abortion in 10 circumstances; a woman has been raped, a woman's health is at risk, a woman is the victim of incest, a woman is carrying a fetus with a severe genetic defect, a physically handicapped women becomes pregnant, an unwed teenager becomes pregnant, a welfare mother who can't work becomes pregnant, a married woman already has a large family, a single woman was using a contraceptive that didn't work. Yankelovich study is cited in S. K. Henshaw and G. Martire, "Abortion and Public Opinion Polls: Morality and Legality," *Family Planning Perspectives*, Vol. 14, No. 2 (March/April 1982).

erful to overturn the abortion restrictions of every single State in the Union. The right created in Roe, which even the Supreme Court has labeled the "right to abortion" *Conn.* v. *Menillo*, 423 U.S. 9, 10 or the "right to an abortion" *Singleton* v. *Wulff*, 428 U.S. 106, 115, has further proven strong enough to override most State attempts to place reasonable restraints on abortion practices. For example, the right to abortion has been invoked to strike down State statutes attempting to protect the child in a late abortion who might be born alive, *Colautti* v. *Franklin*, 439 U.S. 379 (1979); to void State statutes requiring use of the safest abortion techniques, *Danforth*, 428 U.S. 52; to invalidate State statutes intended to give parents the ability to counsel with their minor children and give consent prior to an operation that deeply involves their minor child's physical and psychological health, Danforth, supra; to hold that a 24-hour waiting period prior to performance of this medical procedure is unconstitutional, Akron against Center, June 15, 1983, to declare that a father—although he has a constitutional right to share in procreating (*Skinner* v. *Okla.*, 315 U.S. 555 (1942))—has no right whatsoever to protect the unborn child he has joined in procreating; and even to invalidate a State statute requiring abortions after the first term to be performed in hospitals, Akron, supra. Of course, the most important aspect of Roe is that it has established a regime of elective abortion in America.

ROE AS CONSTITUTIONAL LAW

Almost immediately after Roe was decided, criticism of the opinion began to emerge from the Nation's top jurisprudential and constitutional scholars. These renowned scholars charged that the Roe decision has no basis in constitutional law. In the words of Prof. John Hart Ely:

> Roe is a very bad decision. It is bad because it is bad constitutional law, or rather because it is not constitutional law and gives almost no sense of an obligation to try to be. 32 Yale L.R. 920 1973).

Prof. Archibald Cox echoes this opinion when he asserts that:

> Neither historian, layman, nor lawyer will be persuaded that all the details prescribed in Roe v. Wade are part of either natural law or the Constitution. The Role of the Supreme Court. (1976).

It is important to note as well what these scholars are not saying. They are not criticizing the Court for taking a controversial position on a sensitive issue, nor are they disputing the morality of legalized abortion. As a necessary consequence of its position in the legal system, the Supreme Court is often confronted with difficult questions in the context of legal dispute. In the words of Professor Ely, "These difficult questions yield controversial answers." In most cases, however, the Constitution provides some guidance for the proper resolution of even the most controversial of these decisions. For example, the fourth amendment guarantees to all citizens, the innocent and guilty alike, freedom from unreasonable searches and seizures. This overriding value leads to controversial decisions involving restraints on police officers in the apprehension of criminals. While all may not agree with the Court's particular application of the fourth amendment, Professor Ely points out, one cannot easily make the claim that the Court's decision lacks any foundation in the Constitution.

In the case of Roe against Wade, however, Professor Ely notes the claim is entirely justified, for the Constitution "simply says nothing, clear or fuzzy, about abortion." Nor is there any support whatever in the legislative history of the Constitution to warrant the conclusion that it was intended to secure a "right to an abortion."

Despite the absence of constitutional warrant to find a right to abortion, Roe declares that the due process clause of the 14th amendment confers a right of privacy which includes the right of a woman to abort her offspring if she so chooses. Nowhere in the decision does the Court define the right of privacy; its only discussion of the subject is an assertion that the Constitution does not confer "an unlimited right to do with one's body as one pleases." Yet if the right of privacy does not entitle one to do with one's own body what one pleases, how can it be said to protect activity that ends the life of another member of the human species? Even if the human fetus is not a person in the whole sense of the law, Ely emphasizes, "it is certainly not nothing." Ely's aphorism illustrates an essential truth "that should have been obvious to the Court—that there is nothing private about an abortion."

Although the right of privacy is not mentioned in the text of the Constitution, many legal scholars would agree that the courts may find such a right in the general values which certain specific provisions of the Constitution aim to protect. However, these scholars also stress that the right of privacy must be carefully defined and limited; thus, Professor Ely writes that it is entirely proper for a court to infer a general right of privacy, "so long as some care is taken in defining the sort of right the inference will support."

Roe, however, provides neither a definition for the right to privacy nor an explanation of how that right is implicated by restrictions upon abortion. Rather, the Court simply declares that the right is broad enough to encompass a woman's decision whether or not to terminate her pregnancy. Apparently, the Court thinks that this outcome is supported by the detriment imposed upon the pregnant woman by statutes which prohibit her from aborting her child. As Professor Ely notes, these detriments ought to be taken very seriously. But, he adds, all this has nothing to do with privacy in the Bill of Rights sense or any other the Constitution suggests. Whatever one's philosophical views on the issue, it is genreally agreed that the Constitution does not provide such an unrestricted right to privacy.

The irony of this aspect of the Roe decision was concisely articulated by Prof. John Noonan during our Constitution Subcommittee hearings on this amendment. He noted that for most of us what is private is what can be done alone, at home, or with anyone's family. It would strike most people as bizarre that something so private—as abortion is under Court rulings—depends on and cannot be effected without public funding. Yet that is the announced position of the supporters of abortion. Hearings, October 5, 1981. Professor Noonan summarized his position on the connection of abortion to privacy by stating: "We can all agree that sexuality is private and reproduction is private, but when it comes to taking the life of the unborn we are no longer in the domain of the private. We are dealing with a social act—what is now a social act amounting to an American atrocity." Id.

In her recent dissent to the Akron case, Justice Sandra Day O'Connor recognized other fallacies in Roe. Justice O'Connor pointed out that the Roe Court identified a legitimate State interest in protecting "the potentiality of human life." 410 U.S. 149, 150. She approved this finding, but questioned how the Court could ignore the implications of their own conclusion: "I agree completely that the State has these interests, but in my view, the point at which these interests become compelling does not depend on the trimester of pregnancy. Rather these interests are present throughout pregnancy." Akron, page 8 of dissent.

With clarity and skill, Justice O'Connor thus exposes the arbitrariness of the Roe Court's trimester framework. Under the Roe opinion, the State may not take laws to protect "potential human life" until the third trimester. Yet, if the Court acknowledges the presence of "potential human life" worthy of State protection in the third trimester, why not protect that same "potential human life" a day before the third trimester? In the words of Justice O'Connor, "potential life is no less potential in the first weeks of pregnancy than it is at viability or afterward. At any stage of pregnancy there is the potential for human life." To those who might argue that the third trimester is the point of viability—a questionable point with advancing medical technology—

and thus a logical place to grant the States authority to protect unborn life, Justice O'Connor poses the same unanswerable dilemma: "The choice of viability as the point at which the State interest in potential life becomes compelling is no less arbitrary than choosing any point before viability or any point afterward." If indeed the Court were compelled to choose some arbitrary point to demark when States could legally protect human life, it would seem far more logical to choose the earliest possible point to grant the maximum possible protection to the value identified by the Declaration of Independence as the primary purpose for the formation of governments; namely, the protection of human life. In the words of President Reagan, "Doesn't the constitutional protection of life, liberty, and the pursuit of happiness extend to the unborn unless it can be proven beyond a shadow of a doubt that life does not exist?" Address to National Religious Broadcasters, January 31, 1983.

Justice O'Connor also explained a second major flaw in the Roe reasoning; namely, the trimester formula of Roe has "no justification in law or logic." Akron dissent at 8. The Roe decision dividing the term of pregnancy into three equal parts is necessarily tied to the current state of medical technology. Viability, the point at which an infant can live outside the womb and a State may legislate to protect the unborn, is clearly pushed back as technology advances. Even the Court has acknowledged the "flexibility of that then." *Danforth*, 428 U.S. at 64. At the same time, advances in medical technology have made abortions generally safer and have reduced the State's authority to require hospitalization or other safety regulations. Akron, supra. Thus, as the Justice points out, Roe's framework "is clearly on a collision course with itself. As the medical risks of various abortion procedures decrease, the point at which the State may regulate for reasons of maternal health is moved further forward to actual childbirth. As medical science becomes better able to provide for the separate existence of the fetus, the point of viability is moved further back toward conception." Akron dissent at 7. Justice O'Connor is correct: The logic of this framework is difficult to assert.

The logic is not the only flaw of this trimester breakdown, however. Its legal wisdom is also lacking. To be predictable and enforceable, the law should demonstrate some degree of continuity over time. Under the Roe formulation, the States must continually guess about the current state of the medical art and other factors that coud cause their authority to legislate to fluctuate. For a conscientious legislature, the Roe decision imparts no sure standard as to the limits of their authority. Justice O'Connor explained the uncertainty imposed upon the legislatures in these terms: "Although legislatures are better suited to make the necessary factual judgments in this area, the Court's framework forces legislatures, as a matter of constitutional law, to speculate about what constitutes 'accepted medical practice' at any given time. Without the necessary expertise or ability, courts must then pretend to act as science review boards and examine those legislative judgments." Akron dissent at 7.

While these arguments are compelling, they are by no means the only attacks on the reasoning of Roe. Perhaps I could simply list a few more of the unanswered questions raised by Roe:

The question of when life begins, according to the Court, is beyond the competency of the judiciary to answer. Nevertheless the Court effectively answers the question for the legislatures and citizens of all 50 States by declaring that States can protect unborn life only after "viability."

The Court conceded that if the unborn were "persons" they would be afforded 14th amendment protections. Yet both reasons the Court offers for rejecting the "personhood" of the unborn were wholly inadequate. In the first place, the Court suggests that none of the other uses of the term "person" in the Constitution appear to apply to the unborn. As a matter of fact, however, none of the other uses of the term appear to apply to anyone under the age of 24. All other uses of the term apply to adults. Surely adolescents could not thus be stripped of personhood. The second reason given by the Court is the absence of case law indicating the unborn should be persons. This only proves a well-known fact: This question was before the Court for the first time. It is unseemly that an issue which could have disposed of the case was given such shallow consideration.

Although the Court maintained that it could not determine when life begins, it nonetheless divided a pregnancy into three separate trimesters with different legal implications for each subdivision. One looks in vain for any reasoning from constitutional, legal or scientific sources for a guiding principle underlying this division process.

When finding a right to privacy, the Court employed imagination and innovation to find a never-before-identified right to abortion within the due process clause of the 14th amendment; when finding "person" does not include the unborn, the Court was literalistic to a fault. Without reaching the merits of appropriate judicial construction techniques, vascillating between two extremes inspires little confidence that the decision was based solely upon purely neutral criteria of constitutional interpretation.

Even if the unborn have no rights under the 14th amendment, this is irrelevant to the question of whether a State may restrict abortion. Professor Ely uses a particularly enlightening analogy to illustrate this point:

> Dogs are not "persons in the whole sense" nor have they constitutional rights, but that does not mean the state cannot prohibit killing them: It does not even mean the state cannot prohibit killing them in the exercise of the First Amendment right of political protest.

LEGAL CONTEXT OF ROE

The Supreme Court's decision in Roe against Wade should be viewed in its proper legal and historical context. The Court's sweeping decision resulting in abortion on demand is clearly in opposition to the treatment of abortion at common law, early American abortion laws, laws enacted by the legislative bodies of the States at the time of the decision, and even the abortion laws of most other countries of the world.

ABORTION AT COMMON LAW

After reviewing the development of abortion as a crime at common law, relying heavily on the analysis of Prof. Cyril H. Means, an advocate of legalized abortion, the majority in Roe concluded:

> It is thus apparent that at common law, at the time of the adoption of our Constitution, and throughout the major portion of the 19th Century, abortion was viewed with less disfavor than under most American statutes currently in effect. Phrasing it another way, a woman enjoyed a substantially broader right to terminate a pregnancy than she does in most States today. 410 U.S. at 140.

The Court's treatment of the development of abortion as a crime at common law has been severely and repeatedly criticized for both its conclusions and its uncritical acceptance of the common law analysis of Professor Means. See, for example, Byrn, "An American Tragedy: The Supreme Court on Abortion," 41 Fordham L. Rev. 807 (1973); "Abortion and the Constitution: The Need for a Life-Protective Amendment," 63 Calif. L. Rev. 1250 (1975). It is not necessary at this time for me to engage in an exhaustive analysis of the treatment of abortion as a crime at common law. It is enough simply to point out that the majority's sweeping decision in Roe was clearly contrary to the way abortion was viewed at common law, with respect not only to maternal health but also to the protection of the life of the fetus.

In the 13th century, Bracton wrote that abortion by blow or poison was homicide if the fetus was "already formed and animated, and particularly if it be animated." 2. H. Bracton, De Legibus et Consuetudinibus Angliae 29 (Twiss ed. 1879). Another authority

later in that century, Fleta, also condemned abortion of a "formed and animated" fetus as homicide, "Justifiable Abortion—Medical and Legal Foundations," 49 Geo. L.J. 395, 431 (1961). At that time, biologists taught that a new life came into being when the fetus assumed recognizable human form, which was thought to occur 40 days after conception. See Means, "The Law of New York Concerning Abortion and the Status of the Fetus; A Case of Cessation of Constitutionality," 14 N.Y.L.F. 411, 411-12 (1968).

A difficulty encountered with the abortion crime at common law was the impossibility of proving the cause of the child's death. This severe evidentiary problem led to a paucity of indictments for abortion and led some 16th century writers to conclude that, as a practical matter, abortion was not a crime. Modern L. Rev. 203 (1937). Seventeenth century abortion reform tried to resolve the proof problem by declaring that an abortion was murder if the child was born alive with marks of the abortion and then died. If the child was stillborn, there was no murder because it could not be known "whether the child was living at the time of the batterie or not, or if the batterie was the cause of the death * * *." *R.* v. *Sims,* 75 Eng. Rep. 1075 (K. B. 1601).

Coke attempted, later in the 17th century, to resolve the problem further, and, in so doing, again indicated the concern the common law attached to the life of the fetus—a concern which Roe totally abandoned:

> If a woman be quick with childe, and by a Potion or otherwise killeth it in her wombe; or if a man beat her, whereby the childe dieth in her body, and she is delivered of a dead childe, this is a great misprison, and no murder; but if the childe be born alive, and dieth of the Potion, battery, or other cause, this is murder: for in the law it is accounted a reasonable creature, in rerum natura, when it is born alive. E. Coke, Third Institute 50 (1664).

The majority in Roe, relying on Professor Means' interpretation of the sketchy reports of two cases from 1327 and 1348—three centuries before Coke wrote—suggested that Coke was either mistaken or intentionally misstated the status of abortion as a common law crime, 410 U.S. at 134. Other commentators such as Bryn and Destro strongly dispute Means' analysis of those cases and suggest that the cases stand for the opposite conclusion. The great common law scholars clearly indicated that abortion was a crime with respect, at the very least, to a quick fetus. Blackstone stated:

> Life is the immediate gift of God, a right inherent by nature in every individual; and it begins in contemplation of law as soon as an infant is able to stir in the mother's womb. For if a woman is quick with child, and by a potion or otherwise, killeth it in her womb; or if any one beat her, whereby the child dieth in her body, and she is delivered of a dead child; this, though not murder, was by the ancient law homicide or manslaughter . . . But (Coke) doth not look upon this offence in quite so atrocious a light but merely as a heinous misdemeanor. Black's Law Dictionary, 5th Ed. (1979) at 1122.

Finally, as Blackstone indicated, the common law recognized the life of the fetus at the time of quickening. The first English abortion statute, recognizing this understanding of human generation, provided for greater penalties for an abortion of a woman "quick with child" than a woman "not being, or not being proved to be, quick with child." 43 Geo. 3 ch. 58 & 2. (1803). This statute was changed by a new statute, enacted in 1837, which imposed a penalty for all abortional acts without distinction. 7 Will. 4 & I. Vict., c. 85 (1837). A possible motive for this change was the discovery of the ovum, and a more accurate idea of the nature of conception, in 1827.

The decision in Roe, which, as discussed previously, eliminated any consideration for the life of the fetus, was clearly contrary to the thrust of the common law understanding of abortion.

19TH CENTURY AMERICAN ABORTION LAW

The abortion law in effect in this country, in most States, until the mid-19th century was derived from English common law, 410 U.S. at 138. While the vast majority of the States retained the common law distinction that abortion before quickening was not a crime, no State held that there was no crime of abortion after quickening. Bryn at 827. Later in the 19th century, several States interpreted the common law to mean that abortion was a crime at any time during pregnancy. For example, *Mills* v. *Commonwealth,* 13 Pa. 630 (1850).

Almost all of the States enacted abortion statutes during the 19th century. See 410 U.S. at 175-76 notes 1 and 2 (dissenting opinion). Connecticut adopted the first State abortion statute in 1821. Conn. Stat. Tit. 20, Sec. 14 (1821), The Connecticut statute retained the quickening distinction for the abortion crime. Quickening, however, soon began to disappear as the practical distinction to determine criminality. The intention behind enactment of these statutes is illustrated by the Maine Supreme Court which, in interpreting the Maine statute, abrogated the quickening requirement in the abortion crime; the court pointed out that if the pleading did not allege the destruction of the child, it would be fatally defective for not charging the essential element of the crime. *State* v. *Smith,* 33 Me. 48, 60 (1851).

In 1859, the American Medical Association Committee on Criminal Abortion criticized the quickening distinction in criminal abortion laws for the "grave defects of our laws, both common and statute, as regards the independent and actual existence of the child before birth, as a living being," and called upon State legislatures to revise their abortion laws. 12 transactions of the Am. Med. Assn., 73-78 (1859). This position of the AMA seems to have had its impact because during this period many States abolished the requirement that an abortion had to follow quickening to be a crime. At the time of the ratification of the 14th amendment, in 1868, at least 28 of the 37 States had made abortions before quickening a crime. Quay at 447-520. In the next 15 years, seven more of these States incriminated prequickening abortional acts. By 1871, the AMA could quote with approval from Archbold's Criminal Practice and Pleading with regard to the new consensus:

> It was generally supposed that the foetus becomes animated at the period of quickening; but this idea is exploded. Physiology considers the fetus as much a living being immediately after conception as at any other time before delivery, and its future progress as the development and increase of those constitutent principles which it then received. It considers quickening as a mere adventitious event . . . Indeed, no other doctrine appears to be consonant with reason or physiology but that which admits the embryo to possess vitality from the very moment of conception. 22 Transactions of the Am. Med. Assn. 250 (1871).

Further evidence that at least one motivation behind these laws was the protection of the life if the fetus, is seen in several court decisions interpreting these statutes.

> We hold that the anti-abortion statutes in Oklahoma were enacted and designed for the protection of the unborn child and through it society. *Bowlan* v. *Lunsford,* v76 Okla. 115 (1936).

Thus, again, the Court's decision in Roe, resulting in a practical situation of abortion on demand, was clearly contrary to the early American law on abortion.

STATE ABORTION LAWS AT THE TIME OF ROE

The Supreme Court's decision in Roe held every State's criminal abortion statute unconstitutional. 410 U.S. at 118, note 2.

Between 1967 and 1972, most of the State legislatures had considered changing their abortion laws. Nineteen States did make changes in their abortion law. 1972 Univ. of Illinois L.F. 177. All of these 19 States changed their law to permit abortion to prevent grave health damage to the mother. In addition, some of the States permitted abortions when the unborn child was conceived in rape or incest, or where the child would be born with substantial deformity. Four States required no grounds at all. But all States limited abortions in terms of age of the fetus; for example, Washington had a limit of 4 lunar months.

The other 31 States did not change their abortion law despite the fact that abortion legislation was intro-

duced in most of them. In two States, Michigan and North Dakota, proposed liberalized abortion statutes were rejected by referendum—by majorities of 61 percent and 77 percent respectively. In 21 of the States, the abortion statutes in effect in 1868—the year the 14th amendment was ratified—were still in effect at the time of the *Roe* decision. 410 U.S. at 176 note 2.

In sum, no State—including the four States which allowed abortion on demand—made abortion legal for the entire 9 months. None of the States had abortion laws as expansive as that created by the Court in Roe against Wade.

INTERNATIONAL ABORTION LAW

Not only was the Court's creation of an abortion right more permissive than the law that had been enacted by the representatives of the people of the 50 States, but the abortion right found in Roe was one of the most permissive in the world.

In 1981, according to one study, the United States was one of 7 percent of the countries of the world in which something approximating abortion on demand was legal. Tietze, "Induced Abortion: A World Review" (1981) (the Population Council). But the current status of abortion in the United States may be more extreme than that figure indicates since many of the other countries in that category have enforceable time limits on the legal availability of abortions. Other countries in this category include the U.S.S.R., the People's Republic of China, Denmark, France, Singapore, Sweden, Yugoslavia, and Vietnam. The vast majority of countries of the world have at least some effective legal control over the performing of abortions. As Prof. Richard Stith has observed about Roe against Wade,

> As a teacher of comparative law, I find this decision unique in the world. No other modern domestic state or foreign nation has ever, to my knowledge, privatized the value of new human life to this degree. No one, except our Court has ever left the unborn entirely without public protection even just before birth. Moreover, this extremist position has been imposed on our country not as a matter of temporary legislative experimentation, but by practically unchangeable judicial fiat—and this with scarcely any principled basis in the Constitution. Senate hearings, November 12, 1981, Professor Richard Stith, Valparaiso University School of Law.

Indeed, the single judicial decision in western law which is most directly comparable to Roe on terms of the issues presented has come to almost diametrically opposite conclusions. In 1975, the Federal Constitutional Court of West Germany handed down its own decision on abortion, in which the majority opinion of the court (a) accepted as fact the position that human life exists at least within a few days after conception, (b) rejected the view that this life could legitimately be classified as having little or no value under the law, and (c) invalidated as unconstitutional a policy of unrestricted abortion during the the first 3 months of pregnancy. See generally, Robert Jonas and John Gorby, "West German Abortion Decision: A Contrast to *Roe* v. *Wade*," 9 John Marshall J. Practice & Procedure (1976).

Thus, it can be seen that the Court's decision in Roe against Wade had a devastating impact on existing law. This far-reaching decision was clearly contrary to at least part of the purpose behind the treatment of abortion as a crime at common law and the development of 19th century abortion law in America. The abortion right found in Roe was broader than any existing State abortion law, and, finally, was one of the most permissive, if not the most permissive, in the world.

CONCLUSION

This speech has attempted only to portray some flavor of the jurisprudential criticism that has been directed at the Roe and Doe decisions. In large part, this criticism has come from individuals who do not look with disfavor upon the substantive policies generated by these decisions. They simply question how these policies came suddenly to be mandated by a Constitution that had never been thought prior to 1973 to contain anything approaching the "rights" set forth in Roe and Doe. As Professor Ely again has observed,

> What is frightening about Roe is that this super-protected right [to abortion] is not inferable from the language of the Constitution, the Framers' thinking respecting the specific problem in issue, any general value derivable from the provisions they included, or the Nation's governmental structure. . . . At times the inferences the Court has drawn from the values the Constitution marks for special protection have been controversial, even shaky, but never before has its sense of an obligation to draw one been so obviously lacking. Ely at 935–7.

As Professor Epstein has similarly concluded, the Roe decision is "symptomatic of the analytical poverty possible in constitutional litigation." Epstein at 184.

Among other constitutional scholars who have been sharply critical of the jurisprudence in Roe are the late Alexander Bickley of the Yale Law School, Arthur Miller of the Harvard Law School, Harry Wellington, former dean of the Yale Law School, and Archibald Cox, former Solicitor General of the United States. A. Bickel, "The Morality of Consent" (1975).

Perhaps even more compelling criticism of the Roe decision, however, has come from the Justices themselves who were in dissent in that case. In a dissent far stronger than normally seen on the Supreme Court, Justice White stated:

> I find nothing in the language or history of the Constitution to support the Court's judgment. The Court simply fashions a new constitutional right for pregnant mothers and, with scarcely any reason or authority for its action invests that right with sufficient substance to override most existing State abortion statutes. The upshot is that the people and the legislatures of the 50 States are constitutionally disentitled to weigh the relative importance of the continued existence and development of the fetus, on the one hand, against a spectrum of possible impacts on the mother, on the other hand. As an exercise of raw judicial power, the Court perhaps has authority to do what it does today; but in my view its judgment is an improvident and extravagant exercise of the power of judicial review which the Constitution extends to this Court. 410 U.S. at 221–22 (Justice White Dissenting).

Justice Rehnquist similarly observed:

> The decision here to break the term of pregnancy into three distinct terms and to outline the permissible restrictions the State may impose in each one, for example, partakes more of judicial legislation than it does of a determination of the intent of the drafters of the Fourteenth Amendment. 410 U.S. at 174 (Justice Rehnquist dissenting).

While fully respecting the authority of the Supreme Court to interpret the provisions of the Constitution, supporters of this amendment recognize also the authority reposed in Congress under article V of the Constitution to amend the document in response to what it views as wrongful or inappropriate decisions. To this end, this amendment amends the Constitution to overcome the effects of Roe against Wade and its progeny and to restore authority in the States to legislate with regard to the practice of abortion.

Mr. President, I suggest the absence of a quorum and ask unanimous consent that the time be charged to neither side.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HATCH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATCH. Mr. President, I yield such time as he may require to the distinguished Senator from Iowa.

The PRESIDING OFFICER. The Senator from Iowa.

Mr. JEPSEN. Thank you, Mr. President.

Mr. President, no issue is more important than the one before us today. The sanctity of human life, so brutally disregarded in the act of abortion, is fundamental to our human nature. It expresses humankind's deepest strivings. Respect for human life is essential to the future of our Republic.

I feel privileged to participate in this great debate. Not since the downfall of slavery has our Nation so starkly confronted its deepest values. Abortion

strikes at the heart of what it means to be a member of the human family. And I profoundly believe that the issue of abortion, more than any other issue facing us today, will determine what we are as a people.

Mr. President, it is said that one of the greatest turning points in human history was the Hippocratic Oath. I believe that, and I believe it completely. For most of human history, no distinction was made between killing and curing. But the Hippocratic Oath put an end to that. It made a vital distinction between the physician and the sorcerer—a distinction which is now being threatened by abortion on demand. It is tragic, Mr. President, that we may be returning to the age of the sorcerer by denying the basic facts about when human life begins.

Abortion is ignoble. The world's great religions condemn it. Every known culture has treated it with disdain. And no amount of statistical trickery or verbal blandishment can transform it into something good.

This is what humankind has said most recently about abortion: at the Nuremburg International Military Tribunal for the trial of war criminals, the promotion of abortion among minority populations was considered a crime against humanity; the Declaration of the Rights of the Child of the United Nations affirmed that every child needs appropriate legal protection before as well as after birth; and the American Convention on Human Rights of the Organization of American States asserted that every person has the right to have his or her life protected by law from the moment of conception and that no one shall be arbitrarily deprived of life. The judgment of mankind on the matter of abortion is quite clear.

I believe that every abortion represents a human injustice, a failure to solve a human problem in a positive and constructive way.

Mr. President, induced human abortion is part of an antilife syndrome which, like some deadly contagion, is slowly eroding our deepest values. I fear what abortion on demand can lead to. Already we have witnessed the emergency and acceleration of infanticide as an option in neonatal care. Recent polls indicate that many of our doctors who have repudiated the Hippocratic Oath now want to expand flexibility to kill defective newborns. Where will this kind of thinking end? How far down this anguished road must we travel before we start killing those with incurable diseases or even the institutionalized elderly? I contend that we took the first step down that road when we began to kill our offspring. It is no accident that as the number of abortions has increased, so has the incidence of child abuse.

Ideas have consequences. As surely as night follows day, a disrespect for life in one area will inevitably lead to a disrespect for it in others. To me, the prospect is terrifying, a single abortion on demand is a tragedy, but 10.5 million abortions are a national calamity.

Mr. President, the basis of Western civilization has been its principles, not its productivity. All our vaunted technology, our imposing production of material goods, can never equal the realization we once came to that all human life is sacred. The human spirit made more progress when it listened for the cries of abandoned infants on the trash heaps of ancient Rome than when it sent its first satellite into orbit. Advances in technology can never compete with advances of the human spirit. That we help those who are silent and hurting, the handicapped, the widow and the orphan, or the woman with the problem pregnancy, will speak more highly of us as a nation than if we were to launch a thousand rocket ships to the farthest reaches of the universe. Our values should be our most cherished possessions.

If we do not respect human life, then what will we respect? Everything in our culture derives its value from the value we place on human life. It is the bedrock of Western civilization and of any society morally based. Induced human abortion decreases the value we place on life. It erodes our value structure and deflates the price tags on whatever else we value.

Who can defend Roe against Wade in light of all its abuses and human misery—the clinic corruption, the killing for profit, the damaged women, and most importantly, the millions of dead babies? How can a rational human being countenance this outrage? History will judge how we respond; whether we have the initiative to solve our problems in a positive way or simply give up. Any society that cannot produce alternatives to abortion is a society that lacks commitment and imagination. It is a society that is self-centered, hedonistic, and sick, and it certainly does not reflect the compassion that characterized our Nation's people.

The Roe against Wade decision never received a mandate from the American people. The Supreme Court should never have intruded into this issue.

Mr. President, all the sophistry in the universe will never convince me that induced human abortion can ever be a human good, or, except to save the life of the mother, even a lesser evil. When human life is in the balance, I firmly believe that everything else is secondary.

We are engaged in one of the most important discussions of values since this Nation was founded. I speak as one knowing that, in voicing my own deepest convictions, I also voice the will of my constituency. The people of Iowa do not want what Roe against Wade has given them: abortion on demand. And if those who reject this constitutional amendment have not come to this realization, I predict that one day they will. I believe that the right-to-life movement will never die, but will gain in strength with each passing day.

It is important for all of us to remember that the vote on this amendment does not take place in a political vacuum. The Senate, indeed, the Congress is not the only institutional check upon the Supreme Court. The Presidency, as well, was given by the Founding Fathers its own means of balancing the Court's powers and, when necessary, of righting its wrong decisions.

President Reagan addressed this matter a few days ago, in a meeting not covered by the news media, with members of the Knights of Columbus in the auditorium of the Old Executive Office Building. The President surprised some observers with his typically forthright and candid statements about the Supreme Court's abortion decisions.

Five members of the Court's pro-abortion majority, Mr. Reagan noted, are 74 years of age or older. And that means, he pointed out, that whoever is President for the next 5½ years will be able to turn the Court around on this issue.

I have no doubt who will be president of the United States for the next 5½ years. And I have no doubt that the author of that powerful and moving article in the Human Life Review will use the nominating power of the Presidency to right the most tragic wrong of our lifetime.

Roe against Wade will be overturned, and with it, all the juridical deformities that have been based upon it. It is only a question of whether this Senate will take the lead in doing so, or whether our President—sustained in the future as he was in the past by Americans who choose life—will reshape the Court as he has promised.

Mr. President, the cause of those who respect and defend human life is right. I believe, along with millions of other Americans, the simple truth that everyone has a right to be born, that everyone has a right to exit from the womb and cast a shadow on the Earth.

I long for the day when the sanctity of human life is once again enshrined in our Constitution. Toward that end, I urge my colleagues to join with me in voting for this amendment.

Mr. HATCH. Mr. President, I thank my colleague for his interesting and good remarks and for the leadership that he exhibits in the prolife movement in America. It is not easy to debate or argue these issues, but he

has constantly been in the forefront. I personally appreciate it.

At this time, Mr. President, I yield such time as he may need to the distinguished Senator from Colorado.

Mr. ARMSTRONG. Mr. President, the subject under discussion today—abortion—is a topic which makes most of us distinctly uneasy. In fact, the very mention of the word causes a great many people to be uneasy. For many thoughtful persons, the prospect of antiabortion legislation arouses powerful feelings of the most personal nature—fear, dread, sometimes anger.

Many women are nearly terrified by the prospect of being required to continue a pregnancy against their will. They feel very personally threatened by legislation which would deny or limit their now legally established right to abortion and feel that it is an invasion of their personal privacy and an intolerable threat to their personal freedom. Many sympathetic men share this perception. This reaction is completely understandable, in my judgment.

At the same time, many other persons contemplate with horror the abortions which they see as taking the lives of millions of innocent and defenseless unborn children.

I deeply regret that this issue must come before Congress. From a purely personal standpoint, I am reluctant to assume the responsibility of attempting to weigh and choose between two such fundamental rights—personal privacy, which Justice Brandeis once characterized as the right most cherished by civilized persons—and the sanctity of life, certainly one of the most ingrained—perhaps the most ingrained—of all human values.

The task of making such a decision is forced upon Congress by the Supreme Court's decision in the case of Roe against Wade. As a result of that case, more than 15 million legalized abortions have been performed in recent years and it is estimated that a million more are occurring each year. In some areas, there are now more abortions than live births. Thus, Congress must either act to restrain this trend or, by failing to do so, acquiesce in a national policy of abortion-on-demand.

Swirling around the abortion controversy are many complex ethical and legal arguments, but it seems to me there is one central issue on which all else depends: Is the fetus within a pregnant woman a living baby human being. Or is it not?

Few, if any, of those who believe the fetus is a baby would object to some degree of legal protection for the unborn child. While recognizing the very strong presumption against interfering with the privacy and right of personal choice of individual women, few persons who acknowledge that the fetus is a baby would nonetheless object to some form or degree of legal protection for the unborn child. If, as advocates of antiabortion legislation contend, a fetus is a human being, it is very hard to dispute the claim that the unborn child is entitled to the same human compassion and legal protection afforded other human beings, particularly helpless and dependent humans.

Prochoice advocates oppose antiabortion legislation because of their concern for the freedom of choice of the woman and, in most instances, precisely because they deny the humanity of the fetus which they view as prehuman or as having human potential. They do not agree that a fetus is a true human being in the normal sense and, therefore, they deny that the fetus, or unborn child, as prolife persons prefer to say, is entitled to either the compassion or legal protection accorded to true human beings.

To a large extent, the Supreme Court sidestepped this issue when it struck down State antiabortion statutes in the case of Roe against Wade. In that decision, the Court ruled that the 14th amendment right of personal privacy precludes the State from interfering with a woman's right to terminate pregnancy through abortion. The Court indicated that a fetus is not a "person" within the meaning of the 14th amendment and is, therefore, not entitled to constitutional protections. Significantly, however, the Court did not attempt to determine the humanity of the fetus nor to define when human life begins. The Court characterized this issue as "sensitive and difficult" and noted "wide divergence of thinking" on this question and that the judiciary "is not in a position to speculate as to the answer."

But for individual persons who must decide the moral permissibility of abortion and for the Congress, faced with a momentous policy issue, this fundamental question may not be avoided.

The exact instant at which life begins remains the subject of some disagreement. Not everyone would agree with Prof. Hymie Gordon, chairman of the Department of Medical Genetics at the Mayo Clinic who stated: "The question of when human life begins is an established fact. All life, including human life, begins at the moment of conception." However, it does appear that the great preponderance of evidence, as well as expert testimony and opinion, support Professor Gordon's view.

Dr. Francis A. Schaeffer, a leading philosopher and theologian, and Dr. C. Everett Koop, U.S. Surgeon General and well-known author in the field of medical ethics, have persuasively summarized the life-begins-at-conception argument:

THE GROWTH OF HUMAN LIFE

Our reasons against abortion are logical as well as moral. It is impossible for anyone to say when a developing fetus becomes viable, that is, has the ability to exist on its own. Smaller and smaller premature infants are being saved each year! There was a day when a 1000-gram preemie had no chance, now 50 percent of preemies under 1000 grams are being saved. Theoretically, there once was a point beyond which technology could not be expected to go in salvaging premature infants—but with further technological advances, who knows what the limits may be! The eventual possibilities are staggering.

The logical approach is to go back to the sperm and the egg. A sperm has twenty-three chromosomes; even though it is alive and can fertilize an egg, it can never make another sperm. An egg also has twenty-three chromosomes, and it can never make another egg. Thus, we have sperm that cannot reproduce and eggs that cannot reproduce unless they get together. Once the union of a sperm and an egg occurs and the twenty-three chromosomes of each are brought together into one cell that has forty-six chromosomes, that one cell has all the DNA (the whole genetic code) that will, if not interrupted, make a human being.

Our question to a pro-abortion doctor who would not kill a newborn baby is this: "Would you then kill this infant a minute before he was born, or a minute before that, or a minute before that, or a minute before that?" At what point in time can one consider life to be worthless and the next minute precious and worth saving?

Having already mentioned the union of sperm and egg to give forty-six chromosomes, let us briefly review the development of a baby. At twenty-one days, the first irregular beats occur in the developing heart, long before the mother is sure she is pregnant. Forty-five days after conception, electroencephalographic waves can be picked up from the baby's developing brain.

By the ninth and tenth weeks, the thyroid and the adrenal glands are functioning. The baby can squint, swallow, and move his tongue. The sex hormones are already present. By twelve or thirteen weeks, he has fingernails; he sucks his thumb and will recoil from pain. His fingerprints, on the hands which have already formed, will never change throughout his lifetime except for size. Legally, it is understood that an individual's fingerprints distinguish him as a separate identity and are the most difficult characteristic to falsify.

In the fourth month the growing baby is eight to ten inches long. The fifth month is a time of lengthening and strengthening. Skin, hair, and nails grow. Sweat glands come into being; oil glands excrete. This is the month in which the mother feels the infant's movements.

In the sixth month the developing baby responds to light and sound. He can sleep and awaken. He gets hiccups and can hear the beat of his mother's heart. Survival outside the womb is now possible. In the seventh month the nervous system becomes much more complex. The infant is about sixteen inches long and weighs about three pounds. The eighth and ninth months see a fattening of the baby.

We do not know how anyone who has seen the remarkable films of the intrauterine development of the human embryo can still maintain that the product of an abortion consists of just some membranes or a part

of the woman's body over which she has complete control—or indeed anything other than a human life within the confines of a tiny body. At the very least we must admit that an embryo is not simply an extension of another person's body; it is something separate and uniquely irreplaceable. Another good reason we should not view the unborn baby as an extension of the woman's body is that it did not originate only from the woman. The baby would not exist without the man's seed.

We are convinced that the reason the Supreme Court decision for abortion-on-demand never came to grips with the issue of the viability of the human fetus is that its viability (that is, ability to live outside the womb on its own) is really not the important point.

Viable or not, the single-celled fertilized egg will develop into a human being unless some force destroys its life. We should add that biologists take the uniform position that life begins at conception; there is no logical reason why the pro-abortionist should try to arrive at a different definition when he is talking about people, the highest form of all biological creatures. After conception, no additional factor is necessary at a later time. All that makes up the whole adult is present as the ovum and the sperm are united—the whole genetic code!

The reasoning of Dr. Schaeffer and Dr. Koop seems to me not only solid and convincing but also directly pertinent to the Roe against Wade decision. In that case, the Court held that only a "compelling State interest" could justify limiting a woman's 14th amendment right to abortion. The "compelling" point with respect to the State's interest in the potential life of the fetus "is at viability." Following viability, the State's interest permits it to regulate and even proscribe an abortion except when necessary, in appropriate medical judgment, for preservation of the life or health of the mother.

The Schaeffer-Koop observations about medical viability are especially impressive in view of Dr. Koop's vast experience and expertise. He is the former surgeon-in-chief of the Children's Hospital in Philadelphia where the entire surgical center is named in his honor. A pacesetter in the field of pediatric surgery, Dr. Koop has developed many new an highly successful procedures in surgery on the newborn. He is a well-known author in the field of medical ethics and the founder and editor-in-chief of the Journal of Pediatric Surgery.

If doubt yet remains, the strong pro-life presupposition of heritage strenuously argues for resolving doubt in favor of caution and restraint when human life is at stake. And so on this point I must agree with the Schaeffer-Koop observation that:

> We do not know how anyone who has seen the remarkable films of the intrauterine development of the human embryo can still maintain that the product of an abortion consists of just some membranes or a part of the woman's body over which she has complete control—or indeed anything other than a human life within the confines of a tiny body.

In brief, Mr. President, it is plain to me that a fetus is a human life and that willful termination of that life, except under compelling circumstances to the contrary is, per se, morally wrong. Whether or not it is a proper subject for legislation, however, is an entirely separate question which I would like to briefly address it at this time.

Recognizing the great diversity of our Nation and the divergence of opinion about this controversial issue, as well as our longstanding tradition of State jurisdiction in such matters, a strong case can be made against Federal intrusion in this area. Our federal system leaves to the States vast areas of complete independence. The States define, adjudicate and punish most crimes; protect the safety, welfare, and property of their citizens; establish licensing standards for physicians, lawyers, and other professional persons; regulate health and provide education. Indeed, the States provide the legal framework within which most of life's day-to-day activity takes place. More to the point, State law, not national law, governed abortion until the Roe against Wade decision of 1973.

Unfortunately, however, Roe against Wade has precisely the effect of overruling the States and recasting the abortion controversy as a truly national issue for the first time. On purely legal grounds, the Supreme Court's decision is highly questionable. In his dissent, Justice White termed the Court's action "an exercise in raw judicial power" and "an improvident and extravagant exercise of the power of judicial review." Pointing out the impropriety of overturning longstanding State statutes, as a matter of constitutional interpretation, Justice White observed:

> At the heart of the controversy in these cases are those recurring pregnancies that pose no danger whatsoever to the life or health of the mother but are nevertheless unwanted for any one or more of a variety of reasons—convenience, family planning, economics, dislike of children, the embarrassment of illegitimacy, etc. The common claim before us is that for any one of such reasons, or for no reason at all, and without asserting or claiming any threat to life or health, any woman is entitled to an abortion at her request if she is able to find a medical advisor willing to undertake the procedure.
>
> The Court for the most part sustains this position: During the period prior to the time the fetus become viable, the Constitution of the United States values the convenience, whim or caprice of the putative mother more than the life or potential life of the fetus; the Constitution, therefore, guarantees the right to an abortion as against any state law or policy seeking to protect the fetus from an abortion not prompted by more compelling reasons of the mother.
>
> With all due respect, I dissent. I find nothing in the language or history of the Constitution to support the Court's judgment. The Court simply fashions and announces a new constitutional right for pregnant mothers and, with scarcely any reason or authority for its action, invests that right with sufficient substance to override most existing State abortion statutes. The upshot is that the people and the legislatures of the 50 States are constitutionally disentitled to weigh the relative importance of the continued existence and development of the fetus on the one hand against a spectrum of possible impacts on the mother on the other hand. As an exercise of raw judicial power, the Court perhaps has authority to do what it does today; but in my view its judgment is an improvident and extravagant exercise of the power of judicial review which the Constitution extends to this Court.
>
> The Court apparently values the convenience of the pregnant mother more than the continued existence and development of the life or potential life which she carries. Whether or not I might agree with that marshalling of values, I can in no event join the Court's judgment because I find no constitutional warrant for imposing such an order of priorities on the people and legislatures of the States. In a sensitive area such as this, involving as it does issues over which reasonable men may easily and heatedly differ, I cannot accept the Court's exercise of its clear power of choice by interposing a constitutional barrier to state efforts to protect human life and by investing mothers and doctors with the constitutionally protected right to exterminate it. This issue, for the most part, should be left with the people and to the political processes the people have devised to govern their affairs.

Many legal scholars share Justice White's skepticism about Roe against Wade. But whatever one may think of the legal scholarship on which this decision rests, it remains the law of the land. With the States preempted, what was formerly an issue of State jurisdiction must now be considered at the national level even for the minimal purpose of restoring State jurisdiction by overturning Roe against Wade. This is exactly the purpose of Senate Joint Resolution 3.

A second objection to antiabortion legislation is the oft-repeated contention "you can't legislate morality." At one level, this notion is demonstrably true. Human nature does not seem to change from one millenia to the next; despite legislative intervention, character flaws which humans exhibit today are not noticeably different from those observed at the dawn of history.

Nonetheless, the purpose of much legislation is precisely to make moral judgments—in effect, to legislate morality. Laws are the means by which civilized societies protect and foster that which is right and forbid what is wrong. Underlying legal prohibitions against murder, theft, fraud, and perjury are moral judgments. It is the collective decision of society that such actions are wrong. Murder, fraud, perjury, and the like are deemed not merely inconvenient, untimely, or useless, but actually wrong in the sense that they

violate fundamental principles upon which our civilization rests.

As Russell Kirk points out:

At the heart of every culture is a body of ethics, of distinctions between good and evil.

Within the Judeo-Christian heritage, the sanctity of life is among the foremost of values cherished by civilized persons and nations. Protection of human life has traditionally been recognized as one of the paramount functions of government within a civilized society. Indeed, history largely judges prior civilizations by the extent to which human life is valued and protected.

Nonetheless, critics who contend that "you can't legislate morality" have a point. The human impulse to brutalize and exploit other human beings remains just below the surface in even the most civilized persons and societies.

What is significant, however, is the extent to which wise legislation can curb the expression of such impulses. Legislation implementing moral judgments ended slavery, protect freedom of speech, publication and workship, assure voting rights, and so forth.

This is not to say that every moral judgment ought to be the subject of legislation. On the contrary, Congress and the States are wise to exercise restraint in making fundamental changes based on moral judgments.

Moral issues are, by their very nature, highly emotional. Debates that disturb the spiritual and ethical foundations of a person's concept of the purpose and meaning of life arouse powerful passions, and it is our experience that decisions reached in highly emotional circumstances are decisions that we frequently regret.

Moreover, moral issues do not readily lend themselves to compromise, which is a distinctive strength of the American system. Our Nation derives much of its resiliency and unity from the very fact that we are able to compromise differences on many issues. Ordinarily, decisions within our political process are not so one-sided that those who are defeated at the polls or in a legislative battle are left utterly without consolation. More commonly, the views of the minority are accommodated, in greater or lesser degree, and there is a general recognition that those who form a political majority today will be in the minority at some future time, thereby fostering an attitude of tolerance and compromise. Obviously, however, it is much easier to work out a compromise on matters of purely practical application, such as budgets and taxes, than on fundamental moral questions about which notions of right and wrong leave less room for conscientious maneuvering.

The need for restraint in implementing moral judgments through legislation is also emphasized by the fact that moral issues often bring fundamental values into conflict. The delicate balance between moral order and personal liberty must be preserved.

Nonetheless, abortion is a proper subject for legislation, for two significant reasons.

First, because of the intrinsic importance of the issue. The 15 million or more abortions which have occurred since—and in many instances because of—Roe against Wade are not mere surgical procedures. They are human lives lost. In this perspective, abortion is the greatest human rights issue of our time. I agree with Prof. John T. Noonan's observation:

Of all the subjects relating to the erosion of the sanctity of human life, abortion is the keystone. It is the first and crucial issue that has been overwhelming in changing attitutes toward the value of life in general.

Second, proposals to overturn Roe against Wade are not drastic in nature. They do not, in and of themselves, establish a nationwide antiabortion policy. On the contrary, both the statutory and constitutional proposals now pending before the Senate contemplate further legislative action to prohibit or regulate abortion, providing circumstances under which abortions would be permitted, and establishing legal procedure, including those needed to safeguard personal privacy which would remain a constitutionally protected right, albeit weighed against other constitutionally protected rights including those of the unborn. Reasonable implementing legislation would, in effect, reestablish the legal framework which existed prior to Roe against Wade. Such legislation need not and should never be permitted.

As to the exact form of appropriate legislation to curtail abortion, I have sought to remain reasonably flexible in order to seek a moderate solution, a solution which would be respectful and, to the extent possible accommodating to persons whose basic views are different from my own.

I have also tended to favor incremental legislative approaches rather than sweeping or drastic changes, although in this case, in which we are confronted with a drastic policy change resulting from unexpected court decision, it is difficult to fashion such legislation.

One such approach, which seems reasonable to me, is a statutory proposal which would make permanent the ban on Federal funding of abortions, contains a congressional finding of fact that life begins at conception, and provides for expedited Supreme Court review of State antiabortion statutes based on this congressional finding.

This statutory approach rests on the theory that the Supreme Court has declined to decide when life begins and has, in effect, deferred to the legislative branch of Government to reach this decision as part of its factfinding and policymaking function. If Congress investigates and determines that life begins at conception, then the unborn will automatically be protected by the 14th amendment of the U.S. Constitution and the States will again be empowered to protect these lives through appropriate—though probably differing—State statutes, advocates contend.

Although this legal theory seems reasonable to me, whether it will, in fact, be sustained by the Court is open to question. I see the reality of the situation in these terms: In Roe against Wade, the Supreme Court wandered far from precedent and reasonable interpretation. If members of the Court, upon reflection and further study, are looking for an opportunity to retreat from Roe, then the statutory approach provides sufficient reason to do so. If, on the other hand, the Court is comfortable with Roe, the Court can find much to easily justify striking down State statutes, premised on the congressional finding that life begins at conception. Very recent decisions do not lead me to believe the Court is particularly looking for a reason to overturn or retreat from Roe.

If this is true, then Senate Joint Resolution 3 is an appropriate and, under the circumstances, a moderate approach. It does not establish a nationwide ban on abortion, as some might wish, but merely overturns Roe against Wade and restores the authority for policymaking to the State legislatures where it previously resided.

I am not entirely satisfied with this solution. Many objections can and will be raised. But on balance it seems to me a reasonable and practical approach and one which will, if enacted, undoubtedly reverse the tragic trends of the last decade. At the same time, however, by its very formulation, Senate Joint Resolution 3 avoids freezing into the Constitution a specific ban which might be itself subject to unforseen interpetation. Therefore, I will vote for this proposed amendment while remaining open to further thought and study and other proposals that may at some future time be forthcoming.

In conclusion, I wish to acknowledge my gratitude to the literally thousands of persons throughout Colorada, and others as well, who have shared their views with me. This is an issue about which thoughtful persons do not agree. And because of its sensitivity, the prospect of abortion legislation tests the intellectual humility and patience of all who care deeply about the outcome. I am gratified that the vast majority of those with whom I have had contact about this matter have expressed their opinions in a serious and dispassionate manner and in a way that is respectful of differing opinions.

I have tried to explain my own thinking in the same spirit.

Mr. PACKWOOD. Mr. President, I yield such time as the Senator from Ohio will need.

Mr. GLENN. Mr. President, I thank the distinguished Senator. I will only need about 5 minutes.

Mr. President, because I support a woman's right to choose to have an abortion, I am opposed to attempts to reverse the Supreme Court's Roe against Wade decision which legalized most abortions under the constitusional right to privacy. Roe against Wade—which was recently reaffirmed by the Supreme Court's rulings that State and local laws restricting abortion are unconstitutional—was a major step forward in insuring equality for women in our society. This equal protection, under the constitutional right to privacy, must not be taken away.

As I have stated many times before, I respect the heartfelt views of those who are opposed to abortion. However, I do not believe that their views should be forced on others who feel every bit as strongly that a woman has a right to terminate a pregnancy. I believe that this is a decision which should be reached by a woman in consultation with her physician, husband, pastor, priest, rabbi, or whomever she chooses; and should be based on her own moral and religious convictions.

Today, I rise to oppose Senate Joint Resolution 3, which proposes an amendment to the Constitution stating that, "A right to abortion is not secured by this Constitution." I oppose this amendment because it would act to repeal Roe against Wade. I also do not believe that enactment of Senate Joint Resolution 3 could resolve the national debate regarding abortion. Rather, I believe it would heighten the controversy surrounding this issue.

Senate Joint Resolution 3 is a negative amendment, the first proposed amendment to the Constitution declaring the nonexistence of a right. As such, it proposes to transfer the authority and responsibility for deciding about abortion from the Constitution and the judicial system to statutes passed by the legislative branches of government. However, its full impact is unclear. Supporters claim its passage would restore the status quo ante Roe against Wade, and would give individual States the opportunity to do anything or to do nothing with respect to abortion. In fact, the status quo would not be restored since the amendment would change the Constitution from what it was in 1973.

The unanswered question remains exactly how the Constitution would be changed. The Roe against Wade decision is based on the 14th amendment's constitutional right to privacy, not on any constitutionally found right to abortion. It is difficult to determine how the phrase "a right to abortion", as contained in Senate Joint Resolution 3, would affect specific rights granted under different sections of the Constitution. Although States would have the authority to legislate with regard to the practice of abortion, their attempts might be challenged on the basis of a variety of constitutional rights including a due process right to health or an equal protection argument against an interspousal consent statute.

Again, I oppose Senate Joint Resolution 3 and urge its defeat. It would set a bad precedent for amending the Constitution. I support a woman's right to make childbearing decisions—a view supported by a majority of Americans—and I will continue to oppose legislation limiting a woman's freedom of choice with respect to abortion.

Mr. PACKWOOD. Mr. President, I thank my colleague from Ohio very, very much for those warm statements. I appreciate the fact he is able to give them and tell him again that we vote tomorrow afternoon at 5 p.m.

I yield such time as the Senator from Vermont needs.

Mr. LEAHY. I thank my friend from Oregon. I advise him I shall be only a few minutes. I understand that the Senate is anxious to go out of session and I shall not hold it long.

Mr. President, what is before the Senate today has been widely billed as a long-awaited debate on the issue of abortion. But Senate Joint Resolution 3 is about much more than abortion. It is about the way we amend the Constitution of the United States.

Article 5 of the Constitution is very explicit in requiring special majorities to amend its carefuly drafted provisions, two-thirds of each body of this Congress and three-quarters of the States.

This requirement of supermajorities is essential for the protection of personal liberties in a democracy. Without it legislative majorities could easily sweep away protections that individuals and minority groups have enjoyed under the Bill of Rights for nearly two centuries.

Although in the form of an amendment to the Constitution, Senate Joint Resolution 3 is, in substance, a statutory solution to a constitutional problem.

People may honestly differ over the wisdom and morality of the current legal formula by which the rights of women and the rights of unborn are weighed against each other at various stages of pregnancy.

The range of views among my colleagues on the substantive issue of abortion is considerable but no one can deny that the issue is a fundamental one, that the issue is privacy and autonomy for women, on the one hand, and the rights of unborn life, on the other, which are issues of constitutional dimension. They are.

But the outcome of this fundamental question can no more be left to 50 individual State legislatures than can the issues of free speech, freedom of religion, or scores of other questions raised under the bill of rights and the 14th amendment.

If abortion is morally repugnant in all circumstances, then it is so in every State in the Union, not just some. If the right to choose abortion is a matter for a woman and her doctor in early pregnancy, then that right is not negotiable from State to State. To hold otherwise is to misapply the notion of federalism and do profound injury to the idea of a Constitution that applies to all without regard to geography.

Senate Joint Resolution 3 will allow in one State abortions on women, and in another State only for rape and incest, in the next State not at all, even to save the life of the mother, and so on. That is really not the way the Constitution should be amended.

The response of Senate Joint Resolution 3 to the deep division and public opinion is to use the amending process with its requirements for a supermajority in Congress and the States not to declare that the right to abortion is extinguished because it does not say that but rather that the right to abortion is downgraded.

Senate Joint Resolution 3 declares there can be no national consensus on prohibiting abortion. It is a fair compromise to make the issue statutory rather than constitutional, changeable by this or that legislative majority.

If we accept that principle, then we have to say that this sort of compromise could be offered to solve any number of knotty issues arising under the Constitution. Two-tier amendments could lead to the legislative branch acting alone on the difficult issues of separation of church and State, freedom of expression, protection of individual rights in criminal cases, and the rights of minorities, just to name a few.

The adoption of Senate Joint Resolution 3, like its predecessor Senate Joint Resolution 110, would make a definite statement about how controversial rights ought to be changed. If you do not like a right currently protected by the Constitution and you do not have the right to amend it away, then amend the Constitution, eliminate the power of courts to enforce it by declaring that the Constitution no longer protects that right.

This is the message of Senate Joint Resolution 3 and it is unacceptable as a model of how the Constitution should be changed.

Mr. President, in this country we have a very short Constitution; we have a long history of democracy. Our

country exists now today longer than any other democracy in existence today. There are many reasons for that, of course—the will of our people, the indomitable spirit of America itself, but also because of our Constitution.

I doubt very much, in fact I know that our country would not still be in existence today had it not been for the remarkable document of our Constitution drawn 200 years ago.

Without that Constitution we could not have balanced the rights and the desires and the needs of a growing pluralistic society. Without that Constitution we would not have gotten through Presidential assassinations, the civil war, two world wars, and all the other problems that we have seen as a growing and expanding nation. We would not have gotten through even the problem of our own growth as a nation.

Throughout all of that we have done it with a very short, a very concise, a very precise Constitution. Our body of rights has grown up within that small document.

If we follow the ideas of Senate Joint Resolution 3, then we open the door to start amending the Constitution this way for every single problem facing us, much less the issue of abortion, Mr. President. Our purpose is to develop a society where abortion is not an acceptable alternative, where people do not look for abortion but look instead to life.

In doing that, in reaching for that society, a society which I strongly think is possible, let us not ruin the basis of our own society by amending our Constitution in a way in which we should not.

Therefore, I will vote against this proposal and I hope my colleagues will not vote to amend the Constitution in some unprecedented way.

I yield back to my friend from Oregon.

Mr. HATCH. Mr. President, I yield to the distinguished Senator from Wisconsin (Mr. KASTEN).

The PRESIDING OFFICER (Mr. CHAFEE). The Senator from Wisconsin is recognized.

Mr. KASTEN. Mr. President, I am pleased to rise in support of Senate Joint Resolution 3. After months of silence, the Senate now has the opportunity to address the abortion issue and to restore rights for the unborn.

Senate Joint Resolution 3 simply states "A right to abortion is not secured by this Constitution." Adoption of this language would reverse Roe against Wade, the landmark decision which protects abortion rights, and would restore the power of the States to restrict or prohibit abortion.

This amendment would not repeal any other rights guaranteed under the Constitution. Rather, it would clarify that abortion, which somehow has been construed as part of a woman's privacy, is no longer a guaranteed right.

Today, only a little more than 10 years after the Supreme Court decision in Roe against Wade, well over 12 million abortions have been performed legally in this country. When over one-third of the pregnancies in this country end in abortion, it is clear that somewhere along the way our policy has been misguided. How can we, as a nation founded upon the principles of life, liberty, and the pursuit of happiness, permit such a situation to continue?

In one sweeping decision, the Court made legal one of the most controversial medical procedures of our time. Under the cloak of privacy, the justices reasoned that a woman's freedom of choice included the right to terminate the life of her unborn child.

It is important to underscore the fact that the 1973 decision was not made by elected officials, but by judges. As Justice O'Connor noted in her dissenting opinion on the recent abortion rulings, an issue of this magnitude should be subject to the democratic processes. Abortion policy should be shaped by the people themselves, who are spoken for by our representation in Congress and by officials at the State and local level.

Mr. President, in Senate Joint Resolution 3, we have the vehicle necessary to reverse the Court's ruling. At last, we can allow the American people to register their disagreement with unrestricted abortion as an accepted public policy.

Passage of this resolution would restore the States authority to restrict or prohibit abortion. This is a very moderate and sensible approach and one which I believe reasonable men and women with different opinions about abortion can support.

Let us take this opportunity to resolve this matter and restore the balance of power between the people, the States, the courts, and the Federal Government.

LEGAL OPERATION AND ROE'S PROGENY

Mr. HATCH. Mr. President, once again, I would like to take this opportunity to remind my distinguished Senate colleagues of the significance of the historic vote which approaches this body. We are, in essence, voting to reaffirm our confidence in the constitutional framework drafted in convention in 1787 and ratified by the States in 1788. We are voting to follow the pattern of government which has served this Nation nobly for nearly two centuries, or in the alternative, to endorse a fundamental alteration of the constitutional structure—moreover an alteration adopted without recourse to the supermajorities required for amendment in article 5.

The framers of the Constitution gave careful consideration to the appropriate means to resolve divisive social disputes. They elected to confer upon the Federal Government a limited number of specific powers covering subjects that demanded a national solution, such as national defense, interstate commerce, post offices, and the like. All powers not specifically delegated to the Federal Government were to be exercised by the States. Thus most sensitive social issues would be subject to community consensus and the virtues of diversity. In the words of Madison:

> The powers delegated by the proposed Constitution to the Federal Government are few and defined. Those which remain in the State governments are numerous and indefinite. The former will be exercised principally on external objects, such as war, peace, negotiation, and foreign commerce; with which last the power of taxation will, for the most part, be connected. The powers reserved to the several States will extend to all objects which, in the ordinary course of affairs concern the lives, liberties, and properties of the people, and the internal order, improvement, and prosperity of the State. Federalist Papers, No. 45.

Alexander Hamilton, noted for his defense of a strong National Government, concurred in Madison's explanation of the operation of the Constitution:

> The Federal Government's jurisdiction extends to certain enumerated objects only, and leaves to the States a residuary and inviolable sovereignty over all other objects. Federalist Papers, no. 39.

These statements fairly present the intent of the framers with regard to the balance between the State and Federal Governments. Consistent with this intent, States regulated abortion almost exclusively until 1973. On January 22 of that year, as I have earlier explained, the Supreme Court created a special constitutional status for abortion. The right to abortion became, by Court edict, a fundamental liberty which a State's legislature could limit even in the slightest degree only by demonstrating a "compelling" justification. 410 U.S. at 728. This compelling State interest standard is very exacting. *Kramer,* 395 U.S. 621 (1969). Even such seemingly inconsequential State regulations as a 24-hour waiting period prior to an abortion failed to meet this standard of review. Akron, supra. Although the Supreme Court has repeatedly conceded that protecting maternal safety and the life of the unborn are "legitimate State interests," *Roe,* 410 U.S. at 732, Akron, and so forth, these profound interests have not risen to the level of "compelling" in the eyes of the Court. Accordingly, the right to abortion has operated time and again to strike down the will of State legislatures. Protected by the Court's constitutional interpretation, one absolute extreme on abortion; namely, abortion on demand throughout all 9 months of pregnancy,

has become enshrined as an unassailable tenet of American law.

This amendment, Senate Joint Resolution 3, removes the abnormally elevated status afforded the right created in Roe. After ratification of this amendment, a State statute concerning abortion would be subject to ordinary standards of constitutional review. This standard requires a State to demonstrate a rational relationship between its policy and a legitimately protectible State interest, the rational basis test. Since the Court has already acknowledged at least two legitimate State interests, maternal safety and unborn human life, any statute rationally related to these objectives would pass constitutional muster. Thus, the will of the people, as reflected in State legislatures, would be respected. The traditional constitutional balance which governs other aspects of domestic relations law; namely, State regulation in practically all aspects, would be restored.

In short, this amendment removes the right created in Roe. The removal of this impediment to the traditional operation of the Constitution permits the framework of our Nation's foundational document to govern in this sensitive area of social policy as it did for nearly two centuries until 1973. Hence, our vote may be construed as a vote to endorse the system of governance created by the framers of the Constitution in 1787 or the special right created by the Supreme Court in 1973.

For the sake of clarity, I would like to once again, as I did earlier, list what this amendment would and would not do. Ratification of Senate Joint Resolution 3, as amended, would accomplish the following:

First, it would nullify the special right to abortion created by the Supreme Court in 1973. Even the Supreme Court has referred to the right created in Roe as the "right to abortion." *Conn.* v. *Menillo,* 423 U.S. 9, 10. More than 80 Federal court cases have also used this phrase as shorthand for the new Roe right. This amendment simply, cleanly, directly, conclusively states that "A right to abortion is not secured by this Constitution."

Second, it would prevent the creation of any other right to abortion in the harbor of the Constitution. The article "a" makes the scope of the repeal broader than if the article "the" were used. "The" might be construed as limiting the repealer to the particular doctrine or doctrines that have developed in Roe and its progeny as a justification for abortion. Use of the article "a" makes it clear that no other "right to abortion," however conceived or justified, is provided by the Constitution. Under Senate Joint Resolution 3 there would exist no constitutional authority for any right to abortion.

Third, it would avoid any unnecessary repudiation of the doctrine of privacy. The use of the careful phrase "right to abortion" clarifies that the amendment only repeals the abortion decisions. Other extensions of the right to privacy, such as in contraception or family privacy cases, would not be affected by the narrow language of the amendment.

Fourth, it would mean that State statutes concerning abortion would be subject to ordinary standards of judicial review, that is, the rational basis test instead of the compelling State interest test. An obvious point of explanation is needed at this point to clarify a higher standard would still apply to a State enactment that infringed some other constitutional rights unrelated to the "right to abortion" question—for example, a law prohibiting only black women from obtaining abortions would still be examined under a compelling standard—or strict scrutiny—due to the obvious racial classification, not due to any remaining right to abortion.

Fifth, it would restore to the States their general police power to restrict and prohibit abortion, or elect to refrain from doing so. The States would be restored to the legal status they enjoyed prior to Roe.

Sixth, it would reenfranchise the people, acting through their elected State representatives to participate in the formation of abortion policy. Abortion policymaking that has been centralized in the nonrepresentative judicial branch will be returned to State legislative discretion. This will facilitate the kind of compromises and consensus formation that is impossible in the judicial branch.

Seventh, it would restore the constitutional balance of powers between the State and Federal Government and between the legislative and judicial branches. In sum, it would restore the status quo ante Roe insofar as the power and responsibility to resolve abortion issues is concerned.

Senate Joint Resolution 3, as amended would not do the following:

First, it would not establish any new constitutional right favoring either an absolute right to life or an absolute right to abortion. It would simply restore the operation of the constitutional system, favoring States rights to resolve abortion issues, that existed prior to 1973.

Second, it would not compel the adoption by any State legislature of any legislation restricting abortion.

Third, it would not preclude judicial review of abortion laws or prevent a court from holding abortion laws unconstitutional. A court could hold abortion laws invalid if they failed to comply with the Constitution except to the degree that such a ruling would create a "right to abortion." Thus, racially discriminatory abortion laws would be invalidated, but not ordinary abortion restrictions.

Fourth, it would not affect State constitutions. It would not prohibit the citizens in any State from adopting—or, for that matter, any State supreme court from fashioning—a right to abortion under the State constitution.

Fifth, it would not grant Congress any power to directly restrict or prohibit abortion. Congress would retain its authority under its enumerated constitutional powers to regulate interstate commerce and other areas that might tangentially touch upon abortion. This limited authority is nothing more than exists for every other form of domestic relations law—or any other law for that matter—which is subject to the plenary jurisdiction of the States.

Sixth, it would not give to the States any new authority to regulate abortion. Their general police powers to regulate abortion would be restored, but would not be enhanced.

Seventh, it would not alter the constitutional allocation of power between the State and Federal Government, or between the legislative and judicial branches.

PROGENY OF ROE

As I have mentioned earlier, Roe against Wade and Doe against Bolton created for the first time in the Constitution's history an enforceable right to abortion which overturns the abortion laws of every State in the Union. These Supreme Court cases basically opined that the right to seek an abortion is a fundamental liberty, one of those handful of rights so sacred that any State regulations of the right must show a compelling justification. This standard of judicial review is so strict that very few, and only very inconsequential, limitations on the Court-created right have been held constitutionally sufficient in the decade since Roe.

Although the Court has stated that the right to abortion is not absolute and unqualified, *Maher* v. *Roe,* 432 U.S. 464, 473, it has nonetheless proven powerful enough to strike down State attempts to protect the dual interests of maternal safety and the life of the unborn. For example, the right has overridden State policies requiring spousal consent to an abortion, parental consent for an abortion performed on a minor, use of abortion techniques other than saline aminocentesis in the interest of safety, the same care to save an abortion fetus as would be used to save a child intended to be born alive—*Danforth,* 428 U.S. 52—hospitalization for abortions performed after the first trimester, a physician to notify his patient of the risks and effects of abortion, a 24-hour waiting period before performance of the operation, and humane and sanitary

disposal of the remains of the aborted child—Akron.

In cases which the Supreme Court analyzed under its compelling State interest standard, States have been allowed to require that women consent to an abortion in writing and that abortion clinics keep records of their activities. Danforth, supra. States have also been allowed, under limited circumstances, to require parental notification of abortions performed on a minor, *H.L.* v. *Matheson*, 101 S. Ct. 1164. And just recently, States were allowed to require the presence of a second physician when late-term abortions are performed. Planned Parenthood against Ashcroft, June 15, 1983. In cases analyzed by the Court independent of the compelling State interest test, restrictions on funding of abortions have been upheld, *Maher* v. *Roe*, 432 U.S. 464; *Harris* v. *McRae*, 448 U.S. 297.

The subsequent development of the abortional right promulgated by the Court in Roe against Wade has largely been one of expansion of the right to its fullest possible limits through the gradual elimination of virtually all possible impediments to its exercise. Review of the opinions of the Court which followed Roe against Wade demonstrates this development.

In Doe against Bolton, the court invalidated, on 14th amendment grounds, various procedural requirements contained in a recently enacted criminal abortion statute of the State of Georgia. Before reaching these procedural aspects of the statute, the Court considered and upheld against a vagueness challenge the requirement that the physician find the abortion to be "necessary." 410 U.S. at 191-92. Citing its decision in *United States* v. *Vuitch*, 402 U.S. 62, 71-72 (1971), the Court found that such a standard left latitude for the physician to consider all factors relating to "health" and therefore was within the ambit of "judgment(s) that physicians are obviously called upon to make routinely whenever surgery is considered." 410 U.S. at 192. The broad applicability of the term "health" as the Court defined it—

> Allows the attending physician the room he needs to make his best medical judgment. And it is room that operates for the benefit, not the disadvantage, of the pregnant woman. 410 U.S. at 192.

The Court found the statute's requirement that permissible abortions be performed in hospitals accredited by the Joint Commission on Accreditation of Hospitals was constitutionally invalid on the ground that such requirement was not "based on differences that are reasonably related to the purpose of the act in which it is found." 410 U.S. at 194. The Court recognized the permissibility of the States adopting standards for the licensing of all facilities where abortion may be performed after the first trimester so long as the standards are "legitimately related" to permissible State objectives. Nevertheless, it felt compelled to agree with the appellants that the State had failed to justify a requirement that such abortions be performed in a licensed hospital, as opposed to a facility—such as a clinic—with all staffing and services necessary to perform abortions safely—including means of handling complications—Id. at 195. The Court also found the hospital requirement per se invalid because of its failure to exclude the first trimester of pregnancy. Id.

The Court also struck down the Georgia statute's requirements of prior approval of an abortion by both a committee of the hospital's medical staff in which the operation is to be performed and two other licensed physicians. It found such requirements to be "basically redundant" and without rational connection to a patient's needs, as well as unduly restrictive of the physician's right to practice. Id. at 197, 199. The statute' requirement of residency within the State was found to be unrelated to any legitimate State interest—such as conservation of limited State-supported medical resources for residents of the State—Id. at 200. In short, the compelling State interest test operated to invalidate State limitations on abortion. In the dissenting voice of Justice White:

> The common claim before us is that for any one of such reasons, or for no reason at all, and without asserting or claiming any threat to life or health, any woman is entitled to an abortion at her request if she is able to find a medical advisor willing to undertake the procedure. The Court for the most part sustains this position.

The Court next adverted to the matter of abortion in a very different context. In *Bigelow* v. *Virginia*, 421 U.S. 809 (1975), the Court considered a Virginia statute which had made it a misdemeanor for any person to encourage or promote the procuring of abortion or miscarriage by publication, lecture, advertisement or sale or circulation of any publication, or in any other manner. In 1971, before the decision in Roe against Wade, the appellant had been convicted under the statute for running an advertisement in a Virginia newspaper which advised its readers of the availability of legal abortions in New York and supplied the particulars as to whom to contact for assistance in obtaining an abortion. The Court held that the kind of speech involved, notwithstanding its commercial character, was fully protected under the first amendment. Relying upon its holding in Roe against Wade, the Court further justified its holding upon the ground that "the activity advertised pertained to constitutional interests." Id. at 822.

Justice Rehnquist pointed out the inconsistencies in the majority opinon by noting that the primary reason the advertisement is given more constitutional protection than other commercial speech is that the ad related to "abortion, elevated to constitutional stature by the Court." Rehnquist further captured the inconsistency by noting that if the first amendment were the only basis for the holding, the subject matter of the ad ought not to make any difference.

In *Connecticut* v. *Menillo*, 423 U.S. 9 (1975), the Court corrected a misunderstanding of the scope of its holding in Roe against Wade which had arisen in the highest courts of some States. In reliance on certain language in Roe against Wade, the Supreme Court of Connecticut had held that State's criminal abortion statute to be "null and void" in its entirety, so as to preclude its enforcement even against a nonphysician who had attempted to procure an abortion. Id. at 9-10. Upon appeal by the State, the Supreme Court explained in a per curiam opinion that it had not held the Texas statute involved in Roe against Wade to be unenforceable against a nonphysician abortionist for the case did not present the issue." 423 U.S. at 10, Rather, the Court indicated, the "right to an abortion recognized in Roe against Wade was entirely contingent upon its being performed by a competent licensed physician under conditions insuring maximum safety for the woman. Id. at 11.

In *Planned Parenthood of Central Missouri* v. *Danforth*, 428 U.S. 52 (1976), a case which it described as "a logical and anticipated corollary to Roe against Wade * * * and Doe against Bolton," Id. at 55, the Court dealt with some of the secondary issues which were forecast and reserved in those earlier opinions. At issue were various provisions of a comprehensive statute for the control and regulation of abortion which was passed by the Missouri Legislature in 1974, shortly after invalidation of its previous abortion legislation under the authority of Roe against Wade. Id. at 55-56.

The portion of the statute which defined "viability" as "that stage of fetal development when the life of the unborn child may be continued indefinitely outside the womb by natural or artificial life-supportive systems" was held not to circumvent, or be violative of, the limitations on State regulation outlined in Roe against Wade. Id. at 63-65. The Court rejected the appellants' contentions that the statutory definition was defective by reason of its lack of reference to a gestational time period or the three states of pregnancy, and its use of the term "indefinitely." It found that the prescribing of a specific point in the gestation period as the point of viability is not the function of the courts or legisla-

tures, but, rather, that the determination that a particular fetus is viable is a matter for the professional judgment of the "responsible attending physician." Id. at 64-65.

The Court upheld a requirement of the statute that the woman, prior to submitting to an abortion during the first 12 weeks of pregnancy, certify her consent to the procedure in writing and that such consent be "informed" and freely given and not the result of coercion. Id. at 67. The Court invalidated, however, the statute's requirements of prior written consent to an abortion within the first 12 weeks of pregnancy by the spouse or by one parent—or a person in loco parentis—of an unmarried minor under the age of 18 years. In both instances, that of spouse or parent, the Court took the position that any power a family member might have to veto a contemplated abortion would have to be a delegation of State power. Under this analysis, the Court concluded that the State could not delegate such a power to spouse or parents because it lacked the power itself. 428 U.S. at 70, 74. While recognizing the "deep and proper concern and interest" of a husband "in his wife's pregnancy and in the growth and development of the fetus she is carrying," the Court found that in cases of disagreement a wife's decision must govern because "the view of only one of the two marriage partners can prevail. Inasmuch as it is the woman who physically bears the child and who is the more directly and immediately affected by the pregnancy, as between the two, the balance weighs in her favor." Id. at 69, 71.

Three dissenting justices noted that the Court had assumed the State was delegating power it did not possess. Instead the State was trying to protect the interest of the father in preserving the life of his offspring. "A father's interest in having a child—perhaps his only child—may be unmatched by any other interest in his life." 428 U.S. at 93.

While reiterating the principle that "minors, as well as adults, are protected by the Constitution and possess constitutional rights," the Court also gave recognition to the State's "somewhat broader authority to regulate the activities of children than of adults." Id. at 74. Nevertheless, weighing the State's interests in the safeguarding of the family unit and of parental authority against the right of privacy of the "competent minor mature enough to have become pregnant," the Court found that it could not conclude that "providing a parent with absolute power to override a determination made by the physician and his minor patient, to terminate the patient's pregnancy will serve to strengthen the family unit" or that "such veto power will enhance parental authority or control where the minor and the nonconsenting parent are so fundamentally in conflict and the very existence of the pregnancy already has fractured the family structure." Id. at 75.

The dissent again raised questions. In their view, the parental consent statute merely protected the decision to have an abortion. Minors may not have the capacity to make such decisions in their best interest without parental involvement. States have traditionally sought to protect children from their own immature decisions by requiring parental consent.

The Court also found unconstitutional the statute's prohibition of the use of saline amniocentesis as a method of abortion after the first 12 weeks of pregnancy. Id. at 75-79. This requirement of the statute had been based upon an express legislative finding that such technique was deleterious to maternal health." Id. at 76. But the Court rejected the validity of this finding based upon its own assessment of the record. A majority of the Justices found that prostaglandin injection—apparently the only indisputably safer abortion technique for the woman—was not in fact generally available in the State of Missouri. Thus, the practical effect of the prohibition was, by forcing the woman and her physician to terminate her pregnancy by methods more dangerous to her health, to inhibit unreasonably or arbitrarily the vast majority of abortions after the first 12 weeks of pregnancy. Id. at 78-79, 101-02.

Another provision of the statute required the physician performing an abortion to exercise the same degree of care to preserve the life of an aborted fetus as would be exercised if the fetus had been intended to be born alive. Both criminal—manslaughter—and civil liability were imposed if the physician failed to take measures "to encourage or sustain the life of the child, and the death of the child results." Id. at 82. The Court held the provision to be invalid by virtue of its failure to limit its applicability to the period after the viability stage has been reached. Id. at 83. The dissent noted that read in any way except through a microscope, this section was only meant to apply to fetuses capable of surviving outside the womb, the requirement imposed by Roe.

The Court was presented with another State statute requiring parental consent for an abortion to be performed on a minor in *Bellotti* v. *Baird* (Bellotti 1), 428 U.S. 132 (1976). The Massachusetts statute involved there required the consent of both parents, as well as the pregnant minor, for any abortion to be performed on wealth, after hearing, "for good causes shown," if one or both parents refused to consent. Id. at 134-35. The attorney general of Massachusetts urged that the statute was not one which allowed the parents to veto their minor child's decision to have an abortion solely on the ground of their own preferences. Rather, it was urged, it merely gives preference to parental consultation and consent, but permits a mature minor capable of giving informed consent to obtain a court order permitting an abortion without parental consent or consultation, and allows a minor not capable of giving informed consent to obtain an order without parental consultation where there is a showing that an abortion would be in her best interests. Id. at 144-45. Accepting the proffered interpretation as one which might very well be applied by the courts of Massachusetts, and as one which would not unduly burden the right to seek an abortion, the Court, decided the case was a proper one for abstention. So long as the Supreme Judicial Court of Massachusetts could interpret the statute so as not to unduly burden the abortion decision, in a manner consistent with the interpretation proffered by the Massachusetts attorney general, review of the constitutional issues would be, the Court felt, unnecessary. Id. at 148.

In *Beal* v. *Doe*, 432 U.S. 438 (1977), the Court was presented with the issue of whether title XIX of the Social Security Act, 42 U.S.C. § 1396 et seq. (1970 ed. and Supp V), which establishes the medicaid program, requires participating States to fund the cost of nontherapeutic abortions. Under Pennsylvania's federally approved medicaid plan, financial assistance for abortions was to be provided only upon certification by physicians that same were "medically necessary." 432 U.S. at 441. Fastening upon the distinction between necessary and unnecessary medical treatment, as well as The State's "valid and important interest in encouraging childbirth," the Court held that, absent a clear mandate in the language or legislative history of title XIX, there was no federally imposed obligation upon the States to fund nontherapeutic abortions. Id. at 444-46.

In the companion case, *Maher* v. *Roe*, 432 U.S. 464 (1977), the Court considered the related question of whether the Constitution requires a participating State which pays for childbirth to pay also for nontherapeutic abortions. Similarly to the Pennsylvania regulation involved in Beal, Connecticut medicaid regulations limited benefits for first trimester abortions to those that were "medically necessary." The regulation was challenged on the ground that it violated the equal protection clause of the 4th amendment. The Court held that notwithstanding its impact on indigent women desiring abortions, the regulation involved no discrimination against a suspect class.

This Court has never held that financial need alone identifies a suspect class for purposes of equal protection analysis. Id. at 471.

The Court further held that the regulation placed no obstacles in the pregnant woman's decision to abort, and thus did not impinge upon the fundamental right recognized in Roe against Wade.

The State may have made childbirth a more attractive alternative, thereby influencing the woman's decision, but it has imposed no restriction on access to abortions that was not already there. Id. at 474.

In support of its holding, the Court emphasized that it was not retreating form its holding in Roe and its progeny, but that—

There is a basic difference between direct state interference with protected activity and state encouragement of an alternative activity consonant with legislative policy . . . A State is not required to show a compelling interest for its policy choice to favor normal childbirth. Id. at 475, 477.

Although the State did not have a similar requirement of a showing of medical necessity for other medical procedures, the Court upheld the validity of the distinction, since such procedures "do not involve the termination of a potential human life." Id. at 480.

In a decision issued on the same day as Beal and Maher, the Court, in *Poelker* v. *Doe*, 432 U.S. 519 (1977), gave consideration to the refusal by the city of St. Louis to provide publicly financed hospital services for nontherapeutic abortions. Finding the constitutional principle involved to be identical with that involved in Maher, the Court found no constitutional violation by the city in electing, as a matter of policy, to provide public hospital services for childbirth while denying such services for nontherapeutic abortions.

The Court returned to the matter of State statutes which impose a standard of care on person performing an abortion in *Colautti* v. *Franklin*, 439 U.S. 379 (1979). A Pennsylvania statute required that every person who performs an abortion make a determination of whether or not the fetus is viable and, upon a finding of actual or possible viability, exercise the same duty of care to preserve the fetus' life and health as if the fetus had been intended to be born alive. The statute also required the use of the abortion technique most conducive to the fetus being born alive so long as a different technique is not necessary to preserve the mother's life or health.

The Court found the viability determination requirement of the statute to be constitutionally void for vagueness. Id. at 390. If found a double ambiguity in the statute. The first ambiguity was found to flow from the statute's requirement that the prescribed standard of care be applied where there is "sufficient reason to believe that the fetus may be viable." This phraseology, the Court found, left unclear whether the determining factor was to be the physician's subjective judgment or "the perspective of a cross section of the medical community or a panel of experts." Id. at 391. The second ambiguity stemmed from the statute's use of the phrase "may be viable." The Court found that it could not merely mean "viable" since the statute used that term in juxtaposition to "may be viable". If one term ("viable" or "may be viable") meant "viable" as the term used in Roe against Wade, the Court felt, the other term could be construed to relate to some other indeterminate stage of fetal development. Id. at 392-93. These uncertainties, the Court felt, left the physician subject to potential criminal liability predicated on "confusing and ambiguous criteria." Id. at 394.

The Court also held the standard-of-care provision itself to be impermissibly vague. Id. at 397-401. The defect was found to flow from the provision's failure to make clear which interest is dominant, that of the mother or that of the fetus, or whether the physician is required to make a "trade-off" between the two interests. Such a conflict of cuties, the Court felt, requires the State to proceed with greater precision. Id. at 400-01. The three dissenters noted that Roe had allowed States to protect the unborn after viability, but this ruling withdrew a substantial measure of the State's ability to protect fetal life in the third trimester.

Bellotti v. *Baird* ("Bellotti II"), 443 U.S. 622 (1979), returned to the Court in 1979. On the basis of rulings by the Supreme Judicial Court of Massachusetts construing various aspects of the statute, the Court found the statute to be unduly burdensome to the right to seek an abortion and, therefore, unconstitutional. Four of the Justices were of the opinion that if a State decides to require parental consent for a minor's abortion decision, it must, in order to insure that the requirement for parental consent does not in fact, confer on the parents an "absolute, and possible arbitrary veto," also make available an alternative judicial procedure whereby authorization may be obtained. Id. at 643-44. The Massachusetts statute, as construed by the State's highest court, failed they held, to meet these requisites in two respects: First, by virtue of its requirement that in all events the minor seek parental consent, Id. at 646-48, and second, to the extent it allowed the State court to disregard the abortion decision of a minor who has been determined to be mature and fully competent to assess the implications of the choice she has made based upon its own assessment of the best interests of the minor. Id. at 649-50. With respect to the first defect, the minor must have, the Justices felt, the opportunity to go directly to court without first consulting or notifying her parents, and the court must authorize her to act without parental consultation or consent if it finds her mature and well-informed enough to intelligently make the decision to abort. Id. at 647. If it finds her not to be competent to make such decision independently, she must nevertheless be permitted to show that an abortion would be in her best interests, and if the court is persuaded, it must order the abortion. Id. at 647-48. Once again the Court rejected any notion that minors heed parental consultation if the abortion decision is to be meaningful.

The Court turned again to the issue of abortion funding in 1980 in the companion cases of *Harris* v. *McRae*, 100 S. Ct. 2671 (1980), and *Williams* v. *Zbaraz*, 100 S. Ct. 2694 (1980). Harris involved challenges to the continuing prohibitions by Congress—usually referred to as the "Hyde Amendment"—since 1976 to the use of Federal funds to reimburse the cost of abortion under the medicaid program except in certain specified circumstances. Several pregnant women and others challenged the Hyde amendment as violative of the due process clause of the fifth amendment and the religion clauses of the first amendment of the Constitution. It was also contended that despite the Federal funding restriction, the States were required under their medicaid programs to pay for all medically necessary abortions.

The Court looked first to its holding in Maher against Roe and concluded that the funding restrictions of the Hyde amendment did not impinge upon the freedom of a woman to decide to terminate her pregnancy. Id. at 2685-87. The Court was unmoved by an attempt to distinguish the holding in Maher on the ground that the case dealt with a refusal by the State to pay for nontherapeutic abortions, whereas the Hyde amendment extended the denial of the use of Federal funds to therapeutic abortions also. After reexamining the health interest of the woman which served as a basis for the abortional freedom recognized in Roe against Wade, the Court nevertheless stated that

It simply does not follow that a woman's freedom of choice carries with it a constitutional entitlement to the financial resources to avail herself of the full range of protected choices. Id. at 2688.

The Court also rejected the argument that the Hyde amendment contravenes the religion clauses of the first amendment. The appellees asserted that the Hyde amendment incorporated doctrines of the Roman Catholic Church concerning the sinfulness of abortion, in violation of the establishment clause. In response, the Court stated that

It does not follow that a statute violates the Establishment Clause because it "happens to coincide or harmonize with the tenets of some or all religions." Id. at 2689.

Finally, the Court rejected the argument that the Hyde amendment violated the equal protection component of the fifth amendment by making Federal reimbursement available under medicaid for medically necessary services generally but not for medically necessary abortions. Citing Maher, the Court could find no suspect classification by virtue of the statute's effect on the indigent; further, it found the statute to be rationally related to the Government's legitimate interest in protecting the "potential life of the fetus." Id. at 2691-92. On this analysis, the Court could find no constitutional infirmity with the Hyde amendment.

Williams v. *Zbaraz*, 100 S. Ct. at 2694, the companion case to Harris, dealt with an Illinois statute which prohibited State medical assistance payments for all abortions except those necessary to save the life of the pregnant woman. The Court found the case to be fully governed by the principles enunciated in Harris against McRae, and thus held that such a State enactment was not in violation of the 14th amendment. Id. at 2700-01.

The Court's next decision in the abortion area came in 1981 in *H. L.* v. *Matheson*, 101 S. Ct. 1164 (1981), another case involving the issue of parental notification for the abortion of a minor. The Utah statute at issue required, in relevant part, that the physician "notify, if possible, the parents or guardian of the woman upon whom the abortion is to be performed, if she is a minor." Id. at 1166-67.

The Court limited its consideration of the issues to the effect of the statute upon minor daughters who, first, were living with and dependent upon their parents, second, were not emancipated by marriage or otherwise, and third, have not made a claim or showing as to their maturity or relations with their parents. Id. at 1169-70. Reiterating the rule enunciated in Bellotti II "that a State may not constitutionally legislate a blanket, unreviewables power of parents, to veto their daughter's abortion," the Court nevertheless held that a "mere requirement of parental notice" would not violate the constitutional rights of the minor if she were immature and dependent. Id. at 1171. The Court grounded this ruling in "the important considerations of family integrity and protecting adolescents," as well as the State's significant interest in "providing an opportunity for parents to supply essential medical and other information to a physician." Id. at 1172. Looking again to the State's interest in encouraging childbirth, the Court found no deficiency in the statute by virtue of its disparate treatment of minors who elect to carry the child to term as compared with those who choose to abort; and the Court found no valid basis for voiding the statute simply because it might inhibit some minors from seeking abortions. Id. at 1173. Accordingly, as applied to the extremely narrow class before it, that is, of unemancipated minors who are dependent upon and living with their parents, and who have made no claim or showing as to maturity or relations with parents militating against notification, the Court upheld the Utah statute. Id.

This brings our survey to the most recent Supreme Court pronouncements on abortion, Akron against Center for Reproductive Health, Planned Parenthood against Missouri, and Simpoulos against Virginia, all of which were decided on June 15, 1983. Akron, the centerpiece of this trilogy of cases, began by citing stare decisis, which the Court conceded is "perhaps never entirely persuasive on a constitutional question," as justification for reaffirming Roe against Wade. The Court further clarified that "the right to choose an abortion, as with other fundamental rights subject to searching judicial examination, must be supported by a compelling state interest." Slip Op. at 9. Justice O'Connor called this standard "unduly burdensome." Once again, the Court used language to describe the right created in Roe that closely approximates the language of Senate Joint Resolution 3, "the right to choose an abortion."

Based on the exacting standards of the "compelling state interest" test, the Court declared four Akron City ordinances invalid. The first of these ordinances had required hospitalization for abortions performed after the first trimester of pregnancy. Justice Powell, speaking for the majority of six, noted that Roe had indeed stated that a State's interest in maternal safety becomes "compelling" at approximately the end of the first trimester. Nonetheless, the Court found that "present medical knowledge convincingly undercuts" Akron's argument that their ordinance promoted maternal safety. Accordingly the Court declared the hospitalization requirement unconstitutional as an "unreasonable infringement upon a woman's constitutional right to obtain an abortion." Slip Op. at 20. The effect of this action was to place the statutes of 21 States, which required hospitalization beyond the first trimester, in jeopardy.

Justice O'Connor, speaking for the three dissenters, attacked these conclusions on several grounds. In the first place, the Court was depriving States and localities of the discretion to weigh what requirements are necessary to protect maternal health within their jurisdictions:

In determining whether the State imposes an "undue burden" we must keep in mind that when we are concerned with extremely sensitive issues, such as the one involved here, "the appropriate forum for their resolution in a democracy is the legislature." We should not forget that "legislatures are ultimate guardians of the liberties and welfare of the people in quite as great degree as the courts."

She also noted that hospitalization is not an "unreasonable means of furthering the State's compelling interest in preserving maternal health." Slip Op. at 16.

The next aspect of the Akron case dealt with parental consent. The Akron ordinance provided for parental consent for abortions performed on minors under 15 or, in the alternative, the consent of a juvenile court. Based on a finding that the juvenile court statute of Akron did not specifically confer authority to provide abortion consent or weigh the maturity of a minor to make such a decision alone, the majority declared the Akron statute unconstitutional. Justice O'Connor criticized this conclusion in strong language:

In light of the Court's complete lack of knowledge about how the Akron ordinance will operate, and how the Akron ordinance and the state juvenile court statute interact, our "'scrupulous regard for the rightful independence of state governments" counsels against unnecessary interference by the federal courts with proper and validly administered state concerns, a course so essential to the balanced working of our federal system.

The Court next acted to invalidate the ordinance requiring a physician to inform his patient of the risks, effects, and alternatives associated with abortion prior to performing the operation. The majority based their ruling on the conclusion that "only a physician is competent to provide the information and counseling relevant to informed consent." Slip Op. at 31. To prescribe a recitation of risks and effects of abortion would thusly, in the opinion of the Court, place the physician in an "undesired and uncomfortable straitjacket." Id. at 27. This action by the Court places in jeopardy statutes in 24 of the 50 States which require that women be provided with some form of information prior to undergoing an abortion. The gist of Justice O'Connor's dissent is that providing additional information to a woman can only enhance her opportunity to make a truly informed decision. Information, per se, imposes "no undue burden or drastic limitation on the abortion decision." Slip Op. at 21.

The next aspect of the Court's decision struck down an ordinance requiring a 24-hour hiatus between the signing of a consent form and the performance of the abortion. The Court found that this requirement placed unacceptable encumbrances upon the woman's abortion decision. Justice O'Connor, once again, propounded an effective response: "The waiting period is surely a small cost to impose

to insure that the woman's decision is well considered in light of its certain and irreparable consequences on fetal life, and the possible effects on her own." Id. at 23.

The final aspect of the Akron case invalidated an ordinance similar to several State statutes requiring humane and sanitary disposal of the remains of the aborted child. The Court concluded that this requirement was vague and uncertain because it seemed to "suggest a possible intent to mandate some sort of decent burial." Slip Op. at 33. Justice O'Connor noted that the real intent of this ordinance was to "preclude the mindless dumping of aborted fetuses on the garbage piles," Slip Op. at 24, and that the statute indicated no intent to require that physicians provide "decent burials." Id.

The Planned Parenthood case allowed States to require the presence of a second physician at the abortion of a viable fetus, to require submission of pathological reports following abortions, and to require a juvenile court to grant a minor consent for an abortion "for good cause" unless the court finds that the minor is not mature enough to make her own decisions.

Finally, in the Simpoulos case a Virginia doctor was convicted for performing an abortion during the second trimester of pregnancy outside of a licensed hospital. This Virginia hospitalization requirement differed from the requirement in Akron because Virginia also allows abortions to be performed in licensed outpatient clinics. In this case, the physician injected an unmarried minor with a saline solution and then concurred in her announced intention to deliver the fetus alone in a hotel room. At no time did the physician urge the pregnant minor to seek appropriate medical care or report to a hospital when labor began.

Thus, as shown by this brief survey of the progeny of Roe against Wade, the Court's treatment of the right of abortion which it promulgated in Roe has been essentially one of reaffirmation and extension of that right, and of protection of it from virtually all possible competing interest, private or public. Covering as they do almost a decade of carefully considered opinions dealing with every possible aspect of the matter. It is clear that these opinions evince a firm and unequivocal commitment by the Court to continued recognition and protection of a right to abortion. Thus, so far as the courts are concerned, such right has now become an indelible part of the fundamental law of the land.

In light of the extent to which the right to abortion has been stretched to limit State discretion, I once more urge my colleagues to vote for Senate Joint Resolution 3. Senate Joint Resolution 3 will reverse Roe and discredit any of the progeny of Roe based on the right to abortion. The amendment, as I have explained earlier, does not replace the absolutist and extreme right in Roe with any kind of a value judgment on the appropriateness of a woman's interest in seeking an abortion or the right of the unborn child to life. These judgments are left exclusively to the States. This is not to say, however, as I have also clarified, that the amendment will immunize abortion-related State legislation from the other general structures of the Constitution insofar as they do not protect abortion itself. Thus, for instance, a law prohibiting individuals from advocating abortion on demand would clearly be in violation of the first amendment, while a law making distinctions with respect to when an abortion might be performed based on a woman's race would clearly run afoul of the equal protection clause. Such actions would not have the effect of restoring even a minor way any constitutional impediments to the right of the representative branches of State governments to restrict and prohibit abortion.

I ask unanimous consent that a list of prolife churches and their approximate populations be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

PROLIFE CHURCHES

1. Southern Baptist (13½ million members) (ban, except life of mother).
2. Catholic (50 million).
3. Church of Jesus Christ of Latter-day Saints (4 million).
4. Eastern Orthodox (4 million).
5. Orthodox Judaism (1 million).
6. Lutheran Church Mission Synod (2.7 million).
7. Assembles of God (1.3 million).
8. Churches of Christ (4 million).
9. National Association of Evangelicals—36,000 Protestant churches in 74 denominations.

Mr. HATCH. Mr. President, I believe that concludes our efforts for this day. We will be back tomorrow.

ROUTINE MORNING BUSINESS

Mr. STEVENS. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business during which Senators may speak therein, and the time not to extend beyond 6:15 p.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Saunders, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed in the end of the Senate proceedings.)

FEDERAL ACTIONS WITH RESPECT TO CONSERVATION OF PETROLEUM AND NATURAL GAS—MESSAGE FROM THE PRESIDENT—PM 60

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with accompanying papers; which was referred to the Committee on Energy and Natural Resources:

To the Congress of the United States:

Pursuant to the requirements of Section 403(c) of the Powerplant and Industrial Fuel Use Act of 1978, I hereby transmit the fourth annual report describing Federal actions with respect to the conservation and use of petroleum and natural gas in Federal facilities and conservation of petroleum and natural gas by recipients of Federal assistance.

RONALD REAGAN.

THE WHITE HOUSE, *June 27, 1983.*

ANNUAL REPORT OF THE COUNCIL ON ENVIRONMENTAL QUALITY—MESSAGE FROM THE PRESIDENT—PM 61

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with an accompanying report; which was referred to the Committee on Environment and Public Works:

To the Congress of the United States:

I am pleased to transmit to the Congress the Thirteenth Annual Report of the Council on Environmental Quality.

I hope that those who read this report will recognize the progress that this country continues to make in its long-standing commitment to a clean and healthy environment for all our people.

Americans have long recognized that this nation has been blessed with abundant natural resources and a clean and healthy environment. Beginning with the early pioneers and continuing today, Americans consider clean air and water, fruitful farmlands, beautiful mountains and rivers, and plentiful energy and mineral resources to be treasured parts of their national heritage. As President and as an American citizen, I am deeply con-

cerned that present and future generations be protected from the adverse health effects of toxic chemicals and hazardous wastes, that their water be fit to drink, their air fit to breathe, and that their natural resources be protected. As we strive for economic progress and the promise of a better life, we recognize that a clean and healthy environment is a vital part of that promise.

To ensure our natural resource heritage, the United States has enacted the most far-reaching and comprehensive environmental and natural resource legislation of any nation in history. Our laws protecting air and water quality are used as models by other countries, because they have worked. Air quality in the United States today, especially in our cities, is much better than it was ten years ago. Streams, rivers, and lakes all across the count y are becoming cleaner. The United States has passed legislation to control the manufacture, storage, transportation, and disposal of hazardous substances. We recently created a nationwide fund of over a billion and a half dollars to clean up abandoned chemical dump sites. We have enacted a program to evaluate new and existing chemicals. In 1981, private businesses and government spent over 60 billion dollars in order to comply with U.S. environmental laws.

No other nation has set aside as many acres of parks, wilderness and wildlife refuge areas, or as many miles of scenic rivers and natural trails, for the enjoyment of present and future generations. Our national park system has grown to 77 million acres, and almost 7,000 miles of river are included in our national wild and scenic rivers sytems.

As President, I am committed to continue this record of achievement. As we learn more and more about the causes and alternative solutions to environmental problems, we are learning how to solve them. We are applying the economic and technical lessons we have learned during the past decade in order to continue our environmental improvement into the future.

During the past two years we have worked to manage our natural resources more efficiently. We have increased state government involvement in programs ranging from water allocation to new source permit processing. We have reduced federal subsidies for economic development which contributed to environmental degradation. We have expanded innovative programs which allow industry the regulatory flexibility and economic incentives to clean up pollution. We have increased research to determine the causes and effects of acid rain, which was not a widespread public concern ten years ago.

We can be very proud of our environmental achievements. As we address the pressing environmental issues now confronting us, we will continue to move toward our common national goals: the preservation of scenic beauty, the protection of wilderness areas and parklands, and a future that is both economically prosperous and environmentally safe.

RONALD REAGAN.

THE WHITE HOUSE, *June 27, 1983.*

MESSAGES FROM THE HOUSE

At 2:52 p.m., a message from the House of Representatives, delivered by Ms. Goetz, one of its clerks, announced that the House disagrees to the amendments of the Senate to the bill (H.R. 3132) making appropriations for energy and water development for the fiscal year ending September 30, 1984, and for other purposes; it agrees to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and appoints Mr. BEVILL, Mrs. BOGGS, Mr. CHAPPELL, Mr. FAZIO, Mr. WATKINS, Mr. BONER of Tennessee, Mr. WHITTEN, Mr. MYERS, Mrs. SMITH of Nebraska, Mr. RUDD, and Mr. CONTE as managers of the conference on the part of the House.

The message further announced that the House has agreed to the following concurrent resolution, without amendment:

S. Con. Res. 14. A concurrent resolution in commemoration of the bicentennial of the birth of Simon Bolivar, hero of the Independence of the Americas.

The message also announced that the House has passed the following bill and joint resolution, in which it requests the concurrence of the Senate:

H.R. 1183. An act to amend the Internal Revenue Code of 1954 to limit to $700 the maximum reduction in individual income tax resulting from the third year of the rate cuts enacted by the Economic Recovery Tax Act of 1981; and

H.J. Res. 308. Joint resolution increasing the statutory limit on the public debt.

HOUSE MEASURE REFERRED

The following bills were READ the first and second times by unanimous consent, and referred as indicated:

H.J. Res. 308. Joint resolution increasing the statutory limit on the public debt; to the Committee on Finance.

HOUSE MEASURE HELD AT THE DESK

The following bill was read the first and second times by unanimous consent, and held at the desk pursuant to the order of the Senate of today, June 27, 1983:

H.R. 1183. An act to amend the Internal Revenue Code of 1954 to limit to $700 the maximum reduction in individual income tax resulting from the third year of the rate cuts enacted by the Economic Recovery Tax Act of 1981.

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC-1323. A communication from the Secretary of the Department of the Interior transmitting, pursuant to law, the Annual Report on the Youth Conservation Corps (YCC) program in the Department of the Interior; to the Committee on Energy and Natural Resources.

EC-1324. A communication from the Administrator of the Environmental Protection Agency transmitting, pursuant to law, the Report to Congress on the Progress of Regulation to Protect Stratospheric Ozone; to the Committee on Environment and Public Works.

EC-1325. A communication from the Deputy Secretary of the Treasury transmitting a draft of proposed legislation "To authorize the Secretary of the Treasury to obtain certain services and facilities and incur certain administrative expenditures"; to the Committee on Finance.

EC-1326. A communication from the Assistant Legal Advisor for Treaty Affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties entered into by the United States; to the Committee on Foreign Relations.

PETITIONS AND MEMORIALS

The following petitions and memorials were laid before the Senate and were referred or ordered to lie on the table as indicated:

POM-265. A resolution adopted by the General Assembly of the State of Georgia; to the Committee on the Judiciary:

"SENATE RESOLUTION 134

"Whereas, the State of Georgia is currently celebrating the two hundred and fiftieth anniversary of its founding, and the Governor and the General Assembly were conscious of the upcoming two-hundredth anniversary of the Constitution of the United States; and

"Whereas, the Constitution of the United States is predicated on a set of values based upon the inherent worth, dignity, responsibility, and sovereignty of the individual; and

"Whereas, the Constitution of the United States, having stood the ruthless test of time, is the venerable patriarch of the world's written chapters of government; and

"Whereas, there are indeed few documents of American history which offer so rich a reward to the citizen who reads with care and thoughtfulness; and

"Whereas, it is only fitting that the renewing and reviving of one's commitment to these basic values is the greatest gift that every citizen of the United States can give in this celebration. Now therefore, be it

"Resolved by the General Assembly of Georgia that the members of this body acting on behalf of the people of Georgia urge the Congress of the United States to make plans for the historic celebration of the two-hundredth anniversary of the Constitution of the United States and to have such plans include a call to all people to renew and revive their allegiance to the values for which this country stands."

POM-266. A resolution adopted by the Senate of the State of Georgia; to the Committee on the Judiciary:

"RESOLUTION

"Whereas, in 1973, the Georgia General Assembly, responding to and reflecting the overwhelming public sentiment present within this state, enacted legislation providing for the imposition of the death sentence for persons convicted of the commission of certain heinous crimes; and

"Whereas, since 1973, more than 100 persons have been convicted and sentenced to death for the commission of various horrible and violent crimes; and

"Whereas, if citizens of the State of Georgia are to maintain confidence in the judicial and criminal justice systems and if capital punishment is to serve as an effective deterrent, there must be a certainty that the sentence of death will be imposed and carried out expeditiously for persons found guilty of the commission of these abhorrent acts; and

"Whereas, in 1980, the Georgia General Assembly, responding to the sense of frustration of the public in the matter of the imposition of the death sentence, took appropriate and needed steps to streamline the review processes of the death sentence in the state judiciary; and

"Whereas, this body, while recognizing the appropriateness of each defendant's constitutional right to pursue all legal remedies available to test the legality of his conviction and sentence in criminal cases, recognizes that it is nevertheless not in the public interest that such challenges be pursued in any manner other than timely, with the courts resolving in an expeditious manner all such proceedings. Now, therefore, be it

"Resolved by the Senate that this body does urge the United States Congress to enact appropriate federal legislation establishing in the federal judiciary an efficient and expeditious unified appeals process regarding all challenges to the imposition of the death penalty so that in all death penalty cases the people of the State of Georgia may be assured that there will be swift and sure punishment for persons convicted of those horrible and violent crimes within this state for which the death penalty may be imposed. Be it further

"Resolved that the Secretary of the Senate mail a copy of this resolution to the President of the United States, to the Vice President of the United States, to the Speaker of the United States House of Representatives, to the chairmen of the United States Senate and United States House Judiciary Committees, to the members of the Georgia Congressional Delegation, and to each appellate and district court judge of the 11th U.S. Judicial Circuit."

POM-267. A resolution adopted by the Senate of the State of Georgia; to the Committee on the Judiciary:

"SENATE RESOLUTION 69

"Whereas, by order of a Federal Court Judge, a Federal Monitor has been appointed to oversee operations of the Georgia State Prison; and

"Whereas, the stated purpose of the appointment of the Federal Monitor is to ensure the responsible, secure, and humane operation of the Georgia State Prison; and

"Whereas, the Federal Monitor receives fees that provide him with a salary in excess of that which the Governor of this state receives; and

"Whereas, the Federal Monitor also receives payment for expenses which provides him with an even higher compensation figure; and

"Whereas, the Federal Monitor is authorized to utilize experts whose fees and expenses are added to the already astronomical cost associated with his work; and

"Whereas, these unusually high fees and expenses establish major economic incentives for the Monitor not to complete his work and thus deprive him and his experts of their unique source of income; and

"Whereas, this exorbitant and irresponsible use of the tax moneys of Georgia's citizens works an undue hardship on the people and the economy; and

"Whereas, these unreasonable costs associated with the Federal Monitor's work constitute an almost criminal disregard for the economic realities of our nation and especially of the State of Georgia; and

"Whereas, the people and leaders of Georgia are tired of being used and criminally abused by having to bear the burden of highly inflated costs of $75.00 per hour or $400.00 per day associated with the work of a Federal monitor; and

"Whereas, the Federal Court Monitor has presently received far in excess of $600,000.00 for his work since June, 1979.

"Now, therefore, be it

"Resolved by the Senate that the members of this body call upon the Congress of the United States of America to take the necessary action to ensure that the acts of any Federal Judge or Federal Monitor do not allow for the charging of fees and expenses which are so clearly irresponsible as to border on being criminal in their disregard for the economic conditions and realities of any state and which appear to be punitive in their intent and are certainly punitive in their effect. BE IT FURTHER

"Resolved That the Secretary of the Senate is authorized and directed to transmit an appropriate copy of this resolution to each member of the Georgia Congressional Delegation."

POM-268. A resolution adopted by the House of Representatives of the State of Georgia; to the Committee on the Judiciary:

"H.R. No. 399

"Whereas, Honorable George Bush, the President of the United States Senate, has signed the Response to the People Legislative Treaty to Stop Drugs at the Source, which treaty is to be cosigned by Presidents of State Senates, county commissioners, and members of the Stop Drugs at the Source Petition will be answered; and

"Whereas, the availability of harmful and illicit drugs to our children is a threat to the life, liberty, and pursuit of happiness of the people and the security of the United States of America; and

"Whereas, the availability of harmful and illicit drugs to our children is a violation of human rights; and

"Whereas, in 1972, the Georgia General Assembly, one of the 13 original framers of the Constitution, recognized this national threat and set our nation and other nations on the course of the Stop Drugs at the Source Petition and Treaty campaigns with the historic resolution cosigned by 56 Senators and 180 Representatives; and

"Whereas, educators have developed the Stop Drugs at the Source Petition and Treaty campaigns into citizenship education for citizens for the entire community; and

"Whereas, the Governor of Georgia, Honorable Joe Frank Harris, has proclaimed 1983 the Year of Stop Drugs at the Source; and

"Whereas, the Governor of Georgia, Honorable Joe Frank Harris, has cosigned the Response to the People Executive Treaty with the President of the United States, Honorable Ronald Reagan; and

"Whereas, the President of the Georgia Senate, Honorable Zell Miller, has cosigned the Response to the People Legislative Treaty with the President of the United States Senate, Honorable George Bush; and

"Whereas, the Speaker of the Georgia House of Representatives, Honorable Thomas B. Murphy, has cosigned the Response to the People Legislative Treaty with the Speaker of the United States House of Representatives, Honorable Thomas P. "Tip" O'Neill; and

"Whereas, the Stop Drugs at the Source Petition and Treaty campaigns instituted by the 1972 Georgia General Assembly's resolution are developed and should be presented to our sister states and other nations; and

"Whereas, Honorable Max Cleland, the Secretary of State of Georgia, has agreed to serve as the chairman of the Ben Fortson Bicentennial Secretaries of States Committee to implement the Stop Drugs at the Source Petition and Treaty campaigns in other states and nations. Now, therefore, be it

"Resolved by the House of Representatives that the members of this body express our gratitude and appreciation to Honorable George Bush, the President of the United States Senate, for having signed the Response to the People Legislative Treaty to Stop Drugs at the Source and for his pledge to keep harmful and illicit drugs away from our children. Be it further

"Resolved that the Clerk of the House of Representatives is authorized and directed to transmit an appropriate copy of this resolution to Honorable George Bush, President of the United States Senate."

POM-269. A resolution adopted by the House of Representatives of the State of Georgia; to the Committee on the Judiciary:

"H.R. No. 403

"Whereas, Honorable Thomas P. "Tip" O'Neill, the Speaker of the United States House of Representatives, has signed the Response to the People Legislative Treaty to Stop Drugs at the Source, which treaty is to be cosigned by Speakers of State Houses, county commissioners, and members of city councils, and which treaty is to serve as evidence that the Stop Drugs at the sources Petition will be answered; and

"Whereas, the availability of harmful and illicit drugs to our children is a threat to the life, liberty, and pursuit of happiness of the people and the security of the United States of America; and

"Whereas, the availability of harmful and illicit drugs to our children is a violation of human rights; and

"Whereas, in 1972, the Georgia General Assembly, one of the 13 original framers of the Constitution, recognized this national threat and set our nation and other nations on the course of the Stop Drugs at the Source Petition and Treaty campaigns with the historic resolution cosigned by 56 senators and 180 Representatives; and

"Whereas, educators have developed the Stop Drugs at the Source Petition and Treaty campaigns into citizenship education for citizens of the entire community; and

"Whereas, the Governor of Georgia, Honorable Joe Frank Harris, has proclaimed 1983 the Year of Stop Drugs at the Source; and

"Whereas, the Governor of Georgia, Honorable Joe Frank Harris, has cosigned the Response to the People Executive Treaty with the President of the United States, Honorable Ronald Reagan; and

"Whereas, the President of the Georgia Senate, Honorable Zell Miller, has cosigned the Response to the People Legislative Treaty with the President of the United States Senate, Honorable George Bush; and

"Whereas, The Speaker of the Georgia House of Representatives, Honorable Thomas B. Murphy, has cosigned the Response to the People Legislative Treaty with the Speaker of the United States House of Representatives, Honorable Thomas P. "Tip" O'Neill; and

"Whereas, the Stop Drugs at the Source Petition and Treaty campaigns instituted by the 1972 Georgia General Assembly's resolution are developed and should be presented to our sister states and other nations; and

"Whereas, Honorable Max Cleland, the Secretary of State of Georgia, has agreed to serve as the chairman of the Ben Fortson Bicentennial Secretaries of State Committee to implement the Stop Drugs at the Source Petition and Treaty campaigns in other states and nations. Now, therefore, be it

"Resolved by the House of Representatives that the members of this body express our gratitude and appreciation to Honorable Thomas P. "Tip" O'Neill, the Speaker of the United States House of Representatives, for having signed the Response to the People Legislative Treaty to Stop Drugs at the Source and for his pledge to work together to keep harmful and illicit drugs away from our children. Be it further

"Resolved that the Clerk of the House of Representatives is authorized and directed to transmit an appropriate copy of this resolution to Honorable Thomas P. "Tip" O'Neill, the Speaker of the United States House of Representatives."

POM-270. A resolution adopted by the House of Representatives of the State of Georgia; to the Committee on the Judiciary:

"H.R. No. 404

"Whereas, Honorable Ronald Reagan, the President of the United States, has signed the Response to the People Executive Treaty to Stop Drugs at the Source, which treaty is to be cosigned by Governors, county commission chairmen, and mayors, and which treaty is to serve as evidence that the Stop Drugs at the Source Petition will be answered; and

"Whereas, the availability of harmful and illicit drugs to our children is a threat to the life, liberty, and pursuit of happiness of the people and the security of the United States of America; and

"Whereas, the availability of harmful and illicit drugs to our children is a violation of human rights; and

"Whereas, in 1972, the Georgia General Assembly, one of the 13 original framers of the Constitution, recognized this national threat and set our nation and other nations on the course of the Stop Drugs at the Source Petition and Treaty campaigns with the historic resolution cosigned by 56 Senators and 180 Representatives; and

"Whereas, educators have developed the Stop Drugs at the Source Petition and Treaty campaigns into citizenship education for citizens of the entire community; and

"Whereas, the Governor of Georgia, Honorable Joe Frank Harris, has proclaimed 1983 the Year of Stop Drugs at the Source; and

"Whereas, the Governor of Georgia, Honorable Joe Frank Harris, has cosigned the Response to the People Executive Treaty with the President of the United States, Honorable Ronald Reagan; and

"Whereas, the President of the Georgia Senate, Honorable Zell Miller, has cosigned the Response to the People Legislative Treaty with the President of the United States Senate, Honorable George Bush; and

"Whereas, the Speaker of the Georgia House of Representatives, Honorable Thomas B. Murphy, has cosigned the Response to the People Legislative Treaty with the Speaker of the United States House of Representatives, Honorable Thomas P. "Tip" O'Neill; and

"Whereas, the Stop Drugs at the Source Petition and Treaty campaigns instituted by the 1972 Georgia General Assembly's resolution are developed and should be presented to our sister states and other nations; and

"Whereas, Honorable Max Cleland, the Secretary of State of Georgia, has agreed to serve as the chairman of the Ben Fortson Bicentennial Secretaries of States Committee to implement the Stop Drugs at the Source Petition and Treaty campaigns in other states and nations. Now, therefore, be it

"Resolved by the House of Representatives that the members of this body express our gratitude and appreciation to Honorable Ronald Reagan, the President of the United States, for having signed the Response to the People Executive Treaty to Stop Drugs at the Source and request the President to sign the International Treaty to Stop Drugs at the Source and to request that leaders of all nations cosign the International Treaty to work together to keep harmful and illicit drugs away from our children. Be it further

"Resolved that the Clerk of the House of Representatives is authorized and directed to transmit an appropriate copy of this resolution to Honorable Ronald Reagan, President of the United States."

POM-271. A resolution adopted by the Senate of the State of Georgia; to the Committee on Armed Services:

"SENATE RESOLUTION 23

"Whereas, the Colony of Georgia was founded on February 12, 1733, as a military buffer between the English colonies north of the Savannah River and the Spanish territory of Florida; and

"Whereas, Governor Ohlethorpe organized the militia which for the past 250 years has brought honor, security, and an outstanding military tradition to the great state of Georgia; and

"Whereas, the 101st Separate Coast Artillary Battalion of the Georgia National Guard was organized on October 12, 1940, incorporating Georgia's oldest military units, the Georgia Hussars of Savannah, dating from 1736 as Battery A, the Liberty Independent Troop of Hinesville dating from 1775 as Battery B, the Governor Horse Guards of Atlanta dating from the late 1800's as Headquarters Battery and the new Battery D from Bainbridge; and

"Whereas, the 101st Battalion was ordered to active federal service on February 10, 1941, and assigned to Camp Stewart, Georgia; and

"Whereas, the 101st Battalion was one of the very few National Guard units to go overseas intact in World War II; and

"Whereas, the 101st Battalion was the first complete unit of American ground combat troops to enter combat with the Japanese in New Guninea before the Coral Sea Battle and was shooting down Japanese planes within hours of the fall of Corregidor in May 1942; and

"Whereas, the 101st had the honor of raising the first American flag on New Guinea; and

"Whereas, the 101st fought well and gallantly in the East Indies, Papua, New Guinea, and Philippine Liberation Campaigns; and

"Whereas, the 101st was cited for "outstanding performance of duty in action" during the Papuan Campaign by the President of the United States; and

"Whereas, the 101st was cited for "outstanding performance of duty in action" during the Philippine Liberation Campaign by the President of the Republic of Philippines; and

"Whereas, the 101st battle honors are a continuing legend of gallantry above and beyond the call of duty as exemplified by the continued service to Georgia in the United States Army National Guard by its historic units; and

"Whereas, the World War II veterans of this historic command meeting in Savannah for their annual reunion during the two hundred fiftieth anniversary year of Georgia's founding: Now, therefore, be it

"Resolved by the Senate that this body goes on record as recognizing the long service, many sacrifices, and gallant actions of these citizen soldiers of the 101st Separate Coast Artillery Battalion and the continued service of its historic units in peace as well as war which has brought honor and glory to the State of Georgia and to themselves. Be it further

"Resolved that the Secretary of the Senate is authorized and directed to transmit an appropriate copy of this resolution to the Honorable Ronald Reagan, President of the United States; to the Honorable Joe Frank Harris, Governor of Georgia; to each member of the Georgia congressional delegation; and to Col. Lindsey P. Henderson, Jr. (Ret.), President of the 101st Battalion Association."

POM-272. A concurrent resolution adopted by the General Assembly of the State of Indiana; to the Committee on Labor and Human Resources:

"RESOLUTION

"Whereas, across America there is much unskilled work that is not now offered to potential workers because of the minimum wage requirements; and

"Whereas, much of this potential unskilled work could and would be performed by the youth of America if an exception to the minimum wage requirements was made for the employment of certain young people; and

"Whereas, the President of the United States has recommended that the minimum wage be lowered as applied to certain jobs and certain young people: Therefore, be it

"Resolved by the Senate of the General Assembly of the State of Indiana, the House of Representatives Concurring:

"SECTION 1. That we endorse the recommendation of the President of the United States that the minimum wage be lowered

as applied to certain young people doing certain jobs.

"SECTION 2. That a copy of this resolution be sent by the Secretary of the Senate to the President, the Vice President, the leadership of both parties in both houses of Congress and to each member of the Indiana Congressional delegation."

POM-273. A resolution adopted by the General Assembly of the Commonwealth of Pennsylvania; to the Committee on Veterans' Affairs:

"RESOLUTION

"Whereas, a great majority of Vietnam veterans have problems and needs that have been ignored, including the need for programs of medical treatment, therapy and disability benefits, as well as vocational and disability rehabilitation; and

"Whereas, the American public believes Vietnam veterans should receive the same respect and favorable treatment accorded veterans of earlier conflicts; and

"Whereas, some Vietnam veterans have suffered severe physical effects, including cancer, nervous system disorders and skin diseases, as a result of their exposure to the defoliant, Agent Orange, while serving in the Republic of Vietnam and reports have been substantiated that unusually high numbers of Vietnamese women and Vietnam veterans' wives have given birth to children with birth defects; therefore be it

"Resolved (the House of Representatives concurring), That whereas the Federal Government, through the Department of Defense, was responsible for the spraying of the defoliant, Agent Orange, the Federal Government, then, through the Veterans' Administration should be responsible for the funding and administration of individual screening programs in order that those veterans suffering the effects of Agent Orange may receive full medical benefits, therapy, disability benefits and rehabilitation training; and be it further

"Resolved, That the General Assembly of the Commonwealth of Pennsylvania memorialize the Congress of the United States and the Veterans' Administration to coordinate activities in conjunction with the State Vietnam Herbicides Information Commission; and be it further

"Resolved, That copies of this resolution be transmitted to the President of the United States, the presiding officers of each house of Congress, the appropriate committee chairman in the House and Senate of Congress and to each member of Congress from Pennsylvania."

POM-274. A resolution adopted by the Senate of the State of Georgia; to the Committee on Veterans' Affairs:

"SENATE RESOLUTION 192

"Whereas, the State of Georgia has one of the largest veteran populations of any state in the United States; and

"Whereas, the age and infirmities of the older veterans and the disabilities suffered by the younger veterans indicate the need for expanded care facilities; and

"Whereas, outpatient treatment clinics have been established by the Veterans' Administration in Alabama, Florida, South Carolina, North Carolina, and Tennessee; and

"Whereas, the outpatient treatment clinic formerly located in Savannah, Georgia, was phased out by the Veterans' Administration. Now, therefore, be it

"Resolved by the Senate, That the members of this body hereby urge the administrator of the Veterans' Administration to reestablish the Outpatient Treatment Clinic in Savannah, Georgia. Be it further

"Resolved, That the Secretary of the Senate is authorized and directed to transmit an appropriate copy of this resolution to the administrator of the Veterans' Administration, the chief of the Department of Medicine and Surgery of the Veterans' Administration, and to each member of the Georgia Congressional Delegation."

POM-275. A resolution adopted by the General Assembly of the State of Georgia; to the Committee on Agriculture, Nutrition, and Forestry:

"SENATE RESOLUTION 140

"Whereas, in the closing days of the last Congress, certain provisions were added to the Omnibus Reconciliation Act of 1982, H.R. 6955, to authorize the United States Secretary of Agriculture to charge an assessment of $1.00 per hundredweight of milk; and

"Whereas, that assessment will first be imposed April 1, 1983;

"Whereas, the assessment was intended to discourage increasing milk production, thereby decreasing the federal government payments for milk price supports for excess milk products; and

"Whereas, Georgia has contributed less than the national average to the increase in milk production, since for the years 1975 through 1981 Georgia's production increased by 7 percent, the nation's production increased by 9.1 percent, and California's production increased by 20 percent; and

"Whereas, Georgia receives few milk support benefits from the federal government since these supports are only available for milk which can be stored in the form of butter, cheese, and powdered milk and Georgia's production of such storable forms of milk is negligible; and

"Whereas, Georgia dairymen are already contributing 12¢ per hundredweight to create milk markets in this state to absorb any increased production of milk in the state; and

"Whereas, notwithstanding the fact that Georgia dairymen have contributed little to the problems the assessment was designed to remedy, the assessment will have a devastating impact on dairymen in the state; and

"Whereas, for 1981 diarymen nation-wide had a profit margin of $1.97 per hundredweight, the upper Midwest dairymen had a profit margin of $2.43 per hundredweight, and Georgia dairymen only had a profit margin of 70¢ per hundredweight; and

"Whereas, an assessment of $1.00 per hundredweight on Georgia milk on which there is only 70¢ per hundredweight profit will wipe out many of the state's dairymen and impose severe financial hardships on the survivors. Now, therefore, be it

"Resolved by the General Assembly of Georgia, That this body urges Congress to repeal those provisions of the Omnibus Reconciliation Act of 1982 which authorize assessments on milk. Be it further

"Resolved, That this body also urges the United States Secretary of Agriculture, the Honorable John R. Block, not to proceed with plans to require the milk assessment which will so devastate the dairymen of this state. Be it further

"Resolved, That the Secretary of the Senate is authorized and directed to transmit an appropriate copy of this resolution to the Georgia Congressional Delegation and to the Honorable John R. Block, Secretary of Agriculture."

POM-276. A resolution adopted by the Board of Supervisors of the County of Madera, Calif., urging passage of the Wine Equity Act of 1983; to the Committee on Finance.

POM-277. A resolution adopted by the Commissioners of the County of Beaver, Pa. urging Congress to impose a 5-year period of quantitative restrictions on alloy tool steel and stainless sheet, strip, plate, and rod steel at the levels requested by the U.S. specialty steel industry and the U.S. steel workers of America and urging Congress to extend such quotas to additionally cover carbon steel products; to the Committee on Finance.

POM-278. A resolution adopted by the Senate of the State of Washington; to the Committee on Environment and Public Works:

"SENATE RESOLUTION 1983-79

"Whereas, International and domestic trade is important to the economic health of the Pacific Northwest; and

"Whereas, The Columbia/Snake river system is the major transportation route for Washington-produced products, including grain, forest products, and manufactured goods, moving to international markets; and

"Whereas, The volume of cargo moving on the Columbia/Snake river system amounted to more than thirty million tons in 1982 and has the potential to triple by the end of this century; and

"Whereas, For the river system to meet its full potential by the year 2000, the bar crossing at the mouth of the Columbia river must be deepened to fifty-five feet to make it compatible with the forty foot channel that extends one hundred ten miles from Ilwaco to Vancouver; and

"Whereas, The United States Army Corps of Engineers has determined an 11.1 to 1 benefits-to-cost ratio for the deepening of the mouth of the Columbia river project; and

"Whereas, Deepening of the mouth of the Columbia river would enhance navigational safety and prevent ship time delays at the bar; and

"Whereas, The completion of this project would make Washington's Columbia river ports more competitive in attracting waterborne commerce in the future; Now, therefore, be it

"Resolved by the Senate of the State of Washington:

"(1) That the Congress of the United States be urged to appropriate funds to complete the United States Army Corps of Engineers' recommended deepening of the mouth of the Columbia river to fifty-five feet at the bar crossing; and

"(2) That the Congress of the United States also be urged to move ahead on authorization of this project; and be it further

"Resolved, That copies of this resolution be immediately forwarded to the Honorable Ronald Reagan, President of the United States; the President of the United States Senate; the Speaker of the United States House of Representatives and each member of Congress from the State of Washington."

POM-279. A resolution adopted by the Senate of the State of Washington; to the Committee on Environment and Public Works:

"SENATE RESOLUTION 1983-71

"Whereas, the Port of Grays Harbor is the only deep water port on the coast of the State of Washington; and

"Whereas, many counties rely on the Port of Grays Harbor for the transportation of the tremendous renewable timber resources in the area; and

"Whereas, increased shipments of forest products are being made to Pacific rim nations, including Japan, Korea, and the People's Republic of China; and

"Whereas, shipments of these commodities will contribute significantly to this nation's balance of trade; and

"Whereas, the United States Army Corps of Engineers has just completed a feasibility study on the improvement of navigation facilities in Grays Harbor including the deepening of navigation channels from 30 to 38 feet; and

"Whereas, present harbor conditions prevent larger and more cost-effective vessels in the trade from departing fully laden from Grays Harbor; and

"Whereas, on December 14, 1982, the Board of Engineers for rivers and harbors of the United States Army Corps of Engineers recommended the modification of existing federal navigation projects at Grays Harbor, incuding the deepening and widening of channels, replacement of bridges, and the construction of new turning basins; Now, therefore, be it

"Resolved by the Senate of the State of Washington, That the federal government be urged to approve the proposed modification of existing federal navigation projects at Grays Harbor; and be it further,

"Resolved, That the Congress of the United States also be urged to appropriate adequate funding in fiscal years 1984 and 1985 to continue the planning and engineering of channel improvements in Grays Harbor while formal authorization of the project is being sought; and be it further

"Resolved, That copies of this resolution be immediately forwarded to the Honorable Ronald Reagan, President of the United States; the President of the United States Senate; The Speaker of the United States House of Representatives, and each member of Congress from the State of Washington."

POM-280. A joint resolution adopted by the Legislature of the State of Washington; to the Committee on Energy and Natural Resources:

"HOUSE JOINT MEMORIAL NO. 4

"Whereas, Hydroelectric energy constitutes a clean, renewable, and domestically controlled energy resource; and

"Whereas, There are a great many attractive sites for hydroelectric development remaining in the country, some at existing dams where the environmental impact has already been expected and economics are generally favorable; and

"Whereas, although federal and state hydroelectric permitting procedures have been considerably revised in recent years with the aim of simplification, potential developers are still; encountering cumbersome, conflicting, and uncertain procedures; and

"Whereas, Within the many interlocking federal and state requirements and the many people necessarily involved in the permitting processes, it is unrealistic to expect that procedures can be simplified to an appropriate extent; and

"Whereas, the delegation by the federal government to the states of all permitting authority for small scale hydroelectric facilities would improve the timeliness and thoroughness of both the federal and state permitting processes and would guarantee a quicker response to applicants; Now, therefore

"Your Memorialists respectfully pray that the federal government totally delegate all permitting authority to states for hydroelectric facilities with a capacity of one hundred kilowatts or less.

"Resolved, That copies of this Memorial be immediately transmitted to the Honorable Ronald Reagan. President of the United States, the President of the United States Senate, the Speaker of the House of Representatives, and each member of Congress from the State of Washington."

POM-281. A resolution adopted by the House of Representatives of the Commonwealth of Massachusetts; to the Committee on Commerce, Science, and Transportation:

"RESOLUTION

"Whereas, fire poses a serious and potential threat and every resident of this Commonwealth and to every citizen of the United States; and

"Whereas, fire and its hazards present a complex problem involving ignition time, speed of growth, the rate of heat released by burning objects, the quantity and density of smoke, and combustion toxicology generally; and

"Whereas, the National Bureau of Standards' Center for Fire Research has for many years been the leader in conducting impartial and independent research studies on the causes of fire and the prevention of its spread and related injuries and damages, which studies have been relied upon by local governments and industry generally, including the plastics industry throughout the United States; and

"Whereas, the Office of Management and Budget of the executive branch of the Federal Government has proposed the elimination of all funding for the National Bureau of Standards' Center for the Fire Research to save $5.9 million in the Federal budget for fiscal year 1984; now therefore be it

"Resolved, That the Massachusetts House of Representatives respectfully urges the President of the United States, and the Congress of the United States to support the resolution of funds for the continuation of the critically-important fire research carried on by the National Bureau of Standards' Center for Fire Research in the fiscal year 1984 budget; and be if further

"Resolved, That a copy of these resolutions be forwarded by the Clerk of the House of Representatives to the President of the United States, the presiding officer of each branch of Congress and to the Members thereof from this commonwealth."

POM-282. A resolution adopted by the General Assembly of the State of Tennessee; to the Committee on Appropriations:

"SENATE JOINT RESOLUTION NO. 40

"Whereas, Funding for the Clinch River Breeder Reactor was deleted from the budget submitted to Congress, January 22, 1979, for the fiscal year commencing October 1, 1979; and

"Whereas, on December 4, 1982, the Energy and Water Development Appropriations Bill, approved by both houses of Congress and signed by President Reagan set project funding for the 1982 fiscal year; and

"Whereas, members of the Tennessee General Assembly have repeatedly urged Congress to continue their appropriations to the Clinch River Breeder Reactor and in 1982 Governor Lamar Alexander signed Senate Joint Resolution Number 14 urging Congress to restore funding for such reactor; and

"Whereas, the breeder reactor is one of this country's most viable options for contributing to a solution to the energy crisis in that it provides for an inexhaustible supply of electrical energy; and

"Whereas, any country possessing the technology necessary for construction of the breeder reactor has the potential to become energy independent for the production of electrical energy; and

"Whereas, the United States has been the leading exporter of nuclear technology, but is not the world leader in the production of the breeder reactor and therefore cannot complete in trade with France, Russia, or West Germany, countries which have already developed the breeder reactor, and

"Whereas, the power developed the breeder reactor on a commercial scale will be economically competitive with coal and lightwater fission reactors for the production of electrical energy and will be a boost to the economy of Tennessee, as well as the nation; and

"Whereas, The Clinch River Breeder Reactor program was begun in Oak Ridge, and the research facilities, the educated personnel, and the technologists are there already; and

"Whereas, at a time when concern over nuclear power production is an issue, the community of Oak Ridge has become accustomed to and has accepted the existence of nuclear experimentation; now, therefore, be it

"Resolved by the Senate of the Ninety-Third General Assembly of the State of Tennessee, the House of Representatives Concurring, That the members of this General Assembly urge the Congress to continue funding for the Clinch River Breeder Reactor in Oak Ridge, Tennessee. Be it further

"Resolved, That a copy of this resolution be sent to President Reagan, to Vice President Bush, to House Speaker O'Neill and to each member of the Tennessee congressional delegation."

POM-283. A resolution adopted by the Senate of the State of Washington; to the Committee on Foreign Relations:

"SENATE RESOLUTION 1983-96

"Whereas, in the past four years, the Iranian government has executed thousands of persons for their religious beliefs; and

"Whereas, members of the Baha'i faith in Iran have suffered the loss of property and jobs as a result of their religious convictions; and

"Whereas, in addition to executions and the loss of property and jobs, members of the Baha'i faith in Iran have been subjected to extreme governmental harassment, persecution, and imprisonment; and

"Whereas, at least one hundred twenty-five Baha'is were arrested in Shiraz in a single month this year, and these arrests continue; and

"Whereas, those Baha'is arrested are often executed without the benefit of a trial and without being convicted of any crime except their refusals to renounce their religious beliefs; and

"Whereas, the members of the Baha'i faith in Iran have been specifically excluded from civil protection under the current Iranian Constitution; and

"Whereas, the Baha'i faith is recognized around the world and its members are a

peace loving people who believe in the basic principles of justice, equality, and unity; and

"Whereas, the denial of religious freedom of all people; Now, therefore, be it

"Resolved, by the Senate of the State of Washington, That we support United States Senate Concurrent Resolution No. 73 which condemned the Iranian persecution of the Baha'i community; and be it further

"Resolved, That we urge Congress and President Ronald Reagan to persevere in their efforts to halt the persecution of members of the Baha'i faith in Iran; and be it further

"Resolved, That copies of this resolution be forwarded to President Ronald Reagan; the President of the United States Senate; the Speaker of the House of Representatives; and to the members of the congressional delegation from Washington State."

POM-284. A resolution adopted by the Senate of the State of Washington; to the Committee on the Judiciary:

"SENATE RESOLUTION 1983-80

"Whereas, a recent case brought in the United States District Court for the Western District of Washington involved an alleged violation of both federal laws and the laws of the State of Washington for actions occurring within the Olympic National Park in the State of Washington; and

"Whereas, the case involved a possible violation of the Federal Mann Act, for interstate transportation of a female child for immoral purposes, as well as a possible violation of the indecent liberties statute of the State of Washington, brought under the Federal Assimilative Crimes Act; and

"Whereas, the case is of great concern to the citizens of the State of Washington; and

"Whereas, a jury trial was held and the defendant was found not guilty by reason of insanity and, as required under current federal law, the defendant was unconditionally released; and

"Whereas, many of the jurors who found the defendant not guilty by reason of insanity later stated that they did not realize that a finding of not guilty by reason of insanity would result in the unconditional release of the defendant; and

"Whereas, had the defendant been prosecuted in the courts of the State of Washington, a finding of not guilty by reason of insanity would have likely resulted in further treatment of the defendant for the defendant's mental condition and problem; and

"Whereas, the citizens of the State of Washington are greatly concerned about federal laws which release people who represent a threat to society, when such defendants would undergo further treatment had they been found guilty by reason of insanity in the courts of the State of Washington; now, therefore, be it

"Resolved by the Senate of the State of Washington, That the federal government be urged to examine the federal laws as they relate to the disposition of those found not guilty by reason of insanity, particularly as they relate to the disposition of similar individuals at the state level; and be it further

"Resolved, That copies of this resolution be forwarded to President Ronald Reagan; the President of the United States Senate; the Speaker of the United States House of Representatives, and each member of Congress from the State of Washington."

POM-285. A resolution adopted by the House of Representatives of the Commonwealth of Massachusetts; to the Committee on Foreign Relations:

"RESOLUTION

"Whereas, the Tamils of Eelam, who number three million Hindus, Christians and Moslems and occupy eight thousand square miles, live as an oppressed minority in Sri Lanka, where the majority is composed of ten million Sinhalese, most of whom are Buddhists; and

"Whereas, from ancient times two nations, the Sinhalese and Tamils possessed distinct languages, religions, cultures and clearly demarcated geographic territories until the British, who were characteristically oblivious to the differences between these two separate nations, imposed one rule for the purpose of colonial administrative unification; and

"Whereas, since 1948, when the British departed the island and two unwilling nations were consequently left under a unitary governmental structure, the majority Sinhalese faction has subverted democratic principles to become the new masters of the Tamil-speaking people; and

"Whereas, further evidencing the discriminatory and intimidating policies of the majority, security forces recently went on a rampage in the northern provincial capital of Jaffna, burning shops and more than one hundred fifty houses, almost all of which were owned by Tamils, who make up approximately twenty per cent of the population of the island once called Ceylon, thereby leaving more than five hundred people homeless; and

"Whereas, at least one civilian was killed by crossfire in overnight fighting between naval troops and unidentified people, and at Paranthan, on the rail line between Jaffna and Colombo, policemen attacked a crowd of train passengers headed north for the Tamil-speaking area, injuring an undetermined number of civilians; and

"Whereas, according to the International Commission of Jurists, many of the provisions of the Sri Lankan Prevention of Terrorism Act and Public Security Act are contrary to accepted principles of the rule of law, internationally accepted minimum standards of criminal procedure, and also appear to be contrary to the provisions of the Sri Lankan constitution; and

"Whereas, the Massachusetts House of Representatives does not wish the Commonwealth to contribute to the revenues of Sri Lanka because of its violations of the human rights of the Tamils; and

"Whereas, the Massachusetts House of Representatives does not wish the Commonwealth to invest in Sinhalese interests or in those of any other party that practices discrimination against the Tamil inhabitants of Eelam; and

"Whereas, consistent with its condemnation of moral wrongs done in the name of the Sinhalese people by their government, the Massachusetts House of Representatives hereby endorses a policy of financial boycott by the Commonwealth, thereby dissociating itself from the abiding evil of Sinhalese oppression in Sri Lanka; therefore be it

"Resolved, that the Massachusetts House of Representatives urges the immediate divestment and withdrawal of all public funds or pension revenues from any business organizations that are owned by interests based in Sri Lanka, and urges all officers of the Commonwealth to exercise their best offices to accomplish said objective with the greatest sense of urgency; and be it further

"Resolved, that copies of these resolutions be forwarded by the Clerk of the House of Representatives to the President of the United States, Secretary of State, U.N. Ambassador, presiding officer of each branch of Congress and the Members thereof from this Commonwealth, President Jayewardene of Sri Lanka, Prime Minister R. Premadasa and the presiding officers of the Parliament of Sri Lanka."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PACKWOOD, from the Committee on Commerce, Science and Transportation; with an amendment in the nature of a substitute.

H.R. 2065. An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes.

S. 880. A bill to amend the Communications Act of 1934 to provide equity to daytime radio broadcasters. (Rept. No. 98-165).

By Mr. COHEN, from the Committee on Armed Services, with amendments:

S. 338. A bill to revise the procedures for soliciting and evaluating bids and proposals for Government contracts and awarding such contracts, and for other purposes.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. HATCH, from the Committee on Labor and Human Resources:

Madeleine C. Will, of Maryland, to be Assistant Secretary for Special Education and Rehabilitative Services, Department of Education.

(The above nomination was reported from the Committee on Labor and Human Resources with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. ROTH, from the Committee on Governmental Affairs:

David H. Martin, of Maryland, to be Director of the Office of Government Ethics.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. BYRD (for himself and Mr. NUNN):

S. 1541. A bill to authorize the presentation on behalf of the Congress of a specially struck bronze medal to the families of American personnel missing or otherwise unaccounted for in Southeast Asia; to the Committee on Banking, Housing, and Urban Affairs.

By Mr. JOHNSTON:

S. 1542. A bill to increase the column 1 rate of duty on melamine; to the Committee on Finance.

By Mr. McCLURE (for himself and Mr. WALLOP):

S. 1543. A bill to amend the Federal Land Policy Management Act of 1976, relating to the authority of the Secretary of the Interior to accept volunteer services in aid of the work of the Bureau of Land Management, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. DECONCINI (for himself, Mr. BINGAMAN, Mr. DOMENICI, and Mr. MELCHER):

S. 1544. A bill to direct the Administrator of General Services to acquire domestic copper for the National Defense Stockpile; to the Committee on Armed Services.

By Mr. HEINZ:

S. 1545. A bill to clarify the oversight role of the Congress with respect to Presidential decisions under section 203 of the Trade Act of 1974; to the Committee on Finance.

By Mr. JOHNSTON (for himself and Mr. LONG):

S. 1546. A bill to amend the Deepwater Port Act of 1974, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. ARMSTRONG (for himself and Mr. HART):

S. 1547. A bill to amend the conditions of a grant of certain lands to the town of Olathe, Colo., and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. COCHRAN:

S. 1548. A bill to establish an improved program for extra long staple cotton; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. ARMSTRONG (for himself, Mr. LONG, Mr. DURENBERGER, Mr. WALLOP, Mr. GRASSLEY, Mr. SYMMS, Mr. BENTSEN, Mr. BAUCUS, Mr. BOREN, and Mr. PRYOR):

S. 1549. A bill to amend the Internal Revenue Code of 1954 to permit individual retirement accounts, qualified retirement trusts and certain educational organizations to invest in working interests in oil and gas properties without incurring unrelated business taxable income; to the Committee on Finance.

By Mr. CHAFEE:

S. 1550. A bill to amend the Internal Revenue Code of 1954 to relieve international double taxation of overseas construction projects of U.S. contractors; to the Committee on Finance.

By Mr. DANFORTH (for himself and Mr. EAGLETON):

S.J. Res. 123. A joint resolution to commemorate the 40th anniversary of the establishment of the George Washington Carver National Monument in Diamond, Mo.; to the Committee on the Judiciary.

By Mr. HART (for himself, Mr. CRANSTON, and Mr. PROXMIRE):

S.J. Res. 124. A joint resolution calling for negotiations to halt the production of separated plutonium; to the Committee on Foreign Relations.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. BYRD (for himself and Mr. NUNN):

S. 1541. A bill to authorize the presentation on behalf of the Congress of a specially struck bronze medal to the families of American personnel missing or otherwise accounted for in Southeast Asia; to the Committee on Banking, Housing, and Urban Affairs.

(The remarks of Mr. BYRD on this legislation appear earlier in today's RECORD.)

By Mr. McCLURE (for himself and Mr. WALLOP):

S. 1543. A bill to amend the Federal Land Policy and Management Act of 1976, relating to the authority of the Secretary of the Interior to accept volunteer services in the aid of the work of the Bureau of Land Management, and for other purposes; to the Committee on Energy and Natural Resources.

VOLUNTEER IN THE BUREAU OF LAND MANAGEMENT

● Mr. McCLURE. Mr. President, I send to the desk for appropriate reference a bill relating to volunteer service in aid of the work of the Bureau of Land Management.

The bill would round out the authority of the BLM to effectively utilize the contributed services of volunteers in work projects on the public lands. It would place the BLM on the same footing as other Federal natural resources agencies—notably the National Park Service, the U.S. Fish and Wildlife Service, and the U.S. Forest Service—which have long had this authority.

Congress already has provided authority to the Secretary of the Interior to use volunteer services in aid of the work of two Interior agencies, and to pay expenses incidental to accepting these contributed services. This authority was provided for the National Park Service in the Volunteers in the Parks Act of 1969 (84 Stat. 472; 16 U.S.C. 18 g-j), and for the U.S. Fish and Wildlife Service in the Fish and Wildlife Improvement Act of 1978 (92 Stat. 3112; 16 U.S.C. 742f). In addition, comparable authority was provided to the U.S. Forest Service in the Volunteers in the National Forests Act of 1972 (86 Stat. 147; 16 U.S.C. 558 a-d). Similar legislation would facilitate and enhance the work of the BLM in managing, protecting, and developing the public lands

While section 307 of the Federal Land Policy and Management Act of 1976 authorizes acceptance of services contributed to the BLM by volunteers' work, the draft bill is needed to supplement that basic authority. The draft bill would authorize BLM to provide for incidental services and expenses such as supplies for the volunteers' work, and transportation of volunteers to and from work sites.

As is the case with the other agencies, BLM's volunteers would not be considered Federal employees, except for purposes of the tort claims provisions of title 28, United States Code, and statutes pertaining to compensation for on-the-job work injuries (5 U.S.C. 8101-8151).

The BLM has a backlog of conservation, development, and other resource management work for which volunteers would be useful. Volunteers would not be used for policymaking activities or for hazardous duties such as hazardous aspects of firefighting or law enforcement. Nor would volunteers be permitted to displace any BLM employee.

As shown by the years of experience in the similar Park Service, Forest Service, and Fish and Wildlife Service programs, expenses for a volunteer program by the BLM are expected to be minor in relation to value of services to be contributed. Because the Bureau would pay the incidental expenses involved from regular appropriations categories and levels, enactment of this legislation would not result in added Government outlays.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows;

S. 1543

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 307 of the Federal Land Policy and Management Act of 1976 (90 Stat. 2766; 43 U.S.C. 1737) is amended by adding at the end thereof the following new subsections:

"(d) The Secretary may recruit, without regard to the civil service classification laws, rules or regulations, the services of individuals contributed without compensation as volunteers for aiding in or facilitating the activities administered by the Secretary through the Bureau of Land Management.

"(e) In accepting such services of individuals as volunteers, the Secretary—

"(1) shall not permit the use of volunteers in hazardous duty or law enforcement work, or in policymaking processes or to displace any employee; and

"(2) may provide for services or costs incidental to the utilization of volunteers, including transportation, supplies, lodging, subsistence, recruiting, training, and supervision.

"(f) Volunteers shall not be deemed employees of the United States except for the purposes of the tort claims provisions of title 28, United States Code, and subchapter I of chapter 81 of title 5, United States Code, relating to compensation for work injuries.".●

By Mr. DECONCINI (for himself, Mr. BINGAMAN, Mr. DOMENICI, and Mr. MELCHER):

S. 1544. A bill to direct the Administrator of General Services to acquire domestic copper for the national defense stockpile; to the Committee on Armed Services.

COPPER STOCKPILE PURCHASE

Mr. DECONCENI. Mr. President, we are today introducing legislation which addresses our security concerns and at the same time our poor economic conditions. We believe we have a rare opportunity to actually take advantage of the currently low markets

while improving economic conditions which have caused the declines.

Our specific concern is with the depleted state of the national critical and strategic minerals stockpile. For example, we have a long-established stockpile goal of 1 million tons of copper, but we have on hand less than 30,000 tons of copper. I repeat, Mr. President, we have an existing national stockpile goal of 1 million tons. The need to stockpile copper for strategic purposes for national security is firmly established and undisputable.

It is also beyond dispute, Mr. President, that it is in the Nation's interest to operate the stockpile—to buy and sell commodities—in an economically responsible manner. Economic health is no small part of national security, and is totally compatible with military access to strategic minerals.

What we are proposing is very direct. Copper is now selling at about 78 cents a pound and even lower in large quantities. There is up to $240 million available in the transaction fund established by Public Law 96-41, the Critical and Strategic Minerals Stockpile Revision Act. The administration is currently recommending that $120 million be appropriated for fiscal year 1984. After commitments, the fund will have between $135 to $240 million left.

Mr. President, these moneys are the proceeds from the sale of excess commodities in the stockpile. These funds are earmarked by law, for the purchase of needed materials and can be used for no other purpose. This bill directs the General Services Administration to use these additional funds, the $135 to $240 million, to purchase copper as soon as possible.

It is estimated that the sum which will be available to the fund, in addition to that amount requested by the President for the purchase of other commodities, will buy at least 85,000 to 150,000 tons, and by all probability much more. Although it is less than one-quarter of the established goal, it is probably the realistic quantity which could be purchased in a short period of time.

When additional purchases are feasible, we believe moneys could be shifted to the fund from other accounts; preferably from the aggregate request for foreign assistance, and without additional burden on the American taxpayer. In the meantime, I will ask the General Accounting Office to study the need to stockpile certain commodities and our foreign assistance priorities.

Mr. President, we suggested this bill would also improve domestic economic conditions. The price of copper, adjusted to inflation, is close to its lowest level in decades. It is for this reason that copper right now is a good buy but it is also for this reason that the copper industry is still in its worst shape since the depression. While very limited recovery is expected, buying now will clear up the "glut" market and help the industry to get back to work. When we say industry, we, of course mean people. It is the people who are employed by the industry, and the towns they live in, which are devastated. In Arizona alone, over 8,000 copper workers are out of work. The impact of this disaster on top of other crippling blows to the economy over the last few years, such as the virtual collapse of the housing industry, and the greatest number of business failures since the Great Depression year of 1932 will send a paralyzing shock wave through many of our communities and will have a multiplier effect throughout the Southwest. However, the purchase of 150,000 tons of domestic copper at this time, with funds already on hand and earmarked for this purpose, will stabilize the copper industry and will put thousands of workers back on the job. This, Mr. President, is the essence of national security.

I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1544

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Defense Stockpile Copper Acquisition Act of 1983".

SEC. 2. (a) The Administrator of General Services shall acquire such quantities of copper from domestic producers as may be acquired for the amount of funds available for such purpose under section 9(d) of the Strategic and Critical Materials Stock Piling Act (as added by section 3 of this Act) (50 U.S.C. 98h(d)).

(b) The acquisition of copper under authority of subsection (a) shall be made in accordance with subsection (b) of section 6 of the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98e), but without regard to the provisions of subsections (c) and (d) of such section.

(c) Copper acquired under authority of subsection (a) shall be added to and made a part of the National Defense Stockpile described in section 3(a) of the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98b (a)).

SEC. 3. Section 9 of the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98h) is amended by adding at the end thereof the following new subsection:

"(d)(1) Notwithstanding subsections (b) and (c), the moneys in the fund shall be available to carry out section 2 of the National Defense Stockpile Copper Acquisition Act of 1983 in an amount calculated as provided in paragraph (2).

"(2) For the purpose of paragraph (1), the amount available shall be the greater of—

"(A) the amount necessary to acquire 200,000 short tons of copper; or

"(B) the excess of the amount of moneys in the fund on the effective date of this subsection over $120,000,000.".

By Mr. ARMSTRONG (for himself and Mr. HART):

S. 1547. A bill to amend the conditions of a grant of certain lands to the town of Olathe, Colo., and for other purposes; to the Committee on Energy and Natural Resources.

CHANGE IN CONDITIONS OF A CERTAIN LAND GRANT

● Mr. ARMSTRONG. Mr. President, today I am introducing a brief and straightforward bill to amend the conditions of the land grant to the small town of Olathe in western Colorado.

Olathe was founded in 1882 and incorporated in 1907. Because of a typhoid outbreak 4 years later, the town sought to buy land at fair market value to build a domestic water system that would be a secure and dependable supply of drinking water. Olathe subsequently acquired title to 640 acres of Federal land by act of Congress in 1919 and, over the years, has invested $540,000 in improvements to the property—including reservoirs, pipelines, diversion headgates and roads—most of which were built by hand in extremely rugged terrain.

The system has served the community well but now requires substantial further expenditure to update and maintain the aging pipeline. Several hundred thousand dollars may be required. Due to other expensive capital investments and the town's legal debt limits, Olathe has no funds available for this purpose, no substantial remaining bonding capacity and no assets that would yield sufficient collateral for an adequate loan. I should note here that Olathe is a rural community of 1,250 people, which has doubled its population in the last 10 years, and this has greatly complicated its financial problems.

The town would like to pledge its property rights in the reservoirs and its water rights as collateral for a loan to do the necessary maintenance and modernization work. Unfortunately, the 1919 act provided that the land will revert to the United States if sold or used for any purpose other than supply of municipal water. Paradoxically, this reverter makes the land ineligible for use as collateral, even though Olathe has no intention to use the land for anything other than securing its water supply.

Unless this problem is quickly resolved, the town of Olathe faces the very serious prospect of losing its municipal water supply altogether. Its water rights are only "storage decrees"; that is, the town is only entitled to store surplus water during the spring runoff. Obviously, without a functioning storage and distribution facility, these rights are worthless and will legally fall through disuse to junior appropriators. Moreover, the town's other water supply—an exchange contract with the Uncom-

pahgre Valley Water Users Association—will also be turned off if it no longer has any water to exchange.

The legislation I am introducing will allow the town to mortgage the property for public purposes directly related to the maintenance and modernization of its water system. The proceeds of any other sale or alienation of the property during the next 10 years would still have to be paid to the United States. An additional benefit of loosening this restriction of uses is that the town would be able to develop the reservoirs for recreational purposes. Colorado has a new lottery program for recreational development and Olathe expects to receive up to $10,000 annually from this fund. If the use restrictions of the 1919 act are lifted, these moneys could be used to develop a popular recreational resource for this rural community.

For these reasons, Mr. President, I urge the favorable consideration of this measure and its early passage. I also ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1547

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act entitled "An Act to grant certain lands to the town of Olathe, Colorado, for the protection of its water supply", approved March 3, 1919 (40 Stat. 1317) is amended by—

(1) striking out "to have and to hold said lands for the purpose of the protection of the reservoirs and water supply pipelines and waterworks system of said town";

(2) striking out *"And provided further,* That title to the land shall revert to the United States should the same or any part thereof be sold or cease to be used for the purposes herein provided."; and

(3) adding at the end thereof the following: *"And provided further,* That in the event that the lands or any part there of are sold or otherwise alienated by the town of Olathe on or before January 1, 1994, except as a consequence of a judgment at law or equity to recover sums owed by the town pursuant to a mortgage, sale to trustee, or similar agreement entered into by the town in order to secure funds for public purposes, directly related to repair, maintenance, or modernization of the reservoirs, water supply pipelines, or waterworks system of the town, the proceeds of such sale (excluding the value of any improvements made by the town) or the fair market value of the lands or part thereof (excluding the value of any improvements made by the town) at the time of such sale or alienation, whichever amount is greater, shall be paid to the United States by the town.".●

By Mr. COCHRAN:

S. 1548. A bill to establish an improved program for extra long staple cotton; to the Committee on Agriculture, Nutrition, and Forestry.

PROGRAM FOR EXTRA LONG STAPLE COTTON

● Mr. COCHRAN. Mr. President, at the request of the Secretary of Agriculture, John R. Block, I introduce a bill to establish an improved program for extra long staple cotton.

This legislation would repeal authority for marketing quotas, suspend provisions relating to acreage allotments and penalties, establish a minimum loan level, and eliminate a maximum loan level. The bill would establish a loan period and an acreage base. The bill would authorize an acreage reduction program, a paid land diversion program, and sale of CCC-owned cotton for unrestricted use at price levels approved by the Secretary of Agriculture.

Mr. President, I ask unanimous consent that the transmittal letter from the Secretary of Agriculture as well as the bill be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1548

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Extra Long Staple Cotton Act of 1983."

SEC. 2. Section 347 of the Agricultural Adjustment Act of 1938, as amended, and section 101(f) of the Agricultural Act of 1949, as amended, are repealed effective beginning with the 1984 crop of extra long staple cotton.

SEC. 3. Sections 342, 343, 344, 344a, 345, 346 and 377 of the Agricultural Adjustment Act of 1938, as amended, shall not be applicable to the 1984 and subsequent crops of extra long staple cotton.

SEC. 4. Effective beginning with the 1984 crop of extra long staple cotton, section 103 of the Agricultural Act of 1949, as amended, is amended by adding at the end thereof a new subsection as follows:

"(h)(1) For purposes of this subsection, extra long staple cotton means cotton which is produced from pure strain varieties of the Barbadense species or any hybrid thereof, or other similar types of extra long staple cotton, designated by the Secretary, having characteristics needed for various end uses for which American upland cotton is not suitable and grown in irrigated cotton-growing regions of the United States designated by the Secretary or other areas designated by the Secretary as suitable for the production of such varieties or types and which is ginned on a roller-type gin or, if authorized by the Secretary, ginned on another type gin for experimental purposes.

"(2) The Secretary shall, upon presentation of warehouse receipts reflecting accrued storage charges of not more than sixty days, make available to producers nonrecourse loans for a term of ten months from the first day of the month in which the loan is made at a level which is not less than 50 per centum in excess of the loan level established for each crop of Strict Low Middling one and one-sixteenth inch upland cotton (micronaire 3.5 through 4.9) at average location in the United States. If authorized by the Secretary, nonrecourse loans provided for in this subsection may, upon request of the producer during the tenth month of the loan period for the cotton, be made available for an additional term of eight months. The loan level for any crop of extra long staple cotton shall be determined and announced by the Secretary not later than November 1 of the calendar year preceding the marketing year for which such loan is to be effective and such level shall not thereafter be changed.

"(3)(A) Notwithstanding any other provision of this subsection, the Secretary may establish a limitation on the acreage planted to extra long staple cotton if the Secretary determines that the total supply of extra long staple cotton, in the absence of such limitation, will be excessive taking into account the need for an adequate carryover to maintain reasonable and stable prices and to meet a national emergency. Such limitation shall be achieved by applying a uniform percentage reduction to the acreage base for each extra long staple cotton-producing farm. Producers who knowingly produce extra long staple cotton in excess of the permitted acreage for the farm shall be ineligible for extra long staple cotton loans with respect to that farm. The acreage base for any farm for the purpose of determining any reduction required to be made for any year as a result of a limitation under this subparagraph shall be the average acreage planted on the farm to extra long staple cotton for harvest in the three crop years immediately preceding the year prior to the year for which the determination is made. For the purpose of the preceding sentence, acreage planted to extra long staple cotton for harvest shall include any acreage which the producers were prevented from planting to extra long staple cotton or other nonconserving crops in lieu of extra long staple cotton because of drought, flood, or other natural disaster or other condition beyond the control of the producers. The Secretary may make adjustments to reflect established crop-rotation practices and to reflect such other factors as the Secretary determines should be considered in determining a fair and equitable base. A number of acres on the farm determined by dividing (i) the product obtained by multipling the number of acres required to be withdrawn from the production of extra long staple cotton times the number of acres actually planted to such commodity, by (ii) the number of acres authorized to be planted to such commodity under the limitation established by the Secretary, shall be devoted to conservation uses, in accordance with regulations issued by the Secretary, which will assure protection of such acreage from weeds and wind and water erosion. The number of acres so determined is hereafter in this subsection referred to as 'reduced acreage'. The Secretary may permit, subject to such terms and conditions as the Secretary may prescribe, all or any part of the reduced acreage to be devoted to sweet sorghum, hay and grazing, or the production of guar, sesame, safflower, sunflower, castor beans, mustard seed, crambe, plantago ovato, flaxseed, triticale, rye, or other commodity, if the Secretary determines that such provision is needed to provide an adequate supply of such commodities, is not likely to increase the cost of the price support program, and will not affect farm income adversely.

"(B) The Secretary may make land diversion payments to producers of extra long staple cotton, whether or not an acreage limitation program for extra long staple cotton is in effect, if the Secretary determines that such land diversion payments are necessary to assist in adjusting the total national acreage of extra long staple cotton

to desirable goals. Such land diversion payments shall be made to producers who, to the extent prescribed by the Secretary, devote to approved conservation uses an acreage of cropland on the farm in accordance with land diversion contracts entered into by the Secretary with such producers. The amounts payable to producers under land diversion contracts may be determined through the submission of bids for such contracts by producers in such manner as the Secretary may prescribe or through such other means as the Secretary determines appropriate. In determining the acceptability of contract offers, the Secretary shall take into consideration the extent of the diversion to be undertaken by the producers and the productivity of the acreage diverted. The Secretary shall limit the total acreage to be diverted under agreements in any county or local community so as not to affect adversely the economy of the county or local community.

"(C) The reduced acreage and the diverted acreage may be devoted to wildlife food plots or wildlife habitat in conformity with standards established by the Secretary in consultation with wildlife agencies. The Secretary may pay an appropriate share of the cost of practices designed to carry out the purpose of the foregoing sentence. The Secretary may provide for an additional payment on such acreage in an amount determined by the Secretary to be appropriate in relation to the benefit to the general public if the producer agrees to permit, without other compensation, access to all or such portion of the farm, as the Secretary may prescribe, by the general public, for hunting, trapping, fishing, and hiking, subject to applicable State and Federal regulations.

"(4) An operator of a farm desiring to participate in the program conducted under paragraph (3) of this subsection shall execute an agreement with the Secretary providing for such participation not later than such date as the Secretary may prescribe. The Secretary may, by mutual agreement with the producers on the farm, terminate or modify any such agreement if the Secretary determines such action necessary because of an emergency created by drought or other disaster or to prevent or alleviate a shortage in the supply of agricultural commodities.

"(5) The Secretary shall provide for the sharing of payments made under this subsection for any farm among the producers on the farm on a fair and equitable basis.

"(6) The Secretary shall provide adequate safeguards to protect the interests of tenants and sharecroppers.

"(7) If the failure of a producer to comply fully with the terms and conditions of the program formulated under this subsection precludes the making of loans and payments, the Secretary may, nevertheless, make such loans and payments in such amounts as the Secretary determines to be equitable in relation to the seriousness of the failure. The Secretary may authorize the county and State committees established under section 8(b) of the Soil Conservation and Domestic Allotment Act to waive or modify deadlines and other program requirements in cases in which lateness or failure to meet such other requirements does not affect adversely the operation of the program.

"(8) The Secretary may issue such regulations as the Secretary determines necessary to carry out the provisions of this subsection.

"(9) The Secretary shall carry out the program authorized by this subsection through the Commodity Credit Corporation.

"(10) The provisions of subsection 8(g) of the Soil Conservation and Domestic Allotment Act (relating to assignment of payments) shall apply to payments made under this subsection.

"(11) Notwithstanding any other provision of law, compliance on a farm with the terms and conditions of any other commodity program may not be required as a condition of eligibility for loans or payments under this subsection.

"(12) In order to encourage and assist producers in the orderly ginning and marketing of their extra long staple cotton production, the Secretary shall make recourse loans available to such producers on seed cotton in accordance with authority vested in the Secretary under the Commodity Credit Corporation Charter Act.

"(13) References made in sections 402, 403, 406, 407 and 416 to the terms 'support price', 'level of support', and 'level of price support' shall be considered to apply as well to the level of loans for extra long staple cotton under this subsection; and references to the terms 'price support', 'price support operations', and 'price support program' in such sections and in section 401(a) shall be considered as applying as well to the loan operations for extra long staple cotton under this subsection.".

SEC. 5. Section 407 of the Agricultural Act of 1949, as amended, is amended by adding at the end thereof the following: "Notwithstanding any other provision of law, beginning upon the enactment of the Extra Long Staple Cotton Act of 1983, the Commodity Credit Corporation may sell extra long staple cotton for unrestricted use at such price levels as the Secretary determines appropriate to maintain and expand export and domestic markets for such cotton.".

SEC. 6. Section 1101(1) of the Agriculture and Food Act of 1981 is amended by deleting "and rice" and inserting in lieu thereof "extra long staple cotton, and rice".

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D.C., May 26, 1983.

Hon. GEORGE H. W. BUSH,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed for the consideration of the Congress is a proposed bill "To establish an improved program for extra long staple cotton."

The Department of Agriculture recommends enactment of the proposed bill.

The current extra long staple (ELS) cotton legislation is continuing legislation that provides for acreage restrictions through outdated acreage allotments, marketing quotas and penalties, and price support by means of nonrecourse loans. The loan level must be established between 75 percent and 125 percent in excess of the upland cotton loan level. Loans at this level have resulted in U.S. ELS cotton prices which are not competitive in world markets or with synthetic fibers. As a result, both domestic use and exports of ELS cotton have declined, stocks have increased and large volumes of ELS cotton are being pledged as collateral for price support loans, much of which will be forfeited to the Commodity Credit Corporation (CCC). The current minimum sales price restrictions will prevent CCC from selling its stocks in the foreseeable future. All these factors are resulting in continued increases in Government outlays.

Effective for the 1984 and subsequent crops of ELS cotton, the proposed bill would:

(1) Repeal authority for marketing quotas.

(2) Suspend provisions relating to acreage allotments and penalties.

(3) Establish the minimum loan level at 50 percent in excess of the upland cotton loan level and eliminate the maximum loan level.

(4) Establish a 10-month loan period with an optional 8-month extension at the discretion of the Secretary.

(5) Establish an acreage base for each ELS cotton producing farm each year equal to the average of acres planted and considered planted to ELS cotton in the three crop years immediately preceding the year previous to the year for which the determination is made, with authority to make adjustments necessary to assure fair and equitable bases.

(6) Authorize an acreage reduction program (ARP) for any crop of ELS cotton for which it is estimated that the supply of ELS cotton would otherwise be excessive. The acreages reduction would be achieved by applying a uniform percentage reduction to the acreage base of each ELS cotton-producing farm. Producers would have to comply with any ARP to be eligible for loans.

(7) Authorize a paid land diversion program (LDP), if needed, to assist in adjusting the total national ELS acreage to desirable goals. Diversion payments could be made whether or not an ARP was in effect.

(8) Authorize sale of CCC-owned cotton for unrestricted use at such price levels as the Secretary determines appropriate to maintain and expand export and domestic markets for such cotton. This provision would be effective upon enactment of the proposed bill.

Repeal of marketing quotas and suspension of acreage allotments would permit greater freedom by farmers in determining the most effective use of their resources. They would have the opportunity to meet the needs of the marketplace with less governmental intervention. The lower minimum loan level would permit ELS to again compete with synthetic fibers and in world markets while still providing price protection and permitting orderly marketing. Elimination of the minimum sales price restriction on CCC sales would permit movement of CCC stocks to the marketplace. Government outlays would be reduced.

The enclosed table shows projected loan levels and government outlays through the 1987 crop under current legislation and with the proposed changes.

An identical letter and draft bill have been submitted to the Speaker of the House of Representatives.

The Office of Management and Budget advises that enactment of this proposed legislation would be in accordance with the President's program.

Sincerely,

JOHN R. BLOCK,
Secretary.

U.S. DEPARTMENT OF AGRICULTURE—PROPOSED LEGISLATION FOR EXTRA-LONG STAPLE COTTON, ESTIMATED LOAN RATES AND OUTLAYS

	Current legislation	Proposed legislation
Estimated loan rates (cents/lb.):		
1984 crop	96.25	82.50
1985 crop	96.25	82.50
1986 crop	96.25	82.50
1987 crop	96.25	82.50

U.S. DEPARTMENT OF AGRICULTURE—PROPOSED LEGISLATION FOR EXTRA-LONG STAPLE COTTON, ESTIMATED LOAN RATES AND OUTLAYS—Continued

	Current legislation	Proposed legislation
Estimated outlays (thousands dollars):		
Fiscal year 1985	$4,039	−$13,451
Fiscal year 1986	4,162	−5,137
Fiscal year 1987	4,369	−1,670
Fiscal year 1988	1,941	−511
4-year cost	14,511	−20,769

Note.—Minus sign denotes net receipt from sale of CCC inventory.●

By Mr. ARMSTRONG (for himself, Mr. LONG, Mr. DURENBERGER, Mr. WALLOP, Mr. GRASSLEY, Mr. SYMMS, Mr. BENTSEN, Mr. BAUCUS, Mr. BOREN, and Mr. PRYOR):

S. 1549. A bill to amend the Internal Revenue Code of 1954 to permit individual retirement accounts, qualified retirement trusts and certain educational organizations to invest in working interest in oil and gas properties without incurring unrelated business taxable income; to the Committee on Finance.

UPDATING THE UNRELATED BUSINESS INCOME TAX

● Mr. ARMSTRONG. Mr. President, legislation I am introducing today with Senators DURENBERGER, LONG, WALLOP, GRASSLEY, SYMMS, BENTSEN, BAUCUS, BOREN, and PRYOR could, once enacted, increase profits earned by pension plans and college endowments at, at the same time, infuse new and badly needed capital in domestic oil production.

This legislation is nearly identical to H.R. 7217, a House bill introduced by Representatives JENKINS, MATSUI, GEPHARDT, and FRENZEL and is simple in concept. It permits pension plans and college endowments to treat, for tax purposes, income from oil and gas production exactly like income earned from stocks, bonds, and royalties. Once enacted, an additional investment pool of more than $500 billion would be available for investment in oil and gas production, and at the same time give pensions and endowments possibly higher rates of return on their holdings.

Some background on current tax law will explain the need for this legislation. Most college endowments and private pension plans are granted tax exempt status. Even if they are tax exempt, some sources of income received by pensions and endowments can, under current law be taxable. For Federal tax purposes, there are two sources of income—passive and unrelated business—for pensions and endowments. Passive income—not taxed—usually is interest and dividends earned on stocks, bonds, and royalties. Unrelated business is income taxed at corporate rates because, in theory, the income is derived from a business or investment not related to the purpose of the pension or endowment for which it received its tax exempt status.

This tax theory is 30 years old, and it makes sense. It seeks to eliminate unfair competition to taxpaying businesses by taxing their competitors controlled by tax organizations on the same basis. For example, an endowment owning controlling interest in a manufacturing plant should be taxed on the same basis as the manufacturer's competitor.

Generally, endowment and pension income that is exempted from the unrelated business income—or UBTI—will not be taxed. The problem is that in the past 30 years there has been precious little updating of UBTI. The result is not surprising. Changing economic conditions and new investment opportunities have somewhat outdated the unrelated business income tax. For example, it used to be that stocks and bonds enjoyed high rates of return and tax exempt organizations invested in them heavily. But the past 10 years have found the traditional equities—stocks and bonds—have been hard pressed to maintain an economic rate of return.

Simultaneously, however, direct investments in oil and gas producing properties have proved to be low risk, consistently performing assets that have brought yields outpacing inflation rates. Solomon Bros. reports that annual rates of return for oil assets have outpaced return rates on real estate, stocks, gold, and silver.

But the problem is that the current UBTI taxes earnings from most oil and gas production holdings of pension plans and private investments. The inevitable result is that pension and endowment trustees do not invest in oil and gas production and are foreclosed from higher investment returns than are available from stocks and bonds. Concurrently, oil and gas producers lose access from a large investment pool, estimated to be about $500 billion.

The bill I am introducing today is the solution to this problem. This bill permits pension and college endowments to invest through limited partnerships in working interests in oil and gas properties without being subject to the unrelated business income tax. This legislation is consistent with the underlying theory of the UBTI because it permits these funds to only passively invest in oil and gas production * * * meaning that the pension and endowment trustees cannot take part in the control of the business of producing oil and gas.

The bill has important safeguards that should make this bill noncontroversial:

First. Pension plans and endowments can only invest as a passive owner in a limited partnership, meaning they cannot exercise control in business decisions. In fact, limited partners exercise even less control over business decisions than stockholders do.

Second. Only qualified pension funds and educational organizations, as already defined in current tax laws, are covered under this legislation.

Third. These funds can only invest in working interests in oil and gas properties, meaning they must pay a share of the development and operating costs to receive a share of income. The definition of working interest is the same now used in current law.

Fourth. Pension plans and endowments will receive no benefit from income tax credits and deductions available to taxable limited partners. The bill also precludes allocations of these deductions and credits to taxable partners.

Fifth. Pensions and endowments will not receive exempt income from working interests held by a limited partnership if either organization is related to the general partner.

There are a number of reasons why this bill should pass, and soon. First, the bill has no revenue loss since investments in oil and gas production will only augment investments otherwise made in currently tax-exempt investments.

Second, the bill encourages portfolio diversification by pension plans and endowments that control nearly $500 billion.

Third, this bill offers the promise of higher rates of return than these pensions and endowments now presently receive.

Fourth, it will infuse new and badly needed capital in oil and gas production without raising energy prices. In fact, capital expenditures this year in oil and gas activity has decreased 35 percent this year.

Fifth, the legislation is consistent with the underlying theory governing unrelated business taxable income.

Sixth, this legislation corrects an anomaly in the current UBTI law. Currently, pensions and endowments can receive tax free income from oil royalties—simply investments in oil and gas activities where the investor pays none of the development costs—but cannot receive tax free income from working interests in oil producing properties. In both types of oil investments—royalty and working interest programs—investors are passive * * * exercising no control over business decisions. Thus, partnerships owning working interests should be subject to the same tax rules as are applied to oil royalties.

This legislation is nearly identical to legislation I introduced in 1982. A number of important provisions have been added to address issues raised

since the bill was first introduced. These provisions, about four in number, address concerns raised about partnership allocation, abusive sale-leaseback arrangements, and the use of debt in buying shares in a limited partnership.

Mr. President, I welcome further consideration of this bill, and urge its enactment.

Mr. President, I ask unanimous consent that a more technical and detailed summary of this bill be inserted at this point in the CONGRESSIONAL RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

MEMORANDUM—LEGISLATION TO PERMIT RETIREMENT TRUSTS AND COLLEGES TO TREAT INCOME FROM OIL AND GAS WORKING INTERESTS AS PASSIVE INCOME

BACKGROUND

The Internal Revenue Code makes a distinction in the treatment of investment income earned by qualified retirement trusts and educational organizations between passive income and unrelated business taxable income. Passive income from sources such as stocks, bonds and oil royalties is exempt from the Unrelated Business Taxable Income (the "UBTI") imposed by I.R.C. section 512. All income not specifically exempted from section 512 is taxed at corporate rates. Over the thirty years since the enactment of the UBTI, the investment objectives of the tax exempt organizations have had to adapt to changing economic conditions to deal with inflation and increased funding. The past ten years have found the traditional equities—stocks and bonds—hard pressed to maintain an economic rate of return equal to the rate of inflation. Simultaneously, direct investments in oil and gas activities from non-industry sources have occurred in large scale over the past twelve years and have proved to be consistent performing assets generating rates of return in excess of the rate of inflation. As a consequence of this experience, the pension plans and college endowments are increasingly interested in investments in the domestic oil and gas industry. Since the organizations are interested in domestic petroleum activities as an investment option, their objective conforms with the intent of the UBTI, i.e., to permit passive investment and penalize through taxation active management of unrelated businesses. The legislation would update the UBTI to acknowledge the changed economic and investing environment of the 1980's while maintaining the integrity of the UBTI concept.

DESCRIPTION OF LEGISLATION

The legislation introduced in Congress amends Internal Revenue Code sections 512 and 514 to permit qualified retirement trusts and educational organizations to receive income from limited partnerships that own working interests in domestic oil and gas wells without incurring income tax liability under the UBTI. The legislation includes a limited authorization for the partnerships to borrow funds to engage in oil and gas activities. The objectives of the legislation are:

1. to facilitate portfolio diversification by the retirement trusts into investments generating oil and gas income;

2. to provide a means for colleges and educational organizations to retain gifts of oil and gas working interests without having to arrange forced sales to avoid the UBTI; and

3. to make available additional sources of capital for the domestic oil industry in a manner consistent with the exercise of the prudent investment responsibilities of the retirement trusts and the educational organizations.

ISSUES RAISED BY THE LEGISLATION

Six issues have been raised concerning the legislation. These are—

1. the modification of the current policy to tax the earnings of tax-exempt entities from active trade or business endeavors;

2. the question of allowing certain tax-exempt institutions to invest in oil and gas working interests that include drilling activities;

3. the obstacles for educational organizations in owning and investing in oil and gas working interests;

4. the potential for tax sheltering through partnership allocations;

5. revenue impact for the Treasury; and

6. the use of acquisition indebtedness.

1. *UBTI Tax Policy Modification.* The UBTI was enacted to protect taxable enterprises from unfair competition arising out of the ability of tax-exempt organizations to accumulate capital in "for-profit" businesses free of federal taxation. The statute looks to the underlying activity of a partnership to determine whether the owner-partners are engaging in an active trade or business. The ownership of oil and gas working interests is considered an active trade or business. The legislation amends the UBTI by adding an exemption for limited partnerships that own working interests in oil and gas wells. The modification proposed conforms with the policy objective of the UBTI by—

a. permitting the tax-exempt entities to own working interests only as passive limited partners who are legally prohibited from engaging in management of the partnership;

b. prohibiting control of the managing general partner by the tax-exempt limited partners;

c. requiring that the general partner be a taxable entity; and

d. denying the tax incentives arising from the acquisition and development of oil and gas working interests to the tax-exempt limited partners, thereby creating the situation that these partners must look to distributions to earn a rate of return.

Additionally, it is relevant to note that the retirement trusts are interested in investing in oil and gas because of the rate of return represented by current cash flow that are available from the investment. The pension plans need to fund beneficiary distributions from investments; stagnant investments that do not distribute satisfactory rates of return have little attraction. Finally, the current exemption from section 512 for royalties and net profits interests does not preclude tax-free accumulations of capital by tax-exempt investors. Abuses using this exemption have not occurred because of the need of the tax-exempts for distributable cash flow.

2. *The Prudence of Oil and Gas Investments by Tax-Exempt Institutions.* A certain degree of risk is inherent in investments in the drilling, developing and producing of oil and gas. However, risk is also inherent in many activities in which tax-exempt institutions currently invest without incurring UBTI liability. Thus, the tax code does not preclude tax-exempt institutions from taking risks as long as their investments are in corporate or certain other passive forms. Under present law, tax-exempt institutions can invest in oil and gas properties in the form of royalties and net profits interests which expose them to the same dry hole risks that investments in working interests do. As Congress has recognized, the prudent investment rules applicable to fiduciaries of exempt institutions and qualified trusts, not the UBTI, are the appropriate vehicle to police investment policies.

3. *Role of Educational Institutions.* Under present law, the UBTI provisions frustrate the ability of colleges and educational organizations to obtain contributions of income producing working interests by penalizing the retention of such contributions. This unintended effect of the UBTI forecloses the upside potential of oil and gas ownership for educational institutions and prohibits their participation in the long-term growth of the industry.

4. *Tax Shelter Potential.* While the term "working interests" as used in the bill includes drilling activities, the bill precludes sheltering of income of taxable limited or general partners through allocations to them from expenditures made by tax-exempt limited partners. Specifically, the bill requires that items of deduction, credit and loss be allocated in the same percentages as items of income and gain. Further, it directs the Secretary of the Treasury to prescribe rules to preclude tax sheltering. The bill would permit sharing arrangements to change over the life of the partnership to reward the service partner as economic events occur in the life of the partnership. The technical explanation of the bill also specifies that the general partner may allocate items of deduction, credit, or loss to the limited partners; the federal government gains revenue from this exception since at least some of the limited partners to whom the deductions are allocated are tax-exempt and unable by the terms of the bill to claim the items. Additionally, any drilling activities undertaken by a limited partnership subject to the legislation will reduce the tax expenditure loss that would otherwise be occasioned by the Treasury if the drilling was done by taxable parties.

5. *Federal Revenue Effect.* The legislation will not create a revenue loss for the federal government. Since the tax-exempt entities do not invest in taxable activities, the UBTI generates minimal revenue for the federal treasury. The legislation expands the options of the retirement trusts and educational organizations to deploy their assets into non-taxed investments.

6. *Use of Borrowing.* The provision in the legislation extends to oil and gas investments the same treatment as is available for the acquisition of real estate by retirement trusts and prohibits collusive sale and leaseback arrangements.

TECHNICAL EXPLANATION (REVISED MAY 9, 1983)

The bill amends Section 512 of the Internal Revenue Code of 1954 (relating to the unrelated business taxable income of exempt organizations). The Bill would permit qualified retirement trusts and certain educational organizations to invest in domestic working interests in oil and gas properties without incurring unrelated business taxable income, if such interests are held by such trust or organization as a passive investor (i.e., a limited partner) in a qualifying limited partnership. The amendment applies to pension funds and individ-

ual retirement accounts ("qualified trusts") described in Sections 401(a) and 408(a) of the Internal Revenue Code and exempt organizations ("qualified exempt organizations") described in Section 170(b)(1)(A)(ii) (generally, schools, colleges and universities) and in Section 170(b)(1)(A)(iv) (generally, exempt organizations created by public educational institutions with the purpose of holding an investment property for their benefit).

The definition of a working interest incorporates that which is contained in the regulations of the Internal Revenue Service, that is, an interest where the owner "is not relieved of its share of the development costs by the terms of any agreement with an operator." Treas. Reg. § 1.512(b)-1. The amendment is limited to investments in domestic oil and gas wells and is intended to employ the same description for those wells as is used in IRC § 613A, subject to application of IRC § 638. For purposes of the amendment to Section 512 and the related amendment to Section 514, the term "working interest" includes equipment associated with the development and operation of oil and gas interests.

To assure that partnership income is received by a qualified trust or qualified exempt organization as a passive investor, the Bill requires that the income must be allocated to such trust or organization in its capacity as a limited partner, which means a limited partner for tax purposes.

A limited partnership described in the amendment is one subject to a statute corresponding to the Uniform Limited Partnership Act, both as originally adopted in 1916 and as revised by the National Conference of Commissioners on Uniform State Laws in 1976 (and, in the case of Louisiana, to equivalent partnerships subject to the In Commendam Law, as amended). A common aspect of the status of a limited partner under such laws is that such partner cannot take part in the control of the business of the partnership without becoming liable as a general partner. It is intended that the Bill will not apply to any qualified trust or qualified exempt organization that fails to maintain its status under state law as a limited partner by virtue of having taken part in the control of the business of the partnership.

Income from a working interest held by a partnership may carry with it certain deductions—such as the partnership's administrative costs and the deduction for intangible drilling costs and the investment tax credit—that are allocated to all partners, including limited partners, under the partnership agreement. The amendment provides that all such deductions and credits, and any item thereof, will be excluded or disallowed in the case of any qualified trust or qualified exempt organization to which such item is allocated. Therefore, no such item would be available as a deduction or credit with respect to other taxable income of any trust or organization or to any taxable partner in the partnership. For example, a qualified trust or qualified exempt organization that qualifies under the provisions of this bill would not be entitled to use the investment tax credit with respect to equipment held by a limited partnership even though taxable limited partners in such limited partnership would be so entitled.

The Bill precludes potential abuse through use of certain special partnership allocations. Allocations of larger amounts of deductions, losses or credits, relative to allocations of income or gain, would not be permitted to be made to taxable partners instead of exempt limited partners. The Bill provides three conditions that must be met by the limited partnership with respect to the allocation of income, gain, losses, deductions and credits among partners. First, under the partnership agreement, the partnership cannot allocate a lesser share of any item of deduction, loss or credit to the limited partners than their share of each item of income or gain. This requirement is intended to prevent the partnership agreement from allocating larger deductions, losses, or credits in relation to income or gain from the limited partners as a whole (who may consist in part or entirely of qualified trusts or qualified exempt organizations) to a general partner or partners; however, it is not intended to prevent special allocations of deductions under Section 704(b) that may have substantial economic effect from being allocated from the general partner or partners to the limited partners as a whole or to prevent the allocation of revenues to a general partner for services rendered to the partnership. Also, the Bill is not intended to prohibit the use of sharing arrangements common in the oil and gas industry between a general and the limited partners whereby differing amounts of income, deductions and credits are allocated between the general and limited partners before and after "pay-out." The bill would, however, prevent such a clear cut abuse of exempt status as a materially disproportionate allocation of income and deductions from drilling to a taxable partner in years when drilling operations are being conducted and a subsequent shift to a disproportionate allocation of income and deductions to exempt partners in years when the partnership is realizing income from producing properties.

Second, the Bill requires that, as between limited partners, there can exist no different allocation of any item of deduction, loss or credit. This is to assure that it will not be possible to allocate deductions that are available to the limited partners as a whole to taxable instead of exempt limited partners. However, this limitation does not apply to disproportionate deductions between partners arising as a consequence of the partners having different bases in their partnership interests or in their partnership properties, as, for example, resulting from a Section 754 election.

Third, cash distributions must be made in no different manner from the allocation of income or gain.

The Bill further provides that disproportionately lesser allocations of deductions, losses or credits to exempt limited partners cannot, subject to regulations to be prescribed by the Secretary, be effectuated indirectly, by use of multi-tier partnerships or other arrangements such as trusts or Subchapter S corporations. This limitation is intended to apply only to situations in which a partnership or other entity is used as a purposeful device primarily to achieve a material misallocation of tax benefits from exempt to taxable investors. It is not, for example, intended to prevent a limited partnership that otherwise meets the conditions of the Bill from entering, directly or indirectly, into a general partnership, joint venture, operating agreement or "farm out" arrangement for the acquisition, exploration or development of oil and gas properties under the terms of which the other partner, venturer or operator bears the economic burden of paying all or part of the costs of such acquisition, exploration or development and is allocated or assigned the deductions or credits associated with the costs borne by it.

The Bill further provides that qualified trusts and qualified exempt organizations will not receive exempt income from working interests held by a limited partnership if either organization is related to any general partner. The purpose of the related party provision is to assure that a qualified trust or qualified exempt organization (or a group of such trusts or organizations) cannot control, directly or indirectly, the activities of a limited partnership by means of a related entity without becoming subject to tax on income from such activities. Under the Bill, income from a limited partnership interest would not be excluded from unrelated business taxable income if the combined holdings of all such trusts and organizations in a general partner were to represent 35 percent or more of the total interest in the general partner. For purposes of making this determination, the holdings of the qualified trusts and qualified exempt organizations.

Many limited partnership drilling programs often, for administrative reasons, employ more than one tier of partnerships to effect investment in operating properties. For example, the investors may invest in an upper tier partnership (which may be either a general or a limited partnership) which in turn invests all its assets as a limited partner in a lower-tier partnership. It is intended that the amendment will apply to investors in such "two tier" partnerships, if the income is distributed to them either as a limited partner or as a partner in a partnership that is itself a limited partner (subject to the limitations of the Bill on the disproportionate allocation of losses, deductions and credits).

The Bill also contains a conforming amendment to Section 514(c) (relating to unrelated debt-financed income) which provides that acquisition indebtedness in the case of a qualified trust or a qualified exempt organization does not include indebtedness incurred by the limited partnership to acquire, develop, or operate oil and gas properties. This amendment provides that the objectives of the Bill in Exempting income from working interests will not fail to be achieved because the partnership has incurred debt for purposes of acquiring or developing its properties, as is customary in the oil and gas industry. However, qualified trusts and organizations that borrow to finance the acquisition of limited partnership interests will continue to be subject to the acquisition indeptedness rules as to such borrowings.

The amendment incorporates the safeguards contained in section 514(c)(9), which exempts real estate investments by trusts qualified under section 401 from the acquisition indebtedness rules. These safeguards protect against abuses such as the sale-leaseback involved in Commissioner v. Clay Brown, 380 U.S. 563 (1965). The amendment will not, however, preclude non-abusive sales, leases, farmouts or other transfers between limited partnerships and parties related to the general partner (e.g., affiliated programs), a practice customary in the oil and gas industry, from qualifying for exemption from the acquisition indebtedness rules. A transfer will be considered non-abusive if its terms are consistent with the terms of similar transfers in the geographic area. This geographic-area standard is consistent with the guidelines employed by the North American Securities Administrators Association to evaluate transfers of this

type between sponsors of oil and gas drilling programs and related parties.

It is not believed that the Bill will result in any material revenue loss, since, to the extent qualified trusts or qualified exempt organizations choose to invest in oil and gas drilling programs as a consequence of it, they will forego other investments producing dividend, interest and other passive income that would also be exempt in their hands. In addition, deductions, losses and credits allocated to an exempt limited partner will not be available to reduce the taxable income of that partner or any other partner. The Bill will take effect with respect to partnership taxable years beginning after December 31, 1982.●

By Mr. CHAFEE:

S. 1550. A bill to amend the Internal Revenue Code of 1954 to relieve international double taxation of overseas construction projects of U.S. contractors; to the Committee on Finance.

PREVENTION OF DOUBLE TAXATION

● Mr. CHAFEE. Mr. President, I am today introducing with my colleague, Senator SYMMS, a bill to prevent the double taxation of income earned by U.S. construction firms doing business abroad.

Under existing law, U.S. constructors are inhibited in competing with non-U.S. firms for foreign projects. This situation occurs when both foreign countries and the U.S. tax construction contract services that support foreign construction projects but are performed in the United States. The kinds of services involved are architectural, engineering, design, and construction management. This form of double taxation creates a trade barrier hindering U.S.-based corporations in bidding and obtaining foreign contracts.

Our bill would permit a U.S. firm to deduct as a cost of doing business the foreign tax on U.S. "construction contract services." Such treatment is consistent with our longstanding policy of eliminating double taxation, and with the practice of foreign governments such as the Netherlands and United Kingdom. Also, the bill would place American construction firms on a competitive par with non-U.S. firms competing in international construction. This bill should raise U.S. revenues because U.S. firms could more effectively compete for foreign construction projects, thus realizing the purposes of this bill—to provide more jobs for Americans.

A similar bill, H.R. 1609, has been introduced in the House by Congressmen FRENZEL and GIBBONS.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD immediately following my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1550

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. ELECTION TO DEDUCT CERTAIN FOREIGN TAXES.

(a) IN GENERAL.—Paragraph 4 of section 275(a) of the Internal Revenue Code of 1954 (relating to deduction of certain taxes) is amended by inserting "(other than amounts with respect to which an election under subsection (b) has been made)" after "United States".

(b) ELECTION TO DEDUCT CERTAIN FOREIGN TAXES.—Section 275 of such Code is amended by redesignating subsection (b) as subsection (c) and any inserting after subsection (a) the following new subsection:

"(b) ELECTION TO DEDUCT CERTAIN FOREIGN TAXES.—

"(1) IN GENERAL.—Notwithstanding subsection (a), a taxpayer may elect to deduct the amount of any income, war profits, and excess profits taxes paid or accrued during the taxable year to any foreign country or possession of the United States which is imposed in connection with construction contract services rendered in the United States which are directly related to a construction project located (or proposed for location) in such foreign country or possession.

"(2) DEFINITION OF CONSTRUCTION CONTRACT SERVICES.—For purposes of this subsection, construction contract services shall mean engineering, architectural, design, project management, procurement, cost estimating, scheduling, construction planning or construction mobilization services, or other services, including financial, administrative, clerical, data processing or reproduction services, which are related and subsidiary to any of the foreign services.

"(3) MANNER AND TIME OF ELECTION.—

"(A) IN GENERAL.—An election under paragraph (1) for the taxable year shall be made in such manner and at such time as is provided for the election to credit foreign taxes under section 901.

"(B) DISCRIMINATORY TAXES BY FOREIGN COUNTRY.—Whenever the Secretary finds that under the laws of a foreign country, citizens of the United States or domestic corporations are being subjected to a higher effective rate of tax than are nationals, residents, or corporations of any other countries with respect to income of the kind described in paragraph (1), the election under this subsection shall not be allowed to be made.".

(c) CREDIT DISALLOWED.—Section 901 of such Code (relating to taxes of foreign countries and of possessions of the United States) is amended by redesignating subsection (h) as subsection (i) and by inserting after subsection (g) the following new subsection:

"(h) CERTAIN FOREIGN TAXES DEDUCTED.—The amount of any income, war profits, and excess profits taxes deducted by a taxpayer pursuant to an election under section 275(b) shall not be allowed as a credit under subsection (a).".

SEC. 2. EFFECTIVE DATE.

The amendments made by section 1 shall apply to taxable years ending after December 31, 1982.●

By Mr. HART (for himself, Mr. CRANSTON, and Mr. PROXMIRE):

S.J. Res. 124. Joint resolution calling for negotiations to halt the production of separated plutonium; to the Committee on Foreign Relations.

PLUTONIUM PRODUCTION FREEZE

● Mr. HART. Mr. President, 20 years ago, President Kennedy said:

Every man, woman, and child lives under a nuclear sword of Damocles hanging by the slenderest of threads, capable of being cut at any moment by accident, miscalculation, or by madness. The weapons of war must be abolished before they abolish us.

Seeking to remove this terrible sword of Damocles from our lives, Americans from every walk of life, of every creed and color, from every corner of this land for over a year have been crying out for an end to the madness of a nuclear arms race. And the movement to freeze and reverse it continues to gain strength.

The idea of a nuclear weapons freeze has mobilized public opinion and sent it into battle against an arms race that daily brings us closer to annihilation.

Yet, although an important first step, efforts to freeze, limit, or reduce strategic nuclear weapons address only part of the nuclear threat: The continued United States-Soviet nuclear arms buildup. A second and equally grave problem is the spread of nuclear weapons to nations not now possessing them or to terrorists.

Nuclear proliferation is the new nightmare that haunts the world. Not just nation making war on nation, but isolated terrorist groups blackmailing the world. Not armies of scientists working with ultrasecret technologies, but a few individuals building a bomb with some basic physics and a few pounds of plutonium. Not weapons hurled thousands of miles on complex rockets—but a bomb the size of a suitcase in some American or European city. Not the superpowers of the world restrained by the balance of terror, but unstable outlaw nations—Libya or Pakistan—threatening their neighbors with a handful of nuclear bombs.

Mr. President, we must do everything in our power to prevent the use of nuclear weapons by the superpowers. But we must also work to prevent the detonation of a nuclear bomb by any country or terrorist group, against any country, for any reason.

The joint resolution I am introducing today addresses the fundamental precondition for efforts both to control strategic nuclear weapons and to prevent the further spread of nuclear weapons: halting the production of separated plutonium.

This "plutonium freeze" resolution calls for all countries with the technology to produce separated plutonium—including the United States and the Soviet Union—to enter into immediate negotiations toward a verifiable end to both the production of separated plutonium and the export of the technology for such production.

Separated plutonium is the basic material for nuclear weapons. It has also been considered as a possible fuel

not only for existing nuclear power reactors, but also for the breeder reactors currently under development in several countries.

If separated plutonium becomes an accepted fuel for nuclear power reactors, we will soon see tons of this dangerous material moving each year in international commerce. One can almost imagine a time when, on world commodities exchanges, futures on plutonium are traded along with futures on pork bellies. And with each transaction, the risk of diversion or theft for weapons-building will grow. Indeed we will have begun to traffic in global annihilation.

Mr. President, this resolution does not call for the United States to halt unilaterally the production of separated plutonium. Rather, it calls for all plutonium-producing nations to negotiate a halt to all plutonium production, for whatever purpose. Such an agreement could be verified by inspections by the International Atomic Energy Agency (IAEA), the agency responsible for administering the safeguards applied to civilian nuclear activities around the world.

A U.S. proposal for a plutonium production freeze, verified by the IAEA, might meet with a favorable Soviet response. Last month, Milton Benjamin reported in the Washington Post that the Soviet Union had indicated a willingness to accept onsite inspections by the IAEA of its nuclear facilities. To date, it has not accepted onsite inspection under the IAEA regime of any of its nuclear facilities. But this new development might prove an important first step toward a plutonium agreement on a plutonium production freeze.

I ask unanimous consent that the text of Mr. Benjamin's article appear in the RECORD at the end of my statement.

Beyond a negotiated halt in the production of plutonium and on the export of its means of production, this resolution calls for the United States and other nuclear supplier and consumer nations to reject the commercial use of separated plutonium as a nuclear power reactor fuel. Civilian nuclear power technology can be based on non-weapons-usable fuel, such as natural and low-enriched uranium, especially if supplier nations make abundant, secure, and economic supplies available.

There is no economic justification for using separated plutonium in the world's nuclear power reactors. World uranium reserves greatly exceed demand and will last well into the next century. During the past decade, the price of uranium dropped from $60 per pound to today's price of approximately $20 per pound. Only an eightfold increase in uranium prices would economically justify the reprocessing of spent fuel and use of the resulting separated plutonium in power reactors.

Mr. President, I recognize that several countries, particularly Japan and the Euratom countries, believe their energy security rests on recycling separated plutonium in existing reactors and on breeder reactors, which produce more plutonium than they consume. Despite the obvious dangers of such plans, this administration has not tried to dissuade our allies from them, for fear of jeopardizing our relationships. It is hard to believe that our relationships with these countries could not withstand such efforts—particularly when secure, reliable supplies of natural and low-enriched uranium would be available. The risks of nuclear proliferation created by going the plutonium route jeopardize the security not only of the United States, but of these countries as well. Their short-term interest in using separated plutonium for fuel should not obscure the longer term interest of the world in avoiding nuclear annihilation.

All serious analysts of nuclear arms control recognize the strong link between effects to reduce the size of strategic nuclear arsenals and efforts to curb the spread of nuclear weapons. Nuclear "have-not" nations will not agree to refrain from acquiring nuclear weapons so long as nuclear "have" nations resist disarmament. In fact, article VI of the Nonproliferation Treaty explicity recognizes this relationship. It requires signatories not possessing nuclear weapons to forgo them; in return, nuclear weapons countries must in good faith cease the nuclear arms race and work toward nuclear disarmament.

This joint resolution takes a modest step toward this goal—for once current stockpiles of plutonium are exhausted, no new nuclear weapons would be built. It not only would make it more difficult for nonnuclear weapons states and terrorists to join the nuclear club. It also would have a profound impact on the arms race between the superpowers—a race that threatens the survival of the world.

Moreover, this resolution complements another resolution I have introduced calling for United States-Soviet strategic talks on prevention (STOP), with the explicit goal of reaching an agreement on preventing the use of nuclear weapons.

Mr. President, this joint resolution gets to the very core of the nuclear threats we face today. It would, by preventing international commerce in separated plutonium, reduce the risk that nonnuclear weapons countries or terrorist groups will acquire the means to detonate a nuclear bomb. Unless we halt the worldwide expansion of nuclear weapons arsenals, unless we end our nuclear madness, none of us will be around to mourn the consequences.

Mr. President, I urge the Senate promptly to consider and pass this joint resolution.

Mr. President, I ask unanimous consent that the text of this resolution be printed in the RECORD along with the letter earlier mentioned.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S.J. RES. 124

Whereas nuclear war would kill and maim millions of persons, devastate industrial and technological bases, and threaten civilization;

Whereas the use of nuclear explosives by subnational or terrorist groups or irresponsible governments would destroy population centers and spread chaos and could lead to a nuclear war between nuclear weapon states;

Whereas both the expansion of existing nuclear weapons arsenals, and the spread of nuclear weapons to countries or terrorist groups not now possessing them, would increase the probability that such destruction and devastation could occur by design, accident, or miscalculation and thus would pose the gravest risk to the security of the United States and the world;

Whereas separated plutonium is both a basic ingredient for making nuclear weapons and an alternative fuel for nuclear power reactors;

Whereas if separated plutonium is used as a nuclear power reactor fuel, thousands of pounds of separated plutonium eventually could move each year in international commerce;

Whereas the world's existing uranium resources and uranium enrichment capacity easily can meet all requirements for nuclear power fuel for the foreseeable future, thus rendering economically unjustifiable the use of separated plutonium as a nuclear power reactor fuel;

Whereas separated plutonium cannot be adequately protected or safeguarded against diversion or theft to build nuclear weapons;

Whereas there have been no further negotiations since 1975 among the countries that possess the technology for producing separated plutonium to limit the future export of such technology; and

Whereas the continued and increasing production and use of separated plutonium not only would permit nuclear weapon states to expand their nuclear weapons arsenals, but also would increase the chance that new countries or terrorists groups would acquire the means to detonate a nuclear bomb: now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That—

(1) the United States, the Soviet Union, and other countries that have the technology to produce separated plutonium for military or civil purposes should, without delay, enter into negotiations leading to a mutual and verifiable halt in the further production of separated plutonium for any purpose and the export of technology for such production, in order to prevent separated plutonium from becoming an article of domestic and international commerce, reduce the risk that nonnuclear weapon states or terrorist groups will acquire the means to detonate a nuclear bomb, and halt the expansion of nuclear weapons arsenals around the world; and

(2) the United States and other nuclear suppliers and consumer nations should

promptly begin negotiations leading to an agreement to reject the commerical use of separated plutonium as a nuclear power reactor fuel, to base civilian nuclear power technology only on nonweapons usable fuel, and to make abundant, secure, and economic supplies of natural and low enriched uranium available for that purpose.

[From the Washington Post, May 20, 1983]

SOVIETS INVOLVED IN A-PLANT SITE INSPECTION TALKS

(By By Milton R. Benjamin)

SEATTLE, May 19.—An International Atomic Energy Agency team is in Moscow negotiating an agreement for on-site inspection of civilian nuclear facilities that Director-General Hans Blix said could set a precedent for verifying a U.S.-Soviet arms control pact in the future.

"I think a new perspective has been opened with the Soviet Union's voluntary offer to us to come and safe guard some of their peaceful nuclear installations," Blix said in an interview. "This clearly raises the question to what extent the safe guards technique could be employed in a nuclear disarmament context."

A team of four atomic energy agency officials flew to Moscow on Monday to discuss which Soviet facilities will be opened to international inspection, sources said. The Soviets so far have agreed only to permit inspectors to visit atomic power plants and research reactors, the sources said.

Blix conceded that Soviet willingness to permit inspection of "peaceful, identified installations" was not the same as agreeing to let monitors of a disarmament agreement "roam, the territory."

Nevertheless, State Department officials said they believe that Moscow's reversal of its longstanding refusal to open any of its atomic program to international inspection—and its acceptance of the principle of institutionalized on-site inspection and related verification measures—represent at least a modest step forward.

Blix, who has been attending an IAEA conference on radioactive waste management here, said he found it "very interesting that in a number of recent Soviet statements they have placed a great emphasis on safeguards as a model for verification methods in the field of disarmament."

Though he conceded that the current arms control climate does not appear to be a "very hopeful one" he suggested that a future approach might be for the United States and the Soviet Union to agree to cease further production of the plutonium and highly enriched uranium needed for nuclear weapons.

"We now have the experience, and are increasing our experience, in safeguarding reprocessing plants and enrichment plants, which are the installations that produce weapons-grade material," Blix said, "So if one day the great powers wish to ask themselves, could we have a cutoff of fissionable material for weapons puposes, the techniques are there to monitor it," he said.

This approach to arms control is similar to the "plutonium freeze" proposal currently being circulated in Congress by Sen. Gary Hart (D-Colo.) and Rep. Richard L. Ottinger (D-N.Y.)

Verification of U.S.-Soviet arms agreements never has included on site inspection, but always has relied on monitoring from outside the country and satellite reconnaissance.

Nevertheless, Blix said he felt that "the more recent Soviet statements on verification and control" suggest that Moscow is open to this approach.

The United states, Britain and France for some time have permitted the IAEA to inspect some of their civilian nuclear facilities. China, the fifth nuclear weapons state, does not have a civilian atomic program and is not open to IAEA inspectors.●

ADDITIONAL COSPONSORS

S. 19

At the request of Mr. DOLE, the name of the Senator from Wisconsin (Mr. KASTEN) was added as a cosponsor of S. 19, a bill to amend the Employee Retirement Income Security Act of 1974 and the Internal Revenue Code of 1954 to assure equality of economic opportunities for women and men under retirement plans.

S. 50

At the request of Mr. COHEN, the name of the Senator from Tennessee (Mr. SASSER) was added as a cosponsor of S. 50, a bill to provide access to trade remedies to small businesses, and for other purposes.

S. 338

At the request of Mr. COHEN, the names of the Senator from Nebraska (Mr. EXON), the Senator from New Mexico (Mr. BINGAMAN), the Senator from California (Mr. WILSON), and the Senator from Virginia (Mr. WARNER) were added as cosponsors of S. 338, a bill to revise the procedures for soliciting and evaluating bids and proposals for Government contracts and awarding such contracts, and for other purposes.

S. 422

At the request of Mr. JEPSON, the names of the Senator from North Carolina (Mr. HELMS), the Senator from Oregon (Mr. HATFIELD), the Senator from Florida (Mr. HAWKINS), the Senator from Alaska (Mr. MURKOWSKI), the Senator from Pennsylvania (Mr. SPECTER), and the Senator from Virginia (Mr. TRIBLE) were added as cosponsors of S. 422, a bill to amend title 18 of the United States Code to provide a criminal penalty for robbery of a controlled substance.

S. 591

At the request of Mr. INOUYE, the name of the Senator from Virginia (Mr. TRIBLE) was added as a cosponsor of S. 591, a bill to amend the Internal Revenue Code of 1954 to provide a mechanism for taxpayers to designate $1 of any overpayment of income tax, and to contribute other amounts, for use by the U.S. Olympic Committee.

S. 873

At the request of Mr. LUGAR, the names of the Senator from Hawaii (Mr. INOUYE) and the Senator from North Dakota (Mr. ANDREWS) were added as cosponsors of S. 873, a bill to help insure the Nation's independent factual knowledge of the Soviet Union and Eastern European countries, to help maintain the national capability for advanced research and training on which that knowledge depends, and to provide partial financial support for national programs to serve both purposes.

S. 891

At the request of Mr. CHAFEE, the name of the Senator from California (Mr. CRANSTON) was added as a cosponsor of S. 891, a bill to develop additional procedures for Federal land sales.

S. 1080

At the request of Mr. GRASSLEY, the names of the Senator from Indiana (Mr. QUAYLE), the Senator from Texas (Mr. BENTSEN), the Senator from New Hampshire (Mr. HUMPHREY), the Senator from Alaska (Mr. MURKOWSKI), the Senator from Georgia (Mr. MATTINGLY), and the Senator from Hawaii (Mr. MATSUNAGA) were added as cosponsors of S. 1080, a bill to amend the Administrative Procedure Act to require Federal agencies to analyze the effects of rules to improve their effectiveness and to decrease their compliance costs, to provide for a periodic review of regulations, and for other purposes.

S. 1090

At the request of Mr. WALLOP, the names of the Senator from Virginia (Mr. TRIBLE) and the Senator from Ohio (Mr. GLENN) were added as cosponsors of S. 1090, a bill to establish a National Outdoor Recreation Resources Review Commission to study and recommend appropriate policies and activities for government agencies at the Federal, State, and local levels and for the private sector, to assure the continued availability of quality outdoor recreation experiences in America to the year 2000, and for other purposes.

S. 1306

At the request of Mr. MATHIAS, the name of the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 1306, a bill to amend the patent law to restore the term of the patent grant for the period of time that nonpatent regulatory requirements prevent the marketing of a patented product.

S. 1325

At the request of Mr. MCCLURE,, the names of the Senator from Vermont (Mr. LEAHY), the Senator from Missouri (Mr. EAGLETON), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from Arizona (Mr. DECONCINI) were added as cosponsors of S. 1325, a bill to amend the Internal Revenue Code of 1954 to provide financial relief to State and local governments by eliminating a requirement that would result in a duplicative mailing each year.

S. 1469

At the request of Mr. SPECTER, the name of the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 1469, a bill to amend title 18 of the

United States Code relating to the sexual exploitation of children.

S. 1498

At the request of Mr. SPECTER, the name of the Senator from New Jersey (Mr. LAUTENBERG) was added as a cosponsor of S. 1498, a bill to amend title 23, United States Code to modify the apportionment formula for resurfacing, restoring, rehabilitating, and reconstructing the Interstate System.

SENATE JOINT RESOLUTION 3

At the request of Mr. HATCH, the name of the Senator from Nebraska (Mr. EXON) was added as a cosponsor of Senate Joint Resolution 3, a joint resolution to amend the Constitution to establish legislative authority in Congress and the States with respect to abortion.

SENATE JOINT RESOLUTION 48

At the request of Mr. MCCLURE, the name of the Senator from Oklahoma (Mr. NICKLES) was added as a cosponsor of Senate Joint Resolution 48, a joint resolution to amend the Constitution of the United States to limit budget outlays for a fiscal year to not more than 20 percent of gross national product for such fiscal year.

SENATE JOINT RESOLUTION 56

At the request of Mr. GRASSLEY, the names of the Senator from Hawaii (Mr. INOUYE), the Senator from Alaska (Mr. STEVENS), and the Senator from Michigan (Mr. RIEGLE) were added as cosponsors of Senate Joint Resolution 56, a joint resolution to designate the month of August 1983 as "National Child Support Enforcement Month."

SENATE JOINT RESOLUTION 113

At the request of Mr. WILSON, the names of the Senator from Hawaii (Mr. INOUYE), the Senator from Maryland (Mr. SARBANES), and the Senator from Idaho (Mr. SYMMS) were added as cosponsors of Senate Joint Resolution 113, a joint resolution to provide for the designation of the week beginning June 3 through June 9, 1984, as "National Theater Week."

SENATE JOINT RESOLUTION 116

At the request of Mr. KASTEN, the names of the Senator from Wisconsin (Mr. PROXMIRE), the Senator from Minnesota (Mr. BOSCHWITZ), the Senator from Minnesota (Mr. DURENBERGER), the Senator from Ohio (Mr. GLENN), the Senator from Idaho (Mr. SYMMS), the Senator from Connecticut (Mr. DODD), the Senator from Rhode Island (Mr. CHAFEE), the Senator from North Carolina (Mr. HELMS), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Florida (Mrs. HAWKINS), the Senator from Arizona (Mr. DECONCINI), the Senator from Alabama (Mr. HEFLIN), the Senator from Florida (Mr. CHILES), the Senator from Ohio (Mr. METZENBAUM), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Iowa (Mr. JEPSEN), and the Senator from Illinois (Mr. DIXON) were added as cosponsors of Senate Joint Resolution 116, a joint resolution to designate the week of September 4, 1983, through September 10, 1983, as "Youth of America Week."

SENATE CONCURRENT RESOLUTION 32

At the request of Mr. SPECTER, the name of the Senator from Indiana (Mr. LUGAR) was added as a cosponsor of Senate Concurrent Resolution 32, a concurrent resolution to express the sense of the Congress concerning the legal minimum age for drinking and purchasing alcohol.

SENATE RESOLUTION 137

At the request of Mr. KASTEN, the names of the Senator from Montana (Mr. MELCHER) and the Senator from Nebraska (Mr. ZORINSKY) were added as cosponsors of Senate Resolution 137, a resolution expressing the sense of the Senate that Taiwan should retain full membership in the Asian Development Bank, and that it should not be expelled as a precondition for membership in that body by the People's Republic of China.

AMENDMENTS SUBMITTED

EXTENSION OF EDUCATION FOR THE HANDICAPPED ACT

BYRD (FOR EAGLETON) AMENDMENT NO. 1436

Mr. BYRD (for Mr. EAGLETON) proposed an amendment to the bill (S. 1341) to revise and extend the Education of the Handicapped Act, and for other purposes; as follows:

On page 3, between lines 9 and 10, insert the following:

BYPASS PROVISION

SEC. 4. Section 613 of the Act is amended by adding at the end thereof the following new subsection:

"(b)(1) If a State educational agency is prohibited by law from providing for the participation in special programs for handicapped children enrolled in private elementary and secondary schools as required by subsection (a)(4), the Secretary shall waive such requirement, and shall arrange for the provision of services to such children through arrangements which shall be subject to the requirements of subsection (a)(4).

"(2)(A) When the Secretary arranges for services pursuant to this subsection, the Secretary shall, after consultation with the appropriate public and private school officials, pay to the provider of such services an amount which may not exceed the amount provided per child to all handicapped children enrolled in the State for services for the fiscal year preceding the fiscal year for which the determination is made.

"(B) Pending final resolution of any investigation or complaint that could result in a determination under this subsection, the Secretary may withhold from the allocation of the affected State educational agency the amount the Secretary estimates would be necessary to pay the cost of such services.

"(C) Any determination by the Secretary under this section shall continue in effect until the Secretary determines that there will no longer be any failure or inability on the part of the State educational agency to meet the requirements of subsection (a)(4).

"(3)(A) The Secretary shall not take any final action under this subsection until the State educational agency affected by such action has had an opportunity, for at least forty-five days after receiving written notice thereof, to submit written objections and to appear before the Secretary or his designee to show cause why such action should not be taken.

"(B) If a State educational agency is dissatisfied with the Secretary's final action after a proceeding under subparagraph (A) of this paragraph, it may within sixty days after notice of such action, file with the United States court of appeals for the circuit in which such State is located a petition for review of that action. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Secretary. The Secretary thereupon shall file in the court the record of the proceedings on which he based his action, as provided in section 2112 of title 28, United States Code.

"(C) The findings of fact by the Secretary, if supported by substantial evidence, shall be conclusive; but the court, for good cause shown, may remand the case to the Secretary to take further evidence, and the Secretary may thereupon make new or modified findings of fact and may modify his previous action, and shall file in the court the record of the further proceedings. Such new or modified findings of fact shall likewise be conclusive if supported by substantial evidence.

"(D) Upon the filing of a petition under subparagraph (B), the court shall have jurisdiction to affirm the action of the Secretary or to set it aside, in whole or in part. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.".

Redesignate the succeeding sections accordingly.

STEVENS (FOR THE COMMITTEE ON LABOR AND HUMAN RESOURCES) AMENDMENT NO. 1437

Mr. STEVENS proposed an amendment to the bill S. 1341, supra; as follows:

On page 2, between lines 6 and 7, insert the following:

(c)(1) Section 604(a) of the Act is amended by striking out "Office" and inserting in lieu thereof "Department".

(2) The fourth sentence of section 604(b) of the Act is amended to read as follows: "The Secretary shall transmit each such report, together with such comments and recommendations as the Secretary may deem appropriate, to the Congress.".

NATIONAL NEEDS AND OBJECTIVES IN THE ARCTIC

STEVENS (FOR MURKOWSKI) AMENDMENT NO. 1438

Mr. STEVENS (for Mr. MURKOWSKI) proposed an amendment to the bill (S.

373) to provide comprehensive national policy dealing with national needs and objectives in the Arctic; as follows:

On page 12, line 17, strike "1984", and insert in lieu thereof: "1985".

NOTICES OF HEARINGS

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. McCLURE. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of a public oversight hearing before the Committee on Energy and Natural Resources to continue the review of the geopolitics of strategic and critical minerals. The hearing will be held on Friday, July 22, beginning at 10 a.m. in room SD-366 of the Dirksen Senate Office Building.

Those wishing to testify or who wish to submit written statements for the hearing record should write to the Committee on Energy and Natural Resources, room SD-360, U.S. Senate, Washington, D.C. 20510.

For further information regarding this hearing you may wish to contact Mr. Bob Terrell of the committee staff at 224-5205.

AUTHORITY FOR COMMITTEES TO MEET

SUBCOMMITTEE ON INTERNATIONAL ECONOMIC POLICY

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on International Economic Policy of the Committee on Foreign Relations be authorized to meet during the session of the Senate on Monday, June 27, at 10 a.m., to hold a hearing on the Export Administration Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON ARMED SERVICES

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Armed Services be authorized to meet during the session of the Senate on Monday, June 27, to mark up fiscal year 1984 Department of Defense military authorization, S. 675.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON SECURITIES

Mr. STEVENS. Mr. President, I ask unanimous consent that the Subcommittee on Securities, of the Committee on Banking and Urban Affairs, be authorized to meet during the session of the Senate on Tuesday, June 28, to receive testimony from John Fedders of the Securities Exchange Commission.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON INTERGOVERNMENTAL RELATIONS

Mr. STEVENS. Mr. President, I ask unanimous consent that the Subcommittee on Intergovernmental Relations of the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Tuesday, June 28, at 2 p.m., to hold a hearing on S. 1090, the Outdoor Recreation Resources Review Commission.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON FOREIGN RELATIONS

Mr. STEVENS. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be authorized to meet in executive session, during the session of the Senate on Tuesday, June 28, at 4 p.m., to hold a closed session briefing on Central America.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be authorized to meet during the session of the Senate on Tuesday, June 28, at 11 a.m., to hold a business meeting.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be authorized to meet during the session of the Senate on Tuesday, June 28, at 10 a.m., to hold a hearing on the nomination of Lang Horne A. Motley, of Anchorage, Alaska, to be Assistant Secretary of State for Inter-American Affairs.

The PRESIDING OFFICER. Without objection, it is so ordered.

SELECT COMMITTEE ON INTELLIGENCE

Mr. STEVENS. Mr. President, I ask unanimous consent that the Select Committee on Intelligence be authorized to meet during the session of the Senate on Tuesday, June 28, to hold a hearing on S. 1324, the Freedom of Information Act of 1983.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON THE JUDICIARY

Mr. STEVENS. Mr. President, I ask unanimous consent that the Committee on the Judiciary be authorized to meet during the session of the Senate on Monday, June 27, in order to receive testimony concerning Senate Joint Resolution 73, a proposed constitutional amendment relating to voluntary school prayer.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

WELCOME HOME

● Mr. BENTSEN. Mr. President, all Americans are proud of the *Challenger* crewmembers and the success of their mission, but as the representative of several constitutents who have completed one of history's most ambitious and significant adventures in space I wanted to take just a few moments of the Senate's time to offer congratulations on a job well done.

The *Challenger* mission is more than an American triumph; it had been an international event, made possible by the combined efforts of four nations—Canada, West Germany, Indonesia, and the United States. Working together, we were able to design and complete a mission that set new standards of achievement and helpled establish the shuttle as a viable commerical and scientific undertaking.

Challenger astronauts Robert Crippen, Frederick Hauck, John Fabian, Sally Ride, and Norman Thagard performed with distinction and have earned their status as contemporary heroes. Dr. Sally Ride, the first American woman in space, has become a celebrity, and deservedly so.

For my part, I am not impressed so much by the fact that Dr. Ride was "first" but that she is so highly qualified for her position, so obviously able, and performed so well on the mission. In joining the millions of Americans who offer their congratulations to Dr. Ride, I would only say that I hope we can look beyond her singular achievement to the day when there will be no more "firsts" for the women of America, no more barriers or prejudices that deny them opportunities that are their birthright as American citizens. One further thought, Mr. President: Should Dr. Sally Ride ever decide to abandon science for a career in politics, I hope she will turn out to be a Democrat.

I think there is a tendency to see successful space missions, especially one as dramatic as *Challenger*, as a national triumph. In this case, however, I think we should also emphasize the role of the *Challenger* mission in international cooperation in space. While orbiting the Earth, *Challenger* placed a Canadian and an Indonesian communication satellite into orbit. Carried in *Challenger*'s cargo bay was OSTA-2, one of the first joint research projects to be conducted on the space shuttle. NASA and the Federal Republic of Germany developed OSTA-2 as the first in a series of planned orbital investigations of material processing in space. The results of these experiments will significantly benefit the semiconductor industry and enhance our understanding of metallurgy and glass technology.

The flight of *Challenger* also demonstrated the commercial potential of the shuttle program. Using a 50-foot-long arm, the astronauts lifted the shuttle pallet satellite out of the cargo bay and let it go in space. *Challenger* and the satellite then flew in formation for 8 hours. Cameras aboard the satellite recorded the spectacular exercise on film and gave America's TV audience its first view of the shuttle's flight around the Earth. While in

flight the shuttle pallet satellite conducted eight scientific experiments. When the maneuvers were complete the crew used the robot arm to retrieve the space platform and lock it inside the cargo bay.

These maneuvers were no mere exercise. The successful performance of the remote manipulator arm is critical to future missions when the shuttle will operate like a flying service station. Next year, the tests performed this week will enable the crew of the 13th flight to retrieve a damaged satellite called the solar maximum mission, pull it back into the cargo bay, repair it, and put it back to work in space.

During the course of this flight, shuttle astronauts began working toward the day when the shuttle could be a factory and laboratory in space. The crew conducted 28 experiments, almost three times as many as any previous mission. These experiments covered a wide range—from separating the protein components in human blood to observing the reaction of a colony of carpenter ants to weightlessness in space.

Challenger has proven that it is a vehicle of unsurpassed performance. In only 64 days, the fastest turnaround ever, the spacecraft was recommissioned and ready for launch. On Friday morning, *Challenger* landed smoothly at Edwards Air Force Base. Unfortunately, inclement weather in Florida prevented the shuttle from making another first and landing at Kennedy Air Force Base.

Challenger carried the largest and perhaps one of the most distinguished crews ever flown in space. With the return of *Challenger,* Mission Comdr. Robert Crippen becomes the first astronaut to make two flights aboard the shuttle, having been a pilot on the maiden voyage of orbiter *Columbia.* Hauck, Ride, Fabian, and Thagard are the first members of NASA's class of 1978 to fly aboard the space shuttle. This exceptional group of individuals was recruited for their outstanding performance in a variety of disciplines and specifically trained for the shuttle mission.

I would like to add that two of *Challenger's* crewmembers, Crippen and Fabian, are native Texans. Although he prefers to think of himself as a Washingtonian, Colonel Fabian was born in Goose Creek, Tex. Dr. Thagard had the good sense to attend one of Texas' finest medical schools.

I commend these individuals for their extraordinary contribution to the space program and for the humor and grace with which they have shared their historic mission.●

INABILITY OF CONGRESS TO RESTRAIN FEDERAL SPENDING

● Mr. ARMSTRONG. Mr. President, several weeks ago, I wrote to you about two dozen of the Nation's leading economists asking for their views and concerns about the Congress inability to restrain Federal spending and thereby reduce Federal deficits. These economists represent the views of both the private sector and the academic world.

I commend these responses to my colleagues as relevant reading during the present budget deliberations. Although I do not necessarily agree with all the views expressed, I nonetheless feel the view of these economists provide ample food for thought which will hopefully provoke serious consideration of the present fiscal problems facing our country. I ask that the responses be printed in the RECORD.

The responses follow:

PAINE WEBBER,
New York, N.Y., May 3, 1983.

Senator WILLIAM L. ARMSTRONG,
U.S. Senate, Dirksen Building, Washington, D.C.

DEAR SENATOR ARMSTRONG: In response to your letter of April 19, I too am dumbfounded by the statement that our economy can "assimilate these deficits with no sweat." In fact, the financial markets currently are experiencing some difficulty absorbing large Federal borrowings; witness the unusually high level of real or inflation-adjusted interest rates for this stage of the business cycle. And looking ahead, the bond market's ability to handle continued Federal deficits in the $200 billion per year neighborhood will become even more difficult as private credit demands eventually accelerate over the coming business cycle.

The first of your three specific questions was whether the deficts "constitute a serious threat to the Nation's economic stability?" My answer is a definite "yes." Partly reflecting exceptionally high current and projected deficits, we are beginning the current economic recovery with exceptionally high real rates of interest. For example, the last long-lived economic recovery beginning in 1975 started with short-term interest rates about equal to the rate of inflation. By comparison, today short-term rates are 3–4 percentage points above current inflation. This disturbs me since we never have mounted a sustained, strong economic recovery at these levels of real interest rates. And real growth should be a primary national objective now. For example, I understand that some studies suggest that the industrial countries need to expand at just over a 4 percent real annual rate during the next few years for the Third World debtor nations to be able to expand their exports enough to repay their debts. This required real rate of growth is roughly equal to the growth seen in the 1976–78 period throughout the industrial world. However, the difference this time around is that, as indicated earlier, real interest rates are much higher. Thus, the huge deficits and the related high real interest rates do pose a serious threat not only to the sustainability of the recovery but also to the world banking system.

You also asked what actions should be taken by Congress to bring the deficit situation under control. Specifically, you wanted to know whether Congress should look primarily to spending cuts or increased taxes to close the budget gap. My judgment is that Congress must work on both the spending and revenue sides. With regard to taxation, a 5-percent broad-based energy use tax would help to maintain conservation efforts and also noticeably boost revenues to the tune of nearly $90 billion over the next five fiscal years by some estimates. In addition, as painful as this may be, Congress needs to reconsider or delay the enactment of income tax bracket indexation in 1985. Since Administration policies have succeeded so well in lowering inflation, there has been less bracket creep than initially anticipated when the cumulative 25-percent tax cut was passed back in 1981. As a result, the average effective tax rate will be reduced somewhat more than initially anticipated by the 25-percent tax cut. Consequently, the case for further near-term tax relief through indexation is not as strong as it was at the time of the 1981 tax act.
